The two phenomena to which Lévi-Strauss most often compares myth are language itself and music. The first of these comparisons suggests to him that linguistics might provide the key to understanding myth. What modern linguistics has demonstrated, according to Lévi-Strauss, is that meaning is produced by relationships, not by essences. That is, phonemes (the basic sound units in language) mean nothing in and of themselves. Phonemes only produce meaning in their interrelationships with one another. The same is true, Lévi-Strauss suggests, of the elements in myths. These mythic elements, "mythemes," mean nothing in and of themselves. They rather produce meaning by the structure of their relationships with one another—hence the reason for calling this theory "structuralism." For example, one cannot ask: "What does the moon or a freshwater deity mean in this myth?" One can only ask: "How are the various elements in the myth related to one another, and where else do we find the same or opposite relationships in the culture that produced this myth?"

This means, of course, that the plot-line of a myth is something to be little heeded. The narrative flow of a myth is rather an instance of the deceptive nature of appearances. Lévi-Strauss compares the study of myth with the study of geology, because in both apparent reality is not true reality. The surface appearance of geological phenomena is deceptive; and the truth is often the contrary of what appears. The same is true, Lévi-Strauss maintains, of myths' surface structure or narrative level.

Hence, myths require "decoding" and this process of decoding requires that the student of a culture's myths read and analyze *all* of that culture's myths. Just as a single mythical element means nothing by itself, so too a single myth acquires meaning only when compared with many additional myths. This aspect of structural analysis is particularly well illustrated by Lévi-Strauss' analysis of the Tsimshian Indian (from British Columbia) myth of "Asdiwal" (1976: 146–97), an analysis which many scholars agree is the most successful and persuasive single study by Lévi-Strauss. About halfway through this study, Lévi-Strauss states "having separated out the codes, we have analyzed the structure of the message. It now remains to decipher the meaning" (1976: 165). In order to "decipher the meaning," Lévi-Strauss turns to a summary of a number of additional myths from the same Tsimshian culture.

If these procedures describe how we ought to study myths, what is it that myths do for humans? Lévi-Strauss' most often cited answer to this question is the following: "the purpose of myth is to provide a logical model capable of overcoming a contradiction (an impossible achievement if, as it happens, the contradiction is real)" (1963: 229). What is particularly noteworthy in this answer is the phrase "logical model." This means that for the first time since Tylor, a theorist has suggested that the chief function of

myth is an intellectual or logical, rather than an emotional, psychological, or social, task. At the same time, however, Lévi-Strauss refers constantly to ethnographic information about a culture's social structure, because he finds here other instances of the same structural relationships which appear in myths.

The contradiction which myth seeks to surmount is very often in Lévi-Strauss' investigations that between nature and culture—i.e., the fact that humans perceive that they are of nature like all other animals and yet they speak and create their own worlds in a way that animals do not. This basic contradiction is often played out in a group of myths through a series of binary, symbolic pairs. Thus, a myth which speaks of north and south, women and men, upriver and downriver, etc., may actually be using these terms as codes for a more universal contradiction.

There have been a number of biblical studies in the past decade which label themselves "structural" studies. The great majority of these follow a mode of literary structuralism which is far removed from the structural study of myth inaugurated by Lévi-Strauss. Only studies which refer to some series of structures in a culture, like the structure of kinship relationships, in addition to those discovered in a body of myths really fall into the category of the structural analysis suggested as a means to study myths. Though there are a few instances of this kind of analysis applied to biblical and other Near Eastern myths (Oden 1979; 1983), most scholars have provisionally concluded that too little ethnographic data is available from either ancient Israel or the social world of early Christianity to allow for a meaningful structural analysis.

One strength of structural analysis as practiced by Lévi-Strauss is that it represents such a departure from the various theories utilized previously. Its novelty has created a great interest in both the theoretical and the practical aspects of the study of myth, an interest unparalleled since the turn from the 19th to the 20th century. Second, for the first time since Tylor, this theory regards seriously the thinking of so-called "primitives" or "savages." Lévi-Strauss repeatedly tries to demonstrate that these groups possess intellects every bit as advanced and logical as do modern societies. In this sense, structural analysis is the precise contrary to the theory of mythopoeic thought. Third, Lévi-Strauss has affirmed the necessity of studying all of a culture's myths. This has meant that he and others have begun to read and think about myths long neglected as of peripheral significance. And finally, structural analysis has appeared to produce significant results for some mythical collections. Many of the South American myths studied by Lévi-Strauss, for example, no longer seem as chaotic and nonsensical as they once did.

This final theory is again heir to a number of potential weaknesses. Like the psychological theory, structural analysis has seemed to many scholars difficult either to falsify or to prove true. Since many of the myths refer to other myths, and since Lévi-Strauss has said that myths in the end "signify the mind that evolves them" (1975: 341), we are left, as with the psychological theory, with reference to something beyond empirical testing. Secondly, it may be the case that the linguistic analogies Lévi-Strauss utilizes are at fault, that linguistics does not prove that all meaning is produced by relationships as he has argued. Thirdly, Lévi-Strauss proposes to bypass the narrative level of myths. Yet an element common to almost every single definition of myth is the element of narrative. If the narrative level is so vital that it serves partially to define myth, then how can one ignore it in mythical analysis? Finally, a number of scholars, including especially biblical scholars, have found structural analysis dangerously ahistorical. Lévi-Strauss takes little account of the differences introduced into myths by their historical transmission. It is possible that an answer to this objection may result from the work of Burkert, who combines structural analysis with an awareness that any myth "bears the marks of its history, of multiple levels of application and crystallization" (1979: 27).

8. Conclusions. In 1921, Frazer (xxvi) condemned a particular theory of myth on the ground that it suffered "from the vice inherent in all systems which would explain the infinite multiplicity and diversity of phenomena by a single principle, as if a single clue, like Ariadne's thread, could guide us to the heart of this labyrinthine universe." Frazer's objection is a particularly effective, even poetic, statement of what many students of the myths in the Hebrew Bible and the NT might say about the various theories of myth now available. Not all these theories can be utilized at once, simply because some flatly contradict others.

And new evidence has yielded the conclusion that some theories are beyond repair (a good example is that based on the supposition of a special sort of mythopoeic thinking). Still, central elements in several of the theories summarized above have stood up remarkably well to repeated critical inquiry and can easily be combined with elements from quite different theories to produce a rich synthesis. It is precisely such a synthesis which intrigues the student of mythology with the promise of reaching important new conclusions.

For example, though the evolutionary aspects of the intellectualist model associated in origin with the name of Tylor must be jettisoned, Tylor's insistent emphasis upon the human need for intellectually satisfying explanations is very much in accord both with recent ethnographic investigation and with the foundations of structuralism. The tellers of ancient myths appear to have been as reluctant to allow apparent contradictions to go unexplored as is any modern scientist. Any who propose to explain a body of myths while ignoring this human need for logically satisfying explanation do so at their own peril. So too, though the generalizing excesses of myth-ritualism are patent, the discovery that some myths are related to rituals remains an important one. Certainly, myth-ritualism can be applied only to those myths whose relationship to rituals is beyond reasonable dispute; and, as certainly, the myth-ritual mode of analysis must be founded upon a coherent and sustainable theory of the meanings and functions of ritual. But if these two criteria are met, there is no reason why this theory, too, cannot be combined in a controlled fashion with elements from other theories.

Those students of myth who urged that attention be paid to the social role of myths represent another instance of a significant discovery which has been modified but hardly discarded by more recent investigators. Myths' communal origin and transmission demand that any analysis of them heed their relationship to their social setting. The chief caution here is that future work cannot ignore the evidence that demonstrates that there is very often nothing like a one-for-one relationship between social structures as portrayed in myths and the empirical social structures of the society which produced and repeated the myths. A highly structured and hierarchical society, for example, can produce myths portraying a quite unhierarchical, egalitarian social background; and the opposite (an egalitarian society whose myths portray a hierarchical social setting) can also be true. There is surely a relationship between myths and society; but this relationship is nothing if not complex.

Finally, structuralism, too, has encountered heated objections but none which demands that we ignore all of the results which Lévi-Strauss claims to have attained. Investigators today are much less willing to select a few myths and grant to these selected few a kind of privileged status than was possible before the advent of structuralism. Structural analysis asks that we ignore no myth in a given culture and no element in a given corpus of myths, however bizarre or opaque such myths or mythical elements may appear. The results of such renewed attention to previously side-stepped materials cannot help but produce new insights, even if these insights demand some reformulation of structuralism's own foundations. This will be especially true in the realm of history, where the effects of the transmission of myths through time will have to be compared with the alleged stability of basic mythic structures.

In all these areas, then, a century's reflection and discovery have refined the basic insights of a number of originally quite separate models for the meaning and function of myth. The careful utilization of aspects of each of these theories, in their present refined state, is that upon which future work will build.

MYTH IN THE OT

The scholarly debate regarding the presence of myth in the OT is relatively recent, having only begun late in the 18th century. Since its inception, the use of this category in biblical studies has met with varying degrees of acceptance and rejection. A concensus on the definition of myth is still wanting (see previous article); hence, the identification of mythic elements—and their significance—in the OT text is much debated. This article will trace the development of this discussion in OT research.

D. Myth and OT in Recent Study

———

A. Early Attempts to Study Biblical Stories as Myth

As with many areas of biblical scholarship, the origins of the modern encounter between OT study and the category of myth are to be sought in the 18th and early 19th centuries (Kraus 1969: 147–51). This is not to say that no notice whatsoever was taken prior to the Enlightenment of the possibility that OT material could be looked at as myth. Still, it was the era of the Enlightenment and the ensuing Romantic period which first gave broad and lasting impetus to this possibility. These movements are known above all for their stress upon historical inquiry as the most fruitful way in which to grasp the full significance of all human phenomena. As such, scholars, from the end of the 18th century onward, placed special emphasis upon the remotest origins of all literary and religious texts. Against this background, writers from the Romantic period argued that the human heart first spoke in poetry and in myth. Hence, there arose a desire to recover and to appreciate anew these ancient, mythic expressions of humanity.

Exemplary of the blossoming interest in myth is the work of the brothers Jacob (1785–1863) and Wilhelm (1786–1859) Grimm. Their collections of myths were in the service of the increasingly regnant model that humanity's earliest literary productions began as myths. Against this background, it began to seem possible that OT stories, too, had such an inception, and thus might usefully be studied as myths.

Among those who pursued this possibility with the greatest vigor was the German scholar David Friedrich Strauss (1808–74). Strauss' published work dealt primarily with the NT rather than with the OT. However, the questions he raised and the answers he proposed in his *Life of Jesus*, first published in 1835 (see Schweitzer 1961: 68–71; and Frei 1974: 233–44) were at least as applicable to OT traditions as Strauss had suggested for the NT. Strauss presented in carefully documented detail the argument that many, perhaps most, biblical stories were nothing like the eye-witness testimony they had long been assumed to be. These stories were instead the products of long processes of community tradition. And stories behind which lay such a process were prime candidates to be labeled myths.

Strauss equated the "mythical" with the "miraculous," and on the basis of this equation subjected to analysis all of the miraculous material in the Gospel accounts of Jesus. His argument was in many ways founded on the ancient theory of Euhemerism, according to which all myths began as tales about historical heroes whose actions were exaggerated and who became superhuman in the course of their further development. Stories about Jesus, Strauss suggested, developed in much the way that stories about any remarkable person did. Whenever such a person dies, his memory is preserved such that the historical quickly becomes the superhuman and the mythical. That which is particularly notable about Strauss' *Life of Jesus* is the breadth to which he was willing to extend his basic thesis (Frei 1974: 233–44). Strauss made bold to argue that the mythical was present not just in the accounts of Jesus' conception and birth, but also in the many details in the Gospel narratives—in the stories of Jesus' baptism, for example, or of the various healing and feeding miracles.

Though Strauss was not the first to label biblical stories as myths, he was made to bear a burden which more properly belonged to the entire historical-critical approach to the Bible. For many pious readers, a first acquaintance with the shocking conclusions of this approach coincided with their acquaintance, often at second- or third-hand, with Strauss' volume. For such people, what was shocking was the most basic conclusion of both Strauss and his predecessors: that the bulk of OT and NT narratives were not historically true, even if mythical materials did offer a deeper kind of human truth. Thus, the initial stage of the inquiry into the Bible and myth reached conclusions which conflicted with many peoples' deeply held views about the reliability of the Bible. As Albert Schweitzer wrote, Strauss' *Life of Jesus*, "into which he had poured his youthful enthusiasm, rendered him famous in a moment—and utterly destroyed his prospects" (Schweitzer 1961: 71). The public indignation directed against Strauss led to his dismissal from his academic post at Tübingen, destroyed his academic career, and led him to withdraw for most of his life from the world of biblical scholarship.

B. Hermann Gunkel and the "History of Religions" School

The lead that Strauss' work might have given to 19th-century OT scholarship was not pursued, even though the OT provided at least as much potential for mythological study as did the NT. For example, the stories of the endangering of an ancestress (Genesis 12, 20, 26), of a young man falsely accused of attempting to rape the wife of a powerful official (Genesis 37–50), or of a national saga which includes a dramatic crossing of a body of water (Exodus 15) were all stories known in nonbiblical, mythological traditions. The negative reaction to Strauss' *Life of Jesus* resulted in long reluctance by scholars to label biblical stories as myths, a pause that persisted in some respects for a full century following the appearance of Strauss' study in 1835. The "problem" of the Bible and mythology had ceased to be a problem, argued a variety of biblical scholars, because there were no myths, at least no complete myths, in either the OT or the NT.

The insistent claims that the OT contains no myths seem notably odd because the very years in which scholars were voicing such claims coincided with a striking increase in the number and the awareness of myths from Mesopotamia, Syria, Egypt and elsewhere similar to biblical tales in many regards. By the final quarter of the 19th century, scholars in a variety of academic disciplines knew of a flood hero more ancient than Noah in a Mesopotamian version of Genesis 6–9, or of a first human called Adapa who was prevented by a Mesopotamian deity from attaining immortality (see *ANET*, 72–99 for the Epic of Gilgamesh, whose 11th Tablet portrays the deluge; Oden 1981: 197–216, for the more recently discovered Epic of Atrahasis; and *ANET*, 101–3 for Adapa).

In the face of such evidence, how could scholars exile the genre of myth from the OT? The answer is quite simple: the strategy of exiling myth from OT studies was to do so *by definition.* Almost without exception, biblical scholars in the decades following Strauss relied upon a single and most convenient definition for myth. This was the definition first popularized by the Grimm brothers, which labeled a myth as "a story about the gods." The key to this definition for biblical scholars in the period here under discussion was that the final noun, "gods," is in the plural. Both the OT and the NT, scholars agreed, were of the highest significance in the development of human religions for their witness to the evolving truth of monotheism. If the lasting contribution of biblical religion was monotheism, there could be no talk of gods in the Bible. And if there was no talk of gods in the Bible, then there are in the Bible no myths. (For a discussion of an adequate definition of myth, see previous article.)

So cleanly did this utilization of the Grimm brothers' definition of myth sever mythology from the Bible that virtually every discussion which touched upon myth within the world of late 19th- and early 20th-century biblical study rehearsed this definition with the predictable conclusion which ensued. Both Julius Wellhausen (1844–1918) and William Robertson Smith (1846–94), to whom we owe major and lasting advances in OT study, used the conventional Grimm brothers' definition of myth. So too, at greater length, did Hermann Gunkel (1862–1932), whose work shaped 20th-century biblical inquiry as did perhaps no other single scholar.

Gunkel provides a striking instance of the tension that began to mount at the conclusion of the 19th century between increasing archaeological evidence for mythical material in the Bible on the one hand and the repeated denial of the presence of myths in the Bible on the other. In 1895, Gunkel published a volume entitled *Schöpfung und Chaos,* which inaugurated the "History of Religions School" in the eyes of those scholars who belonged to this group. This school, which numbered among its illustrious members Albert Eichhorn, W. Wrede, Wilhelm Bousset, W. Heitmüller, Hugo Gressmann, and others (see Kraus 1969: 327–40), relied fundamentally upon extrabiblical texts which archaeology was making increasingly available in the years just before the turn of the century. Indeed, the larger program of the "History of Religions School" was most basically founded on the project of fully utilizing texts from outside the OT to explain the development of the OT, in opposition to previous scholars, such as Wellhausen, who were accused of failing to utilize such extrabiblical texts.

Gunkel's central thesis in *Schöpfung und Chaos* is that a single myth—a broadly defined myth of the defeat of a chaos dragon—lies behind several OT and NT stories concerning the beginning and end of the world. However, despite the skill with which Gunkel developed this thesis, he, too, continued throughout

his life to stand within the main camp of those who denied that mythical thinking played any major role in the development of the OT. Though his statements on myth in his voluminous publications are not entirely consistent, Gunkel *was* consistent in defining myths as stories about the gods and in demanding that "for a story of the gods at least two gods are essential" (Gunkel 1964: 15; see also Rogerson 1974: 59–63). Since the OT, Gunkel went on to say, "from its beginning tended toward monotheism," the Bible contains no complete myths. What the Bible does contain, which Gunkel's own research forced him to admit, is "original myths" from other lands, myths that now appear in the Bible only "in comparatively faded colors." The story of the mating of divine beings with women in Genesis 6:1–4, for example, was originally an elaborate myth but is now "nothing but a torso" of a complete myth (Gunkel 1964: 14–15).

C. Myth and the OT in the First Half of the 20th Century

1. Continuations of the 19th-Century Tradition. The simple but powerful maneuver of denying that the OT offers any evidence of complete myths by relying upon the Grimm brothers' definition continued to play the lead role in discussions by biblical scholars about myth and the OT for a surprisingly long period in the 20th century. The longevity of this maneuver's success is surprising since the Grimm brothers' definition was dismissed as inadequate, overly narrow, and apologetic by a wide range of scholars outside the area of biblical study. Still, a glance at the most widely used introductions to the OT which appeared in the period up to about 1960, or at similarly influential OT theologies from the same years, demonstrates that this remained the case until very recently. The OT introductions of Otto Eissfeldt (1965), Artur Weiser (1961), and Georg Fohrer (1968), for example, introduced generations of students to the OT. Each one of these introductions rehearses, in markedly similar language, the argument that a myth demands a plurality of gods, that those stories which look mythical in the OT are merely the decaying fragments of myths which originated elsewhere, and that there can be no complete myths in the OT (Eissfeldt 1965: 35–37; Weiser 1961: 57–59; and Fohrer 1968: 87). The identical chain of reasoning makes its predictable appearance in the OT theologies of Gerhard von Rad and G. E. Wright, different as these scholars' positions are in other areas. Both von Rad and Wright open their theologies with a version of this old argument, conclude that myths find no authentic role in OT thought, and then go on to contrast sharply the alleged cyclical, naturalistic, and mythical thinking which they see as characteristic of Mesopotamia, Egypt, and Canaan, with the linear, historical, and antimythical thought process they claim to find central to OT religion (Wright 1952: 38–48; and *ROTT* 1: 27–28, 136–41; 2:110–11, 349).

2. New Directions: OT Myths and the Cult. Although the first half of the 20th century largely saw the continuation of the tradition of ignoring the potentially fruitful area of study which might have been opened up by analyzing OT stories as other myths were studied, it would be unfair to characterize the entirety of this period in this way. There were already in this period some voices which wished to expand the horizon of OT study in the direction of mythical analysis. The most important of these came from scholars heavily influenced by the myth-ritual program initiated at the turn of the century by the Cambridge University circle which included Sir James George Frazer, Jane Harrison, and others. In addition, Gunkel had also stressed the origins of numerous religious traditions in the popular settings of groups' rituals; and this stress too led him and others to investigate anew the possible myth-ritual origins for a number of OT texts (Gunkel 1967).

Those scholars who investigated the OT under the general heading of myths and cultic activity tend to be grouped into one of several different schools of thought. There were, for example, a number of Scandinavian scholars, including H. S. Nyberg, S. Mowinckel, J. Pedersen, G. Widengren, I. Engnell, and others, whose work can be seen with fair accuracy as a continuation of that of Gunkel (see North 1951: 59–70). A clear example of the application of such scholars' thought to an OT narrative is the conclusion that Pedersen reached considering the Passover story in Exodus 1–15. For Pedersen, this narrative is not a direct historical report of events which occurred to Israel in the generation of Moses. It is rather a ritual legend, which arose from a cultic ceremony whose function was to give a sense of unity to the early Israelites (see Hahn 1966: 144). As Pedersen wrote, "In forming an opinion about the crossing of the reed sea it must be kept in mind … that this story, as well as the whole emigration legend, though inserted as part of an historical account, is quite obviously of a cultic character, for the whole narrative aims at

glorifying the god of the people at the paschal feast" (*PI*, 728). Though the contributions of Mowinckel were numerous, his longest lasting conclusions were those that stemmed from inquiry into the Psalms (see Johnson 1951: 189–207). Such Psalms as Pss 40, 65, 82, 90, Mowinckel read as prophetic speeches, suggesting to him and others that the origins of the phenomenon of prophecy were to be sought in combined myth-ritual occasions. It was Mowinckel as well who argued for the decisive role played by an autumnal New Year Festival. On this occasion, according to Mowinckel and others, Yahweh was ritually reenthroned each year. This festival Mowinckel reconstructed largely from Babylonian and post-Israelite evidence; and to it he attributed the creative force which lay behind many OT texts.

The chief British advocate of myth-ritualism, perhaps, was S. H. Hooke (Hooke 1933), while the leading American scholar to pursue this line of inquiry was T. H. Gaster (Gaster 1977; on Gaster see Grimes 1976: 14–17). Gaster was in many ways the most consistent in his continuation of the original goals of the myth-ritual program. For him, myths must always be seen as "part and parcel of ritual procedures" (Gaster 1954: 184). So, too, he argued, "Myth is cosubstantial with Ritual. They are not—as is often supposed—two things, … but one thing viewed from two different angles or through two different prisms" (Gaster 1954: 187). Gaster was also probably the leading advocate of the "patternism" aspect of the myth-ritual program, according to which there existed throughout the ancient Mediterranean world a myth-ritual complex which fell into a broad pattern of chaos followed by eventual triumph. Specifically, Gaster found in many ancient Eastern texts a "broad sequence of mortification, purgation, invigoration and jubilation such as indeed characterizes seasonal rites in most parts of the world" (Gaster 1954: 211). This pattern was allegedly to be found already in the Babylonian *Akītu* Festival with its attendant performance of the *Enuma Elish* creation epic, as well as in the Ugaritic poems about Baal whose plot runs "parallel on a transcendental plane to the characteristic program of season rituals" (Gaster 1954: 198). The same pattern was then seen by Gaster and others in a variety of biblical texts, including especially the so-called Enthronement Psalms.

However, the application of myth-ritualism to OT materials did not produce as wide an impact upon biblical studies as its relatively few advocates clearly wished. This was chiefly because the very period in which scholars such as Pedersen, Mowinckel, Hooke, and Gaster were writing also saw the rise of an eventually devastating tide of criticism directed against the entire myth-ritual approach (see this discussion in the previous article). If the foundations of this approach appeared to lie in ruins, then there no longer seemed to be any justification for the approach's application to OT texts. In addition, many of the cultic reconstructions proposed by the biblical myth-ritualists were judged to be highly speculative. As Gerstenberger has written, the reconstructed background of the so-called cultic Psalms, "be it called New Year/Enthronement Festival or Covenant Renewal Festival, at times looks like a specter or a bag of bubbles" (Gerstenberger 1974: 197). For this pair of reasons, no real and lasting turn in the direction of a more thorough application of mythological analysis of the OT resulted from this program of inquiry into the cult and OT myths.

D. Myth and OT in Recent Study

In the last several decades, two forces have combined to return the issue of myth and the OT to the forefront of scholarship. First, the discovery of additional ANE myths with undeniable similarities to OT stories has made it increasingly difficult to maintain the former distinction between mythical thinking and OT religion. This is especially the case for the Canaanite myths first uncovered in 1929 at Ras Shamra-Ugarit (Coogan 1978). These Canaanite texts present us with myths composed in a language very similar to biblical Hebrew and from the very area in which Israel would come into existence as a nation in the early Iron Age. Further, it appears that the earliest OT poems (e.g., Exodus 15, Psalm 68, or Judges 5) are composed in a poetic style that stems directly from that which obtains the Ugaritic myths.

Second, the years since about mid-century witnessed a new willingness to reexamine both older definitions of myth and previously dominant theories for the origin and function of myths. However long the definition of myths as "stories about the gods" had survived in biblical study, its reign was crumbling even here. The definition's demise was inevitable, even if it had outlived what anthropologists, folklorists, and others from outside the confines of biblical scholarship might have predicted, because developments

in the broader study of myth demonstrated repeatedly the poverty of a definition for myth which excluded all monotheistic stories. So, too, beginning at about mid-century, a number of scholars, chief among whom is the French anthropologist Claude Lévi-Strauss, proposed to take myths much more seriously as a source of potential knowledge about human mental and social organizations than had been the case since the time of Tylor, Frazer, and others at the end of the 19th century (see previous article).

Once again, perhaps the major impetus for OT scholarship to return to the issue of myth came initially from a NT scholar. Just as Strauss had boldly suggested in the early 19th century that the NT must be seen as mythical throughout, so too the 20th-century NT scholar Rudolf Bultmann (1884–1976) took the lead among biblical scholars in jettisoning the narrow and frankly apologetic definition of myth first formulated by the Grimm brothers. Though Bultmann rarely offers a succinct definition of myth, his understanding of myth is much more in keeping with what anthropologists, folklorists, and historians of religion had been saying on the subject since the end of the 19th century. For Bultmann, as for these scholars in other fields, a myth is one of the ways in which any culture objectifies and symbolizes its entire worldview. Thus understood, it becomes impossible to deny that much biblical narrative is inherently mythological. Certainly, the NT assumption of the physical cosmos as a three-storied edifice (heaven, earth, and hell), as well as that of the earth as the arena of the activity of demons and other supernatural beings, is a mythological assumption. But more than just this serves to indicate the mythological character of biblical thought. For Bultmann, "The whole conception of the world which is presupposed in the preaching of Jesus as in the New Testament generally is mythological" (Bultmann 1958: 15).

Anyone today who wishes to appropriate the message of Jesus must then, according to Bultmann, "demythologize" the NT. Demythologizing does not mean ridding the Bible of mythology, an impossible task in any case; it means, rather, translating this mythology. NT mythology requires translation because of the definition with which Bultmann begins. If a myth is the objectification and symbolization of any culture's worldview, then the myth cannot function for a culture with a radically different worldview.

The demythologizing program of Bultmann prompted, as any student of the scholarly fate of Strauss might ruefully have predicted, a controversy within theological circles similar in shape and intensity to that which Strauss' *Life of Jesus* generated. Critics accused Bultmann of substituting his own brand of existentialist philosophy for biblical thought, and of raising this philosophy to the status of an independent mythology. Behind such criticisms can be seen lurking the hope that myths and biblical narratives might forever remain distinguishable. There must remain, such critics clearly urged, a fundamental difference between biblical thought on the one hand and mythological thought on the other.

Studies by other scholars soon demonstrated that Bultmann did not stand alone. The problem of myth and the Bible had been too long and too easily side-stepped by the maneuver of a simple definition; and, even if much of the criticism of Bultmann was to the point, he had raised issues which refused to subside. By the 1950s, biblical scholars began openly to question the usefulness of the long regnant definition of myths as stories about gods. Thus, G. H. Davies concluded a 1956 study on mythology with the affirmation that "mythology is a way of thinking and imagining about the divine rather than thinking and imagining about a number of gods," so that "the content of myth, whether polytheistic or otherwise is accidental to the nature of myth" (Davies 1956: 88). Two years later, John McKenzie's survey of some of the many theories of myth from scholars in disciplines beyond the biblical field convinced him that the Grimm brothers' definition, despite its long utilization within biblical study, was radically inadequate. Thus, the accompanying claim that the OT was free of myth was no longer defensible (McKenzie 1959: 265–82).

Two important volumes from the last quarter century may serve as markers of the new directions taken by scholars in the investigation of the OT and myth. To the first of these volumes, B. S. Childs' *Myth and Reality in the Old Testament* (1960), belongs the great credit of openly unmasking the inadequacy of defining myths as stories about the gods. Further, Childs goes well beyond this to note how this definition alone was responsible for the long hiatus in inquiry into the function of mythology in the OT. Childs shows that the long-unexamined utilization of the Grimm brothers' definition created a "tendency among

those using this definition to fail to see the essential problem of myth in the Old Testament" (Childs 1960: 15). This problem, Childs continues, is one which is perceived *within* the OT itself. *Myth and Reality in the Old Testament* develops the argument that the OT does contain material which is mythical, though it also contains material which is in tension with the mythical.

A second volume, F. M. Cross' *Canaanite Myth and Hebrew Epic* (1973), goes further in this same trajectory. Here, the argument is not driven so much by theoretical concerns which arise from a redefinition of myth as it is rather by the force of newly available evidence. This evidence, which is largely that of the myths uncovered at the ancient Syrian city of Ugarit, persuades Cross of the bankruptcy of all attempts to prove that Israelite religion is discontinuous with the religions of Israel's neighbors, and hence discontinuous with a mythological tradition.

Cross (*CMHE*) goes on to present evidence for a pattern discernible within much OT literature which is based upon the shape of a central, cosmogonic myth of the Canaanites. The threefold pattern is as follows: (1) A divine warrior battles against a god of chaos; (2) the divine warrior is victorious; and (3) the divine warrior becomes king and receives a royal palace. This pattern, according to Cross, appears in some OT texts in its pure, mythical form (e.g., Psalms 29, 89, or 93), while in other texts (e.g., Psalm 77 or Isa 51:9–11) we see a mixture of mythical with historical traditions. Such a combination Cross finds to be characteristic of Israelite religion: "In Israel, myth and history always stood in strong tension, myth serving primarily to give a cosmic dimension and transcendent meaning to the historical, rarely functioning to dissolve history" (*CMHE*, 90).

Cross' notion of a "tension" between mythical thought and historical thought recalls Childs' thesis that mythical material in the Bible often remains "in tension" with an alternate viewpoint. The similarity of these two scholars on this point is of potential significance in marking a particular stage in the development of our thinking about the OT and myth. While both Childs and Cross have left far behind the former insistence that myths play no role in the OT, neither is quite willing to entertain the possibility that mythical thought and mythical literature are at the very heart of Israel's religion. The possibility is a real one, and one which more recent studies of biblical religion have begun to explore. These studies largely dispense with any discussion of the tension between the historical and the mythical in OT texts. Rather, they begin with the assumption that a great many OT stories are plainly myths, and then go on to study these OT myths according to one or several of the theories for the analysis of myth made available by scholars in anthropology, psychology, and other disciplines (see Oden 1987, with the bibliography there).

The recent progress by biblical scholars in returning openly to the issue of the presence of myths in the Bible is quite remarkable and altogether in keeping with the broader trend toward moving biblical study into the mainstream of academic studies. But equally remarkable is the century-long refusal by OT scholars to pay any great heed to those efforts to redefine myth accomplished by scholars from other disciplines, such as anthropology or folklore study. This refusal is fundamentally grounded in the assumption that all things biblical must be firmly and forever distinguished from the nonbiblical and, especially, the mythological world. The forcefulness of this foundational and long unquestioned distinction accounts for the otherwise inexplicable desire to divide the OT from myth.

A. Terminology

In early Gk, *mythos* means "word, speech, design." It is more or less synonymous with *epos* ("word, speech, message"), close in meaning to *logos* ("account, talk"): myth is narration, tale-telling. After Pre-Socratic and sophistic philosophy began to doubt the empirical truth of the mythical tradition, the epic, non-Attic word *mythos* was used in the 5th century Attic prose and in Plato as a technical term for an entertaining tale, the truth of which was uncertain or unwarranted (Burkert 1985a: 281). From Plato onward, its contrasting term was *logos,* "the rational, responsible account." Latin *fabula* and its derivatives in the Romance languages (Eng-Fr *fable,* Ital *favola*) took over the meanings of Gk *mythos.* The modern term *myth* (Fr *mythe,* Germ *Mythus,* Ital *mito*) goes back to the neo-Latin *mythus,* coined by

Chr. G. Heyne around 1760 in order to express the new appreciation of the inner veracity of myth in contrast to the negative connotations of *fabula.*

B. The Sources

Myth is the content of which Greek and Roman poetry is the form: in this respect, nearly the whole of Greek and Latin poetry is its source. Myth had, to most Greeks and Romans, the status of ancient history; in that respect, the local historians and the travelers (esp. Pausanias, 2d cent. A.D.) who recorded local myths otherwise unknown, are of special interest. In Hellenistic times, mythography developed as a special branch of literature (Henrichs, in Bremmer 1987: 242–77): its earlier authors are lost; among the later, preserved compendia, the most important is the *Library* of Apollodorus (2d cent A.D.).

Pictorial representations of mythical themes, in which Attic ceramography is especially rich, began at an early date (Schefold 1964). Visual art has its own rules, different from those of verbal narration, and Greek and Roman images are more than just illustrations of texts: iconography, though difficult where texts are absent, has its own methods which lead to new and important results (exemplary Sourvinou-Inwood 1987).

C. Characteristics and Functions

In the most widely accepted definition, myth is a traditional tale with social and intellectual relevance. Greek myth has a tradition which, at least in some respects, goes back to the time before the Mycenaean Age (ca. 1550–1150 B.C.). Anthropologists and folklorists tend to view the narrator of a myth as a nonindividual instrument of tradition (earlier generations spoke about "*volksgeist*"); in Greece, already in the Archaic Age (ca. 750–480 B.C.), the narrators of the traditional tales were highly individual poets. Poetical ornamentation of the tradition was accepted and indispensable, innovation was checked by the fact that archaic Greek culture was oral (Gentili 1984): written texts served as a basis for oral performance, and any new poetical version of a traditional theme was, in its ritual "publication" during a festival or a common meal, exposed to the censorship of the entire group.

The relevance of myth lies in its explanatory (etiological) and normative function: myth makes intelligible, to the group it belongs to, the physical, political, and social order; it defines man's position toward the world and the gods; it regulates religious and social behavior. It does so by telling how the present order once came into being. Compared with most other mythologies, Greek mythology is radically anthropomorphic and wanting in the more fantastical elements (Kirk 1970: 172–251); its emphasis on the historical dimension is one aspect of this more general character. As a consequence, scholars were tempted far too often to look for a historical kernel in divine and heroic myths (see, for the first, the case of Dionysos, McGinty 1978, or Delphic Apollo, Sourvinou in Bremmer 1987: 215–41; for the latter, see G below).

D. Religious Etiology

The so-called "Cambridge school" derived myth from ritual, as the spoken text of the enacted performance. Contemporary scholarship has pointed out the difficulties (Kirk 1970: 8–31). Still, myth has a privileged relationship with ritual: there is, at least in ancient Greece, virtually no ritual without a myth to explain its origin and function. In most instances, these myths are recorded only by local historians and travelers: the myths of the poetical tradition often lost the link with ritual.

Greek myth uses many themes whose connections with ritual are well attested outside Greece. The theme of death and rebirth belongs to an initiatory background (Eliade 1958; Brelich 1969); the flood theme, which in Greece is rare and confined to local mythologies, is connected with reversal and periodic renewal (Caduff 1986), as is the myth of the Golden Age (Gatz 1967) or, in some variants, the theme of the Divine Guest (Flückiger-Guggenheim 1984). The "Battle Against the Dragon" is a theme connected with the establishment of a perpetual order, especially with New Year and foundation rituals (Trumpf 1958).

Greek myth never explains all details of a ritual: it does so for its most important or strangest details, often only for its general structure and atmosphere. Myth and ritual use different languages: ritual uses the language of symbolical action often conditioned by ethological programs; myth uses linguistic expressions formed by traditional narrative patterns (Burkert 1979: 1–58). Therefore, a myth may free

itself from a ritual as well as attach itself to a new ritual whose structure it shares. The privileged connection between myth and ritual has no genetic root; but ritual, as the central way to organize and condition archaic society, and myth, as the central mode of explaining and validating archaic social forms, naturally go together.

E. The Origins

1. Indo-European Traditions. Although the Greeks are Indo-Europeans (IE), undisputed IE elements in their mythology, as in their religion, are rare. There are common mythical themes, often where common institutions guaranteed the stability of tradition, as in the account of Nestor's youth in the *Iliad* which has its roots in IE initiatory practice and ideology (Bader 1980), or in the mythology of Helen, the background of which might be IE wedding poetry (Bremmer 1987: 2). A few epic formulas for key concepts have parallels in other IE traditions: this points to the existence of an IE tradition of epic poetry (Nagy 1974); similarly, there exist indications in Greek of a common IE tradition of narrative formal prose (Risch 1985): both were the means of transmission for IE myths.

2. Minoan-Mycenaean Mythology. For Minoan mythology, the only source is iconography, mainly gemstones, recently supplemented by the frescoes of Thera (Marinatos 1984). In the absence of written sources, the differentiation between divine and human figures, as between cult and mythological scenes, is often impossible. Non-anthropomorphical, "demonical" figures, however, are extant and point to mythology. Otherwise, female beings are dominant; connections with known Iron Age Greek myths are precarious (Nilsson 1950).

The Mycenaean Linear B tablets demonstrated that the pantheon of LB Age Greece was close to the Iron Age pantheon. Mycenaean mythology, however, is virtually untraceable. The existence of mythological representations in Mycenaean art is disputed (Vermeule 1958–59); the Linear B texts are purely administrative documents without narrative content. There must have existed a narrative explanation for divine names like *dirimijo diwo ijewe* (dat.), "Drimios the Son of Zeus" or *matere teija* (dat.), "Mother of the Gods" (Gérard-Rousseau 1968: 68.138): they point to Mycenanean mythology which in turn could be continued by Greek myths. According to the still widely held theory of Nilsson (1932), Greek heroic mythology originated in Mycenaean times as a transformation of Mycenaean history: this is highly unlikely (Brillante 1981).

3. Oriental Influence. Both in late Mycenaean and in early archaic times, Greece was a marginal part of the Near Eastern cultures. Traces of Oriental influence are manifest in its mythology (Burkert, in Bremmer 1987: 10–40). The Hittite and Mesopotamian parallels to the succession myth in Hesiod's *Theogony* as well as to the myth of the metal races in his *Works and Days* are well known (Walcot 1966). His account of Zeus' battle against Typhon, though belonging to the much wider attested dragon-battle theme, has close Oriental parallels (Fontenrose 1959); later accounts of the same myth took up new Oriental stimuli (Graf 1987: 90). Even closer to the Babylonian Enuma Elish is another early Greek theogony whose traces are found in the *Iliad* (14.201 §302); the beginning of the cyclic *Cypria* recalls another detail of the same Babylonian epos (Burkert 1984: 88–90, 96–98).

The exact circumstances of the underlying cultural contact are debated. Given the relative closeness between the respective Greek and Oriental myths, a contact in the early Iron Age, without too many distortions by a long independent oral tradition, seems the most likely solution. Both itinerant Oriental religious specialists (Burkert 1984: 15–42) and Greek merchants with their trading posts in N Syria (Boardman 1980: 38–54) may have brought the stories to Greece, either orally or in written form.

F. Theogony and Cosmogony

The earliest extant and most influential Greek account of the origins of the existing cosmos is the hexametrical poem *Theogonia* (*The Coming Into Being of the Gods*), composed by Hesiod of Ascra in Boetia about 700–675 B.C. (West 1966). It views the origins of our cosmos not as a creation, but as a procreation of its single divine members in a strictly genealogical and sexual form (Philippson 1944: 7–42). Eros, the sexual drive, is among the very first primordial beings; the main elements of the physical world (sky, earth, sea, mountains, rivers) are born in the shape of the respective divinities; parthenogenesis, which is rare, denotes the otherness of the being thus brought forth. In three consecutive

generations, the cosmos evolved to its present order, from Gaia (Earth) and Uranos (Sky) via their children the Titans, whose leader Cronus separated Earth and Sky by castrating his father, to the third generation of Cronus' children under the leadership of Zeus, who, after his victory over Cronus, the Titans and Typhon ordered the world by assigning the tasks (*timai*) to the respective gods.

Despite the many Near Eastern influences (see E.3 above), the Hesiodic account is unique in its specific world view. Whereas the Near Eastern myths presuppose a strongly hierarchized society around an absolute monarch and his palace, the Greek myth is modeled on a less rigidly stratified society of partly independent princes around a king, and on a social system in which the genealogical ties were predominant. In Near Eastern myths, man is created by the gods, to relieve them from the toils of working: man exists only as the slave of the gods. In the *Theogony,* what matters is not the physical creation of man but his social and religious position: it is defined, in the Prometheus myth, by sacrifice, which creates a reciprocal tie between gods and humans (Vernant 1974: 177–94), and by marriage, which institutes a firm genealogical order.

Both the cosmogonies of Pre-Socratic philosophy (Kirk, Raven, and Schofield 1983: 7–71) and of later Orphic and related mythological poetry (West 1983) continued cosmogonical speculation. Pre-Socratic philosophy, though often radically distant from tradition, makes use of mythological forms as easily decipherable allegories, as in Empedocles' poem *Peri Physeōs* (On Nature). Orphic cosmogonical poetry is set apart from Hesiod's in its validity: such poems had no relevance to a wider public but were part of the library of ritual specialists and of closed religious groups as early as the 5th cent. B.C. (Burkert 1982). Concomitantly, Orphic poetry, purportedly the work of the heroical singers Orpheus and Musaeus, is close to apocryphal religious poetry.

G. Heroic Mythology, History, and the Epos

1. Heroic Myths. According to the Greek conception, a hero is a mortal accorded cultic honors after death; heroization of prominent men is still attested in historical times (Burkert 1985a: 312–19). Thus, most heroic cults are local, belonging to the ancestor of a family, a clan, or a polis; widespread hero-cults are rare. Heroes thus are conceptually identical with historical persons: to the Greek mind, the deeds and genealogies of heroes are the early history of Greece (Finley 1975: 11–33).

When heroic mythology becomes manifest to us in early archaic time, it had been transmitted orally over a long time, presumably mostly in the form of local epic poetry about the deeds of a single central hero. A fragment found recently of such a poem about the exploits of Heracles in Cos (late 6th cent. B.C.?) (Lloyd-Jones 1984) confirms earlier hypotheses about the existence of such local "*heldenlieder*."

2. The Homeric Epos. The *Iliad* and the *Odyssey* are firmly rooted in this tradition of oral mythological storytelling whose formulation in smaller local epics sometimes still seems discernible. They draw upon the whole range of divine mythology which Hesiod systematized, and the main heroic personalities of both poems have their own mythical history which Homer alludes to or relates in longer digressions. The same holds true for other myths, which have no immediate connection with the main plot of the epos but are used as paradigms. The main event, of which the *Iliad* and the *Odyssey* narrate only a part, the siege and destruction of Troy, also is a mythical tale, even if its historicity could be proved (Foxhall and Davies 1984): the story of the war is told in traditional narrative patterns which have both Near Eastern parallels (see E.3) and possible ritual correspondences (Bremmer 1978).

According to what the epos itself tells, its function is both to delight the audience and to propagate the glory of the heroes. The former function, common to heroic poetry (Bowra 1952: 29), is always fulfilled in public, during a common meal or in an assembly, with the consent and control of the whole group. The latter function implies a normative aim: the deeds of the heroes are worth being remembered because they are exemplary. Besides, heroic epos shares the etiological function of myth, explaining the actual order of the Greek world by reference to a heroic past. For the 8th cent. B.C. the cult of epic heroes around Mycenaean graves and ruins begins to be attested to such an extent that it must have begun in this period (Coldstream 1977: 341–57). The reference to the major, Panhellenic epic cycles gave to these places and ruins not only an owner and a history, but made them part of a newly felt Greek unity: in the 9th/8th cent.,

Greece had overcome the local isolation characteristic of the poor conditions during the Dark Ages; the first colonial ventures broadened the horizons and awakened the feeling of a common Greek culture.

3. Genealogical Poetry and the "Catalogue of Women." An important subtype of mythical narrative is genealogy; again, not exact chronology or documentary historical truth, but etiology in the wide sense of the term (Calame, in Bremmer 1987: 153–86). Genealogical poetry was widespread in archaic Greece; the most comprehensive account was the Pseudo-Hesiodeic *Gynaikōn Katalogos (Catalogue of Women)* (West 1985), a continuation of the *Theogony* which supplements the divine genealogies with those of the heroes (first half of the 6th cent. B.C.). Beginning with Prometheus' son Deucalion, his grandson Hellen, the ancestor of all *Hellēnes,* and Hellen's sons Dorus, Xuthus and Aeolus, the ancestors of the three major tribes of Greece, the *Catalogue* combines the genealogies of Greek heroic mythology into one more or less coherent system, ending one generation after the Trojan War. It is significant how emphasis is put on Panhellenic unity by the introduction, at the beginning of the genealogy, of eponymous heroes who are mere narrative constructs without any known cult: again, this points to the task of myth to give the Greek tribes and cities unity through a common descent.

4. New Myths. Since mythical narration represented history, the gap between the end of the heroic tradition and the immediate present also needed filling. In this continuation of earlier myths, the memory of historical fact was conditioned by story patterns and by contemporary needs; despite the relatively short span of time this "oral history" covered, it would be unwise to rely on its historicity or chronological accurateness. Good examples of this are the accounts of the Dark Age migrations, even more so the foundation-legends of the new colonies around the Mediterranean and Black Sea (750–600 B.C.). In the course of not too long a period of oral transmission, historical facts were drastically transformed into mythical themes and patterns (Prinz 1979); only details backed up by institutions were preserved, such as the origin of the colonists (who kept their political ties with the mother-city and took over its religious institutions) or the name of the founder (who had a public cult on the agora); divine agency, foremost of Apollo in Delphi, was invoked as a means to legitimate the conquests.

H. Archaic and Classical Poetry

1. Choral Lyrics. In the course of the 7th cent. B.C., the creative oral performance of the epos became, with the canonization of written Homeric epic, a mere rhapsodic recitation of a fixed text. As a living means of public communication, it was ousted by choral lyrics which, by an impressive combination of word, music, and dance became the main vehicle of mythical narration in archaic Greece. Foremost among the choral poets was Stesichorus of Himera (died ca. 556 B.C.), whom later literary critics regarded as *hōmerikōtatos,* "closest to Homer" (Gentili 1984: 160–66; Burkert 1987: 50–53). His poetry is preserved only in fragments, but they support the information given by ancient sources that it was Stesichorus' treatment of a great number of heroic myths which was to be most influential, especially for Attic tragedy.

The continuant fluidity of myth is shown by its use in the victory odes of Pindar (52/518–after 446 B.C.), the only preserved body of Greek choral verse: he can adapt his version of the tradition to the individual circumstances of victor, victory, and celebration, even to the extent of implicitly contradicting himself or explicitly correcting a traditional account (Köhnken 1971).

2. Tragedy. Tragedy, the last public oral performance of myth (Rösler 1980), continued the etiological function. It often told the origin of Attic institutions and cults, and it took its stand in current politics: by projecting Athenian democracy into the time of the mythical heroes, it extolled and legitimated the democratic order. The tragedians' new emphasis on problematical relationships between members of the same household or clan responded to contemporary feelings (Knox 1979); Euripides, in some plays, even attempted an analysis of female roles and psychology. Finally, the dramatic interplay of gods and mortal heroes elucidated the relationship between man and god, often by stressing the utter incompatibility of the two (Graf 1987: 162–65; Euripides: Eisner 1979).

I. Philosophy and Demythization

1. The Beginnings. Literacy, with its creation of poetical texts, slowly destroyed the nearly limitless adaptability of oral tradition: as social and intellectual conditions changed, a gap opened up between the

now fixed texts and their new readers. By the end of the Archaic Period, several strategies were available to deal with myths which seemed no longer acceptable. One was to accept the gist of tradition but to explain away all details which did not fit into a rational or commonsense view. This method was adopted especially by the historians, from its first representative, Hecataeus of Miletus (ca. 550–480 B.C.) to the end of antiquity. A second strategy was to reject tradition, mainly on moralistic grounds, as did the pre-Socratic philosophers Xenophanes of Colophon and Heraclitus of Ephesus (Kirk, Raven, and Schofield 1983: 168, 188, 209). This was much more lethal to myth than the petty rationalizations: they radically did away with the strict anthropomorphic model of Greek mythology. A third way was allegorization, the figurative interpretation. It started in the explanation of Homer toward the end of the 6th century B.C. with Theagenes of Rhegium, a rhapsodist and as such also a professional interpreter of Homer, and with the Pythagoreans (Graf 1987: 176–78), and became the standard procedure to deal with mythology from Hellenistic time onward.

2. The Sophists and Plato. Whereas rationalization of myth became the predilection of historians, philosophy continued to rely on allegorization or rejection. The Sophists of the 5th cent. B.C. rejected myth while retaining its normative aims: they used traditional themes in a new guise or created new myths as vehicles for moral and political education, the best known being the "Choice of Heracles" invented by Socrates' contemporary Prodicus of Ceus (Panofsky 1930). The same Prodicus developed a historical reading of divine myths and explained the gods as divine benefactors: this approach became quickly popular and was systematized around 300 B.C. by Euhemerus of Messene after whom, somewhat unjustifiedly, the whole theory was labeled Euhemerism (Henrichs 1984: 140–52).

Like the Sophists, Plato rejected traditional myths in their poetical shape; they were impious and immoral. At the same time, he could invent myths with an educational aim in the sophistic manner. More important, he used *mythos,* the rationally unverifiable tale, as a way to express things which he could not express by *logos,* in rational argumentation, either because, as with statements about the sensual world, their ontological status made *logos* impossible, or, as with eschatology, because they were beyond human knowledge (Brisson 1982).

3. Later Allegorical Interpretation. The Stoics, less radical than Plato, accepted traditional poetical myth but explained it allegorically, usually in terms of natural phenomena, less often moralistically. Due to the success of Stoicism, allegorical explanation became the most widespread strategy to deal with myth both in antiquity (Lévêque 1959; Pépin 1976) and after until the 18th cent., (Feldman and Richardson 1972).

K. Myth in Rome

Roman tradition had, at an early stage, radical historicized its mythology (Dumézil 1987: 63–93); modern scholarship is still decoding early Roman history as myth (for a survey, see Grant 1971). All the more eagerly the Romans accepted Greek mythology, as part of Greek culture which they imitated and adapted, not as part of a living religious tradition. The great number of etiological myths for Roman cults (collected esp. in Ovid's *Fasti*) seem to be of late and mainly scholarly origin.

The Augustan Age, in its aim of giving new spiritual foundations to Rome, changed the status of myth. Vergil, in his *Aeneid,* expanded the Greek myth of Aeneas into an attempt to give a mythico-religious legitimation to Augustan Rome. The myth itself had been known in Italy in the 6th cent. B.C., in Latium in the 4th cent. B.C. as foundation-legend of a local cult at Lavinium (Horsfall, in Bremmer-Horsfall 1987: 12–24). Ovid, though he was a poet without any belief in mythical normativity, explored the psychological aspects of myth in his *Metamorphoses* with a depth and skill theretofore unknown; myth became a mirror of human behavior. Thus Ovid succeeded in giving myth a new, though precarious, relevance: to European culture up to the present day, the *Metamorphoses* were the main source for Greco-Roman mythology.

FRITZ GRAF

N

NAAM (PERSON) [Heb *nāʿam* (נָעַם)]. An individual of the tribe of Judah, the son of Caleb, the son of Jephunneh (1 Chr 4:15).
DAVID CHANNING SMITH

NAAMAH (PERSON) [Heb *naʿămâ* (נַעֲמָה)]. **1.** Sister of Tubal-cain; daughter of Cain and Zillah (Gen 4:22). Naamah is mentioned in the J genealogy of Cain (Gen 4:17–22), along with her brother (Tubal-cain) and two half-brothers (Jabal and Jubal). Her inclusion is somewhat enigmatic. Daughters are rarely mentioned in the genealogies of Genesis. Moreover, Naamah's entry lacks the vocational information given for each of her brothers (Jabal as herdsmen; Jubal associated with instrumental musicians; Tubal-cain connected with workers in metal). Some traditions clarify her background by identifying her as Noah's wife (*Gen.Rab.*) and associating her with singers (*Tg. Ps.-J.*, Gen.Rab.). The antiquity of these traditions, however, is hard to verify. The inclusion of Naamah's name in Gen 4:22 may simply indicate an attempt to present the reader with a balanced genealogy—two children for each of Lamech's two wives.

2. Mother of Rehoboam, king of Judah (1 Kgs 14:21 = 2 Chr 12:13; 1 Kgs 14:31). Naamah's name occurs in her son's introductory (1 Kgs 14:21 = 2 Chr 12:13) and concluding (1 Kgs 14:31) regnal formulae. The reference in the latter is unusual and is missing from some versions (Syriac, Ethiopian) and from the parallel account in 2 Chr 12:16 Each reference to Naamah identifies her as "the Ammonitess." This coincides with the tradition in 1 Kgs 11:1, which lists Ammonite women among the foreign wives of Solomon. Moreover, according to 1 Kgs 12:24 (LXX) Naamah was the daughter of Ana, son of Naash, king of the children of Ammon. If this is true, it lends credence to the theory that Solomon's marriage to Naamah was a shrewd attempt to consolidate the territory captured by his father, David. See also REHOBOAM; QUEEN.
LINDA S. SCHEARING

NAAMAH (PLACE) [Heb *naʿămâ* (נַעֲמָה)]. Town situated in the Shephelah, or lowlands, of Judah (Josh 15:41), within the same district as Lachish. This settlement, whose name perhaps means "pleasant town" (from *nʿm,* "to be pleasant, delightful"), is listed among the towns within the tribal allotment of Judah (Josh 15:21–62). Although a location in the Sorek valley near Timna has often been proposed (e.g., Abel *GP*, 89), a location farther to the S in the vicinity of Lachish seems more appropriate given Naamah's inclusion in the same district. Unfortunately, its exact location has yet to be identified.
WADE R. KOTTER

NAAMAN (PERSON) [Heb *naʿăman* (נַעֲמָן)]. The name of two men in the OT; it is derived from the stative verb *nʿm,* "to be pleasant." Other names, such as Naamah and Naomi, share the same origin.

1. A member of the tribal families of Benjamin (Gen 46:21; Num 26:40; 1 Chr 8:4, 7). In one genealogy (Gen 46:21) he is listed as the son of Benjamin, and in another (1 Chr 8:4, 7) as the son of Bela, son of Benjamin. The differences between the genealogies ought to be seen in light of an intention to stress belonging rather than strict heredity (Aufrecht 1988). Outside these three texts, nothing is known of Naaman. From the perspective of genre, Gen 46:21 and 1 Chr 8:4, 7 are part of formal genealogies which received their final form in the postexilic period (Wilson 1977: 188). The first of these appears to be an expression of Gen 35:22b–23 (Johnson 1969: 21). On the other hand Num 26:40 is part of a census list, which, although postexilic in its present form, is based on an early military census of the monarchical period (Mendenhall 1958).

2. Commander-in-chief of the army of Aram-Damascus in the mid 9th century B.C.E., who became a leper and who visited the prophet Elisha for healing (2 Kgs 5:1–27). The biblical story tells of a powerful foreign soldier who had achieved fame on the battlefield, and who was trusted by his king (2 Kgs 5:1). He was, however, a leper. A young Israelite slave girl, captured in one of the Syrian raids on Israel, began the process of healing by telling her mistress, Naaman's wife, that there was a prophet of great power in Israel. Initially, Naaman tried to gain access to the prophet Elisha through normal diplomatic channels (vv 4–7), but a serious misunderstanding by the Israelite king of the Syrian king's intentions almost started a war. Finally, the general found Elisha, but when told, through an intermediary, that all he had to do was bathe himself seven times in the Jordan he was furious (vv 8–12). His servant constrained him to obey the prophet and eventually he was healed (vv 13–14). Naaman's gratitude was great and he tried, unsuccessfully, to offer the prophet a gift. The gift was refused, but Naaman himself returned home with some earth from Israel as a symbol of a newfound faith in Yahweh, the God of Israel. When he, as the trusted aide to the king of Syria, entered the temple of the Syrian god, Rimmon, he would remember Yahweh and Israel (vv 15–19). The story ends with an attempt by Gehazi to trick Naaman out of some of his baggage, and the transfer of Naaman's leprosy to Gehazi as punishment (vv 20–27).

The story is remarkable in many ways. Externally, such a visit of a high-ranking officer of Aram-Damascus to Israel is most unusual against the background of the almost continual conflict between the two countries. The reign of Ahab was a time of warfare with only minor intervals of peace (1 Kgs 20:1–34; 22:1–40). Following Ahab's death Israelite territories on the E side of the Jordan were put in jeopardy (2 Kgs 1:1; 3:1–27), and from this time until the death of Elisha some fifty years later war was the norm rather than the exception (2 Kgs 6:8–7:20; 8:2–9:27; 12:17–18; 13:3–9, 24–25). During this period there were short times of peace, and from the stories of Elisha (2 Kgs 8:7–15) there is an account of a close relationship between the prophet and the king of Aram-Damascus, Ben Hadad. Whether this cordiality extended to the diplomatic level is not clear, but it should be noted that the two sides were not averse to burying their differences in the face of a common enemy. Ahab had fought with a coalition of western kings, including Damascus, against the Assyrians at Qarqar in 853 B.C.E. (*ANET*, 278–79), and in 734 B.C.E. Israel and Damascus teamed up against Ahaz of Jerusalem (2 Kgs 16:5–9). So, while the visit is highly unusual, it need not have been impossible.

Exactly when the visit took place is impossible to say. In the order of the Elisha stories it comes soon after the death of Ahab and the rebellion of Naaman, that is, after 850 B.C.E., and before Elisha's visit to Damascus (2 Kgs 8:7–15), which must have taken place before 843 B.C.E. But the stories of Elisha are not necessarily in chronological order. Note that Gehazi reappears in chap. 8 with no hint of his leprosy or disfavor with Elisha.

Internally, the story is a fascinating example of Hebrew narrative art. Of all the stories associated with the prophet, and which obviously originated from the supporters of the prophet, this one has the most highly developed plot and contains the largest number of characters (Hobbs *2 Kings* WBC, 58–69). The movement from problem (Naaman's condition) to resolution of that problem (the healing) is not direct, but twists and turns down many paths until the denouement. The story also contains what can only be called a comedy of manners, almost bordering on a farce. It is the servants, the slave girl (2 Kgs 5:2–3) and the servants of Naaman (vv 13–14), who aid the process of healing, whereas the important characters, such as the kings, misunderstand the situation and almost start a war.

The nature of Naaman's leprosy is not exactly clear, although it can be assumed from v 27 that it was a disease of the skin. It was therefore not "Hansen's disease" (Cochrane 1963; Pilch 1985) (see also LEPROSY), and not something for which Naaman, unlike Uzziah (2 Kgs 15:5), was forced into quarantine.

In the present collection of Elisha stories, 2 Kings 5 provides a perfect counterpart to 2 Kings 1, and a near parallel to 2 Kings 8 In contrast to the Israelite king, Ahaziah, who sought healing from a foreign god, Baal-zebub of Ekron, a foreign dignitary and a foreign king seek help in their sickness from the God of Israel and his prophet. This contrast between the behavior of Israel and the behavior of foreign nations

becomes a common theme in the prophetic tradition (Jer 2:10–11). It is to this incident, among others, that Jesus referred in justification of his gentile mission (Luke 4:27).

T. R. HOBBS

NAAMATHITE [Heb *naʿămātî* (נַעֲמָתִי)]. Zophar, one of Job's three friends, is called a Naamathite, i.e., a man from Naamah (Job 2:11; 11:1; 20:9; 42:9). There were various places and tribes called Naamah; e.g., a town in Judah (Josh 15:41), a place in Nejd (central Arabia: *Naʿâmah;* Yaqut n.d., V: 293), and a Sabean clan (*nʿmt,* Harding 1971:594). Tentatively, one may favor a Sabean background for Zophar. In this case, the homelands of Job's friends encircle the whole Arabian peninsula: Bildad is from Shuah, i.e., the middle Euphrates, NE Arabia; Eliphaz the Temanite comes from either Edom or Tayma, NW Arabia in either case; and Zophar comes from S Arabia (Knauf 1983: 25–26).

The S Arabian origin of Zophar is also assumed by the LXX, which makes him a Minaean (by metathesis *mʿn-* instead of *nʿm-*). This, however, reflects the Minaeans' suzerainty over most of W Arabia, which they gained in ca. 400 B.C. See MEUNIM; MEINIM. Before 400 B.C., at the time of the book of Job's composition, the Sabeans controlled the N Arabian trading cities (cf. Job 6:19). See TEMA (PLACE).

ERNST AXEL KNAUF

NAARAH (PERSON) [Heb *naʿărâ* (נַעֲרָה)]. Identified as one of the wives of Ashhur (1 Chr 4:5–6).

H. C. LO

NAARAH (PLACE) [Heb *naʿărâ* (נַעֲרָה)]. Var. NAARAN. A city on the border of Ephraim and Manasseh near Jericho (Josh 16:7). It is probably the same site as Naaran (Heb *naʿărān;* see Boling and Wright *Joshua* AB, 402) in 1 Chr 7:28, though in this list it belongs to Ephraim, suggesting it is inside the border on Ephraim's side.

The site is listed immediately before Jericho, indicating proximity; note also Boling and Wright *Joshua* AB, 402, who take *nʿrth* (MT) as having a directive ending. Consequently, several identifications have been offered for Naarah. Eusebius' *Onomast.* 136.24 describes Noorath as a Jewish settlement 5 Roman miles from Jericho. This would be Roman Jericho near Wâdī el-Qilt. The site of el-Aujeh is ca. 5 miles NE of Jericho.

More commonly, Naarah is identified as the modern Tel el-Jisr (M.R. 190144) ca. 3.5 miles NW of Jericho. Jisr is just below the springs, Ain Nuʿeimeh and Ain Duyuq (the latter preserves the name of Duk, a citadel in the Hasmonean period). These springs qualify as the "waters of Jericho" E of the border referred to in Josh 16:1 (*GTTOT,* 163). Josephus (*Ant* 17.13.1 §340) says Archelaus (ethnarch of Judea, Samaria, and Idumea, 4 B.C.–6 A.D.) rebuilt Jericho. Then he "diverted half the water with which the village of Neara used to be watered" to irrigate the plantations for his new city of Archelais. This locates Neara (Naarah) near Jericho and associates it with a good water supply. The narrative is not decisive but it

appears that Naarah is nearer to Jericho than to Archelais. The identification with Tel el-Jisr is based on the discovery in 1918 of a synagogue floor from the 6th century A.D. Jewish villages are not common here, so this has been taken as support for the identification of Naarah with Jisr even though the distance is not quite exact. Avi-Yonah (*EAEHL* 3: 891) cites a midrash, *Lam. Rab.* 45a, which mentions the enmity between Naaran and neighboring Jericho. Jews were still mentioned in the 5th century A.D. (*Life* of Saint Chariton) and the 6th century (Palladius *h. Laus* 48).

However, Kallai (*HGB*) points out that such late "data" does not support earlier identifications, and there is no archaeological evidence for the earlier site. Glueck (1951) favored the first ruin N of Jericho in the Jordan valley proper, Kh. el-Ayash (because of its Iron I–II pottery) near Wâdī el-Auja. Most identify the nearest Roman ruin, Kh. el-Auja et-Tahta as Herodian Archelais. Kallai (*HGB,* 160, n. 131) notes confusion in the designation of sites, which complicates the identification. Kallai also notes an additional site NE of Kh. el-Mifgir (M.R. 193193). It has Iron Age finds and should be considered as a possible identification for Naarah. It is near enough to Tell el-Jisr to be related to it. Kallai (*HGB,* 165) concludes, however, that there is no conclusive identification.

HENRY O. THOMPSON

NAARAI (PERSON) [Heb *naʿăray* (נַעֲרַי)]. The son of Ezbai and one of David's mighty men (1 Chr 11:37). In the parallel passage at 2 Sam 23:35 he is called Paarai the Arbite, and it is not possible to decide definitely which is the more original reading. For a discussion of the variants, see EZBAI.

STEPHEN PISANO

NAATHUS (PERSON) [Gk *Naathos* (Ναάθος)]. One of the sons of Addi who returned with Ezra (1 Esdr 9:31). While in Codex Alexandrinus the name appears as *naathos,* it appears as *lathos* in Codex Vaticanus. He was one of the Israelites who had married foreign wives and had to put them away with their children in accordance with Ezra's reform. He is possibly the same person as Adna in the parallel list in Ezra 10:30

JIN HEE HAN

NABAL (PERSON) [Heb *nābāl* (נָבָל)]. A wealthy sheep-and-goat owner from Maon who was the husband of Abigail (1 Sam 25:2–3). When David, who was fleeing from Saul, heard that Nabal was shearing his sheep in Carmel, where he tended his flocks, he sent ten young men to inform Nabal that he did not harm any of his men while he was with them in the wilderness. David then asked for help from Nabal. Instead of reacting positively, Nabal behaved arrogantly and refused to give any provisions to David's men. At this, David called his men to arms against Nabal but was intercepted by Abigail, who sent gifts of food to David. She pleaded on her husband's behalf, reminding David that Nabal, as his name implied, was a fool (Heb *nābāl,* "foolish, senseless"; cf. Prov 17:7). She then predicted that the Lord would establish David's house and preserve his life from his enemies (1 Sam 25:28–31). Because of her intercession David decided not to kill Nabal. Abigail told Nabal of his reprieve the morning after a banquet when "Nabal's wine had left him," and at this "his heart died within him; he became a stone" (1 Sam 25:37). Ten days later he died and David took Abigail as his wife.

Despite the popular etymology of Nabal's name, it has been suggested that *nābāl* may originally have had another meaning (cf. Akk *niblu,* scion), since "no parents would name their child 'Fool' " although it may have been a nickname (*EDB,* 1589). Levenson (1978: 13–14) suggests that his real name may have been suppressed "in order to give him a name indicative of his character." Nabal is referred to as a Calebite (v 3) and we are told that he was from Maon and his business was in Carmel (v 2). According to the LXX he was a Carmelite (v 5) and Josephus (*Ant* 6.13.6) calls him a Ziphite. These variants reflect the settlement of the clan of Caleb in the fertile area of Judea S of Hebron where Maon, Ziph, and Carmel were located.

McCarter (*1 Samuel.*AB, 402) points out that "the story is designed to illustrate the excellent qualities of one of David's wives" and that by marrying Abigail, David extended his base of power into Hebron, where he would become king later on (2 Sam 2:1–4). Nabal's sudden death at the hand of the Lord (1 Sam 25:38) brought to fulfillment Abigail's prediction that the Lord would eliminate David's enemies (1 Sam 25:29).

NABARIAH (PERSON) [Gk *Nabarias* (Ναβαριας)]. One of the six men who stood on Ezra's left as he read aloud the law of Moses to the people in the open square before the east gate of the temple (1 Esdr 9:44). His name appears as Nabadias in the Vulgate. Ezra's public reading occurred on the day of the New Year, which was a day of convocation (Num 29:1–6). Josephus connects this event with the Feast of Tabernacles (*Ant* 11.5.5). The name does not appear in the parallel list in Neh 8:4

JIN HEE HAN

NABATEANS [Gk *Nabataioi* (Ναβαταιοι)]. People from the Arab kingdom of Nabatea, which played an important role in the history of Palestine as early as the 2d century B.C., supporting the Maccabeans Judas and Jonathan (1 Macc 5:24–28; 9:35). The Nabatean king Aretas IV is mentioned in 2 Cor 11:32–33 This kingdom, with its capital at Petra, flourished during the late Hellenistic and early Roman imperial periods. The Nabateans (or "Nabataeans") designated themselves as the *Nabaṭû* (*nbṭw*), and are known either as the *Nabataioi* or as "Arabs" by Greek writers. Their territory embraced parts of modern S Syria, Jordan, the Negeb of Israel, the Sinai, portions of the E deserts of Egypt, and the NW region of Saudi Arabia. Within this region, over 1,000 archaeological sites have been cataloged as being Nabatean or containing remains described as Nabatean (Wenning 1987; Gatier and Salles 1988). The expanding corpus of Nabatean Aramaic inscriptions has also reached over 4,000, although most of these are merely graffiti and the longer ones consist mainly of stereotyped funerary phrases. The reconstruction of their history is dependent on Greek, Latin, and Jewish classical sources (Starcky *DBSup* 7: 886–1017; Hammond 1973; and Bowersock 1983 are fundamental).

A. Origins

The prehistory of the Nabateans remains controversial. The relations of the Greco-Roman Nabateans with the earlier Ishmaelite tribe of NEBAIOTH mentioned in the OT has been rejected on linguistic grounds. The discovery of the spelling *Nabayât* in N Arabian texts agrees with that of the Hebrew Bible (*Nabayôt*) and the Assyrian records (*Nabaiati;* with variants), which seems to suggest that this early tribe was unrelated to the later Nabateans, whose name appears as *Nabaṭû* in their Aramaic inscriptions. The absence of the *yod* and presence of the emphatic *ṭet* (rather than *taw*) makes it difficult to assume any relationship between the two. Instead, scholars have sought for the origins of the Nabateans in S Arabia, where the root *nbṭ* appears in the SW Semitic dialects (*DBSup* 7: 900), but neither the Nabatean pantheon nor their cultural traits seem typical of this region. Moreover, the root *nbṭ* is known in NW Semitic much earlier than its appearance in S Arabia. Historical and geographical factors also suggest that the Nabateans arose within the Aramaic-speaking world of the so-called "Fertile Crescent." Within this context, it has been proposed they were a subtribe of Qedar (Knauf 1986) or from the sphere of the Persian Gulf (Milik 1982), possibly in the vicinity of the al-Hasa or Hofuf oasis near ancient Gerrha (Graf fc.).

Wherever their origins, by 312 B.C. the Nabateans were centered at Petra, where they defended themselves successfully from an attack by Antigonous the One-Eyed, a veteran commander from Alexander the Great's eastern campaigns (Hieronymus of Cardia *apud* Diodorus Siculus 19.95). This same source also indicates they had already established themselves as merchants engaged in the profitable aromatic trade from S Arabia. In 259 B.C., the Zenon papyri represented them as part of the ethnographic landscape of the Ḥaurān and N Transjordan (*Papiri greci e latini,* 406). By the 2d century B.C., they occupied the coastal areas of the Red Sea, where they harassed Ptolemaic merchant ships (Diodorus 3.43.5). With the eclipse of the Minaean kingdom in S Arabia by 100 B.C., formerly the main transporters

of aromatics to the Mediterranean (Strabo 16.4.18), the Nabateans emerged into prominence as the primary conveyors of frankincense and myrrh from S Arabia, no longer just middlemen. In the process, they developed numerous settlements along the caravan routes between the Ḥijāz and Damascus, and between Petra and Gaza.

B. History of the Monarchy

The relations of the Nabatean kings with the Hasmonean and Herodian dynasties of Judea (Kasher 1988) and with the Roman authorities (Bowersock 1983; Funke 1989) are the context in which the few historical facts regarding Nabatea emerge in the ancient sources. However, Nabatean Aramaic inscriptions also have helped establish a more secure chronology and sequence for the Nabatean monarchs.

Aretas I (fl. 170–160 B.C.) is the first known Nabatean monarch, the friend of the Maccabean rulers Judas and Jonathan (1 Macc 5:24–28; 15:22; cf. 2 Macc 12:10–12). He is probably the ruler "Aretas, King of the Nabateans" mentioned in the earliest known Nabatean inscription found at Elusa in the Negeb. See ARETAS. A king named Rabbel I has sometimes been assigned to the long interval between Aretas I and II, but the epigraphic evidence cited in support of this hypothesis is uncertain (*DBSup* 7: 905; cf. Bowersock 1983:71–73).

During the reign of Aretas II (fl. 100 B.C.), the Nabateans became embroiled with Alexander Jannaeus, the Hasmonean king who captured the port city of Gaza from the Arab monarch. Aretas also is probably the Arab king "Herotimus" who conducted campaigns into Egypt and Syria (Justin 39.5).

Obodas I (ca. 93–85 B.C.) was also in continual conflict with Alexander Jannaeus during his reign, finally defeating him about 90 B.C. (Jos. *Ant* 13.13.5 [375]) and seizing territories in Moab and Galaaditis from him (13.[382]). In 87 B.C., the Seleucid king Antiochus XII was defeated at Cana in S Syria and was killed by the forces of Obodas (*Ant* 13.15.1 [387–91]; *JW* 1.4.7 [99–102]). After Obodas' death, a royal cult developed around him, centered in the Negeb city that bears his name (Negev 1986).

Aretas III (85–62/1 B.C.) was king when the first great expansion of Nabatea took place. Known as the "philhellene" from his coins, Aretas expanded the borders of Nabatea into S Syria as far as Damascus and struggled with Alexander Jannaeus for control of Moab and Gilead in Transjordan. More intimate relations existed between Aretas and the Idumean ruler Antipater, the father of Herod the Great. In 63 B.C. they combined their forces in support of the Hasmonean claimant Hyrcanus before being repelled by the Roman general Pompey. In the aftermath, Nabatea became a client-state of Rome. There is no record of Aretas III after 62 B.C.

A king named Obodas II has been postulated as the successor of Aretas III based on several coins bearing his name and a portrait of an unusual nature. The coins enumerated for the first three years of his reign are placed between 62–60 B.C. (Meshorer 1975: 16–20). This putative predecessor to Malichus I is more problematic now with the publication of the Tell esh-Shuqafiya inscription dated to the 26th year of the reign of Malichus I and the 18th (not 14th) year of Cleopatra VII Philopater (Jones et al. 1988). This text, dated to 35/34 B.C., firmly places the accession year of Malichus I in the year 61/60 B.C., leaving a possible gap of only one year for the hypothesized Obodas, assuming that Aretas III died in 62 B.C., not in 61 B.C.

Malichus I (61–30 B.C.) ruled during the period of civil war and turmoil in Rome, producing shifts in his alliance and diplomatic maneuvering. In 55 B.C., Gabinius, the governor of Syria, attacked Nabatea and exacted tribute from Malichus. In 47 B.C. Malichus supplied military aid to Caesar at Alexandria, but later supported the Parthians who invaded Judea in 40 B.C., rather than Mark Antony, which placed him at odds with Herod the Great and Antony when they were expelled. Afterward, he was forced to pay a large indemnity to Rome (Dio Cassius 48.41.5), and Antony also exacted revenues and territories from Malichus at the request of his lover Queen Cleopatra of Egypt (49.32.5; *Ant* 15.4.1 [92–96]; *JW* 1.[360]). In 31 B.C., Herod attacked Nabatea and defeated the forces of Obodas near Philadelphia (modern Amman). The defeat of Antony and Cleopatra at Actium in the same year marked the transition to Augustan rule in the Near East. Nabatean favor with the new regime was gained by their destroying Cleopatra's ships at the Suez in her abortive attempt to escape from Rome (Plutarch *Ant.* 69.3; Dio 51.7.1).

Obodas III (30–9 B.C.) enjoyed more cordial relations with Rome and Judea. In 26 B.C. he supported the Roman campaign of Aelius Gallus into S Arabia with 1,000 Nabatean troops commanded by Syllaeus, his minister. Nabatean relations with Herod the Great also appear to have been friendly as a result of Syllaeus, who even attempted to marry Salome, Herod's sister, until Herod made the arrangement dependent on his conversion to Judaism (*Ant* 16.7.6 [225]). At Obodas' death, Syllaeus attempted to seize control of Nabatea, but was thwarted by Herod's advisor Nicolaus of Damascus. Augustine later had the ambitious Nabatean minister executed (Strabo 16.4.24).

The lengthy reign of Aretas IV (9 B.C.–40 A.D.) marks the apogee of the Nabatean kingdom. He appears to have been from a collateral branch of the royal house and assumed the throne without the approval of Augustus, embroiling himself in controversy with Rome during the early years of his reign. Afterward, however, Aretas, known as "the lover of his people," brought about the great expansion and development of the Nabatean realm, bringing him into contact and sometimes conflict with the Herodian dynasts and Rome. His rule marks the architectural development of the Nabatean capital at Petra, the establishment of the *entrepôt* at HEGRA in the Ḥijāz, and the flourishing of the cities along the Petra-Gaza road in the Negeb. The political, commercial, and cultural aspects of Nabatea reached a high point under his rule.

Literary references to the reign of Malichus II (A.D. 40–70) are minimal, which has led to it being characterized as one of political and economic decline. However, he appears to have been the Nabatean king mentioned in *Periplus Maris Erythraei* 19, implying that trade was still flowing from the Red Sea port of Leuke Kome to Petra at the time. Commercial and military activity also continued at Hegra in his reign, with its citizens occupying the distant N Arabian oasis of Dumah (Jauf) in the Wâdī Sirhan. In A.D. 67, he provided military assistance of 1,000 cavalry and 5,000 infantry to the Romans during the First Jewish Revolt, 66–73 (*JW* 3.4.2 [68]). A Nabatean inscription discovered at Rome in 1989 also appears to date to his reign.

Rabbel II (A.D. 70–106) came to the throne in his minority, with his mother Shuqailat ruling as regent until A.D. 75. His accession appears to have been marked by turmoil. A certain Damasi, the scion of an important Nabatean aristocratic family at Hegra, led a revolt against the royal house of Petra. Support for the uprising included tribes from the far N of the Nabatean realm as well as the citizens of his Hijazi home. The phrase "who brought life and deliverance to his people" that appears in Rabbel II's titulary from A.D. 75 and afterward probably refers to his participation in quelling the rebellion (Graf 1988: 180–81). During his reign, Bostra became the new center for the royal house or at least an alternative to the traditional capital at Petra. Inscriptions in the Negeb also indicate that there was an important development of the agricultural resources of the region during his reign. For his long rule, two queens are known, Gamilat (A.D. 76–102) and Hagru (A.D. 102–106), who are designated as Rabbel's "sisters," the daughters of Malichus II.

In A.D. 106, the governor of Syria, Cornelius Palma, annexed the Nabatean kingdom to Rome. The failure of Trajan to take the title "Arabicus" and the presence of the phrase *Arabia adquisita* on coins of his reign (rather than *Arabia capta*) is thought to suggest a peaceful annexation; other indications suggest that some force was required and some conflict took place (Bowersock 1983: 79–82; Graf 1989: 378–88). The transition to Roman rule is marked by the Babatha archive, discovered at En-gedi, containing documents that stretch from A.D. 93 to the outbreak of the Bar Kokhba revolt in A.D. 132 (Bowersock 1983: 76–79). There is no trace of the descendants of the Nabatean royal house in these documents or other sources after the annexation. The theory that a putative Malichus III ruled over a truncated portion of the kingdom no longer seems viable (Graf 1988: 176–77). The archive of Babatha does reveal that an Obodas was the crown prince of Nabatea in A.D. 98, but his fate after the annexation remains unknown. Unlike most client-kingdoms annexed by Rome, there is no evidence of any of the descendants of the Nabatean royal family serving in Roman imperial administration or obtaining senatorial status. Trajan did draft six auxiliary units—the *cohortes Ulpiae Petraorum*—from the Nabatean army, although they were assigned to adjacent provinces of the East and soon disappeared (Bowsher 1990). Although Bostra became the capital of the Roman province, Petra received the title of metropolis under Trajan and served

as the administrative center for the S region. The tomb of the Roman governor L. Aninius Sextius Florentinus (ca. A.D. 127) is even located at the old Nabatean capital city.

C. Language and Inscriptions

The fundamental study of the grammatical and epigraphical aspects of Nabatean Aramaic remains that of Cantineau (1930–32). The Aramaic language used by the Nabateans has its greatest affinity to that employed earlier as the lingua franca of the Achaemenid Persian period. However, this language was adopted; the native language of the Nabateans was an Arabic dialect akin to classical Arabic. This is reflected in the fact that their personal names are primarily Arabic (Healey 1989), typically spelled according to the orthographic practices of the earlier imperial Aramaic (Diem 1973). The peculiar paleography of the 4,000 Nabatean texts (*DBSup* 7: 924–37) also indicates that it was the basis for the development of the Arab script. Late texts also contain a more substantial Arabic vocabulary and syntactical element, forming the basis for the theory of the gradual Arabization of the language. However, the loanwords represent a rather small specialized vocabulary that is mostly funerary and political in nature (O'Connor 1986). The basic Arabic onomasticon of Nabatea and the presence of nearly classical Arabic in an Aramaic Nabatean text of ca. A.D. 100 (Negev 1986) argues against the progressive Arabization of the language.

The Nabateans were obviously polylingual, writing and speaking in other languages indigenous to the region, as is suggested by bilingual texts in the related but different proto-Arabic dialects of Thamudic and Safaitic. The later texts also mention tribes of the Nabatean realm and petitions to deities known from the Nabatean pantheon (Graf 1989: 358–75). Aramaic apparently was used by the Arab rulers primarily for formal and monumental purposes, but they normally spoke in Arabic. Any future history of Nabatea must now consider this larger corpus of non-Aramaic texts. In similar fashon, Nabatean material culture is diverse. Neither the distinctive "eggshell"-thin pottery finds nor Aramaic inscriptions are necessarily indicators of the presence or extent of the Nabatean realm (cf. Graf 1986). Instead, the fact that the Nabateans preserved the indigenous cults of the Edomites, Moabites, and Syrians, wrote in diverse scripts, and spoke several languages suggests a heterogeneous society in which the indigenous populations of Transjordan, N Arabia, and elsewhere were assimilated under Nabatean hegemony. The term "Nabateans" should then be understood as a vast political alliance of various peoples.

D. Nabatean Relations with Judaism and Christianity

Relations between the Nabatean monarchs and the Hasmonean and Herodian dynasties were generally intimate, but occasionally strained (Kasher 1988). The conflicts of Alexander Jannaeus with the Nabatean kings obviously were a result of their expansionist policies after the collapse of the Hellenistic kingdoms. The struggles with the Herodian dynasty were prompted by similar ambitions. Nevertheless, the relations with the Jews generally appears to have been cordial, as suggested by a Jewish presence at Hegra and by the archive of the Jewess Babatha, whose family had peacefully settled within Nabatean territory (Bowersock 1983: 76–78). In fact, the flourishing of Nabatea under Aretas IV offers an excellent parallel to that of Judea under Herod the Great, whose mother Cypros was herself of Nabatean descent. Both client-kingdoms assimilated substantial influences from Greco-Roman culture, as witnessed by the architecture and art of each realm. This "Hellenized" Nabatea even has been viewed as a model for the world of the NT, particularly the Galilean countryside of Jesus (Schwank 1983). However, such elements are more difficult to locate within Nabatean society at large, outside of the upper strata. The Nabatean hinterland is more a reflection of local and indigenous tradition than a synthesis of native and Greco-Roman culture. It is interesting that at the core of Nabatean art there existed a nonfigurative tradition that apparently produced two iconoclastic reactions against the adoption of Hellenistic figurative representations, one in the reign of Aretas IV, and the other after the annexation in A.D. 106, two periods when foreign influences on Nabatea were substantial (Patrich 1990).

The relations of Nabatea with the rise of Christianity are more obscure. The Church Fathers often associated the "magi" mentioned in the birth narrative of Jesus with Arabia, the land of "frankincense and myrrh" (*1 Clem.* 25.1–2; *Dial. Trypho* 78.1; Tertullian, *Adv. Marcion* 3.13). Consequently, some modern scholars have postulated that the magi were Nabateans from Petra (e.g., Charbel 1985), although most

have preferred Babylon or Persia for their home country. More certain is the fact that the daughter of Aretas IV—probably Shaʿudat (*DBSup* 7: 914)—was the wife that Herod Antipas divorced in order to marry Herodias, the wife of his half-brother Herod Philip. This action, condemned by John the Baptist (Matt 14:3–12 and par), led to military conflict between the royal households (*Ant* 18.5.1–3 [109–25]). The only clear allusion to the Nabateans in the NT is in the account of Paul's escape from the governor of Aretas IV and the city of Damascus (2 Cor 11:32–33). Paul's earlier sojourn in Arabia (Gal 1:17) is more difficult to locate, although the Decapolis region has been suggested.

No traces of Nabatean conversion to Christianity appear until the Byzantine period. The Christian scholar Origen of Alexandria participated in a synod at Bostra, an old Nabatean center and the capital of Arabia, whose bishop Beryllus was the subject of a doctrinal inquiry (Eusebius, *Hist. Eccl.* VI.33). Petra was also the home of several prominent Sophist philosophers and rhetoricians at the time (Bowersock 1983: 135). But it is not until the time of Constantine that there is any record of churches at Petra and in the desert hinterland of Arabia (Eus. *Comm. on Isaiah* 42.11 = PG 24.392). In A.D. 325, bishops from Bostra, Philadelphia (Amman), and Aela (ʿAqaba) participated in the Council of Nicea, but no bishops from Petra were present. Nevertheless, later in the 4th century, hellenized bishops were active at Petra (*DBSup* 7: 921–23), but by this time Nabatean presence is difficult to trace in Arabia. There are no dated Nabatean inscriptions from Petra or Bostra after the annexation of the kingdom in A.D. 106. Emigration by many Nabateans from the heartland of the province to the peripheral regions of the Sinai, the E deserts of Egypt, and the Arabian peninsula evidently took place. Inscriptions from the postannexation period are from the fringes of the province or border regions (Wenning 1987: 305). The last dated inscription in Nabatean Aramaic is from A.D. 356 in the Ḥijāz (Wenning 1987: 305).

DAVID F. GRAF

NABONIDUS (PERSON). The successor of Labasi-Marduk, who ruled as king of Babylon for seventeen years (556–539 B.C.), and who was on the throne when Cyrus took Babylon in 539 B.C. Nabonidus, the father of Belshazzar, appears only in the book of Daniel, but was confused with the infamous Babylonian king Nebuchadnezzar (Hartman, Di Lella *Daniel* AB, 50). He appears by his proper name (Aram *nbny;* see Milik 1956, 407–11) in an Aramaic document found three decades ago at Qumran, entitled "The Prayer of Nabonidus."

Berossus, in his *Babyloniaca,* notes that Nabonidus was not related to any of his predecessors, although in his own inscriptions he claims to have been a legitimate successor of Nebuchadnezzar (605–562 B.C.) and Neriglissar (560–556 B.C.). The problem of how and when he seized power remains a difficult one to resolve. Neriglissar died shortly after his Cilician campaign in early April of 556 B.C. Yet Berossus says his son and successor, Labasi-Marduk, ruled for another nine months before Nabonidus took control. Unfortunately, the dated cuneiform contract tablets support a reign of only about two months for Labasi-Marduk, after which cities from Nippur to Babylon and Sippar dated their documents to the accession year of Nabonidus. Berossus claims that Labasi-Marduk was put out of the way by a group of "friends" because of "the evil practices he manifested." It has been suggested that Nabonidus' own son, Belshazzar, may have had a hand in the murder of Labasi-Marduk, with the ultimate goal in mind of becoming king himself. Those who support this view point out that Belshazzar had business dealings with prominent banking families that were influential in Babylon during the reigns of Nebuchadnezzar and Neriglissar. Furthermore, he appears to have profited from the confiscation of property belonging to Neriglissar following Labasi-Marduk's death. Despite these circumstances, however, there is no direct evidence to support this conclusion.

Whatever the case, certain of Nabonidus' own inscriptions do support Berossus' contention that he "bore no relation to the royal race." He was, in all probability, of western Aramean origin and was well advanced in age when he ascended the throne. He claims to have been an only child who had no followers and no desire to become king. To a limited extent, this view is supported by the contents of the famous "biography" of his mother, Adad-guppi, which was found several decades ago in Harran (Gadd 1958). While this and other important inscriptions were erected there by Nabonidus himself after his return from Arabia, they nevertheless focus on his restoration of the Ehulhul temple of Sin and his apparent preoccupation with this god. Adad-guppi asserts that she was responsible for Nabonidus' becoming acquainted with Nabopolassar and Nebuchadnezzar and that his advancement was almost entirely due to her talents. Such a contention is probably not an overstatement since, unlike his predecessor, Neriglissar, Nabonidus apparently was not associated with prominent Babylonian business interests and held no position in any temple bureaucracy.

Unfortunately, the sections of the *Nabonidus Chronicle,* the *Verse Account* and other royal inscriptions (see Grayson TCS 5; *ANET*, 305–7; 308–15; 562–63) that we would normally expect to detail events of Nabonidus' early years survive only in fragmentary condition. Nevertheless, we do know that he carried out a campaign into Cilicia, visited a number of temples in Babylonia, and ordered the repair of fortifications surrounding a number of cities. Not only did he excavate the Egipar in Ur and rebuild the Ebabbara in Sippar, but he also restored or reinstated religious practices associated with Marduk in Sippar and Uruk. Nabonidus' royal inscriptions repeatedly emphasize his association with earlier times, despite his forceful seizure of power. He liked to emphasize his Assyrian and Chaldean "ancestry." He portrays his "antiquarian" and even Akkadian interests (as illustrated by his excavations at Agade, Uruk, and Ur) as evidence of respect for his predecessors and of his reign's continuity with the past (Reiner 1985: 1–16). Yet at the same time he engaged in an extensive reorganization of the Eanna temple bureaucracy in Uruk, where opposition to the succession of a number of monarchs apparently emerged at various times. It has been suggested that intervention in temple affairs in Uruk represents the possible influence of Babylonian business interests on the king himself, resulting in greater external control of property held by the Eanna.

However, such a conclusion ignores the fact that intervention or control of temple affairs in Babylonia was a fact of life as early as the time of Nebuchadnezzar and the relatively small number of Chaldean administrative documents published to date has distorted our picture of the relations between palace and temple in pre-Achaemenid times.

After returning from a second campaign into Cilicia in 553 B.C., Nabonidus left Babylon for Syria, Anti-lebanon and Arabia. Present evidence suggests that he was away from the capital city for at least ten years, during which time his son, Belshazzar, ruled the kingdom as co-regent. It is likely that Nabonidus was aware of the activities of Cyrus of Persia at the time of his departure, since otherwise it would be difficult to explain such a long absence. Nevertheless, the purpose of his visit to Arabia and the oasis of Tema remains unclear (Lambert 1972). While the evidence from Tema published to date is inconclusive, we do know from other sources that Nabonidus made it his principal residence, enlarged its size and fortifications, and stationed troops there. Records of the Assyrian kings from Tiglath-pileser III (745–727 B.C.) to Esarhaddon (681–669 B.C.) indicate both an awareness of the immense economic resources of northern Arabia and attempts to impose tribute in the form of spices and gold on a number of tribes located there. Although Nabonidus' ties to the worship of Sin in Harran probably were a source of friction between himself and the priesthood of Marduk and could have resulted in a lengthy absence from Babylon, it is likely that control of the trade routes from Arabia to Mesopotamia was more of a motivating factor in his decision to reside in Tema for at least a decade.

By the time he returned to Babylon in 543 B.C., Cyrus of Persia had already conquered the kingdoms of Media and Lydia, which left Babylonia open to invasion from virtually all sides. It appears that Belshazzar, Nabonidus' son and co-regent, remained in the vicinity of Sippar (at the command of a Babylonian army) when Cyrus campaigned in Anatolia. There is no evidence of engagements between Chaldean and Persian forces prior to 543 B.C. Unfortunately, the surviving cuneiform sources are either fragmentary or say nothing of substance about events that may have taken place between 543 and 540 B.C. In fact, Nabonidus' name is strangely missing from what does survive. Nevertheless, it appears now that Nabonidus rebuilt Sin's temple in Harran, the Ehulhul, sometime after his return from Tema, while apparently failing to give proper attention to such important centers as Uruk and its Eanna sanctuary, which he had reorganized in his earlier years (Tadmor 1965). The reasons for these activities may never be known, but the Persians insisted that Nabonidus tried to alter traditional religious beliefs by replacing Marduk with Sin, who now became the supreme God of Babylonia. Whatever the case, Cyrus' armies eventually took Babylon in 539 B.C. and Nabonidus' reign came to an end. Classical sources assert that Nabonidus died in another part of the Persian Empire some time after Babylon fell.

In the available cuneiform material from the Chaldean period (605–539 B.C.), Nabonidus is the subject of more varied characterizations than any other monarch. It must be remembered, of course, that he bore no relationship to the other members of the royal line, a fact that later Classical writers were quick to point out. Hence, he was certain to mean different things to different people; his memory would be preserved by various chroniclers or biographers for altogether dissimilar purposes. To some of his contemporaries, he was the symbol of the traditional devotion of a monarch to his god and to the upkeep of his important temples; to others, his reign stood out as an example never to be repeated again. Since such a variety of description exists in the documents, it is not surprising that a multiplicity of elements can be associated with each one, elements that not only enhance the picture of the individual being described but also preserve a cultural attitude toward such a person in accordance with his peculiar achievements.

In attempting an examination of what survives, it is important to make a distinction between sources written during the king's reign and those composed following the conquest of Babylon by Cyrus I of Persia. Fortunately for us, included in the former group is a rather detailed biographical sketch of Nabonidus' mother, Adad-guppi, which provides us both insights into the life of this rather extraordinary woman, and a picture of some of what took place during her son's reign. Clearly, Nabonidus was a devotee of the god Sin of Harran (presumably the city of his origin). A "local" account of his preoccupation with this god would, therefore, be expected to stress this essential fact. In this inscription we are told that "Nabonidus … performed indeed all the forgotten rites of Sin … He completed the

rebuilding of the temple Ehulhul, led Sin … in procession from Babylon … [and] installed [him] in gladness and happiness [in] Harran" (Gadd 1958). The same attitude is reflected in a stela of Nabonidus, also found at Harran, which credits the god Sin with establishing his rule over the Chaldean kingdom. "(This is) the great miracle of Sin," Nabonidus notes, "that none of the [other] gods and goddesses knew (how to achieve) … Sin, the lord of all the gods and goddesses residing in heaven … called me to kingship" (*ANET*, 562). Accounts like these could never appear in an inscription in Babylon, formulaic though they may be. Likewise, a description detailing the setting-up of an image of Sin could not be displayed in the capital city, where devotion to Marduk was fundamental to one's success as a monarch. Nevertheless, these descriptions indicate the existence (in Syria, at least) of a highly favorable attitude concerning Nabonidus, one which portrayed the monarch as a penitent, reverent ruler who had respect for the past. Such a highly positive portrait emphasizing the king's piety stands in dramatic contrast to the largely hostile opinions voiced by the Marduk priests in Babylon following Cyrus' conquest in 539 B.C.

Official chronicles detailing the year-by-year events of the reign of Nabonidus have been known for over a century. The relationship of these chronicles to the substance of the foregoing inscriptions will be dealt with later. However, due to their lack of detailed accounts of the king's accomplishments, it is necessary to examine what survives of the Persian point of view; here, naturally, Nabonidus is blamed not for being inattentive to the responsibility of caring for and restoring temples in various urban centers, but for neglecting Marduk and attempting the worship of a new god (i.e., Sin of Harran) whom no one had even seen in the land. Such an unusually critical attitude appears in the *Verse Account* of Nabonidus, an editorialized inscription composed to justify the end of the Chaldean dynasty and the rise of Persia to prominence. "[He had made the image of a deity] which nobody had (ever) seen in (this country)," the account reads, and "he called it by the name of Nanna." Furthermore, "he let everything go," entrusted his kingdom to his son, Belshazzar, and left Babylon for a ten-year sojourn in Tema. In a similar text, the *Cyrus Cylinder*, these "evil deeds" of the last Neo-Babylonian monarch are detailed, with emphasis being placed on the positive elements in the Achaemenid conquest of Babylonia. "The chief of the gods (Marduk) was enraged … The gods … left their sanctuaries, angered that Nabonidus had brought them to Babylon." According to this account, it was only when Marduk "took pity on the people of Sumer and Akkad who had become like corpses" and commanded Cyrus to conquer Babylonia that everything returned to normal.

In examining the Persian sources and considering the contents of Nabonidus' own inscriptions (both in Babylon and Harran), it is not hard to understand why the later Classical writers considered Nabonidus to be only a name in a list, while the Persians viewed him as an example of something never to be repeated again. The Achaemenids did not consider either the construction or restoration of sanctuaries that were characteristic of Nabonidus to be significant, since they were considered the traditional responsibilities of Babylonian monarchs. Instead, the activities of the king amounting to behavior that went contrary to the traditional will of a god had to be emphasized. Cyrus I, of course, had to cast his own image in a favorable light; having taken Babylon through force and betrayal, it was necessary to be propagandistic in justifying his success. Such, therefore, were the circumstances surrounding the creating (by the priest-scribes of Marduk in Babylon) of an account which focused on the outright heretical acts of the last king of the Chaldean period. Nebuchadnezzar's 43-year reign was one in which devotion to Marduk was accepted fact; Nabonidus, on the other hand, not only halted the New Year Festival but also forsook his kingdom for a sojourn in Tema. But the most hated act of all was his preoccupation with the god Sin of Harran, a preoccupation that, as we have just seen, formed an integral part of the king's own elaborate accounts. Thus, while Nabonidus (in one quarter of his kingdom, at least) may have been viewed as a monarch devoted to the worship of Sin and to the care and upkeep of his sanctuaries, to the Babylonians (under Persian rule) and the Jews of the postexilic period) Nabonidus was literally mad, and consequently did not deserve the devotion of his subjects. As a result, many of these hostile characterizations seen in the Achaemenid portrayals were to be incorporated into other sources where they were employed for different reasons.

As noted above, additional information regarding the reign of Nabonidus can be found in the chronicles and contracts datable to the king's reign. These sources differ markedly from those discussed above; the rather one-sided characterizations of the Persian and Syrian sources are totally absent, leaving only the rather dry, event-by-event record of happenings associated with each year. Both the *Nabonidus Chronicle* and the economic texts contain numerous references to the king's journey to Tema; both note the monarch's absence from Babylon during at least a ten-year period of time. What is germane to our investigation is the king's own justification for his deeds. The Persians associated his lengthy journey with a neglect of his kingly responsibilities; anyone devoted to Marduk would hardly have avoided being present during the celebration of the New Year Festival, since it would have necessitated cancellation of such an essential event. This fact was certainly worthy of note in the *Nabonidus Chronicle,* where we read that "[The king] did not come to Babylon [in the month of Nisan] … The [Akitu festival] did [not take place]."

What, then, was the king's justification for his own absence? The answer is to be found in his account displayed in Harran, namely, that he was commanded to do so by his god until a ten-year period of time elapsed, after which he could reenter his capital city. In the words of Nabonidus, he was merely carrying out the orders of Sin; he did only what he was instructed to do by divine command. Thus, while the Persians could exploit the absence of the king from Babylon to their propagandistic advantage, the inhabitants of Harran were witnessing the acts of a perfectly normal monarch doing only what a devout servant of Sin would be expected to do. The accounts of these deeds, then, naturally carry forth the positive tradition that emphasizes the king's piety.

While the name of Nabonidus does not occur anywhere in the OT or in the *Midr* Rab., his image is nevertheless preserved in the so-called *Prayer of Nabonidus.* This discovery allowed scholars to reassess information found in the book of Daniel in light of relevant materials found in other cultures. While the date of this manuscript is 1st century, B.C., it contains descriptions that are at least similar to the *Verse Account* quoted earlier. It suggests a continuity that spanned several centuries and kept alive a folkloric image that was to be characteristic of several of the Hebrew sources, especially the book of Daniel. It gives us "the words of the prayer that Nabonidus, king of Assyria and Babylon, the [great] king, prayed [when he was smitten] with a bad inflammation by the decree of the [Most High God] in [the city of] Tema. [With a bad inflammation] I was smitten for seven years and from men I was put away. But when I confessed my sins and my faults, He [God] allowed me [to have] a soothsayer. This was a Jewish [man of the exiles in Babylon]."

This astonishing little piece (which is, of course, Midrashic in genre), identifies Nabonidus and Daniel (he must be the Jewish man of the text) and mentions Babylon and Tema—all the aspects of a historical reconstruction. This seems to indicate that the OT in general, and the book of Daniel in particular, assume far greater importance (from both folkloric and historical points of view) than the somewhat imaginary reconstructions found in the *Midr. Rab.* If this is so, then, why is there no mention of Nabonidus in the Apocryphal and the pseudepigraphical works (written in Greek) or in the relevant chapters of the Hebrew OT? Probably because, while the fortification of Babylon was not significant to the Jews, conquest, on the other hand, was. The capture of the city of Jerusalem, the dismantling of the temple of Solomon, and the deportation of captives were acts never to be forgotten; the author of such horrible deeds had to be portrayed in such a way as to not only place emphasis on destruction and wickedness but also to show that the apparent power or might of the king of Babylon was merely the result of Yahweh's punishment of the Hebrews. The king was only a tool to be used in the teaching of a lesson. In this light, a characterization of Nebuchadnezzar had to be richly embellished with elements drawn from a number of sources, folkloric or otherwise. In the process, however, the Hebrew writer made use of historical materials associated with Nabonidus, not because he was "confused" but, rather, because of the fact that Nabonidus appeared in his own and later sources in such a way as to *fit* the situation involving Nebuchadnezzar that was being described. Certainly, the Achaemenids needed to (and did) emphasize Nabonidus' lack of attention to Marduk; when the Hebrews returned to Palestine, they carried with them their own hatred for Nebuchadnezzar plus the Persian hostility toward Nabonidus and, as a consequence, transformed them

both into a story of a conqueror-king who would forsake his god and require the worship of another by his subjects (Dan 3:1–3). The subsequent account of the madness of Nebuchadnezzar (Dan 4:33) reflects the contents of the *Lives of the Prophets* and the *Wisdom of Ahiqar,* and also echoes the Prayer of Nabonidus quoted earlier, where the king is said to have lived apart from men for seven years.

Herein lies, then, perhaps as fine an example as can be found of a melding of history and oral tradition. Nabonidus' own inscriptions inform us of his (at least) ten-year absence from Babylon. The *Verse Account,* although it clearly exaggerates this fact for political reasons, essentially preserves historical fact. The *Prayer of Nabonidus,* written in Aramaic, further emphasizes this point while adding a purely folkloric description to the picture. The traditional image of a prisoner is thus superimposed on both a historical figure and an essentially factual account of his activities. The Maccabean author(s) of the book of Daniel, four centuries removed from the Chaldean period, chose to substitute the name of Nebuchadnezzar for that of Nabonidus, not because of an ignorance of history or because the events of the exilic period were forgotten, but due to the fact that Nebuchadnezzar was the architect of the captivity and a didactic commentary could best realize its objectives through a portrayal of a king that combined history and fiction. To the Hebrew writer, it did not matter whether a characterization harmonized with historical accuracy; the events of the reign of Nabonidus could be combined with the destruction of the city of Jerusalem by Nebuchadnezzar in order to construct an image of a king that could be easily related to the rule of any monarch at any point in time. Thus, as with the Arabic sources, everyone who besieges Jerusalem is thought of as a Nebuchadnezzar; the characterization of the figure becomes propagandistic. Not limited by time or space, it becomes applicable to all periods of history (see Sack 1982).

While it is, therefore, interesting to note the many and varied characterizations of Nabonidus that have led to the publication of a number of interesting studies focusing individually on portions of the surviving sources, it is, nevertheless, unfortunate that their contents may result in our knowing relatively little of the true *historical* Nabonidus. The sources do provide us, however, with an understanding of the cultural attitudes of a number of ancient Near Eastern peoples toward a king who represented many things at different periods of time.

RONALD H. SACK

NABONIDUS, PRAYER OF (4QPrNab.) The *Prayer of Nabonidus* (4QPrNab) was published by J. T. Milik in 1956 from three fragments of the first column and a fragment of a later column of a single ms, which is dated paleographically to ca. 75–50 B.C.E. A further fragment of the first column was noted in an addendum. There have been many subsequent reconstructions, of which the most authoritative is that of F. M. Cross. Cross reconstructs the first column as follows:

(1) The words of the p[ra]yer which Nabonidus, king of [Ba]bylon, the great king pray[ed when he was stricken] (2) with an evil disease by the decree of G[o]d in Teman. [I Nabonidus] was stricken with [an evil disease] (3) for seven years, and from [that] (time) I was like [unto a beast and I prayed to the Most

High] (4) and, as for my sin, he forgave it. A diviner—who was a Jew o[f the Exiles—came to me and said:] (5) "Recount and record (these things) in order to give honor to the name of the G[od Most High." And thus I wrote: I] was stricken with an evil disease in Teman [by the decree of the Most High God, and, as for me,] (7) seven years I was praying [to] gods of silver and gold, [bronze, iron,] wood, stone (and) clay, because [I was of the opini]on that th[ey] were gods …

The fragment of a later column published by Milik refers to a dream which disturbed the speaker, and contains the words "how you are like …"

Discussion of this fragmentary work has been primarily concerned with its relation to chap. 4 of the book of Daniel. Scholars had long suspected that the story in Daniel had its origin in a tradition about Nabonidus rather than Nebuchadnezzar, specifically about his absence from Babylon when he sojourned for ten years in Tema in the Arabian desert. 4QPrNab shared with Daniel 4 the following features: (1) A Babylonian king speaks in the first person (the OG of Daniel provides a fuller parallel on this point); (2) he is punished by God for seven years (Dan 4:29; seven times); (3) a Jewish exile interprets the experience; and (4) the king has a disturbing dream. Further, the reference to gods of silver and gold, etc., is paralleled in Dan 5:23 Of course there are differences too: the name of the king, his location at Tema, the nature of his affliction (a skin disease in the *Prayer*; transformation into a beast in Daniel). Yet most scholars have taken 4QPrNab as striking confirmation of the theory which links Daniel 4 with traditions about Nabonidus. The relationship is enhanced by some reconstructions. Cross reconstructs line 3 as "I was like [unto a beast …]." R. Meyer thinks the dream in the *Prayer* concerned a great tree, as in Daniel. Milik suggested that the last fragment should be completed "how you are like Daniel" (taking the king as the speaker and an angel as the addressee). However plausible these suggestions may seem, it is well to bear in mind that they are not actually attested in the fragments. Our text retains an older form of the tradition than Daniel, insofar as the king is identified as Nabonidus and his sojourn at Tema is recollected. The relationship with Daniel 4 is not necessarily one of direct literary dependence; the two stories may be different elaborations of a common tradition.

The most disputed issue in the interpretation of the *Prayer* concerns line 4 (Cross: "and as for my sin, he forgave it"). Milik takes the verb *sûbq* as "he *granted* me a diviner," but he has to emend *lh* to *ly* to sustain this. Fitzmyer rendered the line: "an exorcist remitted my sins for Him," and took it as a rare Jewish instance of forgiveness through a human agent. The line is too ambiguous, however, to stand as evidence for an idea which is in dispute. It is simpler to take God as the subject.

4QPrNab is part of the corpus of Aramiac writings found at Qumran which has no specifically sectarian characteristics. It is probably older than the 2d century B.C.E. The reminiscence of Nabonidus' stay at Tema suggests that the underlying tradition goes back to the eastern diaspora, wherever this particular work may have been composed.

JOHN J. COLLINS

NABOPOLASSAR (PERSON). Founder and first king of the Neo-Babylonian dynasty of Mesopotamia. Later historians of the Hellenistic period state that he served under the Assyrian king Sin-šarra-iškun (Gk Sarakos) before leading a revolt that led to Babylonian independence from Assyria. These writers further describe him as a Chaldean ruler who made Babylon his capital. There is, unfortunately, no evidence proving that Nabopolassar (Akk *Nabû-apla-uṣur*) and his successors were Chaldeans—that is, representatives of an ethnic group distinct from the Arameans, who flourished in Babylonia at the same time. In his own inscriptions, he refers to himself as the "son of a nobody." It is possible, as Lambert has hinted, that his origins can be traced to the area around Uruk, since he appears in a Babylonian chronicle in a context that suggests he originally came from there. The exact date of Nabopolassar's accession to the throne in Babylonia cannot be determined with accuracy. Although he asserts that he officially began his

reign on August 26, 626 B.C., there is some evidence to suggest that Babylonian cities were already dating their contracts to the "accession year of Nabopolassar" at least two months earlier. Whatever the case, both the Babylonian sources and the Classical accounts are in agreement that Assyria was in turmoil during the latter years of Assurbanipal (669–626 B.C.). In fact, the surviving sources provide us with no evidence indicating either the extent of his sovereignty over Babylonia, the dates for the reign of his successor, Asûsûur-etil-ilani, or the identity of a certain Sin-sûarra-isûkun, known to the later Hellenistic writers as Sarakos. As a result, Nabopolassar, through an alliance with the Medes and their king, Cyaxeres, took advantage of the unsettled situation to liberate Babylonia from Assyrian control. The Medes and Babylonians united their forces and prepared to engage the Assyrians and their Egyptian allies. Pockets of resistance to the Chaldeans now developed in Babylonia (in Uruk and Nippur), complicating an already confused situation. Focusing on these important strongholds, the Assyrians tried to take advantage of an apparent disunity and held out for almost seven years. By 615 B.C., however, Nippur had fallen into Nabopolassar's hand, freeing him to press his advantage into Assyria in an attempt to take Asûsûur and Nineveh. The Medes and their Scythian allies actually took Asûsûur before the Chaldean host could arrive. There, Nabopolassar and Cyaxeres concluded a peace treaty, and two years later, in 612, Nineveh was taken. Although Cyaxeres now had an opportunity to share in the spoils of conquest, he instead retreated to his homeland.

In 609 B.C., the last king of the Assyrian empire, Aššur-uballit II, organized one final, futile attempt to recover lost territory. The northern city of Harran was to be the focal point of such efforts, but it, too, fell and the remaining troops retreated into Syria. The Egyptian monarch Necho II (610–595 B.C.) feared both the Medes and the Chaldeans as much as had his predecessors. Furthermore, the Egyptians had years before become friends of the Assyrians, and the collapse of their empire would disastrously upset the balance of power in Mesopotamia and Syria. To avoid this, in 608, the pharoah marched his armies across Palestine and reached the Euphrates river, where he spent the better part of three years fighting against Nabopolassar's forces in a lost cause. In 605 B.C., the end for the Assyrians finally came at Carchemish.

Nabopolassar's original claim, made twenty-five years earlier, to kingship over Babylonia, had been purely nominal. But by 605 B.C., the reverse was true. Nineveh lay in ruins; the Medes and Egyptians were no longer a threat to anyone, and southern Mesopotamian cities were dating their documents according to the appropriate year of Nabopolassar, "king of Babylon." Yet two decades of war meant that the king could hardly devote the time necessary to pressing affairs in the capital. Now, however, with the independent Chaldean dynasty firmly in control, the supremacy of Marduk of Babylon, the "king of the gods" of the Babylonian Creation Epic, must once again become accepted fact. His temple, the Esagila, and the ziggurat Etemenanki had to be restored, and a fortification wall had to be built. Nabopolassar's own contemporary cuneiform sources (as well as those of his son, Nebuchadnezzar) indicate that he died in his hour of triumph over Assyria, while all of this construction work still lay ahead. Nebuchadnezzar (605–562 B.C.) completed the work over the next several decades.

RONALD H. SACK

NABOTH (PERSON) [Heb *nābôt* (נָבוֹת)]. The victim of a judicial murder perpetrated by Jezebel in the name of her husband, King Ahab of Israel (1 Kings 21). According to this account, Ahab sought to acquire Naboth's ancestral property, a vineyard situated in Jezreel. Naboth refused Ahab's overtures out of religious attachment (cf. Lev 25:23; Zakovitch [1984] suggests that the phrase "inheritance of my fathers" is intended as a midrash on Naboth's own name: *Naḥălat ʾĀBŌT*). Ahab did not press the issue; but his Tyrian queen, Jezebel, engineered a conspiracy by which Naboth was accused of lèse-majesté

("Naboth cursed God and the king"), convicted on perjured testimony, and stoned to death. Ahab then took possession of the property he had coveted. See also the related discussion in AHAB (PERSON). The frequency with which Naboth's name appears throughout the story is striking. Even after his death, he is named six times in three verses (21:14–16); he haunts the scene like a ghost that will not be laid to rest. After Naboth's murder, Elijah the prophet was sent by Yahweh to condemn Ahab for what he had done. The king repented, and his punishment—violent death and the obliteration of his whole line—was deferred to the next generation.

Other references to Naboth's death, found in 1 Kgs 22:38 and 2 Kgs 9:21–26, raise questions about both the place and the time of the incident. 1 Kgs 22:38, read together with 21:19, suggests that Naboth's trial and execution took place in Samaria rather than Jezreel. This has led some scholars to locate the vineyard there as well. Timm (1982: 118–21) rehearses the arguments for both locations, and concludes that the evidence is insufficient to choose between the two. Miller (1967: 308–17) argues, on the basis of 2 Kgs 9:26, that the offending king was not Ahab but his son Joram. The reference in that verse seems to go back to a variant account of the Naboth incident, since the sons of Naboth spoken of in 2 Kgs 9:26 are not mentioned in 1 Kings 21 There seem, then, to have been several versions of the Naboth story in circulation, varying in details such as connections to Jezreel or to Samaria; identity of the royal oppressor; involvement of Naboth's sons; perhaps even the spelling of his name (the LXX reads *nabouthai*, which points to an underlying Heb *nbwty*). The story's enduring portrait of a small landowner helpless before the damnable acquisitiveness of the powerful may lie behind Micah's denunciation of similar rapacious land-grabbing in Judah a century or more later (Mic 2:1–2; cf. Mic 6:16).

JEROME T. WALSH

NABRATEIN (M.R. 197267). The Arabic name for Kefar Neburaya of the Palestinian Talmud, located 3 km N of Safed at 650 m above sea level. The site was known to the 19th-century explorers Renan, Wilson, Guérin, and Kitchener. It was systematically surveyed in 1905 by the German team of H. Kohl and C. Watzinger (1916). In 1960, N. Avigad deciphered a synagogue lintel inscription which the Germans had published. The lintel stone with wreath and menorah reads: " (According) to the number four hundred and ninety-four years after the destruction (of the temple), the house was built during the office of Hanina son of Lezer and Luliana son of Yudan" (Avigad 1960: 52). The date equivalent is 564 C.E. and corresponds to the final stratum of Byzantine occupation at the site.

Archaeological excavations were undertaken in 1980 and 1981, and the focal point of the expeditions was the synagogue that had previously been surveyed. In addition, soundings were conducted in the village in several areas to the W of the synagogue. The following occupational history of the site is reflected in the structural remains: Period I—Early Roman (ca. 1–135 C.E.); Period II—Middle Roman (Synagogue 1, ca. 135–250 C.E.); Period III—Late Roman (phase "a": Synagogue 2a, ca. 250–306 C.E.; phase "b": Synagogue 2b, ca. 306–363 C.E.); Gap (ca. 363–500/564 C.E.); and Period IV—Byzantine 2 to Early Arab (Synagogue 3, ca. 564–700 C.E.).

The Period IV occupation is defined by the material associated with the basilican synagogue of eight columns. The structure has a single entrance on the S facade facing toward Jerusalem and another on the N wall. Its external dimensions are 16.8 m by 11.6 m and it is one of the smaller Galilean synagogues. A porch probably was attached to the facade, three columns of which have been found. In all probability a wooden torah shrine stood somewhere on the S wall; its form and structure is suggested by a late Byzantine ceramic depiction found in a nearby room (Meyers, Strange, and Meyers 1982). The lintel inscription, dated to the year 564 C.E., is unique in Jewish epigraphy in taking 70 C.E., i.e., the destruction of the temple in Jerusalem, as its departure point. The stone itself apparently was reused from an earlier,

probably Period III, Roman building. What is astonishing about the reuse of such a lintel, however, is the long gap which separates the earlier occupation from the Byzantine resettlement.

The Period III synagogue is a much smaller basilica with only six colums, 13.85 m by 11.2 m Its grandest phase was the earlier one, ca. 250–306 C.E., when two bemas flanked the S facade wall. On the one in the SW stood a magnificent torah shrine which was destroyed in 306 (Meyers, Strange, and Meyers 1981a) and partially buried within the bema in the SW corner. Its roof tiles were deposited in a plastered burial pit under the floor of phase b alongside it. The pediment bears a striking similarity with other known depictions of arks in ancient Jewish art. Two rampant lions stand astride a peaked roof with a rosette and egg-and-dart carvings just beneath the roof. A scallop-shell carving occupies the center of the pediment and has a hole carved in it where the eternal light hung. This represents the oldest and most definitive proof for the existence of the ark of law. Standing on the raised platform where Scripture was stored and read, it provides eloquent testimony to the importance and authority of the Bible in everyday life. See SYNAGOGUE.

A still earlier, four-columned synagogue from Period II was found beneath this one. It was built on the broadhouse plan, 11.2 m by 9.35 m, with the S wall, the longer wall, occupying the focus of worship in this period as well. Synagogue 1 is the oldest broadhouse ever discovered anywhere and bears some similarities to nearby Khirbet Shemaʿ. The fact that an early 2d century synagogue of this type could be found in Galilee at the time when the synagogue in general was assuming its architectural form(s) is most significant. It clearly shows how a rigid typology did not influence the early designers of synagogues. Two bemas are located on the S wall in this phase and an imprint of a table or small platform was discovered in the center of the building, suggesting that at this early stage Scripture was read in the center and away from the wall of orientation.

Soundings in the village produced quantities of whole pottery and a number of destroyed architectural fragments with relief sculpture on them—lions, birds, sheep, etc.—that may have been buried in debris after the 306 or 363 earthquakes. Coins reveal a much wider trade network than was expected, especially with E Diaspora cities; but the expected Tyrian coins are still prevalent. A surprisingly well-preserved Period I occupation was excavated, indicating a fairly stable settlement at the end of the Second Temple period. Judging from the architecture and the many pithoi, or large storage jars, that were found in the village, Nabratein might well have been a manufacturing or distribution center for fine Galilean olive oil or wine. A striking feature of the site is the elegance and size of the synagogue relative to the smallness of the settlement itself. It is possible that Nabratein was a kind of way station for traders and travelers going to inland Galilean highland towns or was merely a comfortable stopping-off place for anyone heading S

Although Nabratein will perhaps always be associated with the wonderful ark pediment found there in 1981, it is also significant for the information it provides about Jewish life in Palestine after the Arab conquest of the 7th century. Also, that Jewish settlers chose to return to the site after a century and a half of abandonment reveals something very important about the Semitic attachment to sacred space. Nabratein was apparently an appropriate place to return to in the 6th century. Where the settlers came from, however, and why they chose to return at this time, are questions we still cannot answer.

NACON (PERSON) [Heb *nakōn* (נַכֹן)]. Var. CHIDON. Owner of a threshing floor mentioned in 2 Sam 6:6, which the "ark of God" passed on its way to Jerusalem when David was transporting it from the house of Abinadab at Kiriath-jearim.

There has not been agreement as to whether the Hebrew word, *nakōn,* should be taken to be a proper noun referring to a person. It has been argued that the term should be taken to be a participial adjective in the *niphal* of the root *kwn.* In this case the phrase *gōren nakōn* would mean a "certain/definite threshing floor" (Morgenstern 1918; Arnold 1917). This is not an acceptable rendering, since the noun *gōren* is feminine singular, while the form of *nakōn* as a participle is masculine singular (Carlson 1964).

Others have argued that *nakōn* should be taken as a noun derived from the verb *nkh*, which means "to strike" (Tur-Sinai 1951). Thus, the phrase would be translated "the threshing floor of destruction." In this way the name would function as a literary device foreshadowing the incident to follow in vv 6–7, in which Uzza touched the ark to keep it from falling and was "struck" down by Yahweh for such an offense as touching the ark. The suggestion appears to be one of great improbability.

Thus, the term ought to be accepted as a proper name referring to an individual. Similarly, the arguments for resolving the differences between the name found in 2 Samuel 6, Nacon, and that found in 1 Chronicles 13, Chidon, attempt to hypothesize and trace the grammatical development from one of these to the other (see Campbell 1975; Jackson 1962; and McCarter *2 Samuel*). In such there is no definitive answer.

RANDALL C. BAILEY

NADAB (PERSON) [Heb *nādāb* (נָדָב)]. Name of 5 persons in the Hebrew Bible and the Apocrypha.

The name is a shortened form of names such as Nedebiah (*nědabyāh*; 1 Chr 3:18), "YH (WH) is noble" (Noth *IPN*, 193; Fowler *TPNAH*, 161). Although the name Nadab has yet to appear in extrabiblical sources, longer theophoric names containing the element *ndb* are attested to in preexilic seals and ostraca (Tigay 1986: 57–58; Fowler *TPNAH*, 351).

1. Firstborn son of Aaron according to Num 3:2 (P). Other lists in P always name Nadab first, although they do not explicitly call him the *běkôr,* "firstborn." According to Exod 6:23, his mother was Elisheba, from a prominent family of Judah; this probably symbolizes the interconnection between Judah and the Aaronide priesthood (Galil 1985). Syntactically, Nadab is paired in genealogical lists with his brother Abihu; these lists typically read *nādāb wĕ›ăbîhû› ›el ‹āzār wĕ›îtāmār,* "Nadab and Abihu, Eleazar and Ithamar" (Exod 6:23; 28:1; Num 3:2; 26:60; 1 Chr 5:29 [—Eng 6:3]; 24:1). This pairing probably reflects awareness of the story of Lev 10:1, that Nadab and Abihu died when they offered an *›ēš zārâ,* "a foreign fire," to God (cf. Num 3:4; 26:61; 1 Chr 24:2). This is an extremely difficult story, whose meaning was debated already in antiquity (Shinan 1979). The words following "a foreign fire" in Lev 10:1, *›ăšer lō› siwṣ ›ōtām,* "which (God) had not commanded them," are lacking in the parallel in Num 3:4 and 26:61 and may be an early gloss that explicates "foreign" as "unauthorized" (Gradwohl 1963: 289). Perhaps the "proper" fire should have been taken from the altar (Lev 16:12; cf. Haran 1978:232), or Nadab and Abihu violated the prohibition of Exod 30:9, that no *qĕṭōret zārâ,* "foreign incense," may be offered (Levine 1989: 59). Alternatively, the ambiguity of the story may reflect the irrationality of God (Greenstein 1989: 56–64). Outside of P, the two brothers are mentioned together in Exod 24:1a and 9–11, in a source related to the revelation at Sinai that singles out Nadab and Abihu as ascending along with Moses and seventy

elders and seeing God. They are not given any genealogy there, but it is likely that the incident refers to the same two sons of Aaron. The source-critical analysis of this chapter is very difficult, and these verses cannot with certainty be assigned to J or E (Childs *Exodus* OTL, 500). This source, which elevates the status of Nadab and Abihu by including them among those allowed to ascend and see God (contrast Exod 24:2 or 24:12), is opposite in tone from P's conception, which singles them out for a cultic infraction. This P tradition is probably polemicizing against the inclusion of the clans of Nadab and Abihu among the Aaronide priests by claiming that they do not exist since their eponymous ancestors were killed for a severe cultic infraction, and they died childless (Num 3:4; cf. 1 Chr 24:2). Thus, the P texts and Exod 24:1a, 9–11 reflect the different status of the clans of Nadab and Abihu according to their respective authors (Noth *Leviticus* OTL, 84). For the possible interconnections between this Nadab and Nadab, king of Israel, see #2 below.

2. Second king of the N kingdom, son of Jeroboam (I), who ascended to the throne upon the death of his father (1 Kgs 14:20) in the late 10th century. According to the Bible, he began to reign in Asa's second year (1 Kgs 15:25) and was assassinated by Baasha son of Ahijan at Gibbethon, a Philistine city, while Nadab was leading a campaign against that city (15:27); Baasha then murdered the remaining descendants of Jeroboam (15:27–29). The predominant source of this material is generally seen as the Israelite annals, which have been inserted into a Dtr framework and set within a synchronic chronology. The dating of these annals and their historical accuracy have not been clarified; in any case, the Dtr editing of Nadab's reign is very extensive. No extrabiblical material sheds light on Nadab's reign. Perhaps the battle against the Philistines reflected an attempt to consolidate political power via a military victory (*IJH,* 398). A similar siege against Gibbethon is recounted in 16:15, during the reign of Zimri. Perhaps one of these references to a siege on Gibbethon is incorrect, the result of material which was transferred from one king to another to fill out that king's reign. Alternatively the attempt to conquer Gibbethon by the N kingdom reflected its desire to capture a strategic city, and to "drive a wedge between Judah and Philistia and thus to undermine the economic position of Judah (Yeivin 1960: 218).

There is a similarity between Nadab, son of Jeroboam, and Nadab, son of Aaron, especially in relationship to the account of the golden calf fashioned by Aaron (Exodus 32) and Jeroboam's golden calves (1 Kgs 12:28–33). The extensive similarities in terminology and motif suggest a literary relationship between these texts (Aberbach and Smolar 1967), but the direction of the borrowing and whether it is literary or historical is debated, especially due to the complexity of evaluating the sources and attitudes of these two pericopae (Debus 1967; Childs *Exodus* OTL, 558–62; Hahn 1981). Several possibilities present themselves: (1) Jeroboam patterned his actions after a historical occurrence associated with the desert tradition, the building of ancient golden calves. These calves did not yet have a negative valuation and Jeroboam wanted to give his cultic "innovations" greater prestige by associating them with Aaron's actions. (2) The Jeroboam material is patterned after a form of the golden calf pericope which evaluated that episode negatively; this reflects an attempt by a Judean, anti-Northern author to polemicize against Jeroboam by associating him with a great sin of the past. (3) The golden calf pericope is patterned after Jeroboam's actions; this would then reflect an anti-Aaronide polemic in one of the redactions of Exodus 32 If either 2 or 3 is correct, the similarity in name between Aaron's sons Nadab and Abihu, and Jeroboam's sons Nadab and Abijah (1 Kings 14), all of whom died prematurely (Aberbach and Smolar 1967:134) may be the result of literary patterning, in which case either Nadab 1 or Nadab 2 did not exist as a historical figure. Furthermore, it is possible that the different valuations in the Priestly and non-Priestly material of Nadab and Abihu, the sons of Aaron, may reflect different attitudes toward the legitimacy of Northern worship as established by Jeroboam.

3. A Judahite, the son of Shammai, father of Seled and Appaim (1 Chr 2:28, 30). This appears in a section of the genealogy dealing with the descendants of Jerahmeel (vv 25–33), who is listed as a great-grandson of Judah (vv 4), but who was originally a clan on Judah's S frontier (Williamson *Chronicles* NCBC, 54). The genealogy is from one of the Chronicler's sources (Williamson 1979). The Jerahmeel section is characterized by the formula *wayyāmot PN loʾ bānîm*, "he died childless" (vv 30, 32), which is not found elsewhere in Chronicles; this suggests a separate source for this section. A similar note is found

in 1 Chr 24:2 in relationship to Nadab and Abihu. The brother of this Jerahmeelite Nadab is named Abishur (v 28); it is unclear if the similarity in name to Nadab and Abihu/Abijah is coincidental or the result of patterning.

4. A son of Jeiel (1 Chr 9:36). In 8:30, his father is listed as Avi-Gibeon, but this is an error. See JEIEL #5. Nadab was an early Benjaminite, an ancestor of King Saul, and the settler of the Benjaminite city of Gibeon, according to 1 Chr 9:35 This genealogy is probably preexilic (Demsky 1971), though some see the tie of Benjamin to Gibeon rather than Gibeah and the double mention of Ner and Kish in vv 36 and 39 as an indication that this section of the genealogy is artificial (Malamat 1968: 171). On the repetition of the genealogy in 1 Chronicles 8 and 9, and its structure within the genealogies in Chronicles, see AHAZ.

5. Cousin of Ahikar (Tob 11:18). Tob 14:10 tells of the damnation of Nadab for betraying Ahikar and of the reward to Ahikar for acts of charity. The author of Tobit extensively used some form of the pseudepigraphic book, Ahikar (Simpson *APOT* 1: 189–92). Ahikar, however, does not mention Nadab; Nadab is probably a corruption of Ahikar's Nadin or Nadan, who in Ahikar is the protagonist's nephew rather than cousin (Lindenberger *OTP*, 458 n. 57 and 58). The original Nadin or Nadan is a shortened form of an Akkadian name from the root *nadānu (m),* "to give." The form of the name Nadab in Tobit is highly variable between different manuscript traditions (Lindenberger *OTP*, 488 n. 57), but most forms are attempts to bring the name "Nadin/Nadan" into line with better known names which are similar graphically or aurally, such as Nadab.

MARC Z. BRETTLER

NADABATH (PLACE) [Gk *Nadabath* (Ναδαβαθ)]. A village or place in the S Transjordan from which a Jambrite wedding party proceeded toward Madaba when it was ambushed by Jonathan and Simon Maccabeus ca. 160 B.C. (1 Macc 9:37). The attack on the procession was an act of revenge against the Jambrites of Madaba, who had captured and executed John Maccabeus as he was transporting the baggage of the Hasmonean forces for safekeeping with the Nabateans at a time when those forces had been forced by the Seleucid Bacchides to retreat.

Josephus provides a parallel account of the ambush, in which there are two key differences (*Ant* 13.1.4 §18–21). He names the home of the bride "Nabatha" and describes the bride's father as an "Arab noble," rather than as a "noble of Canaan," as the author of Maccabees describes him. Goldstein (*1 Maccabees* AB, 384–85) contends that the reason for the variant is that Josephus knew of no "Nadabath" and so substituted an Aramaic form of "Nebo," which was located in the mountainous country NW of Madaba. Goldstein sees the author of 1 Maccabees as using the toponym Nadabath in an effort to inflate the exploits of the Maccabees so that they might be compared with the military heroes of early Israelite history. The early Israelite leaders had been victorious over Arab peoples of the same region including the "Nodab" (Gk *Nadabaioi*; 1 Chr 5:19). Goldstein contends, on the basis of a simple misreading and an example of this mistake by Symmachus, that "Maon" was misread as "Canaan" and was preserved in the mss of Maccabees. Maon was the home of a longtime foe of ancient Israel and would thus have

contributed to the author's efforts in drawing a comparison with earlier history. As a result, Goldstein suggests "that Nadabath, a village named for the Nadabite tribe, lay in the territory of the town of Maon." Thus he locates the site at modern Main, 7 km SW of Madaba (M.R. 219120).

The mountainous terrain from which the ambush was launched and into which the survivors fled is of little use in indicating the specific route of the party and hence the direction of Nadabath from Madaba. This description generally excludes the location of the town from being to the E of Madaba. On the basis of Josephus' account, the site of Nadabath has been identified by some scholars as modern en-Neba, NW of Madaba. Another proposed location is Kh. et-Teim 2 km S of Madaba (M.R. 223123).

ROBERT W. SMITH

NAG HAMMADI (26°03´N; 32°15´E). A site near the Egyptian village of al-Qaṣr (ancient Chenoboskion) where, in late 1945, thirteen leather-bound books (codices) written in Coptic were found buried in a storage jar beneath a large boulder. The codices date to the 4th century and reflect a combination of gnostic and early Christian elements. This entry consists of two articles. The first summarizes the archaeological work that has been accomplished in the Nag Hammadi area, specifically the 4th-century monastic basilica discovered at nearby Faw Qibli. The second article surveys the codices themselves, especially their literary genres and religious character.

ARCHAEOLOGY

Located on the W bank of the Nile, some 500 km S of Cairo and at the beginning of the river's turn to the E, the city of Nag Hammadi has given its name to archaeological excavations on the Nile's opposite or N bank in the village of Faw Qibli. The surrounding area on both sides of the river is rich in archaeological remains and has attracted the interest of excavators from the very first years of European activity in Egypt.

As early as 1843 R. Lepsius inspected the rock tombs from the 6th Dyn. found in the cliff face of the Gebel el-Tarif, across the Nile from present-day Nag Hammadi, and named them after a nearby village, Chenoboskion (1904: 177–81). A few years prior to Lepsius' visit, the English explorer Wilkinson had noted both these tombs and the ancient city of Hou (Diospolis parva) located on the opposite bank just 5 km S of Nag Hammadi (1843: 116–17), where Lepsius also stopped on his return trip in 1845 (1904: 181). At the end of the century Petrie excavated the Roman temple in Hou as well as a predynastic cemetery on its outskirts (1901). Based on earlier topographical surveys (Amélineau 1893; Lefort 1939), Debono conducted a brief but unproductive excavation at the supposed site of a Pachomian monastery in the village of Faw Qibli during the early 1950s (1971). However, it was not until the emergence of the so-called Nag Hammadi Codices at the end of the 1940s that systematic exploration of the area's archaeological remains was seriously contemplated. James M. Robinson, organizer of the team which prepared the Nag Hammadi manuscripts for preservation and study, also focused attention on an archaeological survey in hopes of clarifying the original locus of the codices, which according to all accounts had been brought to light at the base of the Gebel el-Tarif. He first sought to engage the Palestinian archaeologist, Paul Lapp, to lead a team to the site of the manuscript discovery, but the Six-Day War of 1967, and then Lapp's unfortunate accidental death in 1970, interrupted these plans (Robinson 1965/66; Van Elderen and Robinson 1976). It was only in 1975 that protonmagnetometer tests of the manuscript find area along the edge of the cliffs at the Gebel el-Tarif, conducted by Philip Hammond, were undertaken; the results were inconclusive. Later that same year the first official season of the Nag Hammadi excavations was directed under the leadership of B. Van Elderen and T. S. Söderbergh.

Several of the 6th-Dyn. cliff tombs were cleared of rubbish and trenches were laid at the manuscript find site. Though evidence was recovered of late-antiquity usage of the tombs by Christian ascetics, no firm connection to the Nag Hammadi Codices could be established (Van Elderen and Robinson 1976; Habachi 1979).

The next year work was shifted to the site of the basilica from the Pachomian monastery at Pbow, now Faw Qibli, whose remains still littered the surface. This monastery had been the headquarters of the 4th-century network of Pachomian communities in the area and a relationship was suspected to exist between

the Nag Hammadi library and this monastic foundation (Robinson 1979). Under the direction of B. Van Elderen, and with the assistance of P. Grossmann, the expedition's main effort was expended on recovering the outside walls and the inner stylobates of the basilica (Van Elderen and Robinson 1976). During the third season, 1977–78, work was completed at the cliff tombs and efforts were redoubled to establish a ground plan of the Pachomian monastic basilica at Faw Qibli; it was now clear that an earlier building, also likely a church, underlay the basilica, and evidence was mounting that an even earlier structure had preceded both of them. Whether any of these constructions were contemporary with the founding of the Pachomian settlement in the second decade of the 4th century could not be confirmed (Van Elderen 1979; Grossmann 1979).

The expedition returned to the field in 1979–80 for a fourth season when work continued on the inner stylobates, the outer walls, and the apse of the basilica (Lease 1980). After an extended interlude, a small team under the direction of P. Grossmann resumed operations in 1986, seeking to clarify the relationship between the basilica and its immediate predecessor (Grossmann fc.). The sixth and last field work at Faw Qibli was completed in 1989, when a skeleton crew under the direction of P. Grossmann confirmed the ground plan of the intermediate church and recovered the ground plan of the site's earliest church building (Grossmann and Lease fc.). All three church structures made heavy use of reused limestone blocks for the foundations of the outside walls and corners, presumably robbed from previous Roman buildings in the immediate area. Burned brick, and in the case of the earliest structure also unfired mud brick, made up the bulk of the walls and stylobates. While the basilica (mid-5th century) was ca. 78 m in length and the intermediate church some 56 m long, the earliest church would have been only ca. 40 m Thus at each building phase the new church was approximately half again as long as its predecessor.

It would appear that the earliest church, as its two successors, was a five-aisle structure with a very narrow nave, thus indicating that this ground plan was the original form at Pbow. As in the later churches there were also rows of columns in the earliest church which ran along the E, and probably along the W sides. The stylobates for these column rows were of unusual construction, consisting of individual foundations for each column which were connected only at the surface level by marginal rows of bricks. Later the apse was added, and as a consequence, the intercolumnar spaces of the E stylobate closest to the apse were most likely closed. This would have created *pastophoria*-like rooms (Grossmann and Lease fc.).

A major difficulty still remaining is the dating of these churches. While the "great" basilica appears firmly dated to 459 (Van Lantschoot 1934:31, 45, 51), the intermediate church cannot be precisely dated. Very preliminary ceramic analyses all point to the late 4th or early 5th centuries, but the condition of the sherds is such that a more exact chronological determination may not be possible. This is even more the case for the earliest church. The extensive destruction associated with the erection of the later churches, and the thorough robbing of the site for building materials, have left few, if any, certain indicators for setting the time of its construction. Indeed, one must emphasize that a stratigraphical level associated directly with this earliest church has yet to be established. At the moment, however, one is at least partially justified—based primarily on the size and the primitive design and construction—in identifying the earliest church as possibly the initial one built for the monastic community at Pbow before Pachomius' death (ca. 330–346; Bacht 1983: 25, 30–31). Thus a preliminary construction history of the site at Pbow would posit a first church during Pachomius' lifetime (= phase I; ca. 330–346); a second, or intermediate and larger church (= phase II; post-370s and Athanasius' triumph or post-380s and the official appointment of Christianity as a state religion; or even later?); and a third, final church—the "great" basilica (= phase III; completed in 459).

Problematic, however, remain hints of structures on the site *prior* to the three churches. In the very first square of the Faw Qibli excavations (Square 1, 1976) and in the largest trench of the latest season (Square 39, 1989), fragments of four different walls emerged, only one of which can be explained in connection with one of the known buildings. The other three, running roughly E-W and very roughly parallel to each other, are neither related to each other nor to any of the three known structures (= churches). These wall fragments seem to lie below the level of the identified structures and thus point to an older, prior building

on the site. What this may have been—a small chapel, for example, associated with Pachomius' earliest organization there, or nonmonastic constructions from a previous occupation and use of the site by others—is not possible to determine at this time. Perhaps further excavation in the middle of the site, where these wall fragments appear best preserved, will shed some light on this matter.

As to the end of the site's formal monastic use, it should be noted that in all the seasons at Faw Qibli, beginning in 1976, neither traces of fire (almost always associated with violent destruction, whether by war or plunder) nor evidence of earthquake damage (in such a case, large stationary pieces, such as columns, all fall in the same direction, which is certainly not the case at Faw Qibli) could be established. In addition, no ceramic evidence, preliminary as it is, points much beyond the 5th–7th centuries. In the face of this archaeological evidence, or rather lack of evidence, it is difficult to maintain an end to the site through destruction by the Persians (620s) or at the time of the Moslem invasion (post-640s). Even harder to accept is the legendary ascription of the site's destruction to el-Hakim (1009), who, like Nero, had many acts charged to his account long after the fact because he was a convenient figure for explaining such violence (cf., Salih 1895:282). Closer to the truth may be simply that the Pachomian community at Pbow reached its zenith during the 5th century, began to decline throughout the 6th century, and was abandoned toward the end of the same century (Timm 1984: 949–50).

Before the Persian and Moslem invasions of the 7th century, therefore, the site probably already served as a source of building materials: note the extensive, systematic robber trenches and the almost complete lack of capitals on the site; the first two ever found there only came to light during the 1989 season and were heavily damaged. One did reveal clearly, however, its acanthus leaf and branch design. Since it can be dated firmly to the basilica of 459, it is an important piece of evidence in revising accepted notions of a so-called "Coptic art." Even at such a late date, this capital displays the usual design featured in the imperial Byzantine (= Constantinopolitan) catalog (Severin 1977).

In any case, the archaeological evidence not only says little or nothing about the supposed link between the Pachomian community at Pbow and the Nag Hammadi gnostic literature (as Robinson, *NHL*, 16; but see Robinson 1979: xix), but also indicates that the community, and thus the active use of the site, ended with the whimper of decline and abandonment and not the bang of violent destruction.

It would therefore appear appropriate to change the name and identification of these excavations from "Nag Hammadi," which inaccurately assumes such a connection, to the "Faw Qibli excavations," thus following the general and accepted Egyptian practice of naming an excavation after its *actual* site name.

GARY LEASE

NAG HAMMADI CODICES

A group of twelve papyrus codices, plus eight leaves from a thirteenth, dating from the 4th century C.E. and inscribed in Coptic. The manuscripts were discovered in 1945 in Upper Egypt, ca. 10 km outside of the modern city of Nag Hammadi. They are now housed in the Coptic Museum in Old Cairo. The standard citation for each of the manuscripts is NHC followed by the number of the tractate in the codex, e.g., *Trim.Prot.* (NHC XIII, *1*). An alternative citation is also in use: CG (Cairensis Gnosticus). NHC I is also called the Jung Codex. Most (but not all) of the 52 tractates in the Nag Hammadi collection are gnostic in character. Hence, the American edition of these and related Coptic texts is called the Coptic Gnostic Library.

A. Discovery and Acquisition of the Nag Hammadi Codices

In December 1945, two brothers, Muḥammad ʿAlī and Abū al Majd, of the al-Sammān clan from the village of al-Qaṣr (ancient Chenoboskion), together with six other fellahin, were digging for *sabakh* (a nitrate soil used for fertilizer) at the base of the Jabal al-Ṭarīf, 9 km W of the ruins of the Basilica of St. Pachomius at Faw Qibli (ancient Pabau). Abū al Majd unearthed a storage jar beneath a large boulder; Muḥammad ʿAlī broke the jar, which contained thirteen leather-bound books (codices). An attempt was made on the spot to divide the find into eight equal lots, a process that involved dismembering some of the codices, but the other fellahin renounced any share in the find, and Muḥammad ʿAlī bundled the codices together and brought them home. There his mother, Umm Aḥmad, burned some of the papyrus leaves as fuel for her bread oven. The story of the find and the subsequent fate of the codices has been pieced together by J. M. Robinson (Robinson 1984: 3–31).

The bulk of Codex I was eventually acquired by a Belgian antiquities dealer in Cairo, Albert Eid, who sent it (except for the cover) out of Egypt. It was eventually purchased for the Jung Institute in 1952, and was officially presented by the director of the institute, Dr. C. A. Meier, to C. G. Jung in Zürich in 1953 and named the Jung Codex. (C. G. Jung had a lifelong interest in Gnosticism and alchemy.) Jung's heirs returned the codex to Egypt, in accordance with an agreement with the Egyptian government. As each portion was published, it was sent to the Coptic Museum; the last installment was received in 1975. The leather cover of Codex I, which had remained in Egypt, was sold to a collector and eventually acquired in 1973 by the Institute for Antiquity and Christianity of the Claremont Graduate School (Claremont, California).

Codex III was acquired by the Antiquities Service for the Coptic Museum in 1946. The director of the museum, Togo Mina, showed it to a young French scholar, Jean Doresse, in 1947, who initiated plans for its publication. However, the political coup d'état in Egypt in 1952 interrupted these plans.

Codices II, IV–XIII, and part of Codex I were eventually acquired by Phocion J. Tano, a Cairo antiquities dealer. Tano brought them to the attention of Étienne Drioton, then director general of the Antiquities Service, and Jean Doresse in 1948. After a period of fruitless negotiations for purchase of the codices, the new government in Egypt headed by Nasser declared them national property in 1952.

One intriguing problem associated with the story of the discovery of the Nag Hammadi Codices is the question of precisely how many codices there are. The discoverer, Muḥammad ʿAlī, consistently maintains that thirteen bound books were found in the jar. But what is now referred to as NHC XIII consists of eight leaves of papyrus that had been ripped out of a codex in antiquity and stuffed into the cover of Codex VI (Robinson 1972). Our Codex XIII, therefore, cannot count as one of the thirteen separate books found in 1945, for it was then part of Codex VI. Was a complete codex destroyed in Umm Aḥmad's oven, together with leaves of papyrus from other codices now left incomplete? Or will it, or parts of it, eventually turn up on the market (Robinson 1984: 15–24)?

B. Description of the Nag Hammadi Codices

The present numeration of the Nag Hammadi Codices was devised by Martin Krause for the Coptic Museum (see Krause 1962), and has superseded all other numeration systems previously in use. (For a table of correspondences, see Robinson 1984:31).

All of the Nag Hammadi Codices, with the exception of Codex I (and possibly Codices XII and XIII) are single quire codices. (A "quire" of the kind typically found in 4th-century codices, such as those from Nag Hammadi, consists of a stack of sheets of papyrus, folded once in the center.) Codex I was made up of three quires. Not enough is left of Codices XII and XIII to determine how many quires each comprised.

Of the leather (sheepskin and goatskin) covers in which Codices I–XII were bound, all but that of Codex XII are extant. The leather covers of Codices I, IV–IX, and XI contained "cartonnage." (Cartonnage consists of scraps of discarded papyrus glued into leather bookbindings in order to stiffen them. On the cartonnage from the Nag Hammadi Codices, see below.)

In the table that follows, the basic information is provided for each of the codices regarding: (a) maximum height of the folios (leaves) in cm, (b) maximum width, (c) original number of folios, (d) original number of inscribed pages, (e) original number of uninscribed pages, (f) number of inscribed pages extant, and (g) number of uninscribed pages extant.

	(a)	(b)	(c)	(d)	(e)	(f)	(g)
NHC I:	30.0	14.1	72	140	4	140	0
NHC II:	28.4	15.8	75	145	5	145	3
NHC III:	25.8	16.1	78	147	9	135	3
NHC IV:	23.8	13.4	46	81	11	81	11
NHC V:	24.3	13.3	47	84	10	84	10
NHC VI:	27.9	14.9	40	78	2	78	2
NHC VII:	29.2	17.5	65	127	3	127	3
NHC VIII:	24.2	14.7	72	136	8	132	6
NHC IX:	26.3	15.0	38	75 (76?)	1?	72	0
NHC X:	26.0	22.2	36+	68+	4	54	2
NHC XI:	28.2	14.3	37	72	2	72	2
NHC XII:	?	?	38+	71+	?	20	0
NHC XIII:	27.2	13.9	?	?	?	16	0

A page is represented in this table as extant even if only a single small fragment remains. The figures given, therefore, do not provide an accurate picture of how much material is lost from each codex. Those codices that have sustained the greatest loss are IV, V, VIII, IX, X, XI, and XII. The best preserved is

Codex VII. As stated earlier, Codex XIII consists of eight folios of a papyrus codex that had been tucked into the front of the leather cover of Codex VI in antiquity.

The Nag Hammadi Codices are now housed in the manuscript wing of the library of the Coptic Museum in Old Cairo, kept in two storage cabinets designed and built for them. The papyri are conserved in Plexiglas panes, with conjugate leaves rejoined to form the original sheets that were stacked and folded in two to make up the quires. The final conservation was carried out in 1974–75 as a special project directed by J. M. Robinson and funded by the Smithsonian Institution and the American Research Center in Egypt.

Up to fourteen different scribal hands may be represented in the Nag Hammadi Codices. Codices I, II, and XI were each inscribed by two different scribes. There is also some overlapping of scribal hands from one codex to another: the second scribe of Codex I was also the first scribe of Codex XI, and the second scribe of Codex XI was also the scribe of Codex VII. The main scribe of Codex II may also have inscribed Codex XIII. The similarities among the hands of codices IV, V, VI, VIII, and IX presumably reflect the influence of a single scribal school (Emmel 1978: 27–28).

Two main Coptic dialects are represented in the Nag Hammadi Codices: Sahidic (S), with various deviations from the classical form of the language (II–IX; XI, *3–4*; XII–XIII); and Lycopolitan (L, also called Subakhmimic, A^2), with considerable variation from tractate to tractate (I, X, and XI, *1–2*).

The cartonnage taken from the leather covers of Codices I, IV–IX, and XI, consists of documentary Greek papyri of the 3d and 4th centuries (the latest date, attested in the cartonnage of Codex VII, is 348 C.E.), as well as documentary and literary Coptic papyri of the same period. The Coptic papyri include fragments of a Sahidic biblical codex (Genesis 32:5–21 and 42:27–30, 35–38, from the cartonnage of Codex VII), probably of the late 3d or early 4th centuries C.E. (Barns, Browne, and Shelton 1981).

C. Publication of the Nag Hammadi Codices

With the publication in 1977 of the facsimile edition of Codices IX and X (Robinson et al. 1977b) and a one-volume English translation of all of the tractates (Robinson and Meyer 1977; cf. Robinson and Smith 1988), the entire Nag Hammadi collection finally became available in some form to the public, 32 years after its discovery. Until that time several tractates, including two entire codices, remained unpublished.

Codex III was the first of the Nag Hammadi Codices to come into the possession of the Coptic Museum. While the initial plans for publication were cut short by the political events in Egypt in 1952, the text of tractates *1, 3*, and *4* became largely accessible in the *apparatus criticus* to Walter Till's publication of the Berlin Codex (BG, Till 1955). Jean Doresse eventually published III, *2* several years later (Doresse 1966, 1968).

In 1952 C. A. Meier, director of the Jung Institute, invited a team of European scholars to edit Codex I, and the *Gospel of Truth* (excluding pp. 33–36, part of the material from Codex I that had not been taken out of Egypt) was published in 1956 (Malinine et al. 1956). The rest of Codex I was published by this team over the next nineteen years (Malinine et al. 1961; 1963; 1968; Kasser et al. 1973; 1975).

In 1952 some photographs were made by the Egyptian authorities for a facsimile edition of the Nag Hammadi mss that had been sequestered by the government. A first volume was published in 1956 (Labib 1956), containing photos of Codex I, pp. 33–36; 49–50; 59–82; 87–90; and Codex II, pp. 1–110. This volume became the basis for several subsequent publications of texts and translations. That same year the International Committee for Coptic Gnostic Papyri was formed, and further publication plans were laid. Three years later the *Gospel of Thomas* was published as a result of this effort (Guillaumont et al. 1959). A French translation of the *Gospel of Thomas* was included by Jean Doresse as an appendix to a book on the Nag Hammadi Codices published by him (Doresse 1958; 1959; cf. 1960), a work which became the chief source of information on the Nag Hammadi collection for years thereafter.

Martin Krause and Alexander Böhlig worked in the Coptic Museum during the next few years, and several texts were published as a result (Krause and Labib 1962; 1971; Böhlig and Labib 1962; 1963). Meanwhile, in 1961 UNESCO became involved in the plans for publishing a complete facsimile edition; as a result over a thousand photographs were made and shipped to Paris between 1963 and 1966. The International Colloquium on the Origins of Gnosticism held at Messina in 1966 urged the completion of this project (Bianchi 1967: xvi), and J. M. Robinson was appointed secretary of an ad hoc committee of

the colloquium. Robinson entered into protracted contact with UNESCO concerning the project. In view of the fact that UNESCO envisioned only a facsimile edition, Robinson organized a team of scholars working under the auspices of the new Institute for Antiquity and Christianity of the Claremont Graduate School to prepare a multivolume English-language edition of the Nag Hammadi Codices to be entitled "The Coptic Gnostic Library."

In 1970 Gamal Mokhtar, President of the Egyptian Antiquities Organization, in consultation with UNESCO, appointed a new international committee for the Nag Hammadi Codices. The committee met in Cairo and drew up the guidelines for the facsimile edition, entrusting to a technical subcommittee (Søren Giversen, Rodolphe Kasser, Martin Krause, and J. M. Robinson [Secretary]) the task of identifying and assembling fragments of papyri for definitive photography. Members of the team of scholars working on the English-language edition participated in work sessions of the technical subcommittee in the Coptic Museum. The first volumes of the facsimile edition were published in 1972 (Codices VI and VII; Robinson et al. 1972a; 1972b). The project was completed in 1984 with the publication of *addenda et corrigenda* as part of an introduction to the facsimile edition (Robinson 1984).

The first volume of the Coptic Gnostic Library was published in 1975, a critical edition of NHC III, *2* and IV, *2* (Böhlig, Wisse and Labib 1975), and the last of the volumes are yet to appear.

While the Coptic Gnostic Library Project of the Institute for Antiquity and Christianity at Claremont was producing tentative transcriptions and translations, a group of doctorands studying Coptic with Hans-Martin Schenke at Humboldt-Universität in East Berlin began to focus their work in a concerted manner on the Nag Hammadi texts. This was the genesis of the Berliner Arbeitskreis für koptisch-gnostische Schriften, directed by Schenke, and over the years a good deal of cooperation has existed between the German and the American groups. The German project involves three phases: (1) publication of translations of selected texts in the *Theologische Literaturzeitung* (the first was by Schenke in 1973); (2) monographs and dissertations on the Nag Hammadi texts (the first was by Beltz in 1970; cf. also Tröger 1973, an important volume of essays); and (3) a projected German translation of the complete collection of texts to be published as volumes 2 and 3 of *Koptisch-Gnostische Schriften* in the series, "Die Griechischen Christlichen Schriftsteller der ersten Jahrhunderte" (Schenke 1978).

In 1974 the Social Sciences and Humanities Research Council of Canada provided an initial grant to a group of scholars associated with the University of Laval in Québec for the production of a complete French-language critical edition of the Nag Hammadi texts, entitled "Bibliothèque copte de Nag Hammadi" (see Ménard 1973). The first volume was published four years later (Ménard 1977), and several have been published since.

Thus, over the years since the first meager publication efforts of the 1950s, a growing number of texts, translations, and studies has accumulated. An enormous bibliography now exists, and no end is in sight (Scholer 1971a, b).

D. Contents of the Nag Hammadi Codices

The following table lists for each tractate the title and abbreviation commonly used in English-language scholarship and the page and line of the ms where it begins and ends (or, in the case of lost material, where it began or ended so far as this can be determined). Pagination is uncertain in the case of Codices X (after p. 10), XII, and XIII (indicated below with asterisks). XII, *3* consists of miscellaneous fragments, and is not an identifiable tractate.

I,*1*:	A,1–B,8. + B,9–10	*The prayer of the Apostle Paul (colophon)*	*Pr. Paul*
I,*2*:	1,1–16,30.	*The Apocryphon of James*	*Ap. Jas.*
I,*3*:	16,31–43,24.	*The Gospel of Truth*	*Gos. Truth*
I,*4*:	43,25–50,18.	*The Treatise on the Resurrection*	*Treat. Res.*
I,*5*:	51,1–138,27.	*The Tripartite Tractate*	*Tri. Trac.*
II,*1*:	1,1–32,9.	*The Apocryphon of John*	*Ap. John*
II,*2*:	32,10–51,28.	*The Gospel of Thomas*	*Gos. Thom.*

XIII,*1*: 35*,1–50*,24.	*Trimorphic Protennoia*	*Trim. Prot.*
XIII,*2*: 50*,25 +.	*On the Origin of the World*	*Orig. World*

Note: Where original titles are lacking in the mss, modern scholars have assigned titles. The titles so assigned are: *Ap. Jas.*; Gos. Truth; Tri. Trac.; Orig. World; Disc. 8–9; Pr. Thanks.; Norea; Testim. Truth; and *Val. Exp.* Of these, *Gos. Truth* is so called from the *incipit*, which served as a title in antiquity (cf. Iren. *Adv. Haer.* 3.11.9). The titles of *Plato Rep.*; *Asclepius*; and *Sent. Sextus*, while not occurring in the Nag Hammadi mss, are also elsewhere attested.

E. Provenience of the Manuscripts

Three major factors point to a monastic provenience for the Nag Hammadi Codices. First, the site of the discovery: The jar containing the codices had been buried midway up the talus of broken rock at the foot of the Jabal al Ṭārif. There is evidence that the talus was used for burials in the early Byzantine period. Over 150 caves are located in the cliff; the one nearest the site of the discovery (T8) has on one of its walls a Coptic inscription, in red paint, of the opening lines of several OT psalms (Robinson 1979: 213). This area had obviously been frequented by Christians. Did a gnostic community use the cliff area as a retreat, and then bury their library before disappearing without a trace? A more likely possibility is that Christian monks, from one or more of the monasteries nearby in the valley below, used a monastic burial site as a place in which to bury a cache of books, presumably because the content of those books had come under suspicion in the monastic communities (Wisse 1978: 436–37).

Second, the cartonnage found in the leather covers points to a monastic context for the manufacture of the codices. This is at least true in the case of the cartonnage found in Codex VII, which contains fragments of a biblical codex and a homily, as well as private letters indicating a monastic provenience, including one from a "Pachomius" to a "Paphnoute." (For a balanced discussion see Veilleux 1986:278–83.) If, as seems likely, the books were manufactured in one or more of the Pachomian monasteries in the vicinity of the find (Sheneset-Chenoboskion, Pabau, or Tabennesi), were they also inscribed by Pachomian monks, or were they manufactured and sold uninscribed to unknown purchasers? Our first point indicates a likelihood that the scribes of the codices were members of one or more of the monastic communities in the area.

Third, the colophons and scribal notes in some of the manuscripts (esp. I, II, and VII) containing pious Christian prayers and the like, are indications of a monastic provenience for the actual copying of the manuscripts. The persons who copied the various texts into the codices evidently treated them as edifying religious literature. A purge of heretical books was carried out in the Pachomian monasteries by Pachomius' successor, Theodore, in response to Athanasius' paschal letter of 367 C.E. Such a purge could have resulted in the burial of the books on the part of recalcitrant monks who wished to preserve them from destruction (Wisse 1978: 435–37). Thus the Nag Hammadi Codices were actually not in use for very long. They (or at least Codex VII) must have been manufactured after 348 C.E. and were presumably buried in the late 4th or early 5th century. The bowl used as a lid to close the mouth of the jar in which the codices were found is still extant; it is red slipware of the 4th or 5th century (Robinson 1979: 213).

F. Classification of the Tractates

While the texts in the Nag Hammadi collection number 52 in all (though the fragments constituting XII, *3* may be from more than a single tractate), five tractates are represented by more than a single copy: *Gos. Truth* (I, *3*; XII, *2*), *Ap. John* (II, *1*; III, *1*; IV, *1*), *Orig. World* (II, *5*; XIII, *2*); *Gos. Eg.* (III, *2*; IV, *2*); and

Eugnostos (III, *3*; V, *1*). There are, therefore, 46 different tractates in the Nag Hammadi collection (counting XII, *3* as one). Of the four tractates in the closely related Berlin Codex, two are also represented in the Nag Hammadi collection: *Ap. John* (BG, *2*) and *Soph. Jes. Chr.* (BG, *3*). All of the texts in question are Coptic translations of Greek originals. Three of them (*Plato Rep.*, *Sent. Sextus*, and *Pr. Thanks.*) were already known in their original Greek versions before the Nag Hammadi discovery; one (*Asclepius*) was known in a Latin version. Since the discovery, previously extant Greek fragments have been identified as representing two of the tractates from Nag Hammadi (*Gos. Thom.* and *Soph. Jes. Chr.*). An extensive parallel to part of *Ap. John* is found in Irenaeus, *Adv. Haer.* I.29, but it is not certain that Irenaeus knew *Ap. John* as such. Even so, *Ap. John* was evidently considered to be a very important writing, given its multiple attestation, and is, in fact, a key text for the scholarly study of gnostic mythology.

In what follows, the Nag Hammadi tractates will be classified, first according to literary genre and then according to religious character, especially their relation to Gnosticism. The reader is also referred to the respective articles on the individual tractates treated here.

1. Literary Genres. The Nag Hammadi collection features a number of different genres, and literary classification is complicated by the fact that some tractates display features of more than one literary genre or contain different genres within them. Thus, the following classification should not be regarded as definitive or exhaustive.

a. Apocalypses. Several of the tractates have the term "apocalypse" in their titles: *Apoc. Paul*; *1 Apoc. Jas.*; *2 Apoc. Jas.*; *Apoc. Adam*; and *Apoc. Peter.* Many of the other tractates are subject to classification as "apocalypses," in whole or in part, according to the criteria commonly accepted (Collins 1979; Fallon 1979): *Ap. John*; *Hyp. Arch.*; *Soph. Jes. Chr.*; *Asclepius*; *Paraph. Shem*; *Zost.*; *Ep. Pet. Phil.*; *Melch.*; *Marsanes*; *Allogenes*; and *Hypsiphr.* Two of these, *Zost.* and *Allogenes*, were known as "apocalypses" in antiquity (Porph. *Vit. Plot.* 12). One, *Soph. Jes. Chr.*, is an apocalypse that has been created as such out of a previously existing tractate also found in the Nag Hammadi collection, *Eugnostos. Ap. John* is similarly a composite document, but it belongs, in its present form, to the apocalypse genre. *Hyp. Arch.*, also a composite document, contains an apocalypse within it (Pearson 1984: 464–65). In addition, *Ap. Jas.* counts as an apocalypse, though it is introduced as an epistle.

Other tractates share features of the apocalyptic genre. *Steles Seth* is presented as a revelation of the content of three steles inscribed by Seth, a heavenly figure associated in gnostic mythology with the biblical son of Adam. The steles contain prayers addressed to the members of the gnostic divine triad of Father, Mother, and Son. *Acts Pet. 12 Apost.* contains within it a revelation of the risen Lord to the apostles.

Two other categories, here treated separately, could arguably be included in a discussion of gnostic apocalypses: revelation dialogues and revelation discourses. They are, in any case, closely related generically to the gnostic apocalypses already listed, all of which contain revelation dialogues or discourses within them. It must be stressed that the apocalypse genre, including the revelation dialogue and revelation discourse, is a central medium of literary expression in Gnosticism.

Of the gnostic apocalypses here mentioned, *Apoc. Adam* represents typologically a key link in the evolution of gnostic apocalyptic out of Jewish apocalyptic tradition (MacRae 1979: 152).

b. Revelation Dialogues. Three Nag Hammadi tractates can be classified as "revelation dialogues" rather than "apocalypses," since they lack an account of the appearance of the revealer. These are *Thom. Cont.*; *Dial. Sav.*; and *Disc. 8–9. Dial. Sav.* is especially interesting because it appears to have been constructed out of a collection of sayings of Jesus like *Gos. Thom. Thom. Cont.* has recently been adjudged to be a Christian revision of a Hellenistic Jewish pseudepigraphical letter attributed first to the patriarch Jacob (Schenke 1983). *Disc. 8–9* is a typical dialogue of the Hermetic tradition.

c. Revelation Discourses. The genre "revelation discourse" is also known as "wisdom monologue" (Layton 1987: 77–78). Two of the examples from the Nag Hammadi collection feature female revealer-figures: *Thund.* and *Trim. Prot. Thund.* closely resembles a shorter "I am" discourse attributed to Eve now embedded in *Orig. World* (II 114,8–15). *Trim. Prot.* appears to be an expansion of a revelation discourse attributed to "Pronoia" ("Providence") in the longer version of *Ap. John* Its relationship to the prologue of

the Gospel of John is a matter of debate (Robinson 1981). *Treat. Seth* features Jesus Christ as the revealer. *Great Pow.* also belongs to this genre, although it lacks the "I am" self-predication found in the others. The first main section of *Ap. John* can also be called a revelation discourse (Pearson 1984: 458).

d. "Rewritten Bible." In this category, which does not constitute a separate literary genre per se, are included those portions of tractates which consist for the most part of paraphrases or running commentary on the opening chapters of Genesis. *Ap. John*; Hyp. Arch.; and *Orig. World* contain notable examples, wherein the focus is on the story of Adam and Eve and the early history of humankind now retold from a gnostic perspective. Formally, the closest parallels to this kind of literature are some of the OT pseudepigrapha, especially *1 Enoch* 6–11, *Jubilees*, and the *Genesis Apocryphon* from Qumran (1QapGen.) (For the term "Rewritten Bible," with reference to these Jewish writings, see Nickelsburg 1984:89; cf. Pearson 1988:647–51). In this category should also be included discrete sections of tractates which formally resemble Jewish midrashim, such as the midrash on the serpent-revealer in *Testim. Truth* and the midrash on David and Solomon in the same tractate (Pearson 1984: 457).

e. Gospels. Four of the Nag Hammadi tractates are called "gospels": *Gos. Truth* (its *incipit* is used as a title); *Gos. Thom.*; *Gos. Phil.;* and *Gos. Eg.* None of these is a gospel of the canonical type, though *Gos. Thom.*, a collection of dominical sayings, resembles in its form the hypothetical "Q"source presumably used by Matthew and Luke. *Gos. Truth* is a homily on the "gospel"; here the term *euangelion* is used in its original Christian sense as "message of salvation" (cf. Rom 1:16; 1 Cor 15:1; etc.). *Gos. Phil.* is an anthology of excerpts from various other works (Layton 1987: 325–26). *Gos. Eg.* (not to be confused with the work of that same name cited by Clement of Alexandria and other patristic writers) is also entitled *The Holy Book of the Great Invisible Spirit*, and consists of a doctrinal treatise to which is added a liturgical service book for a gnostic baptism ceremony. A *Gospel of Mary* is found in the related Berlin Codex (BG, *1*). This text belongs to the "apocalypse" genre.

f. Epistles. One of the Nag Hammadi tractates bears the term "epistle" in its title: *Ep. Pet. Phil.* This tractate receives its title from the letter with which it opens; however, as a whole the tractate belongs more properly to the "apocalypse" genre. Two tractates can be classified as "doctrinal epistles": *Treat. Res.* and *Eugnostos. Ap. Jas.* has an epistolary framework at the beginning and the end, and *Hyp. Arch.* shows epistolary features in its opening passage.

g. Acts. One tractate from the Nag Hammadi collection, *Acts Pet. 12 Apost.*, has the term "Acts" in its title, and resembles in some ways the numerous acts of apostles that constitute part of the NT apocrypha. It is probably a piece of a larger work, containing within its extant portion a revelation of the savior. The Berlin Codex contains a similar text: *The Act of Peter* (BG, *4*).

h. Doctrinal Treatises. To this category belong *Tri. Trac.; Orig. World;* and *Val. Exp.* The last named tractate is a doctrinal exposition, to which have been added liturgical fragments on the sacraments of baptism and the eucharist. *Gos. Eg.* is also a doctrinal treatise with liturgical matter at the end. All of these texts present accounts and interpretations of the basic gnostic myth of cosmogony and salvation, with *Tri. Trac.* and *Val. Exp.* offering different interpretations from the Valentinian school. Two other tractates, *Exeg. Soul* and *Auth. Teach.*, can be treated under the general category of "doctrinal treatises," but of a special type: they consist of allegories on the fall and return of the soul.

i. Wisdom Books *Sent. Sextus* and *Teach. Silv.* belong to this category. The former is a previously known collection of short aphorisms. The latter is a *logos protreptikos* (hortatory discourse) generically akin to the Wisdom of Solomon in the Greek Bible. Neither of these is "gnostic" in the technical sense of the term.

j. Homilies. To this category belong *Gos. Truth; Interp. Know.*; and, at least partially, *Testim. Truth. Gos. Truth* is a meditative disquisition on the message of salvation, and was probably composed by the heresiarch Valentinus himself (Layton 1987: 250–51). *Interp. Know.*, another Valentinian text, presumes a setting in Christian corporate worship. The first part of *Testim. Truth* is a polemical sermon attacking the beliefs and practices of catholic Christian opponents, to which has been added material made up of various sources and utilized for a polemical purpose. In addition, the second part of *Thom. Cont.* consists

of a homily made up of woes and blessings pronounced by the savior. *Zost.* concludes with a brief admonitory sermon.

k. Prayers. Two tractates are so identified in the mss. *Pr. Paul*, with title, has been written into the front flyleaf of Codex I. *Pr. Thanks* is a previously known prayer of the Hermetic tradition appended to *Disc. 8–9.* It is introduced with the words, "This is the prayer that they spoke." In addition, *Steles Seth* consists basically of three prayers of praise offered up by "Seth" to members of the divine triad of Father, Mother, and Son. Prayers of praise, with the formula "Holy are you," are found embedded in *Melch.* (IX 16,16–18,7). Some of the appended liturgical material in *Val. Exp.* consists of prayers. Two liturgical prayers are embedded in *Ep. Pet. Phil* (VIII 133,21–134,9). Prayers of invocation are also found at the end of *Gos. Eg.* in material that actually constitutes a "liturgical service book" (Layton 1987: 101–2). Prayers for individual meditation are embedded in the Hermetic tractate *Disc. 8–9* (VI 55,24–57,25). Some of the colophons in Codices I, II, and VII should be classified as prayers, but they reflect the (monastic) setting of the scribes rather than the content of the tractates copied (see E above).

1. Hymns. Some of the aforementioned prayers could also be construed as hymns, especially those that were apparently meant to be chanted in a worship setting. One entire tractate, *Norea*, can be labeled a "hymn" or "ode" on account of its strophic structure. The Hermetic tractate *Disc. 8–9* refers throughout to the singing of hymns, and hymnic material, including "glossolalia" (*voces mysticae*), is found in it (esp. at VI 60,17–61,17). Similar material occurs in *Gos. Eg.* and *Zost.*

m. Anthologies. One of the tractates labeled a "gospel," *Gos. Phil.*, is really an anthology of mostly unconnected excerpts from other gnostic works. None of these other works is extant. *Orig. World* is almost an anthology in that it contains a number of discrete sources within it. Finally, *Plato Rep.* represents an "anthology" of another kind, for it can safely be assumed that it was not taken directly from book 9 of the great philosopher's masterwork but rather, as was common practice in antiquity, from an anthology of excerpts from ancient writers.

2. Religious Character. The earliest major work on the Nag Hammadi collection treated it as a "library" of "undoubted unity" belonging to a single sect of "Sethian" gnostics (Doresse 1960: 249–51). But over the years it has become clear that it is not a "library" of a single group at all, but a collection of disparate works of various origins. Not all of the texts are "gnostic," and the Gnosticism represented in the texts that are gnostic is of various types, some of which, moreover, are not easily classified by sectarian affiliation according to the catalogs of the great heresiologists of the Church. If one can speak of a unity at all in the collection it would be a unity not of a theological or philosophical sort, but having to do with lifestyle. That is to say, many of the texts in the collection advocate an ascetic lifestyle, and all of them could be read in that light. From this perspective, it is not difficult to understand how these writings could be appreciated in a monastic setting (Wisse 1971; 1978).

However, since most of the texts are, in fact, gnostic, it will be useful to classify the collection in terms of their gnostic or non-gnostic character, as well as in terms of the kinds of Gnosticism represented, to the extent that this is possible.

a. Sethian Gnostic Texts. While Doresse's initial classification of the Nag Hammadi collection must be rejected, scholars meanwhile have noted that there are a number of tractates which appear to be "Sethian" in some sense, and are clearly related to one another in terms of content; that is, they share a common underlying mythological "system" (Schenke 1974; 1981). One of the features of this system is an emphasis on Seth, son of Adam, as a revealer figure and spiritual father of a gnostic "race of Seth." Hence, the classification "Sethian" is suggested by the texts themselves.

The Nag Hammadi texts that belong to this system are: *Ap. John*; *Hyp. Arch.*; *Gos. Eg.*; *Apoc. Adam*; *Steles Seth*; *Zost.*; *Melch.*; *Norea*; *Marsanes*; *Allogenes*; and *Trim. Prot.* To these texts must be added the system described by Irenaeus in *Adversus Haereses* 1.29, which is parallel to part of *Ap. John*, and the untitled tractate from the Codex Brucianus.

Of the Nag Hammadi texts here named, one is definitely a Christian text, *Melch.* (whose gnostic features may be secondary). Others appear to reflect various stages of "Christianization" of originally non-Christian material; these are *Ap. John*; *Hyp. Arch.*; *Gos. Eg.*; and *Trim. Prot.* Still others are not

Christian at all, but reflect a profound influence from Platonist philosophy: *Steles Seth*; *Zost.*; *Marsanes*; and *Allogenes. Apoc. Adam*, another non-Christian text, stands in close relationship with Jewish apocalyptic tradition.

It is to be noted that the system described by Irenaeus (1.29) is expressly associated by him with a group of sectarians called, simply, *gnostikoi* ("gnostics"). Irenaeus does not use the term "Sethian." On the other hand, Hippolytus (*Haer.* 5.19) describes a system that he attributes to a group of "Sethians," and refers to a book of theirs called *The Paraphrase of Seth* (V.22). The content of the Nag Hammadi tractate, *Paraph. Shem*, resembles the system described by Hippolytus, though it does not cohere very well with the other "Sethian" texts already identified. Should it be called, nevertheless, a "Sethian gnostic" tractate? In any case, *Paraph. Shem* is a non-Christian gnostic apocalypse featuring a redeemer called "Derdekeas." The *Paraphrase of Seth* known to Hippolytus was a Christianized version of the mythological system found in *Paraph. Shem.*

Other Nag Hammadi tractates seem in various ways to be related to the Sethian gnostic ones mentioned. *Orig. World* contains material that coheres with such Sethian texts as *Hyp. Arch. Eugnostos*, a non-Christian text, contains teaching concerning the divine world and Anthropos that is akin to the material on the same subject in *Ap. John* and Iren. *Haer.* 1.29 (van den Broek 1981). *Soph. Jes. Chr.* is a Christianized version of *Eugnostos.* Finally, *Treat. Seth*, a Christian gnostic text, reflects in its background a Sethian mythological system (Painchaud 1982: 5–6, 21).

b. Valentinian Texts. The Valentinian school is one of the most important heretical complexes in the ancient Church, and quite a bit was known about it before the Nag Hammadi discovery. Irenaeus expressly says (*Haer.* 1.11) that Valentinus adapted the "gnostic" teachings (described by him in 1.29) in setting up his own school. Thus Valentinus can be said to have been a "reformer" of the (Sethian) gnostic religion represented by *Ap. John* and related texts (Layton 1987: xv).

Given the importance of the Valentinian movement, it is not surprising that a number of Valentinian tractates should show up in the Nag Hammadi find. Four of the five tractates in the Jung Codex (NHC I) are surely of Valentinian origin: *Pr. Paul; Gos. Truth* (probably composed by Valentinus himself); *Treat. Res.;* and *Tri. Trac.* If the Jung Codex represents a Valentinian collection of texts, *Ap. Jas.* (1.*2*), though not of Valentinian authorship, was considered of value to Valentinian gnostics. Another "James" text, *1 Apoc. Jas.*, seems to reflect some Valentinian influence, and may have been subjected to some Valentinian editing.

Also clearly of Valentinian origin are *Gos. Phil.; Interp. Know.*; and *Val. Exp.* Valentinian influences have been discerned in *Exeg. Soul*, and are possibly present in some other tractates as well, such as *Orig. World* and *Norea. Testim. Truth* contains some Valentinian influences, but also takes a stand against the Valentinian school. It has been suggested that the author of that tractate is the ex-Valentinian Julius Cassianus (Pearson 1981: 116–20).

c. Hermetic Texts. The pagan Greco-Egyptian gnosis featuring "Thrice-Greatest Hermes" as its central revealer is represented in the Nag Hammadi collection by three tractates: *Disc. 8–9; Pr. Thanks.*; and *Asclepius.* The two last named are texts known before the Nag Hammadi discovery. *Disc. 8–9* is new Hermetic work, akin especially to *Corpus Hermeticum* I (*Poimandres*) and XIII, but showing more distinctively Egyptian coloring.

d. Texts of the Thomas Tradition. The Syrian (Edessene) Christian tradition identified with Judas Thomas, Jesus' "twin brother," is represented by two texts from Nag Hammadi: *Gos. Thom.* and *Thom. Cont.* This tradition can be considered "gnostic" only in the broader sense of the term (Layton 1987: 360). *Gos. Thom.* was an especially important work. Fragments of three different copies of that gospel in Greek are included in the vast collection of papyri from Oxyrhynchus. (See H. Attridge's edition in Layton 1989:95–128.) *Gos. Thom.* may have been utilized by the authors of such Nag Hammadi tractates as *Dial. Sav.* and *Testim. Truth*, and may also have influenced Valentinus and his pupils (Layton 1987: 220, 360).

e. Miscellaneous Gnostic Texts. In the case of several Nag Hammadi tractates it is difficult (if not impossible) to discern any particular sectarian affiliation. Of the Christian gnostic texts in question, some are associated with special apostolic authorities: James, the brother of Jesus, was especially beloved in

certain Jewish Christian traditions (*Gos. Thom.* 12), and is the focus of three Nag Hammadi tractates: *Ap. Jas.; 1 Apoc. Jas;* and *2 Apoc. Jas.* The "Petrine tradition" (Perkins 1980: 113–30) is represented by *Apoc. Pet.* (not to be confused with the apocalypse of the same name preserved in Ethiopic); *Ep. Pet. Phil.*; and *Acts Pet. 12 Apost.* (but the last may not be of gnostic origin). The apostle Paul is credited with an account of a heavenly journey: *Apoc. Paul* (not to be confused with another account of a heavenly journey with the same title preserved in Latin and several other languages).

Other Christian gnostic texts which defy sectarian identification are *Dial. Sav.; Auth. Teach.; Great Pow.; Treat. Seth*; and *Soph. Jes. Chr.*

Two gnostic tractates in this miscellaneous category are evidently not influenced by Christianity: *Thund.* and *Hypsiphr.*, though certainty in the case of the latter is unattainable owing to the fragmentary condition of the ms.

f. Non-gnostic Texts. Two Christian texts from Nag Hammadi are definitely not gnostic: *Teach. Silv.* and *Sent. Sextus.* The latter was known before and is preserved in a number of languages. *Acts Pet. 12 Apost.* is also better included with the non-gnostic apocryphal acts, for there is no firm indication in the extant material of any specifically gnostic features. Of course, there can be no question about the non-gnostic character of Plato's *Republic*, though it is possible that the snippet found at Nag Hammadi in a fractured Coptic translation, *Plato Rep.*, has been subjected to gnostic editorial adjustment in its Coptic stage.

To be sure, the "gnostic" or "non-gnostic" character of many of the texts is not easy to determine, and scholars often differ in their judgments on this point. Some have questioned the "gnostic" character of such texts as *Ap. Jas.; Dial. Sav.; Thund.; Auth. Teach.*; and even *Gos. Truth.* Other scholars, at least initially, assumed the "gnostic" character of *Gos. Thom.; Teach. Silv.*, and others. It is evident that much more work needs to be done on the study of this material.

G. Importance of the Nag Hammadi Codices

As one of the most important manuscript finds of the century, comparable in that respect to the discovery of the Dead Sea Scrolls, the Nag Hammadi collection has had an enormous impact on a number of scholarly fields and disciplines.

In the field of NT studies, *Gos. Thom.* alone has spawned a huge bibliography. The most important feature of that text is that it consists of a collection of Jesus' sayings which is probably independent of the canonical gospels and, in the case of some sayings, preserves very ancient gospel tradition. The study of gospel tradition has also been enriched by other texts as well, especially *Dial. Sav.* and *Ap. Jas.* New issues in Johannine scholarship have emerged in the study of such texts as *Trim. Prot.*, particularly its relationship to the prologue of the Gospel of John. Indeed, the whole question of the impact of Gnosticism upon the NT and its world has been reopened by the study of the Nag Hammadi texts, and no credible work can be done on that question without recourse to the new material. As study of these texts proceeds, more critical issues for NT studies continue to emerge.

In the field of early Christian history in general, the Nag Hammadi texts have provided new evidence for the analysis of the relationship between "orthodoxy" and "heresy" in the early Church, and how these came to be defined. The study of the religious character of certain geographical areas of the early Church, especially Syria and Egypt, has been greatly enlarged. The study of the history of the NT canon, and of early Christian literature in general, has new material with which to work and new questions to ask.

The study of early Judaism has also been enlarged, for now there is a quantity of new material that bears upon the question of the connections between Judaism and Gnosticism, and the whole issue of Jewish sectarianism in relation to the eventual consolidation of normative (rabbinic) Judaism. The Nag Hammadi collection has been considered of enough importance on these matters to be included in the purview of an important survey of Jewish writings of the Second Temple period (Pearson 1984); one of the texts, *Apoc. Adam*, is even included in a standard collection of OT pseudigrapha (MacRae *OTP* 1: 707–19).

Needless to say, the study of ancient Gnosticism has now been put on a solid basis as a result of this discovery of original gnostic works. Previous to this discovery, scholars of Gnosticism were, for the most part, dependent upon the patristic heresiologists (the gnostics' enemies) for their source material.

Gnosticism, to be sure, is only one of the important currents in Hellenistic-Roman religion and philosophy, and, as an eclectic phenomenon, bears upon the study of other religious traditions. The Nag Hammadi collection has provided new material for the study of Hermeticism, for example, and even for the study of Middle Platonism and Platonism. Indeed, an international conference was held in 1984 devoted to "Neoplatonism and Gnosticism," and the Nag Hammadi texts played a very large role in the papers and discussions (Wallis and Bregman 1989).

The study of the Coptic language has been enormously enlarged by the Nag Hammadi discovery, for it is interest in the Nag Hammadi texts that has drawn significant numbers of students into the study of Coptic who otherwise would not have considered such study. The impact of the Nag Hammadi discovery has also been such that the wider study of the whole range of Coptic literature has been accelerated. In addition, the Nag Hammadi texts themselves provide new material for innovative breakthroughs in Coptic philology, especially in grammar and dialectology. An international society has been organized which is devoted to Coptology in all of its aspects, the International Association for Coptic Studies. Its organizing conference took place in Cairo in 1976, in conjunction with a meeting of the International Committee for the Nag Hammadi Codices.

Finally, the close scrutiny of the Nag Hammadi mss carried out by Robinson and his team has resulted in a number of breakthroughs in codicology and papyrology (Robinson 1978).

These are only some of the areas and disciplines which have been enlarged by the Nag Hammadi discovery. In actual fact, it would be virtually impossible to assess fully the enormous impact upon scholarship made by the random digging of those fellahin from al-Qaṣr at the Jabal al-Ṭarīf on that December day in 1945.

BIRGER A. PEARSON

NAGGAI (PERSON) [Gk *Naggai* (Ναγγαι)]. The father of Esli and son of Maath, according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent of Adam and God (Luke 3:25). Codex D omits Naggai, substituting a genealogy adapted from Matt 1:6–15 for Luke 3:23–31 The name "Naggai" occurs nowhere else in the biblical documents, including Matthew's genealogy, and falls within a list of seventeen otherwise unknown descendants of David's son Nathan (Fitzmyer *Luke 1–9* AB, 500), although there is a Gk *Nage* / Heb *nōgâ* at 1 Chr 3:7, as a son of David. A few NT mss read Gk *Nagai* here (A 1241) (see Hervey 1853:136). Kuhn (1923: 208–9) argues that two seemingly parallel lists of names—Luke 3:23–26 (Jesus to Mattathias) and 3:29–31 (Joshua/Jesus to Mattatha)—were originally identical, the first perhaps reflecting a Hebrew context and the second an Aramaic context, tracing Mary's line of descent (since it does not mention Joseph as Jesus' father). Naggai in the first list corresponds to Melea in the second list. With no major textual variants for Naggai and Melea to support confusion of the two, Kuhn's theory has little plausibility.

STANLEY E. PORTER

NAHAL OREN (M.R. 148241). A site located on the W side of Mt. Carmel on a steep terrace facing S at a height of 46–53 m above sea level. It is near the point where the Nahal Oren stream enters the coastal plain.

The Mt. Carmel region belongs to the Mediterranean plant belt with about 500 mm of rain per year. A perennial spring is located about 100 m E of the site.

During two cycles of excavations held in 1954–57 and 1959–60 (Stekelis and Yisraeli 1963) and 1969–71 (Noy, Legge, and Higgs 1973), about nine levels have been identified representing the Kebarian, the Natufian, and the early Pre-Pottery Neolithic A and B (PPN A and PPN B) cultures. These cultures represent the level of late hunter-gatherer and early farmer which date to ca. 16,000–6800 B.C.E.

The Kebarian culture encompassed two cultural phases. To the earliest belongs a short stone wall founded on bedrock and a rich flint industry and animal bones. Among the flint tools are truncated bladelets, carinated and small-end scrapers, and burins. The upper phase is characterized by extremely small microliths, particularly triangles and crescents (Noy et al. 1973; Kukan 1978).

The Natufian culture reflects the Middle and Late phase (Valla 1981). The middle Natufian phase was mainly uncovered in the lower part of the terrace where a cemetery with about 30 skeletons and varied

installations covered most of the area. Studies of the human teeth revealed special nutrition habits (Smith 1970). Some notable elements in the cemetery are large hearths made of white slabs of stone, "pipe mortars" standing near some of the graves, and small elongated cup holes laid near some of the skeletons. Individual or small groups of individuals found in one grave and the northern orientation of the bodies are also characteristic (Noy fc.). The later phase stands out by stone walls crossing the terrace, individual graves, animal figurines carved on stone, and animal horns (Stekelis 1960), a rich flint industry and, in addition, bone tools, limestone vessels, and elongated basalt polishers, some of which are decorated. The small microliths continue to the end of this phase (Henry 1973; Valla 1983).

Several architectural features exist between the late Natufian levels and those of the PPN A, but these are still under investigation and evaluation.

The PPN A village was built on terraces, where 20 round buildings have been uncovered. Even though the major site belonged to one occupation level, other short occupation levels exist. The houses range from 3–4 m in diameter and are built of local stones; their floors are of terre pisee and most are equipped with round hearths built of small stones, cup holes on flat stones, and some local stone vessels. The flint tools include tranche axes (the Tahunian type), elongated sickle blades of the Beit Tamir type, arrowheads of El Khaim points, Hegudud truncations (Bar Yosef, Gopher, and Nadel 1987), and some small obsidian blades from the Gülü Dag source in Anatolia (Yellin, personal communication). These tools represent the Sultanian stage in PPN A Small human figurines carved from stone were found on house floors and very few burials were below the house floor.

The PPN B is the last occupation of the terrace; most of the architecture suffered natural erosion and human destruction. The earliest stage still has some rounded houses following the tradition of the previous period. The second phase of the PPN B settlement is scattered on the terrace with rectangular houses which were built with medium stone pebbles. Some of the houses were paved with flat square pebble stone. Some skeletons without heads were found buried below the houses (Noy 1973). Two-level grinding stones and upper semi-elliptical stones made from basalt or limestone are common; some of the flint was heated and beautiful color was achieved. Helown, Jericho, and Byblos points, some with Abu Ghosh retouch, are well known (Gopher 1985). Long sickle blades, some with serrated and short tangs, and long pointed blades are unique in shape and length. Minute beads cut from shell were sewn on garments as decoration. In the Kebarian phases, deer and gazelle were the most hunted animals and in the Natufian and PPN A phases the gazelle was the major animal hunted, but in PPN B there was a growing number of goats and sheep (Legge 1973: 90–91). Cultivated plants appear in PPN A and B (Dennell 1973: 91–93).

TAMAR NOY

NAHALAL (PLACE) [Heb *nahălāl* (נַהֲלָל)]. Var. NAHALOL. Fourth Levitical city mentioned in the Zebulun listing (Josh 21:35). There are no parallels to Nahalal in the 1 Chronicles account. Nahalal is mentioned in two other OT accounts, first in the allotment list to Zebulun (Josh 19:15), and, second in the Judges conquest narrative. In the conquest narrative "Zebulun did not drive out the inhabitants of … Nahalol, but the Canaanites dwelt among them, and became subject to forced labor" (Judg 1:30). The exact location of biblical Nahalal is unknown; however, two tells have been suggested as possible sites: Tell el-Beida and Tell en-Nahl.

Tell el-Beida (M.R. 168231) has been suggested by J. Simons (*GTTOT*, 202) as biblical Nahalal. Beida is located 1 km S of modern Nahalal, a Moshav-ovedim founded in 1921. No doubt this is one reason why Simons associated biblical Nahalal with Beida. The tell is situated in the N central section of the Esdraelon Plain. It is a rich area with a good water supply. At the S base of the tell there is a spring of water and surrounding Beida there are tributaries of the river Kishon. To the S and W lies the fertile Esdraelon Plain while to the N and E are the lower Galilee hills. The closest trade route is 9 km to the SW at Jokneam, where it passes across the Carmel and meets the Acco-Bethshan route.

None of the early geographers make any reference to Tell el-Beida. The archaeological surveys conducted at el-Beida have shown an occupation during EB, MB, LB, Iron I, Iron II, Persian, Roman, Byzantine, and Arab periods. There are many difficulties in trying to associate biblical Nahalal with Tell el-Beida. First and foremost is the name of the site. The modern moshav, Nahalal, founded in 1921, is hardly evidence to demonstrate a case for "historical memory" of a place name. It is possible the moshav chose the name because of biblical Nahalal of Zebulun, but the relationship goes no further than that.

Tell en-Nahl (M.R. 156245) was first identified as biblical Nahalal by Albright (1923: 26–27). He argued his position on the philological grounds that Nahalal was nearly identical in form with the Nahl in Tell en-Nahl. However, there is a geographical problem that Tell en-Nahl is located in the plain of Acco in the tribe of Asher, whereas Joshua and Judges locate it in the tribal territory of Zebulun. Tell en-Nahl is located 10 km E of the Mediterranean. It lies in the coastal plain, E of Haifa, centrally located between the E hills and the coastline. Acco, Tell en-Nahl, and the pass leading into the Esdraelon Plain fall on a near N–S line. The view from Tell en-Nahl to the N is Acco, to the E one sees the valley stretching to the low hills, to the S is the Carmel range, and to the W Haifa and the sea. The tell is surrounded by fertile agricultural lands. 2 km to the W of Tell en-Nahl flows the Kishon River. There is a small tributary that flows past Tell en-Nahl immediately to the N The archaeological surveys which have been conducted at Tell en-Nahl indicate occupation during the EB, MB, LB I, LB II, Iron I, Iron II, Hellenistic, Roman, Byzantine, and Arabic periods.

The one major obstacle, as noted above, to the identification of Tell en-Nahl with biblical Nahalal could be resolved if Zebulun's borders had expanded to include this Levitical city; however, that solution is not entirely satisfactory. While the historical memory of the name is important, yet the tribal location must also be considered seriously. Nevertheless the etymological considerations for Tell en-Nahl are attractive and the pottery stretches over the three Iron II centuries. Tell en-Nahl is therefore tentatively accepted as biblical Nahalal. The geographical location of this city remains troubling and until more is understood about Zebulun's expansion to the sea this identification will have to be regarded as speculative. See also Peterson 1977:125–39.

JOHN L. PETERSON

NAHALIEL (PLACE) [Heb *naḥălîʾēl* (נַחֲלִיאֵל)]. The location of one of Israel's final encampments prior to entering Canaan (Num 21:19). It is listed after Mattanah and before Bamoth. Its name ("stream of ʾEl[w]) implies that it was a wadi rather than a town. Eusebius (*Onomast.*) located it near the Arnon. Recent identifications have included the Wadi Wala, which feeds into the Arnon from the N, and the Wadi Zerqa Ma'in which flows into the Dead Sea 18 km N of the Arnon.
RANDALL W. YOUNKER

NAHAM (PERSON) [Heb *naḥam* (נַחַם)]. Identified as the sister-in-law of Hodiah in the genealogy of Judah (1 Chr 4:19).
H. C. LO

NAHAMANI (PERSON) [Heb *naḥămānî* (נַחֲמָנִי)]. A leader of the Jewish community who returned to Palestine with Zerubbabel shortly after 538 B.C.E., the end of the Babylonian Exile. Neh 7:7 lists Nahamani sixth in a list of twelve names which is headed by the names of Zerubbabel and Joshua (the parallel passage, Ezra 2:2, omits the name). The list introduces a passage which records the divisions of the people of Israel, the priests, the Levites, and the temple servants. Nahamani (Gk *naemani*) is replaced in the later parallel 1 Esdr 5:8 by the name Enenios (which is rendered Bigvai, without warrant, by the RSV, in an effort to reconcile the lists of Ezra and Nehemiah).
STEVEN R. SWANSON

NAHARAI (PERSON) [Heb *naḥăray* (נַחֲרַי)]. One of David's mighty men and the armor-bearer of Joab in 2 Sam 23:37 and in the parallel at 1 Chr 11:39 Naharai is called "the Beerothite," and we learn from 2 Sam 4:2–3 that they were Benjaminites who had fled to Gittaim. There is some textual confusion in the LXX of Samuel, as he is called Gelorai in the majority of the Greek manuscripts. The mss of the Lucianic text, which contain what is most likely the OG reading, may witness to an original form close to MT, however, since they have *araia*, perhaps a corrupt form due to the loss of the initial *nu* by haplography from the preceding *anamin.* McCarter (*2 Samuel* AB, 494) explains the Greek form in 2 Sam 23:37 by a series of mutations: "*gelōrai* (Gk **gedōrai* < Heb **gdwry* < **gḥry* < *nḥry*)." The LXX of 1 Chr 11:39, except for minor variants, witnesses to the MT form.
STEPHEN PISANO

NAHARIYEH (M.R. 159267). A small mound on the coast 6 miles N of Acco, at the mouth of the Gaʿaton River. It has remains of the MB, Iron II, and Persian periods, with Roman-Byzantine-Islamic ruins in the vicinity. In excavations in 1947 by I. Ben-Dor, and then in 1954–55 by M. Dothan, the principal discovery was a small cult site about 40 m in diameter and rising just 3 m, right on the dunes of the shoreline ca. 800 m N of the main mound. Despite the potential significance of the cult site, the lack of proper stratigraphic excavation and the absence of any but preliminary reports have robbed the site of its full meaning. The artifacts discussed below, for instance, including the figurines, may be only tentatively attributed to a particular phase (although all are MB; see Negbi 1976:130–31).

The cult site has five major periods of use. Stratum V ("Str. A/Ph. 5") belongs to the MB I period, ca. 1900–1800 B.C., although a few four-spouted lamps and "Canaanean"-style flints suggest some use already in EB IV (Albright's "MB I" period). To the S of the area was a rectangular, single-room structure ca. 6 × 7 m, with a large pebble pavement adjoining it to the S, identified by the excavators as the earliest phase of a *bāmāh* or "high place." Finds from this phase included typical MB I pottery, including Syrian-style painted wares; seven-spouted lamps; cooking pots; many miniature votive vases; a stone mold for casting a horned "Astarte"-type figurine, as well as five silver and bronze figurines themselves (Negbi 1976: 64); and bones of cattle and sheep-goats.

Strata IV–III ("Str. B/Ph. 4–3") were not well separated, but they appear to date from late MB I, perhaps into MB II. At this time the *bāmāh* paving was expanded to ca. 14 m in diameter, covering the wall stubs

of the rectangular structure, and steps to the raised platform were added. A new rectangular broadroom temple was built to the N, ca. 10.7 × 6.2 m, with four column-bases down the center. An intervening courtyard featured an altarlike installation. Finds from this phase included seven-cupped bowls and seven-spouted lamps; hundreds of miniature votives; numerous cooking pot sherds; many beads, items of jewelry, and bronze toggle-pins; animal bones; terra-cotta fenestrated stands; and evidence of metal-working. Of particular interest are three mold-made silver figurines (Negbi 1976: 64).

Strata II–I ("Str. C/Ph. 2–1") is sketchily described by the excavators, and was probably not well discerned stratigraphically. It appears to date to MB III and even into MB III/LB I, ca. 1650–1500 B.C. Several subsidiary rooms were added to the broadroom temple, on both ends. Few finds attributable specifically to this phase are mentioned. The *bāmāh* was raised and expanded again, finally covering the S structure completely. The latest deposits included imported Cypriot wares of the transitional MB III/LB I horizon.

The excavators suggest connecting the Nahariyeh sanctuary with the cult of Asherah, El's consort at Ugarit, known there as *Athiratu-yammi*, "She who Treads/Subdues the Sea." The unique, isolated location right by the seashore and the proliferation of molds and "Mother Goddess" figurines (19 in all; Negbi 1976: 130) makes this connection quite plausible. Dove figurines found by Ben-Dor would corroborate the identification, since Asherah (later, as Tanit) is often associated with doves.

NAHASH (PERSON) [Heb *nāḥaš* (נָחָשׁ)]. King of the Ammonites, whose siege of Jabesh-gilead was broken by a decisive Israelite victory early in Saul's reign (1 Sam 11:1–2). Ammon and Israel had long wrangled over territory east of the Jordan (Judg 11:4–33). Background for Nahash's siege is provided by a passage, possibly original, found just before 1 Sam 11:1 in 4QSam[a] and witnessed to by Josephus, *Ant* 6.5.1 §68–71. This describes a longer pattern of repression by Nahash against Gad and Reuben, of which Jabesh-gilead was simply the last chapter. Nahash had gouged out right eyes indiscriminately, and seven thousand refugees escaped to Jabesh-gilead. MT and LXX pick up the story when, after a month's respite, Nahash besieged the city. Because Nahash wanted to humiliate Israel, he offered the city brutal conditions for the vassal treaty they requested and gave them a week to seek aid from their fellow Israelites. The biblical authors used the story of Saul's subsequent victory, similar to the heroic stories found in the book of Judges, to establish the popularity of Saul's kingship. In another place it is suggested that the oppression of Nahash was Israel's motive for requesting a king (1 Sam 12:12). According to 2 Sam 10:1–2 = 1 Chr 19:1–2, Nahash remained king into the first part of David's reign and was on friendly terms with him, perhaps because of a mutual antipathy for Saul. Nahash's son Hanun picked a disastrous quarrel with David which led to the loss of Ammonite independence. Later, Shobi, another son of Nahash, provided supplies to David during Absalom's rebellion (2 Sam 17:27). A puzzling genealogical reference in 2 Sam 17:25 describes Abigail the sister of Zeruiah (and of David according to 2 Chr 2:16) as Nahash's daughter. If this is not a textual corruption from 2 Sam 17:27 and if one may assume that Nahash king of Ammon is meant, this would indicate that David had a family connection with the Ammonite royal house through his mother's marriage to Nahash. This would help explain Nahash's friendly relations with David, Hanun's suspicion of David's motives (2 Sam 10:2–4), and David's later personal acceptance of the Ammonite crown (2 Sam 12:30).

RICHARD D. NELSON

NAHATH (PERSON) [Heb *naḥat* (נַחַת)]. The etymology of this personal name is unclear. It could possibly mean "clear, pure" (cf. Ar **nḥt;* cf. also *IPN*, 228).

1. The firstborn son of Reuel, and the grandson of Esau (Gen 36:13, 17; 1 Chr 1:37). According to Gen 36:17 he was one of the "tribal chiefs" (Heb *ʾallûpîm*) of the Edomites, and as such the name probably represents a clan within the Esauite-Edomite tribe of Reuel.

2. Apparently a son of Zophai (or of Elkanah?) listed in the Levite genealogy of 1 Chr 6:11 (—Eng 6:26). The name, however, ought to be read either as Toah, in conjunction with 1 Chr 6:19 (—Eng 6:34), or as Tohu, in accordance with 1 Sam 1:1

3. A Levite overseer during the reign of King Hezekiah of Judah (2 Chr 31:13).

ULRICH HÜBNER

NAHBI (PERSON) [Heb *naḥbî* (נַחְבִי)]. The name "Nahbi," according to Noth (*IPN*, 229), is related to the Arabic term *nachbun* which means "fearful" or "timid." The personal name "Nahbi" is found only in Num 13:14 The son of Vophsi, Nahbi represented the tribe of Naphtali among the twelve men Moses sent from the wilderness of Paran (Num 12:16) to spy out the land of Canaan. Though not the head of the tribe of Naphtali (Num 1:15; 7:78), he was one of its leading princes (Num 13:2–3). His selection was doubtless based upon his suitability for the mission to be carried out.

JON PAULIEN

NAHOR (PERSON) [Heb *nāḥôr* (נָחוֹר)]. **1.** Descendant of Seth and Shem, son of Serug when Serug was 30, father of Terah at the age of 29, and grandfather of Abraham (Gen 11:22–25). Nahor lived 148 years. In the book of Joshua (24:2), Nahor and Terah are regarded as polytheists. Two issues arise regarding Nahor: the context of his religion and the origin of his name. As to the first, the presumed location of Nahor at Ur of the Chaldees and the subsequent movement of his son, Terah, to Haran, suggest a religion associated with the moon deity, Sin. Sin played an important role at both of these sites (Edzard 1965: 102). As to the origin of Nahor's name, many scholars relate it to Naḫur, a site listed in records from the Mari texts and throughout the 2d millennium B.C., and located near Harran on the plain of the Upper Balikh river (Westermann, *Genesis 1–11* BKAT, 748). See also NAHOR (PLACE). A personal name *na-ḫa-ru-um* appears in the 3d millennium B.C. Ur III period (Schneider 1952: 519–20). It is not clear whether this is more closely related to the Akk *naḫraru/nērāru,* "to help," which is also productive of names in the Mari period (Stamm 1939: 212, n. 4; 367; Rasmussen 1981: 315). Personal names with a W Semitic *nḥr* root appear in the Old Babylonian period at Mari (Birot 1979: 160; ARM 22, p. 197, no. 222, 10) and elsewhere (Gelb 1980: 27, 329), and may be found in some Jewish names from Babylonia of the 1st millennium B.C. (Zadok 1977: 335, 342). However, the root does not appear elsewhere in personal names with a *qatūl/qatōl* form.

2. Brother of Abram, son of Terah when Terah was 70, and husband of Milcah (Gen 11:26–29). His eight sons with Milcah included: Uz, perhaps related to Job; Buz; Kemuel, "the father of Aram"; Chesed; Hazo; Pildash; Jidlaph; and Bethuel, the father of Rebekah (Gen 22:20–24). Nahor's concubine, Reumah, bore him four additional children: Tebah; Gaham; Tahash; and Maacah. Laban is also named as a "son" of Nahor (Gen 29:5), understood as a "descendant" of Nahor. At Mizpah, Jacob and Laban swore by the God of Abraham and by the god(s) [*ʾĕlōhê*] of Nahor (Gen 31:53). The latter may be related to the deities worshipped by Nahor, grandfather of Abram. Several issues emerge concerning Nahor: (1) his relation to his grandfather, Nahor; (2) Nahor's name; (3) his marriage to Milcah, the daughter of his brother Haran; (4) the religion of Nahor; and (5) the meaning of his twelve offspring.

As to (1) Nahor's relation to his grandfather, who bore the same name, it should be noted that this is the only clear instance of papponymy in the book of Genesis. However, the practice does occur elsewhere in the Bible and in the ANE (Wenham *Genesis* WBC, 253). Items (2) and (3) above are treated, respectively, in NAHOR (PERSON) and MILCAH.

The question of (4) the religion of Nahor may be related to the religion of his grandfather. Indeed, the similarity in names may imply an intended relationship. Since both of these figures are associated with Ur and Harran, the cult centers of the lunar deity Sin, it may be that the worship of this deity formed the focus of their religion. By swearing by the god(s) of Nahor, his ancestor who settled in the Harran area, Laban may have been concerned to protect his property. In recently published texts from (LB) Emar, inheritance clauses refer to the heirs invoking the gods of the deceased [DINGIR.MEŠ-*ia … tu-na (-ab-)bi*] (Huehnergard 1985: 429–31). This seems to be a right and an expectation of the heirs which coincides with their possession of the inheritance. Here is a further indication of distinction in property rights and family responsibilities between Laban as Nahor's representative in the Harran area, and Jacob, as Abraham's representative in the region to the south (Morrison 1983: 163). As to (5) the meaning of the twelve offspring, comparisons have been drawn with the twelve sons of Jacob, also mothered through both wives and concubines. If so, the twelve children of Nahor may reflect twelve tribes. This seems to be implied at least for Kemuel, "the father of Aram."

RICHARD S. HESS

NAHOR (PLACE) [Heb *nāḥôr* (נָחוֹר)]. The servant of Abraham journeys to "the city of Nahor" in Aram-naharaim where he searches and finds Rebekah, granddaughter of Nahor, as a wife for Isaac (Gen 24:10). In Genesis 24, the remaining three occurrences of the name "Nahor" (vv 15, 24, 47) refer to the personal name of Nahor, brother of Abraham. See NAHOR (PERSON). Therefore, it is reasonable to assume that "the city of Nahor" is not necessarily a city whose name is Nahor but the city occupied by Nahor. If so, it may refer to Haran, a city in which Abraham sojourned with Nahor before traveling to Canaan (Gen 11:29–31). This is also the city from which shepherds who knew Laban, son of Nahor, came (Gen 29:4–5). On the other hand, there is a city Naḫur which appears in early cuneiform texts. Spelled as *na-ḫu-ur* or as *na-ḫur*, it is found in texts from Mari (Kupper 1979: 24) and elsewhere in texts from Old Babylonian (Groneberg 1980: 173), Middle Babylonian, and Middle Assyrian sources (Kessler 1980: 91; Nashef 1982: 201). It is not clear that this place name appears in any texts from the lst millennium B.C. (Kessler 1980: 223–24). The city has been located in the area of one of the W branches of the Ḫabur river to the E of Harran.

RICHARD S. HESS

NAHSHON (PERSON) [Heb *naḥšôn* (נַחְשׁוֹן)]. Son of Amminadab and chief (*nāśî'*, Num 2:3) of the tribe of Judah during the wilderness sojourn after the Exodus. As the leader of the tribe of Judah, he

helped Moses conduct a census of the able-bodied fighting men of Israel prior to their departure from Mt. Sinai (Num 1:7), presented the offerings of the tribe of Judah on the first day of the twelve-day celebration of the dedication of the altar (Num 7:12, 17), and conducted Judah both to its proper place on the E side of the tabernacle in the Israelite camp (Num 2:3) and to its position at the head of the tribes as the Israelites prepared to depart from Mt. Sinai (Num 10:14).

Nahshon is listed in a number of significant biblical genealogies. He is celebrated as the ancestor of David both in the OT genealogies in Ruth 4:18–22 and 1 Chr 2:3–17 and in the genealogies of Jesus Christ (Matt 1:4; Luke 3:32). In the genealogies of Moses and Aaron (Exod 6:14–25), Nahshon is identified as the brother of Elisheba, Aaron's only wife from whom the Aaronic priests descended (Exod 6:23). This marriage between Aaron and Nahshon's sister constituted a covenant between the house of David and the house of Aaron and thereby was regarded by the tradition as linking the royal and priestly lines in Judah (Galil 1985: 493). The name "Nahshon" means "little snake"; it may have been given as a nickname (*IPN*, 229).

DALE F. LAUNDERVILLE

NAHUM (PERSON) [Heb *naḥûm* (נַחוּם)]. 1. An Israelite prophet. See NAHUM, BOOK OF.

2. The father of Amos and son of Esli, according to Luke's genealogy tying Joseph, the "supposed father" of Jesus to descent from Adam and God (Luke 3:25). D omits Nahum (Gk *naoum*), substituting a genealogy adapted from Matt 1:6–15 for Luke 3:23–31 The name Nahum as an ancestor of Jesus occurs nowhere else in the biblical documents, including Matthew's genealogy, and falls within a list of seventeen otherwise unknown descendants of David's son Nathan (Fitzmyer *Luke I–IX* AB, 500). Kuhn (1923: 208–9) argues that two seemingly parallel lists of names—Luke 3:23–26 (Jesus to Mattathias) and 3:29–31 (Joshua/Jesus to Mattatha)—were originally identical, the first perhaps reflecting a Hebrew context and the second, in an Aramaic context, tracing Mary's line of descent (since it does not mention Joseph as Jesus' father). Nahum, in the first list, corresponds to Jonam, in the second list. Apart from the OT prophet Nahum (see Nah 1:1; cf. Tob 14:4), for whom there is no evidence of his being a relative of Jesus, nothing further is known of any person with this name in the biblical documents.

STANLEY E. PORTER

NAHUM, BOOK OF The seventh book of the twelve Minor Prophets in the Hebrew Bible. The superscription of the book reads: "An Oracle concerning Nineveh. The Book of the vision of Nahum the Elkoshite." Outside the Bible, Nahum (*naḥûm*, comfort) is a well-attested NW Semitic name (Cathcart 1979: 1). However, nothing is known about the prophet Nahum, and even the place of his origin, Elkosh, has not been identified. Jerome (CChr 76 A, 526) proposed "Elcesaei," a village in Galilee; Pseudo-Epiphanius (*PG* 43, 409) placed it in Judea; and there have been several attempts by modern scholars to locate the site of the ancient town (for bibliography, see Cathcart 1973:38).

A. Text

Recently-discovered witnesses of the text of Nahum discovered in modern times include the Pesher of Nahum (4QpNah) found at Qumran; the Hebrew Scroll of the Minor Prophets from Wâdī Murabbaʿât (Mur 88); and fragments of the Greek text of the Minor Prophets from Naḥal Ḥever (8 ḤevXIIgr) (Barthélemy 1963). There are no significant variants in the text of Nahum in these scrolls, and the student of the text should probably pay more attention to linguistic investigation than to dubious textual reconstruction.

Ugaritic studies have alerted us to the precise usage of *ṣārâ* in Nah 1:9, though *BHS* still recommends emendation of the text to *ṣārāyw*. The interpretation of *yōdēaʿ*, "cares for, is friendly to," in 1:7 is further supported by *KTU* 1.114.7 (*il dydʿnn*, "the god friendly to him"); and *pĕlādôt* in 2:4 may mean "blankets," "coverings," or even "caparisons" in the light of Ug *pld*. The word *mnzr* in 3:17 has yet to be

satisfactorily explained: if it is a military term, it may be a corruption of *ḫnzr*, a term for some kind of military personnel at Ugarit. However, in the light of recent study of Neo-Assyrian preoccupation with astrology and magic, H. Torczyner (1936: 7) was almost certainly correct in reading *manzāzayik,* since in Neo-Assyrian sources the *manzazē* were officials of the palace, including "astrologers, augurs, magicians" etc. (Parpola 1970–71,I:2). In that same verse, the parallel term *ṭipsārayik* is equivalent to Akk *ṭupšarru,* a word used for "astrologer" in Neo-Assyrian texts (Parpola 1970–71,I: 2).

The recently discovered bilingual inscription from Tell Fakhariyeh contains the word *qlqlt*ˀ in line 22 of the Aramaic text, and its equivalent in the Neo-Assyrian text, *tupqinnu*, makes it clear that the meaning is "rubbish dump, refuse heap" (Abou-Assaf et al. 1982: 21, 36). This text, and the occurrence in another Neo-Assyrian text (*AfO* 8 iv 16) of the word *kiqillutu*, "refuse dump" (probably a loanword from W Semitic), may throw light on Nah 1:14, *ʾaśîm qibrekā kî qallôtā.* This new evidence supports the *BHS* apparatus, which suggests reading *qîqālôt* or *qîqālôn*, yielding the translation, "I will make your grave a refuse heap."

Finally, more attention is now being given to techniques in classical Hebrew poetry (Watson 1984), and further research in this area will be useful in the assessment of the results of redaction-criticism and of other methods used in the study of the biblical books.

B. Date

The superscription of the book does not mention any date, but it is clear that the reference to the Assyrian sacking of Thebes (No-Amon; 3:8) in 663 B.C. provides the earliest possible date. There is an impression that Nineveh, which fell in 612, was still standing at the time of the oracles, though it is not impossible that the oracles were composed shortly after it fell. However, there is widespread agreement that a date for the oracles should be sought between 663 and 612, but a more precise dating is very difficult to achieve. Two possibilities have been suggested. The first dates the book to ca. 625 B.C., when Nabopolassar emerged as the leader of an aggressive Babylonia, a development which must have given heart to those peoples who hated the oppressing Assyrians. The second possible date is shortly before 612 B.C., just as the Assyrian empire was entering its death throes, since in 614 B.C. the Medes (under Cyaxares) had already taken Assur and would soon take Nineveh. W. Maier (1959: 31) counters that Nineveh had already become weak and degenerate after the death of Assurbanipal in 626 B.C., and he prefers to date Nahum shortly before 654 B.C., a few years after the sack of Thebes (Maier 1959: 36).

C. Contents

Following the superscription (1:1), the contents may be summarized as follows:

1:2–8	Hymn of Theophany
1:9–2:3(—Eng 2:2)	Threat, Promise, and Judgment
2:4(—Eng 2:3)–3:19	The Fall of Nineveh

1. Hymn of Theophany. The sayings and oracles of Nahum are introduced by a hymn of theophany (1:2–8). There has been much discussion as to the extent of the psalm because of its partial alphabetic acrostic character. According to F. Delitzch (*Psalms* BC^3, 117), this was first noticed by a certain pastor G. Frohnmeyer. Unfortunately, this observation by Frohnmeyer prompted a number of scholars to carry out major critical surgery on the first chapter of Nahum in an attempt to reconstruct a complete alphabetic acrostic, and when G. Bickell (1880: 559–60; 1882:211–13; 1894) and H. Gunkel (1893: 223–44; 1895:102–6) presented their reconstructions, W. R. Arnold protested that these scholars had "decapitated a masterpiece of Hebrew literature" (1901: 236). In recent years critics have not been quite so ardent, and few scholars have pursued the acrostic beyond vv 8 or 9 (see, e.g., Christensen 1975:17–30).

There is considerable debate concerning the date of the psalm. It is unlikely that the psalm was composed by Nahum, but given the incomplete nature of the acrostic, it may be that either Nahum modified an already existing psalm and used it as an introduction to his oracles, or a subsequent editor placed it before Nahum's actual oracles. In any event, the hymn does not reflect any particular historical situation; rather it is a typical hymn of theophany, and its language is similar to that of the Canaanite descriptions of the theophany of the storm god Baʿal (Cathcart 1975: 68–71). Of particular interest is the

reference in 1:4 to Yahweh's roar at the Sea (*yām*) / Rivers (*nĕhārôt*), which recalls the conflict between Ba‹al and the Sea/Rivers in the texts from Ugarit. Like Ba‹al at Ugarit, Yahweh is portrayed as a storm god, a warrior, and a king, and it is the recognition of these motifs that is important for understanding the book of Nahum as a whole and the relationship between the psalm and the oracles in particular (see below).

2. Threat, Promise, and Judgment. Verses 1:9–2:3 have been adjudged by many critics to be in disorder. Verse 9 seems to be addressed to the enemies of Yahweh in general, but since this verse is probably a link between the psalm and the following oracles, one can safely assume that the Assyrians are the specific enemy. A linguistic argument in favor of taking v 9 as a link-verse is the presence of *klh ‹śh* ("he will make a full end") in vv 8 and 9, and *ḥšb* ("to plot") in vv 9 and 11

Verses 10–11 and 14 are further threats against the enemy, but v 11 is clearly directed against Nineveh, while v 14 is directed against the king of Assyria. This series of threats is interrupted by vv 12–13, which are promises to Judah.

Chapter 2 opens with a series of imperatives, typical messenger formulae announced by the *mĕbaśśēr,* the courier of Yahweh the divine warrior, who is about to wage war against the Assyrians. (On the *mĕbaśśēr,* see Miller 1973:12–23, 66–74; and *CMHE*, 229). In 2:1 (—Eng 1:15) there is a message of salvation to Judah and in 2:2 (—Eng 2:1) a message of judgment to Nineveh. Verse 3 (—Eng v 2) states clearly the objective of Yahweh's war against Assyria, namely to deliver his people and restore "the glory of Jacob, indeed the glory of Israel."

3. The Fall of Nineveh. Nah 2:4–14 (—Eng 2:3–13) and 3:1–19 contain a superb description of the assault on Nineveh and its panic and downfall. Nah 2:4–14 (—Eng 2:3–13) is a self-contained unit, but it is difficult to say the same of 3:1–19 Perhaps with Eissfeldt (1965: 414) we should divide it as follows: 3:1–7 describing the destruction and humiliation of Nineveh; 3:8–17, a passage full of derision and irony, stressing the futility of Nineveh's efforts to defend itself; and finally 3:18–19, a dirge or funeral lament.

D. Interpretation

G. Fohrer (1968: 451) is willing to allow "some genuinely prophetical insights" in Nahum, but he is inclined to view the prophet as a "representative of optimistic prophecy with a strong feeling of nationalism." Because there is no condemnation of Israel or call to repentance in the oracles but, on the contrary, a great exultation over the fall of Nineveh, scholars have attributed a virulent nationalism to Nahum and have even alleged that he tends to exhibit the characteristics of false prophecy. Haldar (1947) believes that the book of Nahum originated in cultic circles and that in it the historical enemy is identified with cosmic foes. In other words, there is an element of propaganda in the book. Haldar's views have been widely rejected, but some of his insights in connection with myth deserve attention. Jeremias (1970: 11–55) and Schulz (1973) have not been convincing, and it seems more sensible to try and interpret the material as we have it, rather than engage in wholesale dismembering and reconstruction of the text (Schulz) or in speculation that some oracles against Nineveh were originally directed against Jerusalem/Israel (Jeremias). However, this does not mean that some editorial or redactional process has not taken place, especially with regard to 1:9–2:3 (see *IOTS*, 444; Coggins 1982: 80).

The introductory hymn of theophany (1:2–8) plays an important role in the book, and scholars have not pursued sufficiently their general observations that in it there is a strong sense of the sovereignty of God and a portrayal of Yahweh's lordship over history. The "Avenging God" (1:2, *›ēl nōqēm*) is the one who as king and judge will punish the Assyrians to save Israel. The overthrow and sacking of Nineveh were historical acts of war by the Medes and Babylonians, but more importantly they were acts of war by Yahweh. The "scatterer" (2:2, *mēpîṣ*) who attacks Nineveh is "the jealous and avenging God," "the Lord of Wrath," who rages against his enemies. He is a mighty warrior, "great in power" (1:3, *gĕdōl kōaḥ*) who directs the earthly "mighty warriors" (2:4) against Nineveh. The Lord of the Storm who overcomes the Sea (1:3–4) to establish his dominion and assert his kingship is Yahweh the King, who decides the fate of the king of Assyria (1:14; cf. 3:18).

E. Nahum and the Day of Yahweh

Chapters 2 and 3 of Nahum have a number of lines and phrases which are similar to some found in those biblical passages which speak of the Day of Yahweh. It is true that a common "war-language" is to be expected, but, nevertheless, it is remarkable that a number of lines and phrases are found only in Nahum and the classic Day of Yahweh texts (Cathcart 1975: 72–76). (Compare Nah 1:10 with Joel 2:5, Obadiah 18, and Mal 3:19; Nah 2:5 [—Eng 2:4] with Jer 46:9, Joel 2:9, and Amos 5:16; Nah 2:9 [—Eng 2:8] with Jer 46:5, 21; Nah 2:10 [—Eng 2:9] with Isa 2:7; Nah 2:11 with Isa 13:7–8 and Joel 2:6; Nah 3:2 with Joel 2:5; and Nah 3:10 with Isa 13:16, Joel 4:2, and Obadiah 11)

R. H. Charles spoke of the Day of Yahweh as follows: "This conception is related to the people as a whole, and not to the individual. It means essentially the day on which Yahweh manifests Himself in victory over his foes" (1913: 86–87). It is not surprising therefore that Charles included Nahum in his discussion of the Day of Yahweh, though it seems he is the only scholar who has done so.

The motifs of the Day of Yahweh appear in Nahum, for that "day" was "a day of judgment," when Yahweh punished the guilty because Yahweh as Divine King was also Judge Supreme. The day was also a "day of victory" on which Yahweh asserted his kingship and lordship over creation. If J. Day, after his recent assessment of the Ugaritic and OT evidence, is correct in his view that "the motif of Yahweh's Kingship, and with it the *Chaoskampf* … had its *Sitz im Leben* in the Feast of Tabernacles at New Year's eve" (1985: 21), then perhaps some of the work of earlier scholars like P. Humbert, who associated Nahum with the New Year, deserves more attention. See also DAY OF YAHWEH.

NAIDUS (PERSON) [Gk *Naidos* (Ναιδος)]. An Israelite layperson, one of the descendants of Addi, who was forced to give up his foreign wife during Ezra's reform (1 Esdr 9:31). It is possible that Naidus is an alternate form of one of the names which occur in Ezra 10:30 Its position in the list is parallel to Maaseiah, not Benaiah as *IDB* 3: 499 and *ISBE* 3: 479 suggest (though Maaseiah appears to be

linguistically parallel to Moossias). On the other hand, it is also possible that this name is drawn from a different list of individuals. Evidence for the latter is indicated by (1) the lack of a name similar in form to Naidus in Ezra 10:30, and (2) the different ancestors named in these two accounts (Addi in 1 Esdr 9:31; Pahath-moab in Ezra 10:30). However, whether Naidus is an alternate form in a parallel account, or whether it is simply drawn from an alternate list of names available to the compiler of 1 Esdras 9, cannot be known for certain.

JOHN KUTSKO

NAIN (PLACE) [Gk *Nain* (Ναιν)]. A village or small town mentioned in Luke 7:11 as a *polis.* The crowd bearing the body of a young man exited the "gate" of the city, which implies a city wall, and Jesus raised him from the dead.

The site today is identified with the Muslim town of Nein (M.R. 183226) in the plain of Jezreel on the N slope of the hill of Moreh, N of modern Afula and about 9.5 air miles from Nazareth. Origen of Caesarea knew of the village about A.D. 200 *sel. in Ps.* 88), and it is mentioned as lying in the territory of the tribe of Issachar in one ancient Jewish source (*Gen.Rab.* 98.12). It is mentioned by Eusebius in the 4th century (*Onomast.* 140:3) as "a village, in which he raised the son of the widow from the dead. And now it is to the south of Tabor at the twelfth mile from En-Dor." Jerome (141:5) corrects Eusebius to read "two miles from Tabor near Aendor." Jerome was aware that there was a church at Nain in his day, but he did not visit it (*Ep* 46:12; 108:13). Usually commentators conclude that Nain lay off the main road, which accounts for why Jerome stayed away. Egeria, the 4th-century Spanish pilgrim, visited a church at Nain a generation later which was built from, or upon, the house of the widow whose son was raised. She also saw the tomb where he was to be laid (Peter the Deacon P1:4). It is possible that this was a house-church like the "House of St. Peter" at Capernaum. Its situation off the main road may account for the lack of references in the Christian pilgrim literature from Egeria until Eutychius of Alexandria in the 10th century.

A survey by the University of South Florida in 1982 confirmed that the topography apparently includes a ruined and eroded circular wall around the city, completely covered with soil and debris, which would have required a gate as in Luke 7:11 On the NW side of the city is a spring with ancient cut stones and fragments of Roman sarcophagi scattered about. A basin 2.0 × 1.5 m collects the slow-moving water. A cemetery of rock-cut tombs is found on the E side of the village. An intact sarcophagus from the cemetery rests beside the modern church. A small edifice described as early as 1598 as "a building like a small palace" lies in ruins N of the village and about 100 m from the spring. It resembles 13th- or 14th-century structures and is known locally as "the place of the Lord," apparently a mosque.

JAMES F. STRANGE

NAIOTH (PLACE) [Heb *nāyôt* (נָיוֹת)]. The place to which David fled from Saul, having escaped with the help of Michal, his wife and Saul's daughter. David fled to Ramah where Samuel the prophet was, and the two of them dwelt in Naioth (1 Sam 18:18). From here David fled again and later met Saul's son Jonathan in 1 Sam 20:1ff. It was to Naioth that Saul pursued David, first sending messengers and later going himself. In each case the pursuers were overcome with prophetic behavior, most likely some form of ecstatic behavior common to prophecy.

This is the second episode which is said to explain the saying "Is Saul also among the prophets?" The other is 1 Sam 10:12 which concludes the story of Saul's receiving ecstatic gifts as part of his royal commissioning (1 Sam 10:1–13). Because of this duplication of stories about Saul's ecstatic behavior and because Saul is said at an earlier point to have never seen Samuel again (1 Sam 15:35), the episode of Saul pursuing David to Ramah (where Samuel was residing) and there exhibiting prophetic behavior is thought to be secondary to the original account of David's rise to power (see the discussion in McCarter *1 Samuel* AB, 330f.).

Of greater importance in discussing the place Naioth itself is the question of the meaning of the word. As our preliminary definition indicates, Naioth is said to be "in Ramah" (1 Sam 19:19, 22, and 23

[twice]). In addition, Saul's messengers are sent to Ramah, not to Naioth (1 Sam 19:22). Because of this, early scholars tended to identify Naioth as a locality within Ramah (Driver *NHT*, 159). Another view is based on the alternate spelling given in the MT The text has the consonants in the order *nwyt* while the marginal note (the *qere*) suggests that *nywt* is to be preferred. The RSV follows this suggestion in rendering the place as "Naioth." Following the Aramaic translation of the OT, the Targum, Morton (*IDB* 3: 500) and others (see the comments in *NHT*, 158–59) propose understanding the name to refer to a "house of instruction"—a prophetic school within Ramah. Morton (*IDB* 3: 500) cites 2 Kgs 6:1–7 as evidence for this type of prophetic school. More recent study has given some nuance to this suggestion. A. Malamat (1962: 146) notes in texts from Mari an Akkadian term for "encampment" or pasture settlement (*nāwum*) which has several related words in Hebrew, one of which is *nāyôt.* Malamat (1962: 146) thinks it likely that these kinds of settlements on the outskirts of a town housed prophetic fraternities. McCarter (*1 Samuel* AB, 328) follows Malamat on this and accordingly translates "the camps" for *nāyôt* where it occurs. He cites Jer 33:12 (which contains the related term *nĕwēh,* "habitations") as an example of shepherds dwelling in these types of settlements.

NAMES OF GOD IN THE OT The God of Israel could be referred to by a number of names, titles, and epithets in the text of the Hebrew Bible. These are significant as indicators of developments in the course of Israel's religious history and as expressions of concepts of the divine held by the ancient Israelites.

A. Function of the Name

One should be careful not to interpret OT data related to the theme of the "name of God" simply in the light of our modern conceptions of person, personality, existence, or identity. In doing so, one would run the risk of missing the appropriate approach to the essential dimensions of the biblical faith of ancient Israel. Moreover, OT discourse concerning the "names of God" should always be perceived in its twofold

context: In respect to the name of God, Israel did not think in any fundamentally different way than in respect to *human* personal names; Israel's thinking about the "name of God" was carried out in the larger context of the ancient Near Eastern world and its divinities.

The "name" is a "distinguishing mark"; seen in an etymological perspective this is true for the common Semitic word *šumu* and consequently for the Hebrew word *šēm,* "name" (KB, 983; Grether 1934: 1). A "distinguishing mark" makes it possible to differentiate, to structure, and to order. In this respect "to name" or "to designate" belongs to the ordering of creation; thus primordial time preceded naming in the Babylonian epic of creation *Enūma elisû* (1.1 [*ANET*, 60] "when on high the heaven had not been named …, when no gods whatever had been brought into being, uncalled by name …"). The bestowal of names initiates the human ordering of creation in Gen 2:19 ("so out of the ground the Lord God formed every beast of the field … and brought them to the man to see what he would call them; and whatever the man called every living creature, that was its name"). This association of the act of naming with creation underlines the fact that the name represents something wholesome and salutary; the knowledge of the name opens up specific human dimensions for communication and for fellowship. The one who knows the name of a god or a human can appeal to them. The knowledge of the name can thereby have effective power. Magic and incantations attempt to use this knowledge through techniques which exploit the influence of the name. Thereby free communication degenerates into a manipulative attempt to dominate. Even when such attempts appear to be effective, they are ultimately completely mistaken because they are based on a simplistic and false identification of the person (whether divine or human) with the "distinguishing mark" (name). Or, to express it in a modern way, they are based on an erroneous equation of existence and identity.

The "distinguishing mark" (name) is not quite identical with what is designated; this little difference allows one to think and to hope that the name will endure. This hope also indicates an aspect of the salutary significance of the name: it juxtaposes the experience of human transience with hope of durability. The durability of the "name" can be manifest in the succession of generations ("name" = son: Deut 25:7; 2 Sam 14:7; Ruth 4:5, 10), or owing to a particular exploit ("name" = fame: "let us make an name for ourselves" Gen 11:4; cf. 2 Sam 8:13).

In the sphere of the "name of God" this little difference between the "distinguishing mark" (name) and what is designated can be of considerable theological significance whenever one attempts to express at the same time God's transcendence (his heavenly existence) and his immanence (his presence appealed to in the temple celebration). This thought is particularly conspicuous in Solomon's prayer for the dedication of the temple (1 Kgs 8:27–30). However, there are reasons to assume that similar features could be found in other ancient Near Eastern cultures. The difference between the divinity and its presence in the cult through the name could indeed occasionally lead to a hypostatization of the name as an independent divine figure, e.g., in the Babylonian divine name Isûum and in the Aramaic divine name Asûima (cf. 2 Kgs 17:30 [Amos 8:14]). Both of these names may be a form of the common Semitic word *šumu/šēm,* "name," with a prosthetic *ʾalep* (Grimme 1912: 14–15; bibliography in Barstad 1984: 167–70 and 175–77; somewhat differently Roberts 1972: 40–41). If the Babylonian divinity Isûum is represented as a "dieu bifront" (*RLA* 5: 213–14; Lipiński 1987: 152; cf. *ANEP*, 693; Furlani 1935: 136–56), then this representation corresponds to the cultic function of the "name of God" mediating between the world of human pronounceability of God and his unpronounceable heavenly existence.

B. The Divine Name Yahweh

In Israel of the biblical tradition only one name of God was cultically appealed to: Yahweh (Heb *yhwh*). See also YAHWEH (DEITY). When one speaks of Yahweh one also speaks of Israel. The oldest texts of the OT start from this relationship between Yahweh and his people Israel, so e.g., in the Song of Deborah (one of the oldest [poetical] texts) after the mention of the name of Yahweh the epithet "God of Israel" follows unpretentiously (Judg 5:5; cf. v 3). In fact "Yahweh, the God of Israel" represents one of the most frequent expressions of OT times. What disappears in the course of time is the self-evidence of the appeal to the name of Yahweh. The loss of this obviousness of a living relationship with God is compensated by an explicit confession of faith.

A case example of one such confession is the book of Deuteronomy, especially in its older form, which comprised chaps. 6–26 It begins in a pointed way by mentioning the name of Yahweh ("Yahweh our God is one Yahweh" [6:4]), and concludes in 26:16–19 with a mutual declaration of a covenant between "Yahweh, the God of Israel" and "Israel, Yahweh's people." In the book of Deuteronomy, the old expression "Yahweh, the God of Israel," conditioned by the literary form of Moses' farewell address to the gathered people, was made personal ("Yahweh, your God") and in this form repeated with an almost tiresome frequency. However, this very strongly emphasized confession of the name of Yahweh and his relationship to Israel is not simply a literary reflexion of the piety of a (small) "Yahweh Alone Party" (Smith 1971: 33; Lang 1983: 13–59). Rather, one should understand in the light of the larger political, cultic, and religious awakening of the time of Josiah (639–609 B.C. [2 Kgs 22–23]). That the name of Yahweh became a constitutive part of the "Josianic reformation" can be seen from the sudden increase in theophoric names with a Yahwistic component in the generation. The epigraphic evidence which archaeology has put at our disposal is quite unequivocal (Rose 1975: 171–82).

A "confessional situation" is in most cases also a "struggle situation." In a confession of the name of Yahweh it is not only a matter of finding one's security and identity. Rather, in the same time a process of demarcation takes place with respect to those who think differently concerning Yahweh's name and concerning its invocation in the cult. The inner Israelite differentiation of the Josianic reform is manifest, e.g., in the brutal action against the cultic sites in Bethel (2 Kgs 23:15–20), an ancient Yahweh sanctuary (cf. Gen 28:10–22), which had served as a royal state sanctuary (1 Kgs 12:26–33), during the time of the N kingdom (926–722 B.C.). The difference of the confession of faith in Yahweh of the N kingdom when compared with the confession of the Josianic reform can also be seen in the light of the difference in use of divine names; here again one can have recourse to epigraphic evidence, in particular to the Aramaic texts from Elephantine. See ELEPHANTINE PAPYRI.

The documents from this colony show that Elephantine Jews built a Yahweh temple (which lasted until 410 B.C.). The spelling of the divine name *yhw* (with three consonants) found in the papyri presumably represents a form older than biblical *yhwh* (Rose 1978: 16–30). But these texts show combinations of the name of Yahweh which cannot be reconciled with what the biblical texts establish as a norm of the faith in Yahweh: e.g., *ʿntyhw* "Anath-Yahwē" (*CAP* 44.3). (On the divinity *ʾšmbytʾl* [*CAP* 22.124], see BETHEL [DEITY]).

For the historical Israel of the royal period one should assume a diversity of confessional expressions of the faith in Yahweh. To these the book of Deuteronomy opposes as a program and a creed its emphasis on the "one Yahweh!" (6:4) and one central sanctuary chosen by Yahweh (12:5, 11, 13, 14, 18, 21, 26). The old "covenant" relationship between Yahweh and Israel (26:16–19) would thus be realized in a comprehensive way and with ultimate authority only at the one central sanctuary: exclusively in the Jerusalem temple. The Deuteronomic creed and the Josianic reform complement each other.

In the subsequent biblical discussion concerning the "localization" of the "covenant"-relationship, the special name of Yahweh plays a part, but the biblical texts also offer some fundamental reflections concerning the function of the name of God. With the older, shorter form ("the place which Yahweh shall choose" [e.g., Deut 12:14, 18]), one is content to emphasize the choosing of a central sanctuary; the younger, longer form specifies the function of this choosing ("the place which Yahweh shall choose to cause his name to dwell there" [e.g., Deut 12:11], or "the place which Yahweh shall choose to put his name there" [e.g., Deut 12:5, 21]). One could almost speak of a "theology of the name" (von Rad 1947:25–30; Mettinger 1982: 52–66; 123–32). The presence of the divine name at the cult site serves to emphasize the legitimacy of the appeal to God as it was carried out in the cult; the way and the manner in which the name of Yahweh is appealed to in the central sanctuary (= Jerusalem) represents the only legitimate form which corresponds to the will of God, Yahweh having deposited his name there. Only there (and not, e.g., in Bethel) could one be sure that the name invoked by the priest would be identical with the one which God himself revealed. The legitimacy of the entire cultic service (the word and the sacrifice) depends on the legitimization of the name of God.

The "theology of the name" is then also appropriate in order to facilitate a theological reflection beyond the cultic sphere as it opens the way for a distinction between the earthly "dwelling of the name of God" and the heavenly dwelling of God. This amounts to a theological differentiation between the immanence and transcendence of God.

The old formulaic relationship between Israel and the name of Yahweh ("Yahweh, the God of Israel") did not find an emphasis only in an inner Israelite differentiation, but could also serve as a negation of everything which stood outside of this relationship. What is not comprised by the name of Yahweh should have no justification to exist in Israel. This demarcation (or delimitation towards the outside) finds its radical expression in the first commandment ("Thou shalt have no other god before me [lit., in front of my face, i.e., vis-à-vis the symbol of my cultic presence"]). Where one appeals to the name of Yahweh any other divine presence has to be eliminated (e.g., Deut 12:2–3: "… you shall destroy their name out of that place"). The divine name of Yahweh does not tolerate any foreign divine name.

In this way in the Josianic reform and in the Deuteronomic creed the name of Yahweh became the focal point for the representation of what faith in God should mean for Israel. In the final analysis, the book of Deuteronomy is nothing else but a sermonic commentary on the old designation "Yahweh, the God of Israel." The name of the people, *Yiśrā˒ēl,* is itself formed with another theophoric element: "El." This incongruity between the name of God and the name of the people allows one to conclude that the "Yahweh-Israel" relationship is a result of a historical development which should not be seen independently from the formation of the national and political entity called "Israel."

In addressing the question of the relationship between "Yahweh" and "El," historical and philological research attempts to clarify the epoch *before* the formation of the biblical tradition. Indeed the biblical tradition itself preserved a memory of the fact that the relationship "Yahweh-Israel" is not primordial, but arose in the course of history, whether it is related to the basic experience of the liberation from Egypt ("I am Yahweh thy God from the land of Egypt" [Hos 12:10—Eng12:9]), or to the covenant and the Sinai revelation (e.g., Exod 24:8), or to a covenant declaration in the land of Moab (Deut 26:18), or to the completion of the conquest (Joshua 24). The biblical tradition has equally preserved a memory that within the tribes which would later form the people of Israel, other divinities were also worshipped (Josh 24:15: "Choose you this day whom you will serve, whether the gods which your fathers served in the region beyond the river …, but as for me and my house, we will serve Yahweh"; cf. v 23: "Then put away the foreign gods which are among you, and incline your heart to Yahweh"). Since the OT intends to be a document of the faith of *Israel*, the possibility of writing the *pre*-Israelite history of the name of Yahweh in the time of the tribes remains extremely limited. One of the most popular theories on the origin of the name of Yahweh is the Qenite or the Midianite hypothesis: Yahweh was presumably worshipped by these nomadic tribes in the Southern Palestine (cf. e.g., the narrative tradition of Moses' Midianite [or Qenite] father-in-law [Exod 2:16; 3:1; Judg 1:16; 4:11; etc.; cf. the discussion in Kinyongo 1970:7–19]). One thing is certain: Yahweh does not belong to the autochthonous divinities worshipped in Canaan.

C. Non-Yahwistic Divine Names and Titles

The encounter between the nomadic or half-nomadic migrant groups and the sedentary populations in the region of the arable land out of the convergence of which Israel arose is reflected in the titles and attributes of the biblical god.

1. El (Divinity). One of the oldest such encounters and also the most unproblematic was the one which related faith in Yahweh with the worship of El. According to Gen 33:20, Jacob had built an altar in Shechem and called it "El-Elohe-Israel"; the author of this text assumes an identity of this "El" with Yahweh. Actually, "El" is not a divine name but a common Semitic appellative for the "divinity" (see *TDOT* 1: 242–61). In order to make appeals to the divinity, this "El" required some concrete expression either by being related to a locality (e.g., "El-Bethel," Gen 35:7), or by adding an epithet (e.g., "El of the covenant" [El-BeréÆt], Judg 9:46; El-Roi, Gen 16:13; cf. 22:14). For many worshipping communities with a polytheistic religious structure, "El" could also become a personal divine figure (e.g., the Aramaic inscriptions of Panammuwa [Zincirli; 8th century B.C.] mention "El" alongside the divinities Hadad, Resûef, Rākib-el, S²amaš; *KAI* 214 and 215). As a whole the "international" character of the god "El" and

the original appellative function of the name "El" have occasioned the circumstance that this title may refer to the highest god (god-king), to the founding god (*Göttervater*), or to the god-creator. "El" appears to have this function and form in the texts from Ugarit-Ras Shamra, reflecting an expression of the Canaanite religion at the end of the 2d millennium B.C., but also in the biblical texts like e.g., Genesis 14, where Melchizedek is designated as "the king of Salem" and "the priest of El-Elyôn [RSV: "God Most High"], creator of heaven and earth" (vv 18 and 22).

2. El-Elyôn (God Most High). In the biblical tradition this "El-Elyôn" was naturally identified with Yahweh (Gen 14:22): "I [= Abram] have lifted up my hand unto Yahweh, El-Elyôn, creator of heaven and earth." This identification is facilitated by the fact that both elements of the divine name El-Elyôn can be reduced to the function of the attributes: "the divinity, the most high." The conversion into an epithet of Yahweh is, of course, only the last phase of a long process. In the poetic language which stands even closer to the Canaanite worldview, Deut 32:8–9, speaks of "Elyôn" (as the creator and sustainer) who attributes to different nations a portion of the inhabitable land and assigns a nation to a god (to a divine being, "son of El" [according to the original form of the text; cf. LXX, Qumran]). Then Yahweh had equally acquired "his people as his portion." This text seems to presuppose an even earlier differentiation between the "supernational" creator-god ("Elyôn") and Israel's national god Yahweh (cf. Ps 82:1, 6).

Genesis 14 is the only text in the OT where the terms "El" and "Elyôn" are directly connected ("El-Elyôn"). However, there are numerous instances where "El" and "Elyôn" are mentioned in parallelism, e.g., Ps 73:11 ("and they say, 'How can El know? Is there knowledge in Elyôn?' "); Ps 107:11 ("for they had rebelled against the words of El, and spurned the counsel of Elyôn"). Salem in Genesis 14 is to be identified with Jerusalem (cf. Ps 76:3: Salem = Zion), which supports the assumption that the adoration of El-Elyôn was transmitted to the Israelite tribes by the intermediary of this Canaanite city-state. It would have been transmitted first to the Benjaminites who settled north of Jerusalem (cf. the conjecture "Elyôn" in the blessing of the tribe of Benjamin, Deut 33:12 [Helck 1984:523–29]), and then after David's conquest of Jerusalem to other groups of the young kingdom (The Davidic connection arises from reading the conjectured "Elyôn" in the last words of David, 2 Sam 23:1: "the oracle of the man who was named by Elyôn"; cf. 1 Sam 2:10 [*HALAT*, 780]). With David and Solomon in the royal (residential) city of Jerusalem, the official and national cult was associated with the name of Yahweh, whereby pre-Israelite traditions were further transmitted and extensively absorbed. In many poetic texts Yahweh is placed in parallelism with Elyôn (e.g., 2 Sam 22:14 = Ps 18:14; Ps 21:8); the last clear identification is expressed in Ps 47:2: "Yahweh-Elyôn is terrible, a great king over all the earth."

With the appropriation of the epithet " (El-)Elyôn" the Yahweh worship, which is of nomadic provenance, has become enriched with the dimensions of world creation and the royalty.

3. El-ʿOlām (Everlasting God). Gen 21:33 attests this divine epithet for the cultic worship in Beer-sheba but identifies this divinity "El-ʿolām" quite naturally with Yahweh (cf. Jenni 1952–53: 1–5). Numerous ANE texts show that this epithet is not specific to the biblical tradition. Like "El-Elyôn" this epithet appears regularly in contexts in which the *royal* dimensions of the divinity are emphasized. *ʿolām* designates the "fullness" (totality) of the experience of time and space. With this concept one attempts to place the concrete and limited human experience into the largest possible frame. Within the world of human experience in the ancient Near East, this "transcendence" was extensively personalized and symbolized in the king. In Israel too, one wished this *ʿōlām* to the king: "May my lord King David live for ever [*ʿōlām*]!" (1 Kgs 1:31). In respect to the Davidic dynasty developed a term designating an "*ʿôlām* covenant" (cf. 1 Sam 20:42; 2 Sam 7:13, 16). The *ʿôlām* character of the king points ultimately to the *ʿôlām-quality* of god, of which numerous biblical and extrabiblical texts speak. In these texts one cannot always clearly determine whether *ʿōlām* emphasizes mainly the specificity of god (or of gods respectively) or whether *ʿōlām* functions as an epithet or even as a proper name (as in El-ʿolām Gen 21:33). In Ps 75:10, the expression "the God of Jacob" stands in parallelism with *ʿōlām:* "I will praise *ʿŌlām* (or: "for ever"), I will sing praises to the God of Jacob."

4. Shaddai (Almighty). It is somewhat more difficult to determine exactly the facts about the title "El-Shaddai." See ALMIGHTY. Only the final result in the process of appropriation, its identification with

Yahweh, can be clearly ascertained. Exod 6:3 offers an etiology: "I appeared to Abraham, to Isaac, and to Jacob, as El-Shaddai ('God Almighty'), but by my name Yahweh I was not known to them." All other aspects of the title, its origin (Hebron? [cf. Alt 1929:12–13 and 54–62]) its history, its function (name or attribute?), even its etymology (cf. Koch 1976:308, 328) and its meaning still remain uncertain. (The meaning "Almighty" is based on the LXXand the Vg and should be seen as a free rendering of the Heb term which had become obscure.) Besides exilic texts which mention "El-Shaddai" (e.g., Exod 6:3 [P] and Ezek 10:5), there are a few more ancient ones like the oracle of Balaam in Num 24:16: "He knows the knowledge of Elyôn, he sees the vision of Shaddai" (cf. v 4). The conspicuous feature in this text is the parallelism between Elyôn and Shaddai (as in Ps 91:1). One could add to this the mention of El and Shaddai in the blessing of Jacob (Gen 49:25: "By El, thy father, who shall help thee; by Shaddai, who shall bless thee …").

In the case of El-Shaddai as well, philological-historical research leads us again to the sphere of the Canaanite religion. The *sûdyn* "Shaddayin" in the Aram inscription from Deir ʿAlla were presumably divine beings of uncertain character. See DEIR ʿALLA (TEXTS). What is theologically significant, however, is to find out in what manner this tradition has been used for the expression of faith in Yahweh. The key text, Exod 6:3, uses an ancient epithet (which no longer had any cultic usage) to contrast the religion of the patriarchs with the Yahweh religion in such a way that the period of the patriarchs should not be lost for the history of Israel's faith. The faith of the patriarchs reflects genuine experiences of God, for the true God had "appeared" to them (Heb pass. "had been seen"), although this was more an intuitive experience than empirical knowledge ("I was not known to them"); full fellowship with God is possible only where "my name Yahweh" is known.

This late (exilic or postexilic) theological conception of the "Priestly writing" remains essentially in line with the old traditional associations of the name of Yahweh: (1) The name Yahweh is related to *Israel*: it is only to Israel that "I am Yahweh" is emphatically addressed (Exod 6:6: "Say to the people of Israel, 'I am Yahweh …' "; v 8: "I will bring you into the land: I am Yahweh"). (2) The *cultic* dimension of the name is evident in the Priestly supposition that before the revelation of the true name of God, Yahweh, no legitimate offerings are conceivable; for the Priestly writing, the time of the patriarchs is a period without cultic offerings. (3) The name of Yahweh was associated with the event of the liberation from Egypt (Exod 6:7: "I am Yahweh your God, who brings you out from under the burden of the Egyptians"); all the rest is prehistory of Israel and, in a sense, the prehistory of Yahweh. For this "prehistory" narrated in the book of Genesis, the Priestly author does not use the divine name Yahweh but prefers the expression "Shaddai" (or "Elohîm").

5. Abîr (Mighty One). Here, too, one deals with an ancient divine epithet, which in the OT text appears particularly in connection with the expression *ʾăbîr yaʿăqōb* (RSV: "the Mighty One of Jacob"): Gen 49:24; Isa 49:26; 60:16; Ps 132:2, 5 The Hebrew word *ʾăbîr*, however, is not used only for God but also for humans and for animals. The basic etymological meaning of this word (in Hebrew and other Semitic languages) is "might" or "strength." For humans the term *ʾăbîr* serves to designate war heroes (e.g., in Ps 76:5, *ʾăbîr* stands in parallelism with "men of might"), and for animals (e.g., choice stallions or steeds [Judg 5:22; Jer 8:16; 47:3; 50:11]). The quality designated by *ʾăbîr* is perceived to be particularly embodied in the strength of a bull; in the texts from Ugarit-Ras Shamra, *ʾibr* means "bull" (*UT* 3, no. 39); also in biblical texts, bulls can be designated with the term *ʾăbîr* (Isa 34:7; Pss 22:12; 50:13).

Jeroboam I (933–911 B.C.E.) the founder of the first Israelite dynasty, did not seek to introduce any new divinity into Israel when he erected the bull figures in Dan and in Bethel (1 Kgs 12:26–30); rather, his act is to be understood as an attempt to give expression to an old N Israelite tradition (as reflected, e.g., in the old divine epithet "ʾAbîr of Jacob" [cf. Gen 49:24 in the blessing of Joseph]) in the figure of an impressive cultic object (Weippert 1961: 93–117). This representation of the God of Israel could be confused with that of the Canaanite god Baal; consequently, as the polemical demarcation against Baal began, the problem arose, on the one hand, to uphold the old epithet "ʾAbîr of Jacob," and on the other hand, to dissociate the strength *(ʾăbîr)* of a bull from Yahweh, the God of Israel. The Masoretic copyists had recourse to an artifice by introducing a *dāgeš* in the letter *bet* and thus distinguished between two

words: *ʾăbîr* was reserved for the divine epithet "ʾAbîr of Jacob" (or Israel, respectively), while all other occurrences of the term were written *ʾabbîr*.

This differentiation, however, does not resolve all the problems. In Ps 78:25, the manna is called "the bread of the *ʾabbîrîm"*. Grammatically the plural *(-îm)* is used; nevertheless, one may question whether it is not an instance of a plural of "majesty" (or of "absolutization") which is often employed in connection with God. The context in Psalm 78 speaks of *God:* Yahweh is "Elyôn" (v 17) and he is equally the *ʾăbîr* par excellence; the Revised Version of 1927 translates the grammatical plural as singular, which is correct in respect to its meaning: "man did eat the bread of the mighty." In the gift of the manna the separation between divine and human existence was overcome. The LXX did not understand this divine epithet any longer and rendered it with a plural: "bread of the angels" (cf. RSV).

6. Paḥad (Fear). As in the case of *ʾăbîr,* the term *paḥad* represents a divine epithet which is mentioned in connection with the patriarchs: Gen 31:42, 53b ("Terror/Dread of Isaac"). See also FEAR OF ISAAC. Alt (1929/1953: 24–25) had seen in this epithet a divine name, this has been questioned by other scholars (*CMHE*, 4; Koch, 1980). The meaning of *paḥad* is also debated (Albright proposed "kinsman of Isaac" [*FSAC*, 188–89]; rejected by Hillers 1972); the understanding of *paḥad* as "terror" should be given preference since the term has frequently this meaning in the OT Many occasions of fright provoked by the encounter with the numinous are explicitly related to God: e.g., 1 Sam 11:7 speaks of "*paḥad* Yahweh" (= the dread which Yahweh causes to fall upon the enemies of Israel). As the might of the "*ʾAbîr* of Jacob" represents an element of protection and of security for the community which identifies itself as belonging to "Jacob," so the terror-spreading numinous effect of "Isaac's *Paḥad*" represents a warranty of an effective protection for this community, which is comprised under the name of "Isaac."

One can trace a definite dissemination of this divine epithet "Paḥad" in the ANE (Lemaire 1985: 500–1). Different divinities were ascribed the capacity of spreading a numinous dread. In the context of OT texts this ancient divine epithet allows the biblical author to talk of the (tribal) prehistory of Israel and of the (numinous) prehistory of Yahweh without using specific divine *names.*

7. Elohîm (God). "Elohîm" belongs to the linguistic root "El" (god); "El" and "Elohîm" can be understood as parallel and interchangeable terms (e.g., "Sons of El" [Ps 29:1; 89:7] and "Sons of Elohîm [Job 1:6; 2:1; 38:7]). The form "El" is found preponderantly in older (or archaizing) texts in the OT The origin and function of the medial "*h*" is debated in philological research. Texts from Ugarit-Ras Shamra also show a plural with the medial "*h*" as a particular by-form. However, its main area of distribution is the Aramaic-speaking world. Beginning with the 8th century B.C., Aramaic developed increasingly as the international language of the ANE, and its progressive influence on Israel is beyond doubt (the most recent books of the OT [e.g., Daniel] contain chapters written in Aramaic). The assumption of such an extremely strong influence of the Aramaic language could explain the weighty presence of the term "Elohîm" in the biblical texts: late (montheistic) Israel had found in Elohîm a term to express that the numinous concept which Aramaic designated with "Elohîm" as international and unspecific, was nothing else but the rudimentary form of knowledge of the one and true God, which had been given only to Israel with the name of Yahweh (*TDOT* 1: 267–84).

Grammatically the form "Elohîm" contains the plural ending *-îm.* The function of "Elohîm" as a true plural ("gods") is reflected in numerous biblical texts (e.g., Exod 12:12: "all the gods of Egypt"). In this function "Elohîm" can be preceded by a definite article ("the gods"; e.g., Exod 18:11: "now I know that Yahweh is greater than all the gods"). In Heb "Elohîm" can be accompanied by plural adjectives (e.g., very frequently in Deuteronomy: "other gods") and construed with plural verbal forms (e.g., Ps 97:7: "all gods bow down before him [Yahweh]").

The striking feature of the OT texts lies in the use of this plural form "Elohîm" in order to designate the one God of Israel. One could think of a "plural of majesty"; however, it is most probable that this plural should be understood in the sense of an intensification and eventually as an absolutization: "God of gods," "the highest God," "quintessence of all divine powers," "the only God who represents the divine in a comprehensive and absolute way." In this function the term "Elohîm" can stand as a surrogate for the name of the biblical God; e.g., Gen 1:1 (P): "In the beginning Elohîm created the heaven and the earth."

In this sense is the term "Elohîm" used in a systematic way instead of the divine name "Yahweh" in one part of the Psalter (Psalms 42–83); therefore in the scholarly literature this part is called the "Elohistic Psalter (note the two almost identical Psalms 14 [with "Yahweh"] and 53 [with "Elohîm"]).

When in the OT texts the form "Elohîm" is used instead of "Yahweh" in this or similar ways, this mirrors different types of theological reflection, in an attempt to place one's own tradition of faith and of the name of God in a context of an increasing challenge manifest through different religions and other divine names. The differentiation in the Priestly writing between "Elohîm" (= pre- [and extra-?] Israelite) and "Yahweh" (= genuinely Israelite) is only one attempt, in the crisis of Israel's dispersion among the nations (in the time of the Babylonian exile), to transform the faith in one primarily national Yahweh into a new form which tries in a conscious and an increased manner to incorporate into one's own tradition the experience of the supranational and international.

Besides the confrontation with the religions of the surrounding world, in the exilic period there arises an inner Israelite dialogue concerning the way one should deal with the traditions. What now appears as a Priestly layer on the Pentateuch must have once been an independent work, which attempted to offer an alternative to the great Deuteronomistic-Yahwistic historical work (Rose 1981: 320–28; Van Seters 1983:323). What is called the "Yahwist source" (J) in the Pentateuch by exegetes is in fact distinguished by the fact that (in contrast to the Priestly writing [P]), it employs the divine name "Yahweh" from the beginning and presupposes cultic appeal to the name of Yahweh already for the beginning of human history; cf. Gen 4:26: "To Seth [= the third son of Adam and Eve] also a son was born, and he called his name Enosh [=humanity]. At that time men began to call upon the name of Yahweh." For the theologian "J" (the Yahwist), to invoke the name of Yahweh is not an exclusive right of Israel. Rather, access to this God and to his name is in principle open to all of humanity ("Enosh"). The texts of this author are characterized by a truly extraordinary, but presumably programmatic juxtaposition or even blending of "Yahweh-Elohîm" (in the narrative of creation Gen 2:4b–3:24), but also by the integration of the "Elohistic" material ("E"; e.g., Genesis 20) in his narrative flow, stamped throughout with the name of "Yahweh." The constant interchange between "Yahweh" and "Elohîm" in his story of Joseph (Genesis 37–50) and in his story of Balaam (Numbers 22–24) must appear quite confusing. Yahweh, the God of Israel, is "Elohîm."

What interests the theologian "J" in the God of Israel is not his particularity, which expresses itself in an individual name, but the manifest realization of his function: he accomplishes what one expects of a god (*Elohîm*). His name "Yahweh" does not express anything else but a definition of a true and helpful existence: the author of Exod 3:14 understood "Yhwh" etymologically as "I am that I am." The divine name "YHWH" is thus derived from the Semitic verb *hyy/hwy* "to be" in the sense of a helpful and effective being ("*Da-Sein*": support, manifestation, event [von Soden 1966]; cf. somewhat differently Albright 1924: 370–78; *FSAC*, 15–16: "he causes to be, he creates"; cf. Freedman 1960; *TDOT*). The powerful effectiveness which one expects from every divinity (cf. the etymology of *El/Elohîm*, is realized only by Yahweh as the unique true *Elohîm*. In this way the (particular) name of Yahweh can step behind the (universal) Yahweh function (= *Elohîm*). Vis-à-vis this universalistic ("humanistic") interpretation of the "J" theologian, the theology of the Priestly writing attempts to teach faith in Yahweh in a quite pointed way starting from the particularistic specificity of Israel. Both authors employ the term "Elohîm" virtually as another name for Yahweh; each, however, with a very different theological purpose.

8. Baal. While the largest spheres of the pre- and extra-Israelite *El*/*Elohîm* tradition could have been integrated into the faith in Yahweh, the process of confrontation between Israel and the Canaanite Baal tradition was on the whole more complicated.

Nevertheless, the starting point is not essentially different insofar as the term *baʿal* did not originally represent a specific divine name but rather an appellative "lord, owner, possessor," which could be used entirely outside the religious language and without a reference to a particular divinity (*TDOT* 2: 181–200). Thus every married man is a *baʿal* (possessor, owner) of his wife (e.g., Gen 20:3; Exod 21:3, 22, etc.), every family leader was a *baʿal* of his family ("house"); in the same way one could be a *baʿal* of a field or

of a herd of cattle. The sphere over which one exercises one's possession is defined by the genitive (*baʿal* of …). See also BAAL (DEITY).

In a similar way the sphere over which the ancient Near Eastern divinities exercised their lordship is defined; the biblical texts contain a considerable number of such genitival constructions with the element *baʿal,* e.g., "Baal-Peor" (Num 25:3, 5; Deut 4:3; Ps 106:28) is the god who is the owner (*baʿal*) of the sanctuary on Mount Peor in Transjordan (Num 23:28). The divine epithet *baʿal* is attested in the entire Semitic-speaking world and was attributed to a variety of gods. In the West Semitic sphere (Syro-Palestine) a particular development occured. From the middle of the 2d millenium B.C. the original epithet was oriented more and more to function as a divine name: first of all, the name was reserved for a clearly defined type of divinity (the storm god); the individual names (e.g., Hadad) of originally different gods of this type receded into the background, so that eventually the term *baʿal* could assume the function of a divine name.

In the West Semitic sphere this development took place with a varied rapidity: in the areas strongly exposed to international exchange and trade (e.g., Ugarit-Ras Shamra) it certainly occurred much faster than in the hill areas of Samaria and Judah. The use of a widely disseminated divine epithet allowed the cities and regions involved in the exchange to emphasize even more strongly their common features as over against their particularistic traditions with their isolating effect. With this "international" character Baal is comparable to "El"; contrary to "El," however, the term *baʿal* stresses much more the dynamic element, which on the one hand, is due to its heritage from storm god, and on the other hand, to the meaning of the word *baʿal:* the rule or dominion implied must be constantly and actively achieved, exercised and demonstrated.

The Israelite tribes which came into contact with Canaanite Baal worship must have felt or even hailed the affinity between their similarly immensely dynamic, and downright warlike Yahweh tradition (e.g., Exod 17:16: "A hand upon the banner of Yahweh! Yahweh will have war with Amalek from generation to generation!") and the Canaanite Baal. In any case, there are a number of indications showing that the Israelites as well began to worship their god Yahweh using the epithet *baʿal,* which the Canaanites applied to the most dynamic god in their tradition. King Saul named one of his sons "Ishbaal" (= "man of the lord"); by doing this he certainly did not intend to show reverence to the foreign, Canaanite divinity Baal. Rather, the epithet *baʿal* referred to Yahweh, the God of Israel. This assumption is further corroborated by the list in 1 Sam 14:49, where the three sons of Saul are mentioned. The second son, called ISHVI (Heb *yišwî*) (perhaps "man of Yahweh"), should probably be identified with "Ishbaal." The theophoric elements ḇaʿalʷ and "Yahweh" in the Israelite personal names are interchangeable since Yahweh is "*baʿal*" (lord). The personal name Baalyah in 1 Chr 12:6 is a confessional name meaning "Yah (= Yahweh) is lord [*baʿal*].". That is to say, whatever one characterized with the epithet *baʿal,* it was fully realized by Yahweh (and only by him!); he is the *baʿal* par excellence.

Under these presuppositions of "Yahweh's baalship" it is not surprising that in the OT psalms Yahweh is worshipped with terminology similar to that used of the Canaanite Baal in the epics from Ugarit-Ras Shamra, that is, as the one "who rides on the clouds" (Ps 68:5; 104:3; Deut 33:26), who manifests himself in thunder and storm (e.g., Ps 18:14–15; 77:19). Behind Psalm 29 could be hidden an entire Canaanite hymn to Baal which was transposed into a hymn to Yahweh. This "baalization" of Yahweh should not be understood as if by it the specific Israelite tradition was abandoned; the epithet *baʿal* does not replace the divine name *Yahweh.* Rather, this entire development reflects the natural attempt of a young nation to learn from the cultural experience of older nations. This cultural and religious process of learning had received an enormous impetus from the fact that David had established the capital of his kingdom in the ancient Canaanite-Jebusite city of Jerusalem, and that his son Solomon had erected there the royal palace and the Yahweh temple with the help of Phoenician builders. In doing so the Phoenicians were not just suppliers and workmen; rather, they conceived and erected the temple in Jerusalem as if they were building a Baal temple in their own homeland, and to Solomon this probably appeared suitable.

After the David/Solomon era began a contrary development which saw it as unbefitting to use the epithet *baʿal* for Yahweh. The end of the unity between Israel and Judah (933) and the subsequent feud

between these brother nations led to a significant political weakening which had as its cultural and political consequence the gradual transformation of Palestine into a "backyard" of the Aramaic and Phoenician sphere of influence. King Omri of Israel (886–875 B.C.), himself not of Israelite origin (maybe of Aramaic origin?) initiated a policy of coalition and intermarriage with the royal house of Phoenician Sidon. Through the Sidonian princess Jezebel, Israel came into direct contact with a religion in which the term *baʿal* was not just an epithet but had become the divine name of a Phoenician god. Beginning in the 9th century B.C., the term *baʿal* became for the traditionally oriented worshippers of Yahweh in Israel increasingly the embodiment of everything foreign; therefore, one could no longer address one's own god Yahweh with the honorific title *baʿal* "Yahweh" and "Baal" had become incompatible alternatives; this is portrayed in the striking narrative of Elijah's confrontation with the prophets of Baal on Mount Carmel (1 Kings 18). The book of Hosea as well is stamped with this opposition; the prophet would like to suppress the word *baʿal* in Israel's future worship of Yahweh: "And in that day, says Yahweh, you will call me, 'My husband,' and no longer will you call me, 'My Baal' " (Hos 2:18—Eng2:16). Later writers go even further in the suppression of the name Baal by substituting *bōšet* ("shame"; Jer 3:24; 11:13; Hos 9:10) thus deforming the name Ishbaal into "Ishbosheth" (= "man of shame"; 2 Sam 2:8 [for a different view, see Tsevat 1975:71–81]).

9. AdoÆn/AdoÆnai (Lord). While the address "my *baʿal*" ("my lord"/"my master") was banned from the religious language in the worship of Yahweh, another term enjoyed an increased popularity: The Heb word *ʾādôn* (see also ADONAI) appears to have a meaning close to that of "*baʿal*"; both words could be rendered "lord." *ʾādôn* differs from *baʿal* in nuance, in that this term does not necessarily designate a relationship of ownership but rather authority. Its antonym is Heb *ʿebed* "subordinate, servant, slave." The pharaoh made Joseph the "*ʾādôn* (lord) of his house" (Gen 45:8; Ps 105:21), the term *baʿal* ("owner") being inappropriate here. Above all, the king is addressed with the deferential *ʾădônî* "my lord." Insofar as God is represented as a heavenly king he can be spoken of as "*ʾādôn*^{w} and appealed to as "my *ʾādôn*". With reference to God, the form *ʾadônāy* is most frequent; the ending *-āy* is either a personal pronoun on a plural noun ("my lords," "my lordship"), or an emphatic substantival-afformative ("lord par excellence").

The royal tradition in the representation of the divinity was well established in the ANE centuries before the beginning of Israel's history. As Israel grew into this monarchic tradition, Yahwism took over royal imagery and royal titles. David called his fourth son Adoniyah (2 Sam 3:4; 1 Kgs 1–2), an unmistakable sign that for David, Yahweh is to be worshipped as a king and appealed to with the deferential designation *ʾādôn.* On the name, see ADONIJAH (PERSON).

The royal tradition appears in a particularly significant way in the story of Isaiah's call (Isaiah 6), and therefore it is not surprising to find that in this connection the honorific title *Adonai* is employed (v 1: "I saw Adonai [the Lord par excellence] sitting upon a throne, high and lifted up; and his train filled the temple"; cf. vv 8 and 11). The prophets see themselves as called and authorized messengers of the king Yahweh, and therefore show a predilection for the "messenger formula" ("thus speaks XY …"), which legitimizes the word of the messenger as being identical with the formulation given by the king who appointed them. It is not accidental that one finds the royal honorific title "lord" used with a particular frequency in the introductory and concluding formulas of the prophetic speeches ("thus says Adonai, Yahweh of hosts" [e.g., Isa 10:24], and "… oracle of Adonai, Yahweh of hosts" [e.g., Isa 3:15]). Moreover, the royal function of the term Adonai in these formulas is implied by its affinity with the expression "Yahweh of hosts": the subordinate stands at the disposal of the ruler (*ʾādôn*) and accomplishes his will.

In the prophetic books the term *Adonai* occurs 320 times out of the total 449 occurrences (for the term's distribution in the OT, see *TDOT* 1: 62–64). The book of Ezekiel alone contains 217 occurrences of this term. In the title Adonai, the prophet in the Babylonian exile might have seen a possibility of differentiating between his god Yahweh and the Babylonian divinities who were called *bēl (< bʿl)* but not *ʾādôn,* (this was not widespread in Mesopotamia. Thus the same title *Adonai*, which in the West Semitic (Canaanite) world of monarchic Israel was a symbol of a definite integration of Yahwism into the old

royal tradition, later in the time of the Exile, could become an expression of differentiation over against foreign religious forms. The divine name *Adonai* does not appear at all in 1–2 Chronicles or Leviticus; this may indicate that in these writings the royal-monarchic tradition is set aside in favor of a priestly-Aaronic point of view.

10. Ṣebaoth (Hosts). "Ṣebaoth"is a plural, which sets again the question to the philologists and the exegetes how to understand it, whether as a "real" plural designating ("the hosts"), or whether here again one meets a plural of "majesty," of "intensity" designating something "absolute." The basic etymological meaning of *ṣebāʾôt* is "force, weight, might" (Eissfeldt 1950: 110–11), with a particular consequence that the subordinate be enlisted to serve. A case example of such an enlistment by a royal sovereign is the recruitment for military service (1 Sam 8:11–12a); but also the recruitment for work could be designated with this term (Exod 38:8; 1 Sam 2:22; cf. 1 Sam 8:12b–13). Consequently "Yahweh Ṣebaoth" is the one who has the absolute power to recruit others into service (cf. "plural of extension and importance" [Tsevat 1965:49–58]; "name of a god whose principal attribute was royal majesty" [Ross 1967:76–92]). See also HOSTS, LORD OF.

The "power to recruit into service" comprises several domains: first of all it is Israel who is recruited into service by Yahweh, its highest sovereign. Thus in 1 Sam 17:45, the divine name "Yahweh Ṣebaoth^{w} is placed in apposition with "the God of the armies of Israel." The Song of Deborah (Judges 5) illustrates that Yahweh's power of control reaches widely beyond the "armies of Israel"; for not only the Israelites as "Yahweh's troups" (v 13) fight against Jabin of Hazor and against Sisera the captain of his army (Heb *ṣābāʾ* [4:2, 7]), but the stars as well fight on Yahweh's behest: "from heaven fought the stars, from their courses they fought against Sisera" (5:20). The stars symbolize "the host of heaven" (e.g., Isa 40:26; 45:12), the recruited powers of heaven, which could also be perceived as members of a heavenly court of Yahweh (1 Kgs 22:19: "I saw Yahweh sitting on his throne, and all the host [Heb *ṣābāʾ*] of heaven standing beside him on his right hand and on his left"). This representation has its analogies in other ANE religions; the astronomy of Babylonian science and religion exercised a particular influence which, e.g., during the long reign of Manasseh (687–642 B.C.) should not be underestimated. By contrast (according to 2 Kgs 23:5, 11), his grandson Josiah (640–609 B.C.) followed a policy of emancipating his kingdom from all political and religious vassal conditions; he proscribed every cult having to do with "the sun, the moon, the planets, and all the host of heaven" (23:5).

In confrontation with Babylonian science and religion the view of Israel in respect to the power of the stars became increasingly critical, leading to the rejection of astrology (Deut 17:3; Jer 8:2). Eventually it became a criterion of differentiation between Israel and the nations: Israel is forbidden to worship "… the sun and the moon and the stars, all the host of heaven, … things which Yahweh your God had allotted to all the [pagan] peoples …" (Deut 4:19). The prophet Ezekiel does not employ the divine name "Yahweh Sebaoth," perhaps he wanted to renounce an old tradition which in the meanwhile had become ambiguous. When other biblical texts from the same period still use the term *ṣābāʾ* ("host"), they are careful to indicate that in Yahweh's vicinity all other forces must be categorically devoid of power. When, e.g., the Priestly writing continues to designate Israel as "*ṣebāʾôt* (hosts) of Yahweh," then these *ṣebāʾôt* do not represent a military power but a community on its way to a worship at Sinai (Exod 12:41; cf. 6:26; 12:17, 51); when the heavenly *ṣebāʾôt* (hosts) are mentioned, then these do not represent powers so much as the (peaceful) angels and messengers of God (Ps 148:2: "Praise him, all his angels, praise him, all his host [*ṣābāʾ*]!"

In the period of the Exile (after the downfall of the Judean monarchy), Israel had to find for their theology and for their faith in Yahweh other forms of expression than the traditional ones which were anchored in the context of royal-military imagery. Moreover, in the Persian period (the episode of Zerubbabel, ca. 520 B.C.) arose the expectation of a royal Messiah, and so it is not surprising to find the sudden strong usage of the divine name "Yahweh Sebaoth" by the prophets Haggai and Zechariah, for it elicited memories and hopes of the national power and greatness.

11. Conclusion. All the epithets and titles which in the course of its history the faith of Israel combined with the name of Yahweh, cannot be referred to as original attributes of the Israelite worship of Yahweh;

rather, they mirror—both together and individually—the history of the dialogue between the OT faith in God and the ANE world. In the course of history of this dialogue the movement of integration became gradually substituted by an opposite movement of demarcation and exclusivity.

D. Foreign Divine Names

Originally Israel showed a considerable readiness to integrate into its own faith in Yahweh epithets, titles, and other attributes stemming from religions of the surrounding world, while at the same time it refrained from placing the proper names of foreign gods into a relationship with Yahweh's name. Herewith Yahwism clearly differs from Mesopotamian practice; for example, among the 50 different names of Marduk are listed numerous older Sumerian divinities in an attempt to identify and harmonize them with the Babylonian main divinity (*ANET*, 69–72; Bottéro 1977: 5–28).

Although the possibility of identification of Yahweh with other deities remains excluded, it is nevertheless significant to see in what way in different periods, Israel dealt with the names of foreign gods. In an older period it was naturally presupposed that other nations had a god responsible for them in a way similar to Israel. Just as Israel was "the people of Yahweh" so were the Moabites "the people of Chemosh" (Num 21:29; Jer 48:46). The existence of these gods was not doubted; however, their power was deemed to be less than that of Yahweh. 1 Kings 10 narrates how the Syrian king Ben-hadad erred in assuming that Yahweh could be spoken of in a disdainful way as a "mountain god" (vv 23 and 28), whose sphere of influence would be restricted to the hill country of Samaria. Yahweh can confront and engage in battle with any other national god; even the god of the great power of Egypt cannot succeed against Yahweh: "Yahweh Ṣebaoth, the God of Israel, said: 'Behold, I am bringing punishment upon Amon of Thebes' " (Jer 46:25). The depiction of Yahweh's superiority can, in the narrative, acquire traits of a parody; thus 1 Samuel 5 narrates the powerlessness of the god Dagon, the god of the Philistines in Ashdod who must formally fall before Yahweh (cf. Delcor 1964:136–54).

The derision of the powerlessness of foreign gods can lead to the negation of their existence. The story of God's judgment on Mount Carmel (1 Kings 18) may be mentioned as an example: seen in a historical perspective the issue was the claim to preeminence in Israel contested between Yahweh and the Phoenician Baal (v 36: "Yahweh, let it be known this day that thou art God *in Israel*"); in the narrative development of this event Elijah's scorn for Baal is sharp (v 27: "either he is musing, or he is gone aside, or he is on a journey, or perhaps he is asleep and must be awakened"). Therefore his remark "cry aloud, for he is a god" (v 27) can be understood as irony and negation of Baal's existence.

Altogether one finds very few foreign divine names in the biblical texts (note the list of gods in 2 Kgs 17:30–31); the majority of foreign deities were simply ignored. The names of others, although mentioned, were deformed or altered. Marduk, the main god of the Babylonians became "Merodach" (Jer 50:2; cf. Merodach-Baladan [Isa 39:1], Berodach-Baladan [2 Kgs 20:12 (MT)], Evil-Merodach [2 Kgs 25:27; Jer 52:31]); the vowels of this name might be a case of a dysphemic Masoretic vocalization intended to slander, perhaps by calling to mind the word *me›ōrar* cursed. This practice is comparable to the procedure of replacing "Baal" with *bōšet* "shame." This *bōšet*-dysphemism is probably found in the deformation of the divine name Astarte in Masoretic Ashtoreth (1 Kgs 11:5, 33; 2 Kgs 23:13) and in the construction of a (false) divine name Molech (e.g., Lev 18:21; 20:2–5; 1 Kgs 11:7; cf. *TWAT*, 965–66; somewhat differently Heider 1985:223–28). Milcom, however, is not originally a divine name (1 Kgs 11:5, 33; 2 Kgs 23:13; Jer 49:1, 3; Zeph 1) but an expanded divine title which expresses the royal function (*mlk*) of the god. The case is similar with the word Asherah, which may originally have represented the divinization of cultic sites (Albright 1925: 100; Deut 16:21 suggests a holy tree or a cultic stake) which only secondarily became a name of a goddess (Albright's theory has been followed; cf. Lipiński 1972; *TDOT* 1: 438–44).

The goddess Anath, Baal's consort, is never mentioned in the biblical texts; her cult must have been of considerable significance in Syria and Palestine (cf. "Anath-Yahweh" in Elephantine); her name is found in numerous place and personal names in Israel: Anathoth (as a place name [e.g., Josh 21:18; Jer 1:1]; as a personal name [1 Chr 7:8; Neh 10:19]), Beth-Anath (Josh 19:38; Judg 1:33), and others.

Israel's relation to the names of foreign gods mirrors its changing attitudes toward foreign religions: finally, the existence of foreign gods was denied. In the list of gods of Solomon's foreign wives (1 Kgs 11:5–8) the word "gods" was eventually replaced with "abomination": "Milcom the abomination of the Ammonites," "Chemosh the abomination of Moab."

E. Attenuation of the Divine Name

When for biblical faith other gods do not exist any longer, the necessity of a name disappears; it is no longer indispensable to have a "distinguishing mark" in order to differentiate one's god from others. In postexilic texts the use of the divine name "Yahweh" clearly diminishes (it does not appear at all in the following books, Esther, the Song of Songs, and Ecclesiastes). Yahweh is the only god; Yahweh and God ("Elohîm") became synonyms. The gradual reduction of the use of the divine name on the basis of its loss of function can lead to its complete removal; in this development with Judaism, two mutually exclusive tendencies were manifest: a cosmopolitan attitude and a scrupulous outlook.

1. Cosmopolitan Thinking. From ancient times the wisdom milieu, in conjunction with its international and interreligious thinking, had preferred the general term "god" over any individual divine name. The wisdom literature of ancient Israel participated in this common Oriental current, for which the wider perspective was more important than any particular concretion. For these circles the "fear of god" (religion) seemed more important than any particular cult of any individual divinity. In the period of a universal dispersal of Israel (the time of the Exile), as the customary sacrificial cult for Yahweh was made impossible, the influence of this sapiential, cosmopolitan thinking reached wider circles in Judaism. The expression "God of heaven" from the diplomatic language of the Persian period came into the vocabulary of the monotheistic faith of Judaism, furthering the abandonment of the name of Yahweh in favor of this title with a universalistic appeal ("God of heaven" appears preponderantly in later texts of the OT: 17 times in Ezra-Nehemiah, 12 times in Daniel, cf. e.g., Jonah 1:9; 2 Chr 36:23; one should also name the 9 occurrences in the Elephantine papyri). The cosmopolitan atmosphere of the Persian period and the subsequent Hellenistic era encouraged a tendency to view particularistic thinking as antiquated and unenlightened; it was inevitable that the particular divine name "Yahweh" would be affected by this "modernistic" tendency as it was adopted by larger circles in Judaism.

2. Scrupulous Thinking. The contrary movement is the strong conservatism of traditional Judaism manifest in the revolt of the Maccabees and later in Qumran. This milieu is characterized by an increasingly rigorous interpretation and application of tradition and the precepts of the Torah (the Pentateuch). The prohibition in the decalogue (see TEN COMMANDMENTS) of misusing the name of Yahweh was originally oriented against magical practices, but in the course of the interpretation of the law it became the occasion of eventually denying *any* use of the divine name. This prohibition was motivated by scrupulous fear and a desire to ensure that it would not be used "in vain" (Exod 20:7; Deut 5:11) either by Jews or non-Jews. Even the cultic use of the name in the temple or the synagogue was eventually affected by this fear: whenever in the biblical texts the name of Yahweh was mentioned, it was read and pronounced as "Adonai ("my lord"). See also KETHIB AND QERE. Thus in the Greek translation of the OT (LXX) the name of Yahweh was rendered throughout with *kyrios* ("Lord"). The Masoretic Hebrew manuscripts of the OT have preserved the consonants Y-H-W-H (the tetragram) but supplied the vocalization "Adonai." The authentic pronunciation of the name of Yahweh thus became lost and only isolated instances can be found in the writings of the Church Fathers (Rose 1978: 6–16).

F. From Immanence to Transcendance

Judaism had secured that the divine name should not be profaned any more. The divine name, once the "distinguishing mark" of divine presence and immanence, had become the essence of God's unapproachable holiness so that in the Jewish tradition "the Name" (*haššēm*) could be synonymous with "God." The nuance of difference between God and his name was lost; God and the divine name were one, and equally holy.

———

A. Introduction

The term "double name" is sometimes also called "*byname*,""*supernomen*," or "*signum*." The types of such names and the reasons for their acquisition vary. The assuming of extra names, which sometimes actually replace a birth name (whether intentionally or not), is a phenomenon of the Greco-Roman world which spanned the period of the 2d century B.C. to the 3d century A.D., with a peak of frequency in the 2d century A.D.; though it was not confined to this period absolutely. The examples of this naming feature which fall outside these chronological limits (e.g., Paris/Alexander of Trojan War fame) are considerably less common. The phenomenon is not confined to the Greco-Roman milieu, though that will be the focus of this article. Double names occur in various Semitic languages, e.g., Nabatean (*NDIEC 1976*, 92–93), Hebrew (Jacob/Israel, etc.), Palmyrene (Teixidor 1979: 5), and Egyptian (*CEML* 4: 1012, 1095, 1113). Double names were used by Jews and Christians no more and no less than by others in the Greco-Roman world of the period. The high frequency of attestation of bynames in Egypt and Asia Minor in comparison with other areas merely reflects the relative number of texts recovered from those places. Women possess bynames less often than men; but this may be a reflection of the greater frequency with which males are named in ancient texts. There are some attestations of young children with double names. For a discussion of why the use of double names may have been rather more widespread (at least for Ptolemaic Egypt) than the surviving frequencies may suggest, see Clarysse (1985: 57–66, especially 64 n. 22).

Lest this question seem of antiquarian interest only, it may be observed that double names occur quite commonly in contemporary Western society. At one end of the spectrum is the double name adopted by criminals and others wishing to conceal their birth name. But the pejorative connotation of "alias" is unknown for bynames in antiquity. Similarly, no ancient writer assumed a nom de plume (a disputed case is Xenophon [ca. 428/7–ca. 354 B.C.], who may have written his *Anabasis* under the name of Themistogenes of Syracuse; *Hell.* 1.2.). The attribution of a work to a more famous individual is a separate question: a writer "fathers" his work upon someone else in order to have it achieve wider currency. This phenomenon of literary falsification was prevalent in antiquity, particularly among early

Christian pseudepigraphica (Speyer 1971). In our own times, there is often a specifically religious motive leading to the adoption of a new name. Western converts to Islam come to mind, such as Muhammed Ali (formerly, Cassius Clay), or Jusuf Islam (formerly, Cat Stevens). Since these individuals substitute a new name for their former one, we are not looking at an exact parallel to the phenomenon of the double name (see F.4 below). One well-known aspect of the Puritan phenomenon in 17th-century England was the adoption of some quite remarkable first names. This appears to have been a congregationally focused initiative, a very self-conscious attempt to indicate the separated character of the congregation, and an expression of independence from the established church, where, of course "standard" Christian names were common. One of the best-known such individuals was Praise God Barebones, a member of the Long Parliament.

The not very large body of research into double names in Greco-Roman antiquity has rarely been taken fully into account by those considering instances in the NT Indeed, it is often the case that a single name-combination (Saul/Paul, or Simon/Peter) is examined without particular reference to comparable examples in the NT While such studies may prove fruitful (Elliott 1972), to view individual instances against a wider canvas provides better perspective and illustrates how the language of the NT is entirely a normal part of its times. For the reason(s) which account for the double name of a Saul/Paul may not be identical with those for a Simon/Peter.

Of the studies by classicists, two may be particularly singled out. M. Lambertz (1913–14) devoted his pair of long articles to the spread of the use of double names in the Roman Empire: his evidence is assembled on a regional basis. Nearly thirty years later R. Calderini (1941–42) chose to concentrate upon Egypt, mainly focusing upon papyrus evidence in her bipartite contribution. Lambertz (1913: 79 n. 4) lists previous bibliography, to which Calderini adds little. W. Kubitschek's brief article in Pauly-Wissowa (PW 2A: 2,448–52) is superseded by their contributions. Deissmann (1979) is not the only one who draws upon documentary parallels for his NT study, which is very brief and confined to Saul/Paul. Cerfaux (1938) drew upon Lambertz's articles and more recent papyrological publications in his study of these names in Acts. Yet he fails to make the point that it is the author of Luke/Acts, far more than any other NT writer, who shows greatest interest in bynames, varying the formulae for stylistic reasons. The single most valuable study since Calderini is Kajanto (1963). Solin (1980) provides useful insights on double names among Jews, a matter which had claimed Cassuto's attention half a century earlier (1932–33).

There still remains a need for a comprehensive onomastic study of the *supernomina* in the NT, set against the wider context of current Jewish and Greco-Roman usage. With the completion of the *Thesaurus Linguae Graecae* the whole range of Greek literature, from Homer to A.D. 600 (including the Fathers), may now be practicably investigated for a subject such as this. When the *Lexicon of Greek Personal Names* is brought to completion (the first volume appeared in 1987) this area of research will be further facilitated. As for the documentary evidence, the sheer bulk of inscriptions and papyri being published annually provides plenty of scope for thorough investigation in this area.

In what follows, the different formulae used to indicate double names will be illustrated by reference to several typical examples, drawn particularly from recently published documentary texts. For these texts, dates are A.D. unless otherwise specified. Further examples to illustrate these formulae may be found in the studies of Lambertz and Calderini. Consideration of types of double names will be followed by examination of the variety of reasons for the assuming of an extra name. NT instances of bynames will be dealt with in each of these sections. Next, attention will be given to two particular features involving double names in the NT. Finally, brief observations will be made on some related onomastic phenomena. Examples listed under one subheading are often relevant to other sections. This article focuses exclusively upon personal names, not uses of double names applying to other contexts (e.g., cities or geographical regions). Almost all of the examples provided here are Greek, but a small number in Latin is included.

B. Phraseology

1. *A ho (hos) kai B* (A also [known as] B). This is by far the most common formula used to indicate a byname, notwithstanding that it occurs only once in the NT (Acts 13:9, Saul/Paul). In a fragmentary list of 54 names in Milne, *IG Aeg.* 33028 (Karnak, ca. 200), seventeen use the *ho kai* style to introduce a

double name. Occasionally, the formula is filled out by the addition after the second name of a participle (*epiklētheis, legomenos,* etc.), e.g., *Jos. JW 1 99; Ant 12.43, 385; 13.10, 131; 20.240; CPJ 3: 462, M. Clodius Alexander ho kai Gaianos epik (aloumenos) Thebes in Egypt, 157).*

Documentary examples: Iv. Eph. 6:221b, Eutychia/Elpis (1st–2d cent.; 2224; Aurelius Herodes/Zeuxanemios (early 3d); 2249c, Donata/Theusebion (Jewish?; undated); 2253c, Eugamia/Diapherousa (servile?; undated); 7, 1.3010, *P. Statienus* Petronianus/Julianus (ca. 220); Pfuhl/Möbius 1159, Trophimos/Krasos (=Crassus; Christian; Altintaș in Phrygia, later Imperial); 1606, Cornelia Fortunata/Doutouros (Tomi, 3d); *SEG* 29: 781, Aletia/Elpidous (Thasos, Imperial); 1275, Gellia Tertia/Elpis (Apameia in Bithynia, 3d); *CIJ* 1: 694, Cl. Tib. Polycharmos/Achyris (Stobi, late 3d); 2.1238, Pheidon/Epiketeos (N of Jerusalem, undated); 1532, Epitychia/Dionysia (Fayum, 29 B.C.); *P.XV Congr.* 14, Heron/Eirenais and Sisois/Chairemon (Philadelphia in Egypt, 41–48/9); *P.Oxy.Hels.* 12, Apollonios/Euporos (99); 23, Calpurnius Isidoros/Harpokration (212; the same man appears in several other texts); 24, Aur. Ptolemaios/Zeuxianos (217); 26, Aur. Dionysios/Apollonios and Aur. Sarapiades/Hierax (296); *P.Köln.* 2.84, Zoilos/Dionysos (Thinites, 143); *BGU* 13:2223, Isidora/Haropkratiane (175).

Sometimes the byname is introduced merely by *Kai,* e.g., *AE* (1979) 612, Aphrodeitos *kai* Eirenaios (Mylasa in Caria, Imperial); cf. note in the first publication *ZPE* 34 [1979]: 215–16); *P.Köln.* 2.109 (provenance unknown in Egypt, 4th–5th), Pataor *kai* Loutteos; on this last example, cf. *NDIEC 1979,* 124. A further example is noted below under B. 19. An interesting bilingual epitaph preserves the formula in transliterated Latin letters: Acathocles *(sic) o cae* Rodios (*CIL* 10:11; Rhegium Iulium in Sicily, Imperial). The normal Latin equivalent is *qui et.*

2. *A ho kaloumenos B* (A called B). This participle is not terribly common as a byname formula. It is rather more frequently used to define a person or thing by some attribute, e.g., Rev 12:9 (see *NDIEC 1976,* 92); cf. *I.Kyme.* 41:47–48 (1st–2d centuries), in which Isis is "called" *Thesmophoros.* In the NT: Luke 6:15, Simon/Zelotes; 8:2, Mary/Magdalene; 22:3, Judas/Iscariot; Acts 1:23, Joseph/Barsabbas *hos epeklēthē* Justus; 13:1, Simeon/Niger; 15:22, Judas/Barsabbas; 15:37, John/Mark.

Documentary examples: Iv. Eph. 6.2241, Cornelia Saturnina/Lollia (Imperial); 2285a, Dionysios/kallistos (undated); VII, 1.3429.20–21, Olympos/Nikephoros (near Metropolis, 2d century B.C.); 4356, Herais/Thymele (Hypaipa, undated); *I.Smyrna* 1.245, Attalos/Gaius, son of Gaius (undated; here the son's second name is derived from his father's name).

3. *A ho epikaloumenos B* (A additionally called B). A common way to introduce an additional name. NT: Acts 11:13, Simon/Peter (the same formula is a *v.l* at 10:5); 12:12, John/Mark.

Documentary examples: P.Petaus 53, Pentheus/Pkanpesoul, N./Alektonas, and Maximus/Tene (Ptolemais Hormu, 184/5); of the 22 people listed in the 29-line *P.Petaus* 67, eleven have this formula (185); of the ca. 150 people listed in the 174-line *P.Petaus* 93, 28 have this formula (late 2d).

4. *A ho epiklētheis B* (A additionally called B). A reasonably common way to indicate the *supernomen,* especially when it is—or was in origin—a nickname. NT has Acts 4:36, Joseph/Barnabas.

Documentary examples: Iv. Eph. 5.1609, NN/Graus (apameia in Bithynia?, not dated), very possibly servile in view of the nickname, "old man"; *CIJ* 2: 1435, Alexandros (?)/Borzochoria (= Bar Zachariah) (Alexandria, not dated).

Literary examples: Athenaeus, *Deipn.* 1.5b. Hegemon/Phake; 10.437e Dionysios/Metathemenos ("Shifty"); 13.583e, Synoris/Lychnos ("Lamp"); D.S. frag. 35.33.3, M. Cato/Demonsthenes; Diogenes Laertius 5.84, Demetrios/Ixion, and Demetrios/Stamnos.

5. *A ho klētheis B* (A called B). Parallel to (4) above, but rarer in its use as a byname formula. Not so used in the NT

Documentary example: Iv. Eph. 7.1.3127, Ti. Claudius/Paulinus/Charixenos (Scala Nova, Imperial).

6. *A epiklēn B* (A by name B). Not very common; for the form see LSJM, *s.v.* nowhere used in the NT

Documentary examples: CIJ 1:108, Hermione/Barseoda (Rome, undated); 2:776, M. Aurelius Alexander/[As?]aph (Hierapolis, 3d?); *SEG* 26: 1214, Julianus/Euteknios (Lyon, 3d–4th); Lifshitz 1967: no. 84, Isaak/Sindouros (Lapethos on Cyprus, 5th A.D.).

Literary example: Jos. *Ant.* 20.233, Onias/Menelaus.

7. *A ho legomenos B* (A spoken of [as] B). Not common as a double name formula. NT: Matt 27:17, Jesus/Christ (a title on its way to becoming a name); John 11:16, Thomas/Didymos (a translation name which has become a genuine *supernomen;* also at 20:24; 21:2); Col 4:11, Jesus/Justus.

Documentary example: Reilly, *Slaves* 580 (=977), Hermione/Graus (Kalymna, 2d).

Literary example: Jos. *Ant.* 13.320, Salome/Alexandra.

8. *A ētoi B* (A or B). A rare usage not found in the NT

Documentary examples: P.Oxy. 8.1122, Aurelius Phoibammon/Loukas (407); 46.3295, Aurelia Nike/Taias (295); cf. the Latin inscription *AE* (1976) 419, Paula *sive* (E)ustathia (Gaul, late Imperial).

9. *A anth'hou B* (A instead of/alternatively B). Not common; apparently attested as a byname formula only in nonliterary papyri (a distinctively Egyptian Greek usage?).

Documentary examples: P.Basel 10, Tesenouphis/Horos (Soknopaiu Nesos, 166); *P.Mich.* 4.1.223.3118, Heuremon/Pekmeis (Karanis, 175; the same man—a Jew: see *CPJ* 3:492, nos. 4, 6—is identified as P./H. at *P.Cair.Mich.* 359.691 (Karanis, 175); *P.Petaus* 15, Suchotes/Suchion (Ptolemais Hormou, 194/5); 93.73–74, Pouaris/Kynaros (Ptolemais Hormou, late 2d cent.).

10. *A ho dia logōn B* (A by the name of B). Even less common than the previous type; apparently attested as a byname formula only in nonliterary papyri (a distinctively Egyptian Greek usage?).

Documentary examples: BGU 13:2263, Pabous/P …, Stotoetis/Sotas, and Sotas/Satabous (Soknopaiu Nesos, mid-2d); *P.Strasb.* 7.4.775, N/Anoubion, and N/Ptasios (Herakleopolite nome, ca. 300).

11. *A B* (i.e., double name without any formula to indicate it). This type is more common than certain other ways of expressing the byname, but is naturally less easy to detect. NT: Simon Peter is the preferred reading at 2 Pet 1:1 (cf. RSV). In contrast to Judas *ho kaloumenos* Iscariot at Luke 22:3, he is named J. *Iskarioth* at 6:16 (cf. Matt 26:14, *ho legomenos* J. *Iskariotes*).

Documentary examples: P.Mich. 4.1.223.391, 2190, Pekmeis Heuremon (karanis, 175), who at 1.3118 in the same text is designated P. *anth'hou* H.; *I.Bankers* 15, Metrodoros Asbolios is called M. *ho epikaloumenos* A. later in the same inscription (Kourion in Cyprus, 3d); *Iv. Eph* 7.1 3329, Euboulos Kassandros (near Ephesos, undated); *I.Smyrna* 1.247, M. Aurelios Moschos III Poseidonios (3d, or later?); *CPR* 5: 2.14 Aurelius Jonah Skim (Heraklepolis, late 5th); 15, Jacob Symeon (Herakleopolite nome, 477) is a possible example: see ed. n., ad loc. *CIL* 8: 4.26415, Pullaienus Florentius Titinius Pupianus, a man addressed by Cyprian, *Ep* 66, as Florentius *qui et* Puppianus. *AnSt* 37 (1987) 49–53, no. 1, C. Flavius Chrysippos Panages (Cremna in Pisidia, II) may well be a further example.

12. Double Bynames. Fairly rare. NT: Acts 1:23, Joseph *ho kaloumenos* Barsabbas *hos epeklēthē* Justus. *Documentary example: P.Vindob.Tandem* 11.44–45, Aurelius Theodoros *ho kai* Herakleios *epikaloumenos* Nikon (Herakleopolite nome, 241/2). *Literary example:* Appian, 12.2.10, Mithridates *hōi* Dionysos *kai* Eupator *epōnyma ēn.*

13. Variation of the Formula. It is clear that the various formulae used to mark a double name were interchangeable. The only minor qualification to this is that in the case of double bynames a form of *epikaleisthai* is generally used to introduce the last name, since it is normally a nickname in origin. NT: in Acts, John Mark is designated variously: 12:12, J. *ho epikaloumenos* M.; 12:25, J. *ho epiklētheis* M.; 13:5, simply John; 15:37, J. *ho kaloumenos* M.; 15:39, simply Mark. The single name Mark is the form that won out in the Church, as is clear from the gospel title, presumably to differentiate him from the apostle John. So, too, for Simon Peter. In Matt 4:18 and 10:2 he is described as S. *ho legomenos* P.; Luke 6:14 uses the periphrasis S. *hon kai ōomasen* P.; while in Acts participial and finite verb forms of *epikaloumai* are interchanged (10:5, 18, 32, 11:13), clearly for stylistic variation within that section. As in the case of Paul and Mark, the name Peter eventually ousted his Jewish name (cf. 1 Pet 1:1). As further illustration of the interchangeability of the formulae not that whereas Acts 1:23 gives Joseph *ho kaloumenos* Barsabbas *hos epeklethe* Justus, Papias refers to him as Justus *ho epiklētheis* Barsabbas (*PG* 5:1256).

Documentary examples: P. Petaus 93.73–74, Kronios *epikaloumenos* Samanytis, son of Pouaris *anth'hou* Kynaros (Ptolemais Hormou, late 2d); *I.Bankers* 15 uses both *ho kaloumenos* and *ho epikaloumenos* to refer to Alexander/Luscinius (Kourion in Cyprus, 3d).

Literary examples: 1 Macc 2:1–5, all five sons of Mattathias son of John have *supernomina*: four are *ho kaloumenos,* one is *ho epikaloumenos.* Later the *ho kai* formula is used of Judas Maccabeus (1 Macc 8:20; 2 Macc 5:27; 8:1). *Jos. Ant.* 18.35, Joseph *ho (kai)* Caiaphas; at 18:95, J. *ho* C. *epikaloumenos*; but in the Gospels he is simply called Caiaphas. According to Theodoret, *Qu. in Num., PG* 80.368, Moses' father-in-law had the double name (*diōnumos*) Raguel "like Jacob *kai* Israel, like Simon Peter (no intervening formula), like Thomas *ho legomenos* Didymos, like Thaddaios *ho kai* Lebbaios."

14. Reversal of Name Order. *Documentary examples: CPJ* 2:178, Theodotos *ho kai* Niger (Edfu, 79), whereas at 2:249 he is Niger *ho kai* Theodotos (Edfu, 73/4). In a series of texts, *P. Sakaon* 11, 12, 82, 85 (cf. 76), dated between 297–300, we have testimony to an official, probably a Christian, who usually calls himself Aurelius Athanasios *kai* (sic: not *ho kai*) Philadelphos, and who signs his name Aurelius Philadelphos. But in no. 12 he calls himself Aurelius Philadelphos *kai* Athanasios. On this man see *NDIEC 1978,* 77. On the use of *kai* alone to introduce a by-name, see B.1, above.

Literary example: Cyprian of Carthage is designated both Cyprianus *qui et* Thascius (*Ep* 66, *tit.*), and Thascius *qui et* Cyprianus (*Act. Procons. Cyp.* 3.3).

C. Types of Double Names

1. Ethnica. Used as a byname, as distinct from a descriptive label of origin, this is rare. *Documentary examples: Homm. Sauneron.* 2.55–56, Psenosiris *ho kai* Syros (Akoris in Egypt, Hadrianic); Lowey, *IGB* 303, Euprepes *ho kai* Rhod[ios] (Rhodes, Imperial).

2. Nickname. Perhaps the most common type. *Documentary examples: SEG* 26: 1843, C. Julius Capito *hos kai* Odysseus (Cyrenaica, lst cent.), a soldier perhaps so named as a reflection of his mobility while in service; *I.Bankers* 17, epitaph for a young banker which says that his parents called him Synekdemos but everyone else used the crude nickname Billos (Kelenderis in Asia Minor, Imperial); *IGUR* 3.1321, Rufinus whom people used to call Asterion, "starlet" (Rome, 3d or 4th); *Epigraphica Anatolica* 12 (1988) 116 no. 63 Flavius Ktesiphon *ho kai* Sphekas, "wasp" (Stratonikeia in Caria, Imperial); *P.Coll.Youtie* 65.12–13, 29, M. Vibius Horigenes *ho kai* Magnus (Oxyrhynchos, 241; nickname omitted in 1.73). With this last the well-known instance of C. Pompeius Magnus (1st cent. B.C.) provides an obvious parallel. Of other Roman nicknames which became assimilated as *agnomina* perhaps the best known is Q Fabius Maximus Verrucosus Cunctator (late 3d B.C.).

Literary examples: Jos. *Ant.* 12.43, Simon *ho kai* Dikaios *epiklētheis* "because he was pious towards God and good-willed towards his compatriots." Cf. in the NT, Col 4:11, Jesus *ho legomenos* Justus, and the second by-name of Joseph/Barsabbas/Justus at Acts 1:23 Even though no explanation is given for the accession of these names in the NT, we may infer something similar to what Josephus makes explicit for Simon. Note, too, the famous classical example of Aristeides "The Just" (Plut. *Comp.Ar.et Men.* 9); but here it is not a double name. Jos. *Ant.* 13.383, Alexander Jannaeus was so cruel that he was given the name (*epiklēthēnai*) Thrakidas by the Jews. Cassius Dio, *Epit.* 80.4.1, P. Valerius Eutychianos *ho kai* Komazon acquired his by-name because of his mimes and laughable behavior. Diogenes Laertius 5.84 mentions that a certain Demetrius was called (*epiklētheis*) Ixion "because he was thought to have acted wrongly with regard to Hera." In the same passage is mentioned another Demetrios *ho epikletheis* Stamnos ("Wine-jar"); but no reason for this nickname is provided. Athen. *Deipn.*, 13.583e, Theokleia *epekaleito* Koronē ("Crow").

3. Pet Name. *Documentary example: IG* 10.2.1.214, at the end of this text which honors C. Antonius Urbanianus Philistos we are told that "his parents themselves (honored) their sweetest child Pierios" (Thessalonike, 240/1 or slightly later).

4. Metronymic. This appears to be very rare, and may be an oddity. *Documentary example: BGU* 13:2251.17, Didymos *epikal (oumenos)* the son of Achllis (Fayum, 2d century).

5. A Family Trait. This is particularly marked to distinguish members of ruling dynasties from the Hellenistic period onward. Various Ptolemies, Seleucids, and Antigonids had differentiating bynames, clearly thought of as such in view of the addition of one of the formulae. Names like Ptolemy Philadelphos, Seleucus Nicator, and Antigonos Monophthalmos come to mind. The Persian Artaxerxes III (359–338 B.C.) was differentiated from homonymous predecessors by the *supernomen* Ochos. Other royal

houses employed the device, such as rulers of Cappodocia, Bithynia, and Pontus. It is therefore nothing out of the ordinary to find certain of the Hasmoneans bearing double names: Alexander Jonathan (Jannaeus), and John Hyrcanus. The phenomenon is a feature of Imperial Roman rulers: C. Iulius C.f. Caesar/Augustus, popularly called Octavian; Antoninus/Pius, etc. But the case of Roman emperors' names is more complex than that of members of Hellenistic dynasties and client kingdoms, because of the Roman practice of adoption. Furthermore, from the mid-Republic onwards an *agnomen* was not an uncommon addition to the *tria nomina*, sometimes being added to commemorate some particular achievement. Members of the Scipionic family of 3d–2d centuries B.C. illustrate this, e.g., P. Cornelius P.f. Scipio Africanus, and his brother L. Cornelius P.f. Scipio Asiaticus. Some of the Caecilii Metelli attached *agnomina* to their names, reflecting in somewhat gross fashion their imperialistic outlook: e.g., Macedonicus, Delmaticus. Some other examples have been noted above under "nicknames" (c.2). But it is not only ruling families which might display this accretion of names. One recently published property transfer (161 B.C.) forms part of a larger archive which provides evidence of at least 15 individuals with double names out of some three dozen family members spanning six generations (Ritner 1984: 171–84 and pl. 30). *P.Coll.Youtie* 67 (260/1) includes the name Sarapion *ho kai* Apollonianos, which the editor shows (see the family tree on p. 450) was used by four family members spanning three generations. For discussion of this phenomenon in the papyri see Calderini (1942: 17–20), and Bagnall (1988: 23).

In *P. L. Bat.* 22, the editor draws together a private archive of a certain Dionysius who, in nearly 40 documents (both Greek and Demotic) spanning 116–104 B.C., is referred to by two other names as well: Plenis and *Pa-‹š€* . In the three generations for which his family is attested, five other people out of a total of fourteen have a second, or in one case a third, name.

D. Reasons for the Addition of a Byname

1. Cultural Assimilation. Egyptians, Jews, Lycians, Syrians, and other non-Hellenic individuals frequently adopted a Greek or Latin double name to advertise their identification with Greek mores. This is very possibly the most common reason for the adoption of a byname; certainly it is the easiest to perceive. But it is obvious that this does not account for all instances by any means, since there are many examples of individuals whose double names are ethnically identical with their primary names (e.g., Greek + Greek; Egyptian + Egyptian).

Documentary examples: Teixidor 1979:20, Male *ho kai* Agrippa (Palmyra, 131); *P.Köln.* 2.100, Taarpaesis *he kai* Isidora (Oxyrhynchite nome, 133); *CPJ* 1:126, Apollonios *hos kai* Ionathas *Syristi*, "in Aramaic" (Fayum, 238/7 B.C.); *CIJ* 1:108 Hermione *epiklēn* Barseoda (Rome, undated), an epitaph for an infant less than one year old; 2:776, M. Aurelius Alexander *epikln* [As?]aph; (Hierapolis, Imperial); *IGUR* 3.1231, Theodosia/Kalypso (early Imperial), epitaph for a young Jewish woman aged 18. For the proposal that this text is Jewish see Horsley (1987a). The Jewish examples here provide clear parallels for such NT name combinations as Saul/Paul, Simon/Peter, John/Mark, and Jesus/Justus. Paul, at least, must have had both Jewish and his Latin name from birth (Acts 22:26–29), for which *CIJ* 1:108 above provides a good parallel, as does also the double name of a Christian child who died before reaching the age of two, *AE* (1976) 419 (quoted above at B.8).

Literary example: Diogenes Laertius 4.67, the Carthaginian philosopher Hasdrubal, better known as Kleitomachos, who became head of the academy at Athens in 129 B.C.

2. Official/Private Contexts. It has been suggested recently (Clarysse 1985; Bagnall 1988) that in Ptolemaic Egypt what determined the use of an Egyptian or Greek name was the type of document which the person initiated (Clarysse 1985: 59–60). Private texts (especially those in Demotic) show a preference for Egyptian names, while Greek names preponderate in official documents concerned with government or military administration. One inference drawn from this observation is that double names are largely visible only among those with some official role. Furthermore, at least in the sense of language, the context is Egyptian by choice, and Greek only for official purposes (Bagnall 1988: 23). There is some basis for these propositions, but (as Bagnall allows) they do not account for the whole phenomenon of additional names because of their diversity chronologically and geographically. The motivation cannot have been so single in all cases.

Documentary examples: Erbsteit archives (Pathyris, mid 2d century B.C.), for which see Ritner (1984) and Bagnall's inferences (1988: 23) about the use of double names by the males in the family. See *P. L. Bat.* 22 (ca. 40 texts from Akoris in Middle Egypt ranging from 116–104) archive of the family of Dionysius also known as Plenis and *Pa-‹š€* .

3. Status. A slave with a non-Roman name usually adopted the name of his master upon emancipation. But there are examples where the first name is retained in such a way that it is thought of as forming a byname with the freed-status name.

Documentary examples: SEG 29: 781, Aletia Tertulla *he kai* Elpidous (Thasos, Imperial); 1275, Gellia Tertia *he kai* Elpis (Apameia in Bithynia, 3d).

4. Religion. A byname may be adopted to signify a shift in religious adherence. In such a circumstance it is not uncommon for the former name actually to be abandoned (see below, F.4); but those instances cannot then be considered double names.

Documentary examples: CIJ 1:523, Veturia Paulla became a convert to Judaism at the age of 70 and took the name Sara (Rome, undated). *SIRIS* 586, a sarcophagus for Tetratia Isais, who is called Memphius (sic) elsewhere on the same monument (on female *supernomina* in *-ius* see Kajanto, 41). The accompanying epigram makes plain that she was a devotee of Isis (Ravenna, 3d). *BGU* 13:2224, Apollonarion *he kai* Sarapias, sister of Sarapion (175) provides a possible example: the sister adopted the extra name in order to identify more closely with the cult of Sarapis.

5. Homophony. Not especially common; in the NT *Saulos/Paulos* may be an example (cf. Mussies, 361), as may be the substitute name Simeon/Simon.

Documentary examples: Pfuhl/Möbius 1977–79:1509, Gauros *ho kai* Gaius (Byzantion, probably 2d cent.); *I.Nikaia* 275, Antiochis *he kai* Antonia (undated), may be a further example.

6. Punning. In the NT the double name Simon/Peter involves a pun at one remove (Matt 16:15–18): Cephas was accorded as a punning nickname but the Greek translation (John 1:42) came to predominate.

Documentary examples: Iv. Eph. 7:2.3824, Menekrates *ho kai* Baros (Hypaipa, undated): the latter name in the good sense of "strength" may be playing on *-krat-* in the first name; 3828, Aurelius Sokrates *ho kai* Euphronios (Hypaipa, 3d [?]): here the by-name may well be playing on the name Sokrates, the implication being that this individual was a dullard who didn't live up to the reputation of his great namesake. Note also *IGLS* 6: 2841, [K]onnaros *ho kai* Briares (Baalbek, undated): this is el-QoÆnera, the Palmyrene god El, who created the earth, whose by-name here means "strong, powerful."

E. Further Observations on Usage in the NT

While it will be clear from the foregoing that the occurrences of double names in the NT fit naturally into the larger Greco-Roman linguistic and cultural context there are two aspects which deserve further comment.

1. A Semitic Feature. The use of a patronymic as a double name which then largely ousts the primary name appears to be a Semitic feature, not confined particularly to Judaism. In the OT the name Bath-sheba at 2 Sam 11:3 appears to be an example, although she is also called there the daughter of Eliam. In Acts 4:36 we are told that Barnabas' first name is Joseph, but he is everywhere called simply Barnabas; and this is the name that survives in the later tradition (as in *Ep. Barn.*). Later, at Acts 13:6–8, we encounter Bar-Jesus, for whom a translation equivalent is given ("Elymas the magician"), but not his primary name. Barabbas in the Gospels provides a further example, though it is uncertain whether the name Jesus preserved by some mss at Matt 27:16–17 was Barabbas's primary name. Other examples in the NT are Bartimaeus (Mark 10:46) and Bartholomew (Mark 3:18, and parallels; Acts 1:13). Barsabbas is interpreted as a name by the author of Acts for two men (1:23 and 15:22). Contrast Matt 16:17 where Bar-Jonah remains a patronymic and is not to be thought of as having become a name in its own right. Beyond the NT other instances may be mentioned. Earlier, the Hebrew subscription to Sirach says that the book was written by Simon Ben Sira; but he was normally referred to merely by the patronymic-become-byname. In the 2d century A.D. Simon Bar Kokhba is rarely referred to as Simon: the patronymic had become a second name. A further example of a Semitic patronymic serving as a byname occurs in *CIJ* 2:1435, noted above at B.4.

Is this double name feature distinctive of Judaism? Although all the examples given above are Jewish, and non-Jewish instances are not easy to locate, the question should perhaps be left open, in view of the oddity quoted above at C.4, where a metronymic occurs as a byname in Egypt.

2. Fluid Examples. In the NT there are a small number of individuals whose possession of a double name is not settled in the tradition. In contrast to Luke 6:15, Simon *ho kaloumenos Zelotes*, the latter word is used as a description of him at Acts 1:13, not as a name (so, too, Chrysostom, *Hom. in Matt.; PG* 57–380). The author of Luke/Acts has employed the Greek equivalent of Aram *qan›ānā,* which Mark 3:18 (= Matt 10:4) has preferred to transliterate as S. *ho Kananaios.* With the double name in Luke 6:15 may perhaps be compared *CIJ* 1:362, Ionios (=Jonah?) *ho kai* Akone (Rome, undated), the latter name being suggested by Frey (ad loc.) to be an attempt to transliterate *qan›ānā.* A second example of this onomastic fluidity is Mary *he kaloumenē* Magdalene at Luke 8:2; contrast 24:10 where Magdalene is merely adjectival. This latter use is standard in other Gospels.

Even more than with the previous feature, we should be cautious about claiming this fluidity as distinctively Jewish, let alone distinctive to the NT For it is to be expected that certain types of *supernomina* will not become permanently attached to the primary name from their first use. Nicknames and patronymics are two obvious kinds of bynames which would all fit into this category of being in flux for some time.

F. Related Phenomena

Alterations to names may be effected in other ways which do not strictly constitute double names. Some types of these may be noted briefly.

1. Apocopation. This was common in antiquity no less than today. A probable NT example is Epaphroditus/Epaphras (Phil 2:25, 4:18; Col 1:7, 4:32). Yet it is clear that each of these names had a life of its own (*NDIEC 1979,* 5: 21–23).

2. Translation Names. In the NT note Cephas/Peter (John 1:42); Tabitha/Dorcas (Acts 9:36); Thomas/*Didymos.* Only the last of these has become a double name (John 11:16; 20:24; 21:2), though the "Peter" element in the first has been formed into a double name on occasions with Simon/Simeon. In Acts 13:6–8 the author suggests that Elymas is the translation equivalent of Bar-Jesus, but this is doubtful. For some examples from the papyri see Clarysse (1985: 65).

3. Substitute Name. In the NT note Simeon/Simon, Silas/Silvanus, Jason probably for Jesus at Rom 16:21 At 1 Macc 7:5 Alcimus probably replaces Eliakim. The diminutive Priscilla replacing Prisca in Acts shows that the phenomenon is not always due to a desire to replace a Semitic name with one that looks more Greek or Latin.

4. Change of Name. Perhaps the most famous instance in antiquity of the abandonment of the original name in favor of a new one is provided by Amenhotep IV, pharaoh of Egypt in the mid New Kingdom, who altered his name to Akhenaton to promote a unique monotheistic reform in Egypt. *IG* 4:1.123.22–33 (Epidauros, late 4th B.C.) records that Asklepios gave the name Apistos (Unbeliever) to a man who came for a cure but disbelieved that the god could heal him. Only the new name is recorded on the inscription, not the man's original name. Vitruvius 10.2.15 recounts the discovery by the shepherd Pixodaros of the quarry from which the Ephesians were able to take their marble for the temple of Artemis. In recognition of this find the citizens decreed honors to him and changed his name to Evangelus. A number of Christians on trial at Caesarea in 308 bewilder the magistrate because they have renounced their birth-names, which were pagan theophorics. In place of them they chose names to identify with their new faith, such as Elijah and Samuel (Eus. *m.P.* 11.8). In Pfuhl/Möbius 1977–79:764 the deceased Meteleios says that he changed his name to Teinexeios; yet both are preserved on the epitaph (Prusa ad Olympum, late Imperial). As a final example, Ammianus 16.12.25 mentions the case of Agenarich, whose name was changed to Serapion by his father when the latter became an initiate of Isis.

NAMES, HYPOCORISTIC A hypocoristicon is generally a single-element name resulting from the shortening of an originally longer one. Hebrew names, and Semitic names in general, were often composed of two elements (or, as was often the case in Akkadian names and sometimes the case with West Semitic ones, three elements) which formed a nominal or verbal sentence. It was not uncommon for one of these elements to be dropped, producing this hypocoristic form. Theoretically, any element that occurs in a compound name can be considered hypocoristic when found alone, and it can be assumed that biblical names such as *ʿôbēd,* "servant (of)," or *yākîn,* " (he) will establish," are hypocoristic, the fuller form not being represented. As such, they can be differentiated from one-word names, such as those based

on descriptions, plants and animals, the elements of which were rarely employed in compound names. However, names such as *šāʾûl,* "asked (of)," which refers to King Saul over 350 times in the OT and never appears in a "full" or longer form (note also the three lesser known individuals named Saul in the OT and Saul/Paul in the NT), suggest that sometimes these elements were used independently, not as hypocoristica of longer names. Despite the sizable corpus of onomastic evidence from inscriptions as well as in the Bible, there is still not enough known about naming practices in the ancient Semitic world to clearly define the functional conventions regarding hypocoristic names. Were they generally considered informal? Did they receive greater preference in speech than in writing? What role did personal preference, as opposed to cultural convention, play in the use of hypocoristic forms? Does the Bible provide a balanced view of hypocoristic use? To what extent, if any, did neighboring Semitic societies differ in their conventions? Such questions have yet to be fully answered.

A hypocoristicon could be verbal, nominal, or theophoric. It could stand alone, with or without minor changes in vocalization, or have a suffix appended to it (Noth *IPN* 36–41). Examples of the most common suffixes, *-â, -āʾ* and *-î,* on nominal and verbal Israelite hypocoristica include: *ʿezrāʾ, ʿezrâ* (cf. *ʿēzer, ʿazrîʾēl, ʿăzaryāhû*); *šebnāʾ, šebnâ* (cf. *šĕbanyāhû*); *mîkāʾ, mîkâ* (cf. *mîkāʾēl, mîkāyāhû*); *ʿabdî* (cf. *ʿebed, ʿabdāʾ, ʿabdĕʾēl, ʿabdîʾēl*); *ʿuzzî* (cf. *ʿuzzāʾ, ʿuzzâ, ʿuzzîʾēl, ʿuzzîyāhû*). Other hypocoristic suffixes include *-ay: ḥelqay* (cf. *ḥēleq, hilqîyāhû*); *-at* (most often associated with feminine names): *šimrāt* (cf. *šemer, šimrî, šĕmaryāhû*); *maḥlat* (cf. *maḥlî, maḥlōn*); *-ôt: šēmôt; šĕlōmôt* (cf. *šĕlūmîʾēl*); *-o: dôdô* (cf. *dôday*); *šĕlōmōh* (cf. *šĕlūmîʾēl*); *-ān/-ām: šipṭān* (cf. *šĕpaṭyāhû*); *ʾăḥuzzām* (cf. *ʾăḥuzzat, ʾăḥazyāhû*); *-ôn/-ôm: ʿabdôn* (cf. *ʿebed, ʿabdāʾ, ʿabdĕʾēl*); *gēršôm, gēršôn.* Diminutive use of the *-ôn* suffix is probably attested in the names *šimšôn* and *naḥšôn.* Theophoric hypocoristic personal names, based on either a divine name or epithet, were much less common throughout the ancient Semitic world. Examples from the OT, with and without suffixes, include: *ʾēlāʾ* (ʾl [Samaria ostraca]), *baʿal* (*bʿl* [Samaria ostraca]), *gād, gādî, malkām, rešep*, and possibly *yēhûʾ*.

Hypocoristic geographic names are less common, or at least less demonstrable, due to the fact that the majority of known geographic names are sparsely attested. Also, there is a proportionally greater number of one-word geographic names, compared to personal names, both with and without suffixes, which cannot, strictly speaking, be considered hypocoristic. Many of these are descriptive in nature. A name such as *gibʿâ,* "height," cannot automatically be considered a hypocoristicon, even when there are names compounded with this element, such as *gibʿat šāʾûl,* since the term *gibʿâ* is descriptive and can function independently, as compared with a name such as "hears," or "servant [of]." Demonstrable examples of geographic hypocoristica in the OT, for which the hypocoristic and the longer form refer to the same site, include: *yābēš,* "dry" (cf. *yābēš gilʿād*) and *yabneh,* "[deity] causes to build" (cf. *yabnĕʾēl*).

The potential value of biblical parallel passages in studying the use of hypocoristic names is illustrated by comparing 1 Chr 9:16: *ʿōbadyâ ben-šĕmaʿyâ ben-gālāl* ("Obadiah the son of Shemaiah, son of Galal") and Neh 11:17: *ʿabdāʾ ben-šammaʿ ben-gālāl* ("Abda the son of Shammua, son of Galal"). An interesting display of hypocoristic usage, which exemplifies the present incomplete understanding of hypocoristic conventions, involves Jeremiah's scribe Baruch. He is always called *bārûk* in the MT (23 times), usually with the patronymic *ben-nērîyâ/-yāhû,* and in Jer 36:32 he is referred to as *bārûk ben-nērîyāhû hassōpēr* ("Baruch the scribe, the son of Neriah"). This phrase is identical, except for the hypocoristic form of *bārūk,* to the inscription on an Israelite bulla which reads *brkyhw bn nryhw hspr* (Avigad 1978: 53).

Other ancient Semitic names also evidence this practice of hypocoristic usage, exhibiting both independent and suffixed forms. These latter are similar to those mentioned in reference to the Israelite names listed above and can easily be reviewed in the published studies of major collections of names from the ANE (See for example: Stamm 1939: 11, 113–14; Benz 1972: 232–35; Gröndahl *PTU,* 49–54; Huffmon *APNM,* 130–40; and Zadok 1977: 148–70). One popular Akk hypocoristic suffix, *-ya,* found also in the cuneiform representations of Ugaritic and Amorite names, induced Jastrow (1894: 101–27) to propose that the Israelite theophoric *-yâ* should be regarded as merely an emphatic suffix. Gray (1896: 150–51), among others, rightly disputed and rejected this theory, noting that Jastrow's explanation might be correct in only a few, rare cases.

Hypocoristic forms of Hebrew, as well as Aramaic, names continued to be employed into the NT period. Examples from the NT, preserved in Greek, include: *Anna = ḥannâ,* "grace, favor" (cf. *ḥānān, ḥannî›ēl, Ananias = ḥănanyâ*) and *Symeōn = šim‹ōn, Simōn = šim‹ōn,* "[deity] has heard" (cf. *šim‹ā›, šim‹â, šim‹î, šĕma‹yāhû*).

NAMES, THEOPHORIC Theophoric names, both personal and geographic, have as one of their elements a divine name or epithet. Since many Semitic names were compounded from two or three elements to form verbal or nominal sentences, theophoric names thus represent declarations about or expressions of petition to the deity mentioned in the name.

The most common divine name found in Israelite theophoric personal names is a form of YHWH, which never occurs in a name in its full form, *yhwh,* but does appear in several standardized ones: *yĕhô-, yô-, -yāhû, -yô, -yâ,* and rarely *-yĕhô-* and *-yoÆ-.* This is followed to a lesser extent by the generic *›ēl,* "god." Examples from the OT and Israelite inscriptions include: *›ûrîyāhû/›wryhw,* "YHWH is my light"; *yĕhônātān/ywntn,* "YHWH has given [the child]"; *yišmā‹ē›l/yšm‹›l,* "God hears [requests]." Divine epithets, or characterized titles, were most often references to kinship or dominion. Examples of this type of theophoric personal name include: *›abnēr/›ābînēr,* " (My) [divine] father is a lamp" (cf. *›ăbîyāhû/›byw,* "YHWH is my [divine] father"); *›ăḥînādāb,* "My [divine] brother is noble" (cf. *›ăḥîyāhû/›ḥyhw,* "YHWH is my [divine] brother"); *›ădōnîrām,* "My lord is exalted" (cf. *›ădōnîyāhû,* "YHWH is my lord"); *malkîrām/mlkrm,* "My [divine] king is exalted" (cf. *malkîyāhû,* "YHWH is my king"). Despite the assimilation of Gk names by the Jews of the Greco-Roman period, Heb and Aram names are recorded in the NT, although they have been preserved in Greek form. Examples of theophoric names from the NT include: *Iōannēs = yôḥānān,* "YHWH is gracious"; *Zacharias = zĕkaryāhû,* "YHWH has remembered"; and *Gamaliēl = gamlî›ēl,* "recompense of God."

Theophoric names in other ancient Semitic societies were generally similar in form to those names already cited, differing in the divine name or epithet employed, although many of the latter were fairly standard among different Semitic groups. Examples of some non-Israelite theophoric names contained in the OT are: *hădad‹ezer = hdd‹zr* [Aram], "Hadad is (a) help (er)" and *nĕbûkadne›ssar/nĕbûkadre›ssar = Nabû-kudurri-usur* [Akk], "O Nabu, protect the heir."

Theophoric geographic names are less common and are usually cultic or commemorative in nature. Examples from the OT, not all of which originated with the Israelites, include: *bêt-‹ănāt,* "Temple of Anat"; *bāmôt ba‹al,* "High places of Baal/the lord"; *migdal-›ēl,* "Tower of God"; *naḥălî›ēl,* "Wadi of God"; *ba‹al pĕrāsîm,* "Baal/lord of the breaches"; *pĕnû›ēl,* "Face of God." The only place names in the OT which contain the divine name YHWH are early altar names, such as *yhwh šālôm,* "YHWH is peace," and later futuristic names for Jerusalem, such as *kissē› yhwh,* "Throne of YHWH."

Since names in the ANE were often chosen for their meaning, theophoric names, especially personal ones from the OT period, prove to be a valuable resource for religious information. (Geographic names, by nature, are long-term identifiers. Many of them continued through a variety of population and cultural changes, thus restricting their value.) The very fact that so many of the names in ancient Semitic societies, including the Israelites, were of a theophoric nature demonstrates a strong disposition toward the role of the divine in the lives of these people. These names indicate what attributes and qualities were associated with a specific deity by the general populace of a society. Although basic qualities, such as being mighty, mindful of worshippers, and hearing and responding to petitions were attributed to most major deities, comparisons can be enlightening. According to Israelite personal names, YHWH was brother, father, god,

lord, king; he blessed, created, gave, heard, judged, knew, protected, remembered, saved; was light, good, great, gracious, noble, righteousness, perfection; etc. Hunsberger (1969) felt such information could be employed to demonstrate a correlation between the content of Israelite theophoric personal names and theological shifts due to major sociopolitical events during the course of the OT period.

Theophoric names also provide an indication of which deities were considered important by a given population group. Even in polytheistic societies, where many of the sometimes hundreds of deities which were recognized were actively worshipped, certain divine names were more popular in theophoric personal names than others (see, for example, Fine 1954: 116–34). Interestingly, research has indicated at Ugarit that divine names such as *ʾaṯrt, dgn* and *yrḥ,* which are well-known from mythological and cultic texts, were not popular in personal names (de Moor 1970: 222; *PTU,* 103, 123, 145). Concerning ancient Israel, studies have shown that despite the prophetic polemics against the waywardness of the people from the time of the Judges onward, a comparatively large percentage of Israelites had names containing the divine element YHWH, while surprisingly few people had names which contained a non-Yahwistic theophoric element (Tigay 1986, for the inscriptional evidence; Pike 1989, for OT evidence). These are the types of information which theophoric names can provide—information which must be weighed in any evaluation of the religion of ancient Israel.

DANA M. PIKE

NANEA (DEITY) [Gk *Nanaīa* (Ναναια)]. A goddess of Mesopotamian origin whose name in Semitic sources is given as *Nanâ* or *Nanay (a).* Her syncretistic cult spread far and wide throughout the ancient world, including Greece. In the Greek world she was equated with Artemis or Aphrodite, in Egypt with Isis, and in Iran with Anahita. Her name is attested from Alexandria and the Fayum to Transoxiana, and from Arad to Piraeus. Known Nanaiophorous names include Barnanaios, Bathnanaia, Mekatnanaia, and ʿAbdnanay. From early times Nanea was affiliated with sun and moon, and posed as a deity of love and war.

Of particular interest is a temple of Artemis-Nanea in Dura-Europos built in Roman times. Dedicatory inscriptions identify her as the chief goddess of the city, a status she also enjoyed at Susa already in Seleucid times. Images of Aphrodite, Nike, and Tyche in her temple at Dura-Europos suggest associations with these deities. According to 2 Macc 1:13–18, Antiochus IV (Epiphanes) on his eastern campaign (165–164 B.C.) reached Persia, where he attempted to contract a marriage with Nanea and claim the wealth of her temple as dowry. The priests of the Nanaeion displayed the treasures and thus lured the king inside the precinct. Then from a concealed door in the ceiling they stoned him and his attendants, decapitated them, and tossed their heads to the rest of the royal retinue waiting outside.

Antiochus' attack on the temple is confirmed by Polybius (31, 9), Josephus (*Ant* 12.354) and Appian (*Syr Wars* 66; cf. 2 Macc 9:1–2). All three locate the temple in Elymais (Elam) and identify the goddess as either Artemis (Polybius, Josephus) or Aphrodite (Appian). 1 Macc 6:1–4, though not naming the goddess, includes among the temple's riches dedicatory offerings left by Alexander the Great (cf. Josephus).

The nature and circumstances of Antiochus' death as depicted in 2 Maccabees 1 are contradicted by all other ancient sources. Confusion with Antiochus III (the Great), who lost his life in an attempt to rob a temple of Belus in Elymais (Diodorus 28, 3, 29, 15; Justin 32, 2; Strabo 16, 1.18) seems likely.

The exact location of the Nanaeion in question is unknown. For discussion see *AI* and Goldstein *Maccabees* AB

ALBERT PIETERSMA

NAOMI (PERSON) [Heb *no‹ŏmî* (נָעֳמִי)]. The wife of Elimelech, mother-in-law of Ruth (Ruth 1:1–4).

The family of Elimelech left Bethlehem-Judah for Moab because of famine in the land. Naomi was bereft of Elimelech and her two sons, Mahlon and Chilion, during their ten-year sojourn in Moab (1:1–5). Her daughters-in-law, Ruth and Orpah, weighed their responsibility to the family, and despite Naomi's resistance Ruth accompanied Naomi back to Bethlehem (1:8–18). Although destitute, Naomi and Ruth survived because of the aid of a relative named Boaz (2:1; 4:3, 5) who subsequently married Ruth and purchased a parcel of land in Naomi's possession (4:3, 9–10). Naomi instructed Ruth to approach Boaz and request him to undertake the role of the family's *gō›ēl* (kinsman-redeemer) in their behalf (3:2, 9). However, there was no clear legal obligation upon Boaz since the law limited a *gō›ēl* marriage to a brother-in-law of the widow (Deut 25:5–10). The familial relationship between Naomi's husband and Boaz must have been distant since Naomi did not know of him until her return to Bethlehem (1:8–16; with 2:20).

Also, scholars are puzzled that Naomi is said to have had land for sale. There is no provision in the OT for land ownership by a widow, and more importantly the story portrays Naomi as penniless without mention of her propriety of land. It is best to conclude that Naomi, since she had no sons, was the only party who could dispense the land to a qualified relative.

Another difficulty regarding Naomi is the ascription of Ruth's child, Obed, to Naomi by the women of Bethlehem: "A son has been born to Naomi!" (4:17). The story assumes that the audience will understand this without explanation. Perhaps the writer interpreted Boaz as a proxy for both Elimelech and Mahlon, making the child both Ruth's and Naomi's.

The name "Naomi" is the only one whose meaning is explained in the story itself (1:20–21). The name means "pleasant" or "my pleasantness," although the former is preferred since *y* is a hypocoristicon. It is related to the root *n‹m,* "to be pleasant, delightful," and the adjective *nā‹îm,* "pleasant, delightful." By a play on words Naomi implies this meaning for her name because she contrasts it with "Mara" ("bitterness"). See MARA. She explains to the Bethlehem women that her present condition of sorrow prevents her from being "Naomi."
KENNETH A. MATHEWS

NAPHISH (PERSON) [Heb *nāpîš* (נָפִישׁ)]. A son of Ishmael (Gen 25:15; 1 Chr 1:31) and, like all the sons of Ishmael, an Arab tribe (1 Chr 5:19). See ISHMAELITES. According to 1 Chr 5:19, Naphish inhabited N Transjordan (or an adjacent region) in the Persian period. See JETUR; NODAB. Two or three centuries earlier, a chief of this tribe, ‹Amm-la-yiṯa‹ (in Akkadian, *Am-le-ta Na-pi-šá-a-a*) is mentioned in a cuneiform letter to Ashurbanipal (CT 53, 289 Rs 8f) in connection with a Massaean (see MASSA) and the "rebellion" of the Kedarite chief Yauṯa‹, which troubled the Assyrian king before 649 B.C. (Knauf 1983).

Zadok (1982: 296) has suggested that the Nephisim/Nephushesim (Ezra 2:50 = Neh 7:52) were prisoners of war from the tribe of Naphish. The various spellings of the Nephusim's name (Ezra 2:50 *npysym* [Ketîb], *npwsym* [Qerê]; Neh 7:52 *npwšsym* [Ketîb], *npyšsym* [Qerê]) caution against this suggestion, although neither the difference of the second syllable's vowel (*û* versus *î*) nor the inconsistent rendering of the sibilant (*s* and *š*) provide insurmountable obstacles against it. Although ancient N Arabian *sin* is generally rendered *šin* in Hebrew and Aramaic, occasional spellings with *samek* occur as early as the 5th century B.C.

For an explanation of the tribal name, cf. Arabic *nafîs* "precious"; as a personal name, Nafîs is attested for Tayma-Thamudic and Safaitic (Knauf 1989: 81).

ERNST AXEL KNAUF

NAPHOTH-DOR (PLACE) [Heb *nāpôt dôr* (נָפוֹת דּוֹר)]. A Canaanite city-state situated 12 miles S of Carmel and 9 miles from Caesarea. It lies in the N part of the plains of Sharon and was an important seaport town for many centuries beginning in the LB Age. It maintained links with the Mediterranean world from the 15th or 14th centuries B.C. It is identified with modern Kh. el-Burj (M.R. 142224).

The name Naphoth-dor is found in numerous forms, implying varied connotations. It is likely that the Egyptians named it Tantura, whereas the Sea Peoples called it Naphath-dor and the Assyrians referred to it as Du›ru. The MT uses both the plural form *nāpôt* (Josh 11:2) and the singular *nāpāt* (Josh 12:23; 1 Kings 4:11) although the singular form is better attested in the MT and in the versions.

"Naphath" has been understood to mean a "district" or a "dune." The sand dunes in the area would certainly have been the reason for that name. On the other hand, the language of the Sea Peoples who occupied the town in the 12th century suggests an alternative meaning. The cognate in archaic Greek means "a wooded country." This is a semantic equivalent of Sharon, conveying the meaning "Dor of Sharon."

The long history of Naphoth-dor is reflected in the abundant remains from the LB Age down to the Crusader period. Apart from the remains some significant references to it in ancient documents illustrate its importance. After being founded probably by the Egyptians in the 15th century, it continued to serve as a harbor. An inscription of Rameses II from the 13th century B.C. mentions it for the first time. It was destroyed at the hands of the Sea Peoples in that century, and the Tjeker, one of the Sea Peoples, subsequently took control of Dor. Wen-Amon's report makes reference to Beder, king of Tjeker, as being in control of Dor during his visit to the city. It flourished throughout the Iron Age and became the capital of Solomon's fourth district governed by Ben-abinadab, his son-in-law. It was also a customs sanctuary. A seal of a priest called Zekaryahu suggests its links with Yahwism. Tiglath-Pileser III attacked it in 734 B.C. and captured it in 732 B.C. He reorganized the area by forming the District of Du›ru consisting of the region which extended as far as the Philistine border. Later Sargon II formed the Province of Samaria which included the former Province of Du›ru. The Assyrian Eponym List and the list of cities repeatedly mentions this city. It was granted autonomy under the Persians and became a Sidonian colony. Later it became a Ptolemaic royal fortress. Antiochus Sidetes besieged it employing cavalry, infantry and ships, but without success. By the end of the 2d century B.C. it was ruled by the tyrant Zoilus. Alexander Jannaeus was able to acquire it by negotiation and Pompey granted it autonomy in 64 B.C. by returning it to its former owners. It continued to be a free city under Herod and his successors. Josephus remarks that the Gentiles who inhabited it practiced Apollo worship. There is also evidence for the worship of Zeus and Astarte. A synagogue was in existence before the destruction of the Second Temple. There was a church and it became a bishopric during the Byzantine period in the 7th century A.D.

Joshua 11 recounts that the King of Naphoth-dor was a member of the coalition which fought against Joshua. Though the king was defeated the victory over the city was temporary, since Josh 17:11 and Judg 1:27 indicate that this city was one of those that remained to be conquered. The account of the defeat, however, affirms that a famous and powerful city like Naphoth-dor was given into the hands of Israel by the Lord when Israel was an obedient people.
PAUL BENJAMIN

NAPHTALI (PERSON) [Heb *naptālî* (נַפְתָּלִי)]. The sixth son of Jacob and the second son of Bilhah, Rachel's servant, and the eponymous ancestor of the tribe Naphtali. Naphtali is born to Bilhah and Jacob after Rachel suggests to her husband that he should have children by her servant. She is driven to this plan because she is unable to conceive, in contrast to her sister Leah, who at the point of the initiation of Rachel's plan had already had four sons by Jacob. Although born to Bilhah, Rachel has the privilege of

naming Naphtali. *Naptālî,* formed from a base involving the *Nip‘al* of *ptl,* a verb that means "to twist" or "to wrestle." In popular etymology the name is associated with the words Rachel speaks upon naming him: "with wrestlings of God I have wrestled with my sister, and I have prevailed" (Gen 30:8). Although barren, Rachel feels a measure of success with the births of two sons to her servant; they do not, however, solve her anguish of childlessness. Only with the birth of her own child, Joseph, can she say that God has removed her reproach.

The book of Judges recounts that the tribe of Naphtali attempted to drive out the people of Beth-shemesh and Beth-anath, but was unsuccessful. They do, however, subject the residents to "forced labor" (Judg 1:33). Naphtali's most noted campaign occurs under the direction of its famous military leader, Barak. Barak, instructed by Deborah to fight Sisera at Mt. Tabor, with the assistance of Naphtali and Zebulun, leads people memorialized as those willing to risk "their lives to the death" (Judg 5:18). Naphtali was also summoned by Gideon to fight the Midianites and Amalekites (Judg 6:33–35). Mayes (*IJH,* 315), however, suggests that this reference is not historical because the list of the tribes who assist Gideon appears differently in Judg 7:23 (although Naphtali does appear both here and in Judg 6:33–35) since Gideon's campaigns were undertaken primarily by his own clan, the Abiezrites. It is uncertain whether Jacob's reference to Naphtali as an "unleashed hind" (Gen 49:21) in his blessing to the tribes is pejorative or a reference to the tribe's resilience in fighting.

Deut 27:11–26 describes Naphtali as one of the tribes who participates in a blessing/curse ceremony on Mt. Gerizim and Mt. Ebal. Naphtali, along with Reuben, Gad, Asher, Zebulun, and Dan, represents the curses that will result if the Israelites break the covenant. Elliger (*IDB* 3: 509) suggests that since it is said that Naphtali "dwelt among the Canaanites," probably has a non-Semitic name, and was probably under the domination of Hazor, it enjoyed a lesser status among the tribes. However, the description in Ps 68:27 which refers to Naphtali as one of only four tribes (along with Benjamin, Judah, and Zebulun) who are participants in a temple procession may counter this suggestion. Naphtali is also cited as the tribe that provides three cities to the Gershonites as a portion of their levitical inheritance (Josh 21:32; 1 Chr 6:76).

The boundaries and cities of Naphtali are given in Josh 19:32–39 This territory consists of the N regions of Israel around the E parts of the Galilee. This area is also indicated by Moses' blessing to Naphtali, who is to possess "the lake and the south" (Deut 33:23). The reference to the S is an enigma since the S regions of the Galilee belonged to Issachar. The exact boundaries of Naphtali are disputed. The region extending from Mt. Tabor to the Jordan, clearly part of the territory of Naphtali, is understood to be the tribe's N border by Noth (1935: 225–26), but the S border by Aharoni (*LBHG,* 238). The N border of this tribe may be missing due to the inability of Israel to clearly demarcate its N territory within Canaanite strongholds (Aharoni *LBHG,* 231). The list of Naphtali's territory appears abbreviated; instead of giving independent border demarcations, the references include only the boundaries of the adjacent territories of Zebulun and Asher. The disputed S boundary touches Zebulun, the W boundary borders Asher, and the E border meets at the Jordan (*LBHG,* 239).

Several cities listed as Naphtali's border cities have been identified. Aznoth-tabor, Heleph, Adami-nekeb, and Jabneel have been identified with, respectively, Khirbet el-Jebeil, Khirbet ‘Irbadeh (both at the foot of Mt. Tabor), Khirbet et-Tell above Khirbet ed-Damiyeh, and Tell en-Na‘am. Lakkum may be Khirbet el-Manṣurah (*LBHG,* 238–39).

Gottwald finds the biblical references to Naphtali's territory and skirmishes tenable since Naphtali existed in mountainous and forested terrain that could have been readily defended (1979: 528). Noth and Gottwald suggest that the city of Hazor, whose destruction is described in Joshua 11, was not destroyed by Joshua but by Naphtali in the 13th century B.C.E. (Gottwald 1979: 154; *NHI,* 149). Naphtali continued to challenge the feudal city-states in the E regions of the upper Galilee. Because of its success there, Naphtali was able to settle the region, or, if their settlement had already begun, to increase its own independence (Gottwald 1979: 528).

During the period of the monarchy, Naphtali is mentioned as one of the regions conquered by Ben-hadad of Syria. Ben-hadad, allied with Asa of Judah against Baasha of Israel, attempted to encroach upon Judah's territory (1 Kgs 15:20). During the reign of Pekah of Israel, Naphtali came to an end. Tiglath-

pileser of Assyria captured "all the land of Naphtali, and he carried the people captive to Assyria" (2 Kgs 15:29). Ezekiel hopes for the restoration of Naphtali in the N, alongside Dan and Asher.

SHARON PACE JEANSONNE

NAPHTHA [Gk *naphtha* (ναφθα)]. A highly flammable substance mentioned twice in the Apocrypha. It was one of the substances used to heat the furnace into which Azariah (i.e., Abednego), Shadrach, and Meshach had been cast (LXX Addition to Daniel v 23). It was also the common name (Gk *naphthai*) used for the thick liquid that in the time of Nehemiah was used to ignite the sacred fire of the altar sacrifices (according to 2 Macc 1:26). Strabo (16.1, 15) also refers to naphtha as a liquid that ignites if it is brought near fire. These references clearly allude to some petroleum product. The word itself comes from the Akk *napṭu*, which eventually worked its way into Greek as a loanword (Aram *nepṭā/napṭā;* Goldstein, *2 Maccabees* AB, 181). See also NEPHTHAR.

GARY A. HERION

NAPHTUHIM The Table of Nations (Gen 10:13) and the parallel genealogy in 1 Chr 1:11 place the Naphtuhim among the descendants of Mizraim (Egypt), son of Ham, son of Noah. These two references have the only occurrences of the name in the Bible. Because of the association with Egypt, scholars have looked in that direction to identify more closely who these people might be.

Kitchen (*NBD,* 815) proposes two Egyptian etymologies for the Hebrew name. One is associated with the delta area of Lower (i.e., northern) Egypt, and the other with the "oasis" area W of the Nile. The former location has merit since in the genealogies the Naphtuhim are closely associated with the Pathrusim, probably to be identified with Upper (i.e., southern) Egypt. Rendsburg (1987) proposes an Egyptian original which reads "those of Ptah." This, he claims, refers to Memphis, headquarters of the worship of that Egyptian god (see *CAH*^{3} 1/2: 15–17, 52; Kitchen 1973: 187–94). This would locate the Naphtuhim somewhat south of the delta, in Middle Egypt.

The Aramaic Targum on Chronicles reads 1:11 as Pentaskinnai, from the Greek *Pentaschoinon.* This is located in the northeastern delta region of Egypt (*EncMiqr* 5: 905). While an Egyptian identification of the Naphtuhim is sure, the lack of more specific evidence does not allow us to determine the exact area occupied by them.

DAVID W. BAKER

NARCISSUS (PERSON) [Gk *Narkissos* (Ναρκισσος)]. In Rom 16:11, Paul sent greetings to "those of the people of Narcissus who are in the Lord," i.e., the Christians among the slaves or freed (wo)men of Narcissus. Narcissus himself does not receive greetings. Perhaps the Christian Narcissus had died or was absent from Rome (cf. Cranfield *Romans* ICC, 792), or more probably he was *not* a Christian. That only some of the servants of Narcissus' household were Christians supports the latter possibility. And Paul probably would have added some detail about Narcissus, as he did with the other Christians mentioned in Rom 16:3–13, if Narcissus had been a Christian.

The Christian slaves or freed (wo)men of Narcissus formed a house-church in Rome (Lampe *StadtrChr,* 302, 319). Paul mentioned four other groups in Romans 16 which evidently worshiped together: The "house-church" of Prisca and Aquila (v 5), "Asyncritus, Phlegon … and the brethren/sisters who are with them" (v 14), "Philologus, Julia … and all the saints who are with them" (v 15), and "the (Christians) of the people of Aristobulus" (v 10). The latter were slaves and freed (wo)men again. In addition, Jewish and pagan sources reflect that (freed) slaves of one master formed worship communities without the master belonging to their religion: The Jewish freed (wo)men of Agrippa, of Augustus, and of the *gens Volumnia* established three different synagogues in Rome, as did a group of former Herodian slaves (see the

inscriptions in Lampe *StadtrChr,* 367). In the year 61 C.E., Cassius (in Tacitus *Ann.* 14.44) complained about those slaves in distinguished Roman households "who have different rituals, foreign religions." Looking from the pagan side, Cassius confirms Rom 16:10–11

Since freedmen named Narcissus were numerous in Rome (Lampe *StadtrChr,* 136), it is superfluous to speculate whether Narcissus was the famous imperial freedman under Claudius (*CIL* 15:7500) as is sometimes proposed. *Acts Pet.* 48:7; 49:15; 53:13; 61:8, 27 (2d century C.E.) portray Narcissus as a Roman presbyter owning a house where Christians met.

NARRATIVE, COURT See COURT NARRATIVE (2 SAMUEL 9–1 KINGS 2).

NARRATIVE, HEBREW Narrative communicates meaning through the imitation of human life, the temporal ordering of human speech and action. It constructs a verbal world that centers on human characters, their relations, desires, and actions in time. Time is crucial for narrative. Unlike other kinds of discourse, e.g., lyric poetry, proverbs, or legal codes, which communicate through images, propositions, or admonitions, narrative is distinguished by plot, a sequence of connected action that leads, through varying degrees of dramatic intensity, to some sense of resolution. Narrative interrelates distinct events to form a coherent whole without extraneous incidents.

———

A. Narrative Portions of the Bible

The bulk of the Hebrew Bible is narrative. The primary story extends from Genesis through 2 Kings. The plot is initiated by God, who attempts to establish and sustain a relationship of trust with humankind. A particular family is chosen and promised a land and nationhood, gifts which will come to represent God's pledge of commitment and of presence in the relationship. For its part, the divinely chosen family seeks to realize its vision of land and nationhood with, and sometimes without, God's assistance. God's desire for relationship and human desire for place and identity prove frequently incompatible and provide the ingredients of conflict in the overall story. Though the gifts are gained they are lost finally through the people's failure both to take seriously their own story and to respond to God's desire.

A second major narrative is the book of Chronicles, to which the books of Ezra and Nehemiah form a sequel. Prefaced by a genealogical compendium of Israel's ancestors prior to the monarchy, 1 and 2 Chronicles is an account of the kingdom of Judah from the death of Saul through the Exile and announcement of restoration. The heart of the story is an elaborate account of how King David established a united state, organized its bureaucracy, founded the temple, provided for its functionaries, and promoted the levitical priesthood. What follows is essentially a falling away from this perceived ideal. The narrative traverses the same period as 2 Samuel–2 Kings but presents a distinctive point of view, narrower in its focus and more obvious in its ideology. The two books that follow detail the

rebuilding of Jerusalem and the temple and the attempt by both Ezra and Nehemiah to sustain the restored community as a theocratic state in the face of external and internal pressures.

Some of the prophetic books also include narrative, usually retelling the historical circumstances in which the prophet worked and prophesied. Material in Isaiah and Jeremiah virtually duplicates segments of 2 Kings. Other books contain a type of discourse marginally akin to narrative as such: visions and divine speeches often report series of events. Visions, however, often minimize temporality, and divine speeches offer more of a catalogue of events rather than a closely constructed plot in which tension rises and falls.

Of the remaining narratives, the books of Ruth and Jonah fit into the temporal scheme of the primary story, and further develop the theme of God's desire for relationship in ways that are both consonant and contrastive with the larger account. Esther and Daniel 1–6 continue Israel's story after the loss of the land. These narratives capture the crisis of the displaced people dealing with foreign rule. Esther relates the pressures upon national identity in an alien context and Daniel explores the limits of God's sovereignty and God's relationship to the rest of humankind. Of all biblical narrative, Job is the most temporally and geographically elusive. Its distinctiveness lies not only in its present form—a brief narrative framing an extensive poetic dialogue—but also in its interest in an individual whose nationality is obscure and whose relationship to Israel is not, on the surface of the story, of primary importance.

B. Narrative and Genres

Biblical scholars have for several hundred years focused their attention upon the way the narratives have come to be in their present form. They have attempted to recover from the Bible its original sources, written and oral, and to write a history of the development of biblical literature and its conventional literary forms for the purpose of reconstructing the history of Israel and Israelite religion. Despite some impressive early hypotheses, the findings of source analysis have proved mainly inconclusive. Even those critics more interested in the literary characteristics of the material have attended to questions of genre or form rather than to the inner workings of the stories themselves. But while definitions of conventional forms can be helpful, they cannot capture the complexity of meaning produced by biblical stories.

1. Genres. Form critics have designated a variety of genres in Hebrew narrative. The term "saga" has been frequently used of the ancestral narratives in Genesis; "legend" is sometimes used of the narratives about Moses in Exodus and Numbers, or about Elijah and Elisha in 1 and 2 Kings; the Joseph story in Genesis has been termed a "novella," as have the books of Esther, Jonah, and Ruth, and the story of King David's family found in 2 Samuel 9–20 and 1 Kings 1–2. Etiologies, or accounts of origins, are found at various places in Genesis–2 Kings. "Tale" is another term that has been used of shorter story units.

Often the labels are used to indicate some perceived relation to "history," though such relations are extremely difficult to determine. In the case of the primary story (Genesis–2 Kings), scholars have been readier to designate as "history writing" subject matter closer to the exilic period (6th century B.C.E.). A major exception has been the story of King David, often thought to be a reliable historical document from close to the time of David. On the other hand, the Chronicler's story, in part because of its more obvious ideological bias and its later composition, has long been viewed as historically less reliable than Samuel and Kings, despite the fact that it presents itself as "history writing" no less than those books.

It would appear that some useful distinction might be made in terms of "imaginative" genres (saga, legend, novella, etc.) and "recording" genres (anecdote, annalistic extract, memoirs, history writing, etc.). In practice, however, such distinctions are not easily sustained. The difference between fiction and nonfiction, for example, is not always clear, especially where ancient "history-like" writing is concerned. Even where historical records are involved, once events are selected and ordered by an author or editor, particularly when serving a distinctive ideology, a distance is established between the narrative world and the world of "what actually happened." In short, then, genre labels, especially those which are conceived in terms of historiographical purpose, are of limited use.

2. Narrative. Nevertheless, an important distinction can be made between "dialogic" and "monologic" narrative. The former is represented by much of the primary story together with most of the shorter stories such as Ruth, Jonah, Daniel 1–6, and Esther. It is more open to multiple interpretations, entertains within

it several ideological points of view or "voices," often in tension, and is characterized by restraint on the part of the narrator and a premium on "showing" through characters' actions and dialogue rather than simply "telling." The latter is represented above all by Chronicles, Ezra, and Nehemiah. It has more in common with the rhetoric of public persuasion such as the political speech or the sermon, tends to elicit a narrower range of responses from the reader, minimizes tensions and ideological plurality, and is characterized by a premium on "telling" through extended monologues from both narrator and characters.

C. Elements of Narrative

If the narrative is thought of as the narrator's construction, what the reader does may be thought of as reconstruction. Plot is the organizing force or principle through which narrative meaning is communicated. But not only is meaning expressed on a time continuum, it is conveyed through different and incomplete sources—the voice of the narrator, the speech and actions of characters. Presented with fragmented but potentially coherent information, the reader must observe, order, and amplify in order to forge meaning.

1. Plot Structure. A reader comprehends a plot both in terms of the simple sequence of action and in terms of the rise and fall of dramatic tension. How the reader discerns the dramatic structure of the plot will determine what is most significant in the sequence. Dramatic structure can be charted with three basic categories. The *exposition* sets up the story world and initiates the main series of events. The situation presented in an exposition is usually characterized by incompleteness, disorder, or unfulfilled desire, from which develops a subsequent *conflict.* The conflict, which may be internal to a character or an external one, between characters, moves through various phases until a climax gives way to some degree of *resolution.* Thus the story of the succession to David in 1 Kings 1–2 establishes that the king is old and senile and that the oldest son, Adonijah, desires and expects to succeed to the throne. Conflict materializes in a rival party backing Solomon, and a climax is reached when Nathan and Bathsheba make a successful preemptive strike on Solomon's behalf. The king yields the throne to the younger son. Resolution follows in stages with the king's death and the eventual execution of Adonijah.

In most cases, however, the plot structure may appear to be more complex. For example, there may be several points of intensity or climax. Sometimes this will depend on which character's point of view is perceived to be predominant in the narrative as a whole. Thus in the story of Jephthah in Judges 10–12, the major climax of the story, from the Israelites' point of view, is Jephthah's victory over the oppressing Ammonites (11:32–33). That, too, could be taken to be the climax, from Jephthah's point of view, if his initial predicament is his expulsion from Gilead. On the other hand, the story of a Jephthah early deprived of a family might be seen to reach a climax in his decision to sacrifice his only child. When the tragic role of the daughter predominates, however, the climax may perhaps lie in her acceptance of death as her lot.

Another factor that complicates biblical plots is the frequency with which narratives are constructed from a number of seemingly separate plots. This factor has often led scholars to postulate the presence of originally independent sources in what they see as a composite rather than unitary final narrative. In terms of the final form, however, irrespective of their origins, these plots usually function as subplots or episodes within a larger plot. Thus the stories of Abraham and Sarah in Egypt (Genesis 12), Sarah and Hagar (Genesis 16 and 21), or the wooing of Rebekah (Genesis 24) are all episodes within the larger story of promised land and nationhood. In the family story of Jacob (see Genesis 37:2) the story of Judah and Tamar becomes a subplot within a larger plot which deals primarily with Joseph but in which, in the fraternal struggle for ascendancy, Judah also plays a prominent role.

In some cases, as with various stories of the ancestors in Genesis, the episodes are not causally connected, but rather linked through association. Genesis 26, Isaac's visit to Gerar, has no immediate connection with the preceding incident involving Jacob and Esau's birthright. Nor does it flow into the next episode which reverts to the rivalry between the brothers. Yet it fits into the larger Genesis story, first, by associating Isaac's behavior with that of his father in Abraham's visits to Egypt and Gerar (chapters 12 and 20) and, second, by foreshadowing, through motifs of deception and strife, the coming struggle within Isaac's own family. In other cases, as with the last chapters of Judges or 2 Samuel (or likewise the fight between Ephraim and Gilead at the end of the Jephthah story), the episodes appear as a

kind of coda or epilogue which invites the reader to reflect back on what has preceded and to discover thematic and often ironic associations.

Frequently in the larger narrative complexes the subplots and plot episodes center upon one or two main characters as hero or heroine. When the larger plot is considered, however, the main protagonist (apart from God) generally turns out to be a corporate character such as the ancestral family or the people of Israel. As the complex story unfolds the reader, who keeps shifting focus between the inner and outer plots, maintains a more balanced perception of the whole.

2. Character. A reader's reconstruction of character involves observing, assessing, comparing and contrasting what the characters do, what they say, what the narrator says about them, how other characters respond to them and what other characters say about them. We may usually take what the narrator says about a character as a serious guide to aid us in our understanding of a character, but the narrator seldom tells us all we want to know. Rarely does the narrator describe external appearances or present internal thoughts and emotions. Moreover, what other characters say cannot always be relied upon since characters in biblical narrative, mimicking real life, convey only limited human viewpoints, frequently prejudiced and self-serving. In her speech to David in 1 Samuel 25, Abigail heaps opprobrium upon her husband, Nabal, and pictures David as the angel of God, able only to do good. Yet we may be justified in suspecting her of exaggerating once we have noticed, first, the dubious nature of David's unsolicited "protection" of Nabal's flocks, second, the haste and vehemence with which David orders reprisals against the whole of Nabal's household, and, third, the fact that Abigail is desperately seeking to placate David, even to the extent of offering discreetly to join him ("And when the Lord has dealt well with my lord, then remember your handmaid," v 31).

The relationship of character to plot is not simply that characters enact plot. Desire and ambition motivate the movements and changes that constitute the plot. And desire and ambition are forces within the characters who people the story. To understand the complexity of the character we need to determine the desire. Why does Abram try to pass his wife off as his sister in Genesis 12? After he receives God's promise of land, nationhood, and blessing, Abram sets out to find this land seemingly without a word to his wife Sarai about the divine promise. When famine strikes, he eagerly leaves the land of promise to go to Egypt where he, afraid for his life, presents Sarai as his sister rather than his spouse. Pharaoh takes her as his concubine, paying in exchange for her a rather handsome sum to the man Abram. The reader is left pondering Abram's motivation. Is fear only part of what inspires him to pawn his wife? Does she not become the surety for "blessing"? Did he ever intend for the aged and barren Sarai to share in the divine promise at all? Might "nationhood" require the womb of a younger woman? One of the maidservants provided by Pharaoh, perhaps?

3. Narrator's Point of View. Narrative information is presented through the point of view of the narrator and the characters. These perspectives in conjunction with that of the reader form a system of relationships. The reader's point of view affects and is affected by the relation between the perspectives of the narrator and the characters. The narrator's point of view can be detected in direct narration, comment, and explanation. Alternatively, the narrator may step aside and allow the characters to speak for themselves and so to convey their own point of view. The most common error readers of biblical narratives make is confusing a character's point of view with that of the narrator. This can be avoided by carefully comparing and contrasting what the narrator tells the reader directly with what the characters say.

Take, for example, the exposition of the story of Judah and Tamar in Genesis 38 Judah's sons die, the narrator tells us, because they "do evil in the sight of the Lord." When dealing with their widow, Tamar, who is entitled to marry his third son, Shelah, Judah tells her to return to her father's house. Shelah, he says to her, is not old enough to marry yet, but to himself he says, "lest he, too, die like his brothers." It is clear from this inner speech that he views Tamar to be a jinx, whereas the narrator has made it clear that the deaths are God's responsibility. This distinction between point of view assists the reader in evaluating both the characters, Judah and Tamar. First, the reader is guided to accept the narrator's assessment and to recognize Tamar's innocence. Second, the discrepancy invites the reader to consider Judah's readiness to

blame the woman rather than see any fault in his sons. His double standard will become doubly apparent in his subsequent rush to condemn her for a second time when she is found to be pregnant. Ironically, where he sees harlotry, the reader sees radical responsibility. The harlotry is his own.

4. Language and Meaning. All narrative information is, of course, communicated through the medium of language. The language of narrative is often multivalent, carrying more than one meaning at once. There are several different types of verbal ambiguity. Sometimes two or more meanings of unequal force are present in a single word or phrase. A careful reader recognizes the play of both meanings off one another, while the characters usually perceive only one meaning to be intended. In the Judah and Tamar story cited above, Tamar, disguised as a prostitute, bargains with an overly eager Judah for his cord, seal, and staff as a pledge of payment for her sexual services. Judah understands her to be referring to the staff that he is carrying in his hand and he willingly leaves it along with the other articles in her care. An astute reader might note, however, that the Hebrew word for staff also means "tribe" and might muse over the fact that Tamar, in the course of the story, indeed controls the future of Judah's tribe. The phallic shape of the staff also allows sexual connotations to play in an already sexually loaded story. Tamar is essentially bartering for a phallus that will bring her children and security, and with Judah's staff in her possession, she is able to emasculate him publicly when he attempts to have her burned for harlotry.

When meanings of equal force are carried in the same word or phrase, the ambiguity may be recognized by the characters as well as by the reader. The significance of the ambiguity is, nevertheless, usually left to the reader to determine. For example, in Ruth 2 Naomi exclaims upon seeing the grain Ruth has gleaned from Boaz's field, "Blessed be he by Yahweh whose kindness has not forsaken the living or the dead!" It is unclear from the construction whether Naomi is referring to the kindness of Yahweh or that of Boaz. For the reader, this ambiguity underscores a major theological point found in the book of Ruth, namely, that divine and human action are often difficult to distinguish.

When savoring the language of narrative, the reader must take seriously variation in expression. A change in wording can often indicate a different point of view (as indicated above), offer insight into a character's values, or reveal a character's attempt to manipulate others in the story world. To cite another example from Genesis 38, we should not miss there a subtle change of term for the role played by Tamar. When Judah sees her alongside the road, he considers her to be a common prostitute (*zônāh*). His subsequent dealings with her reflect this assumption. When he sends payment to her by the hand of his friend the Adullamite, the search is made for a *qĕdēšāh,* a "holy woman," a person who engages in sexual activity as cultic ritual. The shift in terminology points again to Judah's double standard. For public consumption he portrays his dealings under a more socially acceptable label.

An example of a deliberate variation in a situation involving persuasion can be found in Judges 19–20 The Levite, having handed over his concubine to a mob intent on raping him, equivocates on the details when he seeks to incite the congregation of Israel to take revenge on Gibeah. He avoids describing himself as the object of homosexual desire; instead, he claims that the men wanted to kill him. He avoids implicating himself in the woman's death; instead, he simply states that she was raped and is dead. His speech reduces a situation of complex culpability to a simple scenario of himself as victim with the entire male population of Gibeah at fault. If his view of the woman as a disposable possession was not already apparent to the reader in the preceding scene, it should be by the end of his speech.

5. Irony. When a narrative situation suggests more levels of meaning than the characters involved can recognize, irony is present. Irony is incongruity of knowledge. Characters think they know what they are doing when in fact they may be doing something rather different. They think they understand the way the world is when in fact it is different. Sometimes the discrepancy of knowledge is contained within the story world, so that some characters know more than others. Both Joab and David are in a position to savor the irony of Uriah carrying the letter which is also his warrant of execution (2 Samuel 11). In such cases the reader is also aware of the irony. At other times the reader alone is in a position to appreciate the irony. To Joab, at the news of Uriah's death, David sends the message, "Do not let this thing be evil in your sight, for the sword devours now one and now another." But to the reader the narrator observes a few verses later, "But the thing that David had done was evil in the sight of Yahweh."

Irony as an ingredient or mode of narration varies within the Hebrew Bible. Genesis–2 Kings is particularly rich in irony, Chronicles much less so. That difference is typical of the difference between dialogic and monologic narrative.

Irony becomes particularly significant as an interpretive strategy when the irony is played out between narrator and reader. "In those days there was no king in Israel; every man did what was right in his own eyes" observes the narrator several times amid the accounts of chaotic self-interest at the end of Judges. Are we to read this as a recommendation of kingship as a cure of ills? But if we do, we must ignore both the story of Abimelech (Judges 9) and most of the resulting history of the monarchy in Samuel and Kings where kingship seems no major barrier to the further exercise of corrosive self-interest.

Likewise we are told in the book of Kings of David's and Solomon's rectitude in such positive terms that we may be led to see in them some absolute standards of behavior. But one key word, "except," creeps into the evaluative statement. David "did what was right in the eyes of the Lord and did not turn aside from anything that he commanded him all the days of his life, except in the matter of Uriah the Hittite" (1 Kings 15:5). That "except" can have a powerful effect on the way we read the sentence if we recognize the matter of Uriah the Hittite to be the pivotal episode in David's life, representing a peak of grasping for whatever was good in his own eyes. Likewise we may be impressed by an apparent encomium of Solomon, who "loved the Lord, walking in the statutes of David his father; except he sacrificed and burnt incense at the high places" (1 Kings 3:3). By the end of his story we are obliged to consider whether that comment might not be ironical. "He had seven hundred wives, princes, and three hundred concubines; and his wives turned away his heart [from God] … [he] built a high place for Chemosh the abomination of Moab … and so he did for all his foreign wives, who burned incense and sacrificed to their gods" (1 Kings 11:3, 7, 8).

6. Reader's Point of View. Irony often is produced through setting up a conflict of facts or values as in the cases just mentioned. Awareness of irony is then a matter of point of view. Indeed play with the reader's point of view is characteristic of much Hebrew narrative and not just in connection with irony. A common way of effecting this is through allusion to other stories, episodes or characters.

The exposition of the book of Ruth describes a situation structurally reminiscent of the exposition to the Judah and Tamar story in Genesis 38 There is separation from family/homeland, a sojourning elsewhere, marriages to foreign women, deaths of two sons and spouse. In the Genesis story, as noted above, Judah suspects Tamar, the Canaanite widow of his two eldest sons, to be the cause of their death. Without openly accusing her, however, he urges her to return to her father's house. Naomi's attitude toward her daughters-in-law is not openly declared by the narrator but she, too, urges return—each to her mother's house. Struck by the analogy between the stories, a reader might well wonder whether Ruth has become to Naomi what Tamar was to Judah, namely, an albatross around her neck. The reader seeking to understand Naomi's motives is thus prompted to scrutinize her speech and actions with a degree of suspicion instead of taking them simply at face value.

Likewise awareness of the symbolic value of Moab in other stories—the story of Lot and his daughters (Genesis 19) and the sin of Baal-Peor (Numbers 25)—enables a reader of Ruth to align his or her point of view for a moment with that of the Israelites in the story or its implied ancient Israelite reader and detect racial and religious prejudice against Moab. Finally, the depiction of Naomi sending Ruth down to the threshing floor at night to lie with Boaz calls to mind not only the way Laban tricked Jacob into marrying Leah rather than Rachel (Genesis 29) but again the deception of Lot by his daughters and Judah by Tamar. Again, the allusions inculcate suspicion on the part of the reader so that entrapment comes into focus as an explanation for an enigmatic episode.

Sometimes allusion is effected by precise word-choice as well as structure. Jephthah (Judges 11) arriving home after victory and a vow that he will sacrifice the first to meet him encounters his daughter, who has gone out "with timbrels and dancing." The narrator's insistence that she was "an only child (*yĕḥîdâ*)—he had, apart from her, no son or daughter" recalls God's speech to Abraham in Genesis 22: "Take your son, your only child (*yāḥîd*) Isaac, whom you love … and offer him as a burnt offering …"

Later, in 1 Samuel 14, analogy brings into play a third text, Saul's threat to execute his son Jonathan for violating an oath that Saul had made on behalf of the army.

The parallels help to enlarge a reader's perspective. Why is it that the sons are spared, the daughter killed? Is this the priority of patriarchy? Or, to put it another way, why is the daughter so alone? The angel reaches out to stay Abraham's knife, the people stand between Saul and Jonathan, but no one intervenes on the daughter's behalf, though female companions appear to weep for her virginity upon the mountains. Another narrative analogy reinforces the point: Miriam meets a returning victorious Moses (Exodus 15) accompanied by "all the women … with timbrels and dancing." With timbrels and dancing, too, "the women" greet the victorious Saul and David on their return home (1 Samuel 18). By contrast the daughter stands before her father isolated, apparently bound to his will, a patriarchal victim. In turn, her isolation points back to Jephthah's own experience of familial (especially patriarchal) rejection. What we see is a vicious cycle, a cycle of abuse. Ironically, the rejected child, whose desire is for acceptance and security, destroys his own child. Human failure ensures that oppression accompanies Israel's deliverance from oppression.

D. Conclusion

The narrative of the Hebrew Bible is multifaceted and richly rewards the careful and imaginative reader. There are many ways of reading that have found favor with the communities that have treasured these stories. No account can do justice to them all. Rather we have selected some features of the text and pointed to ways of response that both draw upon contemporary understanding of how literature is read and also contribute to the interpretive traditions of the great communities of the book.

DANNA NOLAN FEWELL
DAVID M. GUNN

NAṢBEH, TELL EN- (M.R. 170143). A site situated ca. 12 km N of Jerusalem along the main road which leads from Jerusalem to Shechem/Samaria. The tell is generally identified with biblical MIZPAH of Benjamin (Josh 18:26; cf. 1 Sam 7:5–11); some reject this identification, however, preferring to identify Nabi Samwil (ca. 8 km NW of Jerusalem) with Mizpah. Albright (1948: 203) has alternatively suggested that Tell en-Naṣbeh may have been ancient Ataroth-addar.

A. The Site

Tell en-Naṣbeh lies on a spur (ca. 770–784 m above sea level) which connects with a mountain on the N Deep valleys surround the site on the other three sides. A fortification wall laid out in a large oval, which measures ca. 265 m N–S and 160 m E–W, encompasses ca. 32 dunams. In addition to its strategic importance along the main N–S central hills road, after the division of the kingdom it became particularly important as a border defensive town.

B. History of the Site

After an initial occupation with a small settlement in the EB, the site was deserted until it was reoccupied ca. 1100 B.C., apparently by the Israelites. The city was the scene of the rallying of Israel's forces in retaliation against Benjamin for the rape-murder of the Levite's concubine (Judges 20). It later was part of the circuit of the prophet Samuel (1 Sam 7:16–17). Following the division of the kingdom, Asa apparently fortified the site in an effort to secure his N border against Israel (1 Kgs 15:17–22; see also below). After Nebuchadnezzar destroyed Jerusalem and appointed Gedaliah governor of Judah, Gedaliah established his residence at Mizpah, where he was later assassinated (2 Kgs 25:22–25; Jeremiah 40–41).

After the Exile, the city became the capital of the district (Neh 3:7), and during the Maccabean revolt, it was where Judas mustered his army against Gorgias (1 Macc 3:46).

C. The Excavations

1. Chalcolithic–EB The only evidence for these periods is occasional sherds on the site and in caves. The caves, most of which are around the base of the tell, were primarily used for burial, but there is evidence of occupation in some.

2. Iron Age I. The tell was unoccupied through the EB, MB, and LB, but was reoccupied in the 11th century B.C. The excavations have revealed part of the fortification wall, which averaged only about a meter thick, into which were integrated at least two towers. Parts of the domestic area have also been discovered.

3. Iron Age II. a. The Fortification System. An offset-inset defensive wall was traced around the entire 660 m circuit of the tell. Nine or ten towers were incorporated into the system. The outer face of the wall stood ca. 12–14 m above the surface, while the interior stood 8–10 m high. The wall averaged 4 m thick, and the towers added another 2–5 m The towers were defended with glacis, while several sections of the wall had the added strengthening and protection of buttresses, retaining walls, or glacis. The wall was built of fieldstones, which were only slightly dressed. They were bonded with clay mortar and chinked with small stones. A thick plaster covered the lower sections of the wall (ca. 4.5–5 m) to prevent scaling by the enemy. Beyond the wall was a fosse, 2–5 m wide, which is the only fosse found at an Iron Age site in Palestine.

A peculiar feature of the fortifications is the inconsistent quality of construction. It appears that it was built in sections (indeed some sections are not connected to each other). Perhaps the wall was built by groups of corvée laborers, who were required to meet certain work quotas. Such an inference may be corroborated in the biblical texts describing the strife between Baasha and Asa. Upon Baasha's retreat from Judah's border, "King Asa made a proclamation to all Judah, … and they carried away the stones of Ramah and its timber, with which Baasha had been building; and with them King Asa built Geba of Benjamin and Mizpah" (1 Kgs 15:22).

The city gate at Tell en-Naṣbeh is one of the best preserved from ancient Palestine. It was a two-entry gate with an opening 4.2 m wide which was apparently 2.2 m high. Benches lined the cubicles between the piers and along the wall and gate just outside the first set of piers. Sockets in the threshold of the outer piers indicate that two pivoting doors were used to close the gate. The doorjamb of the E pier still preserved the slot in which the bar that locked the gate would be stowed when the gate was open, and the W pier retained the hole in which the end of the bar was placed to lock the door. The gate design is unusual in that it is not a bent right or left access, but is a direct access, which still necessitated an entry route parallel to the city wall.

A large open square (8 by 9 m) stood immediately in front of the gate and another was just inside. A covered channel drained both the squares and the city gate.

Near one of the city gates was a stone pillar, a *maṣṣebah,* like the one (with a basin nearby) found in the town gate of Tell en-Farah (N)—these both certainly had some cultic function. See TIRZAH (PLACE).

The discovery of numerous *lmlk* royal store jar handles testifies to the alignment of the city with Judah, at least in the late 8th century B.C. In contrast, the excavations at Bethel, just 5 km to the N, yielded no such seal impressions.

b. Domestic Remains. About a third of the area within the wall has eroded away completely to bedrock. Because of the absence of cisterns, it would appear that this area was not densely developed, since the presence of cisterns is common in developed areas. From the concentration of houses, it appears that the city may have accommodated a population of ca. 1,000. With few exceptions, no houses were built against the wall, but this area served as a street encircling the houses. Most of the houses of the town were very poorly built; however, some were fairly well-built with either monolithic or stacked drums, which supported the ceiling. The presence of strong pillars and stairs implies that some of the buildings had upper stories.

Three examples of four-room houses were found built against the wall, and separated from the main group of buildings—these may have had a public function of some kind and perhaps were storehouses (for the collection of taxes?) or military structures.

Water was supplied to the site mainly by cisterns, fifty-three of which were discovered on the site. A seasonal spring is on the SE edge of the mound, but it is often dried up during the summer months.

c. Small Finds. Tell en-Naṣbeh has yielded one of the most complete collections of Israelite pottery in the country. Epigraphic finds included seven incised potsherds, various stone weights, and numerous seal impressions, among which were 68 *lmlk* seal impressions and several private seals, the most beautiful of which is the seal of "Jaazaniah servant of the king."

Badè, the original excavator of this site, suggested that Jaazaniah was one of Gedaliah's officials and that he should be identified with Jaazaniah, the captain of the forces mentioned in both 2 Kgs 25:23 and Jer 40:8, but his identification is not absolutely certain. The seal depicts the representation of a cock, the earliest known representation of this bird in Palestine. Other finds include a short dedicatory inscription in Neo-Babylonian, a cylinder seal, and numerous scarabs.

Meager building remains testify to some occupation during the Persian period, and fragments of Attic pottery (ca. 540–420 B.C.) have been found on the site. Among other imported ware was an E Greek Clazomenian vessel, unique in Palestine, dating from 540–530 B.C. From this period numerous stamped seal impressions were found on pottery reading *Yhd* and *Yršlm* and about thirty reading *Mṣh*, which some have suggested is an abbreviation for Mizpah, but this is not convincing. In the inscription deciphered by N. Avigad, the name is written in full, *Mwṣh*, which probably refers to Moṣah, a locality W of Jerusalem.

Wampler dated the Persian period settlement to 587–400 B.C.; he believed the site was abandoned after that time. However, Albright and G. E. Wright have contended that occupation continued at Tell en-Naṣbeh during the first half of the 4th century B.C. Evidence in the form of surface and tomb finds (i.e., sherds and coins) testifies to settlements during the Hellenistic, Roman, and Byzantine periods at nearby Kh. ʿAtara and Kh. Shweikha.

M. BROSHI

NASI See SANHEDRIN.

NATHAN (PERSON) [Heb *nātān* (נָתָן)]. Var. NETHANIAH. **1.** A son of David born in Jerusalem to Bath-shua (Bathsheba) (2 Sam 5:14; 1 Chr 3:5; 14:4). Three full brothers of Nathan's are listed: Shammua (Shimea), Shobab, and Solomon. In addition, David had six sons born previously in Hebron to six different wives, and nine born in Jerusalem to unnamed wives, as well as many sons born to his concubines in Jerusalem.

The genealogy of Jesus in Luke 3 includes this Nathan as the son of David through whom Jesus was descended (v 31). Matthew's genealogy traces it through Solomon (1:6). The two genealogies thus diverge at this point, and they converge again (briefly) with Shealtiel and Zerubbabel (Matt 1:12; Luke 3:27). Many solutions have been proposed to the problem of the divergences between these genealogies (see Johnson 1969:139–252). The one preferred here sees the Matthean genealogy as giving Jesus' legal lineage; the Lukan, his natural lineage (Marshall *Luke* NIGTC, 157–62), but the definitive solution undoubtedly has not yet been advanced.

This Nathan is also mentioned in Zech 12:12, an eschatological passage that lists several houses (i.e., families) that will mourn a messianic figure who has been pierced. Four families are mentioned by name

(vv 12–13): David's and his son Nathan's, and Levi's and his grandson Shimei's, representing royal and priestly (i.e., civil and religious) authority, respectively.

Zech 12:12 conceivably could be referring instead to the prophet Nathan (see Mitchell *Haggai and Zechariah* ICC, 333). If so, then royal, prophetic, and priestly traditions all are represented in vv 12–13, and the Shimei there could be Saul's descendant, representing the (failed) dynasty of the first king. This seems less likely than the first proposal, however.

2. A prophet in David's time who figured prominently in events at three critical junctures in David's life: (1) he delivered the dynastic promise to David; (2) he confronted David about his sin involving Bathsheba and Uriah; and (3) he intervened on Solomon's behalf in the struggle for succession to David's throne.

Nathan first appears, with no introduction and no pedigree, in the crucial and much discussed 2 Samuel 7 (paralleled at 1 Chronicles 17), in which he delivers to David the important promise of a perpetual dynasty (see Kaiser 1974; McCarter *2 Samuel* AB, 190–231). His first word to David, delivered on his own authority (v 3)—that David should build a house for YHWH—was overruled by YHWH himself. He appeared to Nathan in a night vision (vv 4, 17), with his message about David's dynasty and his son's place in building YHWH's house. Nathan then delivered this message via the classical prophetic formula ("Thus says YHWH"—vv 5, 17), and David responded with a prayer of thanksgiving (vv 18–29).

Nathan's greatest moments came in his confrontation with David after David's two great sins (2 Samuel 12). Here, he boldly and courageously accused the king of gross sin. He used a fictional legal case to do this, at which David became incensed at the injustice perpetrated (vv 1–6). Nathan dramatically pointed out that David himself was the wrongdoer (vv 7–9), and pronounced a sentence (vv 10–12). (Nathan appears in this role in the superscription to Psalm 51) David immediately repented, and Nathan pronounced forgiveness, but declared that the child born of the adulterous affair would die (vv 13–14). After this happened, David and Bathsheba were blessed with another son, Solomon, and Nathan was the bearer of a message of comfort to them at this time (vv 24–25).

Nathan next appears as Bathsheba's and Solomon's ally in the struggle for succession to the senile David's throne (1 Kings 1). He was excluded, along with several other officials, from Adonijah's installment as king (vv 7–10), and he helped Bathsheba plan a strategy for having Solomon installed (vv 11–14). Both of them appeared before David, reminding him of a promise he apparently had made to make Solomon king (vv 13, 17, 30). In response, David authorized Solomon's installation as king (vv 28–37); consequently, Nathan and Zadok the priest anointed Solomon king (v 45), and Adonijah was displaced (vv 41–53).

Nathan appears in these texts (especially the first two) as a court prophet with free access to the king, yet as one who spoke with the authority and boldness of the classical prophets of the 8th century and later. He certainly does not appear as beholden to the king in the way the 400 court prophets that Ahab consulted do (1 Kings 22). He also appears as a historian of sorts: the "Chronicles of Nathan the Prophet" are mentioned in 1 Chr 29:29 and 2 Chr 9:29 as being among the historical records for the reigns of David and Solomon. His prophetic authority appears again later, when Hezekiah installed Levites with musical instruments in the temple, according to YHWH's command through "David and Gad the king's seer and Nathan the prophet" (2 Chr 29:25). He also was likely the Nathan of 1 Kgs 4:5 (see 4 below).

3. The father of Igal, who was one of David's select group of thirty mighty men (2 Sam 23:36). He was from Zobah, a region N of Dan. In 1 Chronicles, he is listed as the brother of Joel, rather than as the father of Igal (11:38). McCarter (*2 Samuel* AB, 494–95), emending the verse in Samuel at several points, based upon OG readings and the parallel in 1 Chr 11:38, reads it as follows: "Igal son of Nathan, the commander of the army of the Hagrites."

4. The father of two of King Solomon's officials: Azariah, who was over the district prefects, and Zabud, a priest and the "king's friend" (1 Kgs 4:5). It is impossible to tell whether this Nathan is David's son (see 1 above), or the prophet (see 2 above), or someone else; most scholars see him as either of the first two. Of these, it would appear more plausible that he was the prophet, given (1) the positive role the prophet played in Solomon's accession; and the facts that (2) Solomon may have been loath to give a

brother's (and possible rival's) sons high positions in his administration, and (3) his son Zabud was the "king's friend," an unlikely title for a nephew.

5. The son of Attai and father of Zabad (1 Chr 2:36). His name is found in a lengthy Judahite genealogy (2:3–4:23), specifically, among the descendants of Jerahmeel, son of Hezron (2:25–41). His grandfather was an Egyptian slave, to whom Sheshan gave one of his daughters in marriage, since he had no sons (2:34–35).

6. One of the "leading men" sent by Ezra to Iddo and others at Casiphia (a place otherwise unknown), to ask him to provide Levites for Ezra to perform religious services (Ezra 8:16; 1 Esdr 8:44). Thirty-eight Levites were provided, along with 220 temple servants to attend them (Ezra 8:18–20). This Nathan may have been the same one mentioned in Ezra 10:39, a son of Binnui (MT Bani), one of those who put away their foreign wives and children during the reforms of Ezra (cf. the variant Nethaniah in 1 Esdr 9:34).

DAVID M. HOWARD, JR.

NATHAN-MELECH (PERSON) [Heb *nětan-melek* (נְתַן־מֶלֶךְ)]. A chamberlain under Josiah, king of Judah (2 Kgs 23:11). Josiah removed the horses dedicated to SÛamasû, the sun-god, which were near the chambers of Nathan-melech, as part of his purge of the Jerusalem cult. Nathan-melech is called a *sārîs,* often translated "eunuch," but the term need not be understood in the literal sense. Though similar to the Arabic root *sarisa,* meaning "to be impotent," the term is actually an Aramaic loanword of Akkadian origin (*ša rēši*), which means "he who is at the head (of the king)." The exact status of a *sārîs* is difficult to determine, for the term is given to officials of various standing in the court (Gen 37:36; 1 Kgs 22:9; 2 Kgs 18:17; 20:18; 25:19). The name "Nathan-melech" means "the King has given." It is a theophoric name declaring that the child has been given (*ntn*) by the deity (*mlk*). Melech is not the name of a deity, but a title (king) and may refer to Yahweh as King. However, it is also possible that it refers to Molech, whose worship is mentioned in the Hebrew Scriptures (1 Kgs 11:7; 2 Kgs 23:10; Jer 32:35) or to the Ammonite deity, Milcom (1 Kgs 11:33; Jer 49:1, probably to be identified with Molech). For further discussion see Gray *Kings* OTL; and *IPN.*

PAULINE A. VIVIANO

NATHANAEL (PERSON) [Gk *Nathanael* (Ναθαναελ)]. 1. A priest from the line of Pashhur, required by Ezra to dismiss his foreign wife (1 Esdr 9:22).

2. A relative of the fictional Judith, identified in the opening genealogy of the book's second half (Jdt 8:1). Designed to provide the book's heroine with an exemplary Jewish heritage, there is little point in treating the genealogy, and the reference to Nathanael in particular, as historical (Enslin 1972: 109–10; Lamparter 1972: 161; Zenger 1981: 434). In this case, as in others, the names have been drawn from other biblical texts (cf. Neh 12:21; see Zenger 1981:485).

FREDERICK W. SCHMIDT

3. A disciple of Jesus from Cana in Galilee (John 1:45–51; 21:2). Nathanael was brought to Jesus by Philip, who confessed Jesus to be "him of whom Moses in the law and also the prophets wrote, Jesus of Nazareth, the son of Joseph." The testimony, apparently alluding to Deut 18:15, 18, identified Jesus as the prophetic figure expected by some circles within 1st-century Judaism. Philip's testimony was met with disbelief by Nathanael, who responded, "Can anything good come out of Nazareth?" His disbelief was apparently based on the scriptural lore that neither the awaited prophet nor the Messiah would have Galilean origins (John 7:40–44).

The rejoinder identifies Nathanael as a serious student of the scriptures, a trait confirmed by the evangelist's description of him as having been seated under a fig tree prior to Philip's invitation. In rabbinic tradition, fig trees were frequently cited as appropriate locales for teachers to discuss the meaning of the scriptures with their students (Str-B 2. 371). Further indications of Nathanael's scriptural competency are to be found in his use of "Rabbi" to address Jesus and the allusion to Jacob's vision at Bethel (Gen 28:12) at the conclusion of Jesus' dialogue with him.

In the encounter between Jesus and Nathanael, Jesus enigmatically proclaims Nathanael to be a true Israelite and wins his adherence by a demonstration of his superhuman knowledge. As is frequently the case in the fourth gospel, those who come to faith in Jesus because of his superhuman power or knowledge express their faith in a profound christological statement. Nathanael professed Jesus to be the Messiah, "You are the Son of God! You are the King of Israel!"

Nathanael, the true Israelite, is then promised a vision of the Son of Man by Jesus (John 1:51). The verse containing the promise was most probably an originally independent unit of material, appended to the story of Nathanael by the evangelist. In his gospel, it serves to identify Nathanael as a representative disciple (cf. the plural, "you will see") to whom the vision of the Son of Man is promised. Seeing Jesus is characteristic of faith and discipleship in the fourth gospel (John 1:39).

In the promise of the vision of the Son of Man, Jesus offers a self-revelation to Nathanael. The promise's allusion to the vision of Jacob (= Israel; cf. Gen 32:28–30) at Bethel is best understood within the Jewish tradition of paraphrasing the scriptures. In context, Jesus' saying identifies Jesus in glory as the revelation (manifestation) of God. Thus Nathanael, who has been seen by Jesus, is one who will see who Jesus truly is. In this respect he is a "true Israelite," meriting from Jesus a title of honor which stands in contrast to "the Jews," a title used of Jewish leaders with pejorative connotations in the fourth gospel.

Nathanael is not mentioned in the Synoptic Gospels, but Christian tradition has had a tendency to identify him with BARTHOLOMEW whose name comes after that of Philip in the Synoptics' listing of the Twelve (Matt 10:3; Mark 3:18; Luke 6:14; Acts 1:13). Although Bartholomew is a patronymic name, leaving open the possibility that he had a proper, personal Hebrew name, there is no historical evidence to support the identification of Nathanael and Bartholomew. Most probably the desire to find the name of Nathanael, whose discipleship is celebrated in John 1:45–51, on the list of the twelve disciples led to the confusion between Nathanael and Bartholomew.

NATIONALITY AND POLITICAL IDENTITY The term "nation" is commonly employed in OT studies, being the standard translation of Heb *gôy* (as opposed to "people," the standard translation of Heb *ʿam*) (*TWAT* 1: 965–73; *THAT* 2: 290–325; Høgenhavn 1988: 23–42). Yet the modern use of the term and its derivates ("nationality," "nationalism") has special features, not necessarily to be found in the quite different situation of biblical times. The possibility of (unperceived) misunderstandings is a real one; in particular, the current idea that Israel was a "nation" (in its modern sense) is doubtful and in any case the subject for specific research.

As is well known, the terminology and the very same historical reality of the "national states" are the result of the great political movements of the late 18th century: The American declaration of independence (1776) and the French Revolution (1791) established the transfer of sovereignty from kings to peoples, eventually giving birth to the national states, i.e., states coincident with ethnic boundaries (Weil 1938; Kohn 1956; Guyomar 1974; Ranum 1975). European history in the 19th century is largely the history of the progressive constitution of national states—the political movements being deeply

embedded in the "romantic" culture of the time (with its positive evaluation of peoples, national traditions, language, etc.). In the 20th century the national idea gained a worldwide extension (being applied to new states emerging from decolonization: Cohen and Middleton 1970). But at the same time it underwent various processes of crisis (cf., e.g., Shafer 1955; Deutsch 1962; Snyder 1968; Mancur 1982; Gellner 1983): application to quite artificial entities, extremization in the form of nationalism (not devoid of racist implications); challenge by the international character of new political movements; and lastly a growing inadequacy to face the needs of an advanced capitalism and a "world-system" market.

The flourishing of nationality as the leading model of political organization seems therefore to be quite limited in time. During the long millennia from the birth of the state to the late 18th century, other models were mostly in use: from the city-state to the universal empire, from the feudal system to the centralized monarchy—with the principle usually well on the fore that the state (including the people) was the personal belonging of its sovereign (be it king or god). The application of the term "nation" to political realities in the old periods of history is possible (cf., e.g., the use of "nation" with reference to ethnic groups at a stateless stage: Mair 1962:15–16; and case studies like Bailey 1960), but is always in need of a specific definition in order to avoid the suspect of anachronism. On the other hand, the nationalistic trends in past-century Europe were effective in shaping the institutional history of Israel in terms of a search for national unification. (Clements 1976: 142–43; Sasson 1981).

A. Political Identity in the Ancient Near East

1. The Archaic Counterposition "Us" vs. "The Others.". In the early stages of development of the state in the ANE there is no place for the national state. On the one hand, the prevailing dimension is that of the city-state (so that a single people is often divided into a multitude of states); on the other hand, the processes of unification in Egypt and lower Mesopotamia gave birth to a counterposition between the inhabitants of the more civilized alluvium and the "barbarians" of the surrounding areas—a counterposition more cultural (also cosmological, in a sense) than nationalistic in nature. The Egyptians, by locating the Nile valley at the center of the world, distinguish their own land as *t€* from the neighboring countries as *ḫ€ śwt,* the fertile valley (*kmt*) from the surrounding desert (*dsûrt*), and even label only Egyptians as really "men" (*rmt*), and consequently their own language as the only "human language." The same approach is found in the Sumerian world, with the counterposition between the land (= lower Mesopotamia) as KALAM and the hilly seats of the foreigners as KUR.KUR.RA (Limet 1978; Steiner 1982). In both the Egyptian and the Sumerian cultures the feeling of superiority leads to describe the strangers/foreigners as inferior, hardly human, beings—lacking the basic features of culture. This counterposition ("us" vs. "the others") cannot be considered as a kind of nationalism, however; and the various "foreign peoples" (Helck 1964; Limet 1972), albeit listed in stereotyped sequences (e.g., Uphill 1965–66), are just a component of the chaotic periphery threatening the cosmic order established by the god (and maintained by the sovereigns) at the center of the world.

2. The Lack of Ethnic Motivations in Political Conflicts. In lower Mesopotamia, the close contact between Sumerians and Akkadians produced an obvious consciousness of linguistic, ethnic, and cultural

differentiations (Sollberger 1960; Kraus 1970; Cooper 1973). It has been observed, however, that ethnic identity was never an important political factor, neither in the inner (political, administrative, religious) relationships, nor even in conflicts between bordering states (Jacobsen 1939). The rise of Sargon of Akkad has been often (in the early stages of research) presented as the result of a new wave of Semitic intruders, as a conscious attempt to establish a Semitic empire over the Sumerian cities, as a climax in the assumed conflict between the two ethnic groups. Such implications are not present in the documents of the time, and the resulting "Akkadization" of the written official records is only the result of the location of the new capital city in a Semitic-speaking area. Quite different is the ethnic and cultural animosity against the barbarian invaders of the Guti dynasty. Again, the so-called "Sumerian renaissance" is well characterized by its use of the Sumerian language in the administration, because of the location of the capital city Ur in the Sumerian area, but any kind of discriminating politics against the Akkadians is lacking—the kings of Ur bearing the title of "kings of Sumer and Akkad." In the following Old-Babylonian (OB) period, Sumerian became a dead language, but the new element of the West-Semitic Amorites kept Mesopotamia in a multilinguistic state, again with no political relevance attached to the ethnic groups. As soon as the Amorites were culturally assimilated, their origin made no difference in their status as members of the state.

The same situation has been studied in N Syria, where Hurrian and West-Semitic groups closely intermingled in the same states, as Alalah (where the Hurrians prevail) or Ugarit (where the Semites prevail). Also in this case, some proposals about an ethnic interpretation of the political relationships have been shown not to be supported by the documents of the time (Paltiel 1981). Even the onomastic habits in the royal houses were not simply the reflection of ethnic affiliation, but took into account political purposes and marriage links (Liverani 1978).

Lastly, the political role of the ethnic groups of Indo-Iranians in the Mitanni kingdom has been clearly overevaluated by the peculiar trends of prewar Germany, and is now quite discredited (Kammenhuber 1968). In any event, the issue of the Indo-Iranians is one of political elitism rather than the formulation of a "national" state.

3. The Territorial State and the Role of the Tribe. During the Bronze Age, i.e., from the "urban revolution" at the end of the 4th millennium to the 13th century B.C., states had a "territorial" nature. Individuals belonged to one state just because they were resident in its territory—with no consideration of their ethnic affiliation or origin. The king, residing in a "palace" in the capital city, was the sovereign of the territory controlled by that city, i.e., he exerted a "monopoly" of taxation on the surrounding villages, he was the head of the administrative organization (in its largest sense, including cult and army), he was recognized as the representative of the local god. The king's subjects were basically divided into two categories: (a) the "free" population, mainly peasants and pastoralists, residing in villages, engaged in food production, owning the means of production (land and cattle), dependent on the king on a fiscal basis only; and (b) the "king's servants," mainly engaged in specialized activities, residing in the capital city, using means of production which belonged to the palace, therefore dependent on the king in their working relationships. The inner structure of the state was socioeconomic; linguistic and ethnic qualifications were irrelevant.

This general picture obtained also in Syria-Palestine (Buccellati 1967), divided during the Bronze Age into a multitude of kingdoms, centered on capital cities and governed by local kings (leaving aside the higher sovereignty imposed in some periods by foreign empires, which did not alter the local political structure). The kingdom was designated by the name of its capital city (e.g., Ugarit), to which the titulary of the king makes reference (e.g., RN king of Ugarit). In the case of a larger kingdom encompassing more cities, the minor ones would be ruled by "vassal" kings, in a system of "Chinese boxes." Quite seldom, in countries devoid of important cities, the kingdoms were named after the country (e.g., Amurru, Nuhashshe). In any case, what was evidenced was a territorial unit, not an ethnic one.

The system outlined above is valid for discussions of the sedentary and urbanized population. The pastoral element had a quite different social and political organization, based on kinship relations instead of residence. The relevance of this "tribal" sector in the "dimorphic" society of the Bronze Age was

subject to some fluctuations through time. The apex of their impact on the territorial states took place ca. 2,000 B.C., in the "intermediate period" between EB and MB (Kamp and Yoffee 1980); and was still important during the MB period, when many kingdoms in upper Mesopotamia, Syria, and Palestine had a double designation according to the capital city and the surrounding tribe. So the king of Mari was also king of the Hana (tribe); the king of Tuttul was also king of the Amnanum (tribe); the king of Abattum was also king of the Rabbum (tribe); etc. Even in lower Mesopotamia the Amorite penetration gave origin to similar cases: e.g., the king of Uruk was also king of the Amnanum. The MB kingdoms seem to be composed of two elements, the territorial one (the capital city and its territory) and the tribal one. Their spatial coincidence may have been only partial, and their nature was quite different (residence in one case; kinship in the other).

Later on, during the LB period, the tribal sector became less and less important, its political role completely marginal, and its relations with the king's palace tendentially hostile. The double labeling disappeared in the 17th century. Syria and Palestine in the LB Age were politically shaped according to the "territorial" model in its most "pure" form—the residual tribes (Ahlamu in upper Mesopotamia, Sutu in Syria; the Shasu in Palestine according to the Egyptian sources) were considered outside the reach of the king's control.

4. The Early Iron Age: From Tribe to "National" State. At the end of the Bronze Age, the territorial states underwent a serious inner (socioeconomic) crisis (Strange 1987): the palace organization collapsed, and the tribal element acquired a new preeminence. Peoples of nomadic origin gained control especially of the inner belt (almost abandoned after the flourishing in the EB Age) between the most urbanized coastal plains and the steppe plateau: the Arameans in Syria and in upper Mesopotamia; Ammonites, Moabites, and Edomites in Transjordan. A colonization took place in the hilly country of Cisjordan (Israelites), which was previously unsettled. Arameans and Chaldeans further penetrated the alluvium of lower Mesopotamia, which was subject to an agricultural and demographic crisis and partly reduced to swamps and pasturelands.

The characteristic "model" of the Iron Age state was no longer territorial: it was a state based on tribal kinship. The state took its name from the ruling "house" (*bêt PN*), and the members of the state were its "sons" (*bĕnê PN*), as if all the population was a huge "extended family" ultimately going back to a common tribal ancestor. From the old stock of the "Ahlamu Arameans" a number of tribal states came into being in upper Mesopotamia (Bit Adini on the Middle Euphrates, Bit Bahyani in the Habur triangle, Bit Zamani on the Upper Tigris) and in N Syria (Bit Gusi or Bit Agusi in the Aleppo area; cf. also Bit Gabbar as the ruling dynasty in Sam'al); while the Aramean tribes kept their political autonomy in southern Mesopotamia (Bit Yakini, Bit Dakkuri, Bit Ammukani, Bit Sha'alli, Bit Shilani). In Palestine the same picture can be deduced from the names of the *Bĕnê ʿAmmōn* and the *Bĕnê Yiśrāʾēl* themselves. In cases where the new states were named after a regional name (like Moab, Edom, Judah) it is doubtful whether they were topographical or tribal in origin.

Of course, it is not only a matter of names. The implication is that the members of the state were no longer just the inhabitants of a region, but rather individuals belonging to the same tribe—linked together by birth (or "blood") ties, common language, common traditions (as revealed by genealogies and by etiological stories), and the common worship of a tribal god. The counterposition between states acquired nationalistic elements as well. The political belonging and relationships were, in the last analysis, inscribed into the individual's birth; and the "model" state would encompass all the members of the same "nation" and nobody else (unless in the form of foreign residents).

It is lastly to be noticed that the national element was characteristic of the Iron Age states not only in the West Semitic world of Syria and Palestine. Similar trends can be pointed out also on the Anatolia, Armenian, and Iranian highlands: the kingdoms of the Phrygians or the Lydians in Anatolia, or those of the Manneans or the Medians in Iran had a "national" basis and characterization hardly precedented in the Bronze Age.

5. Evolution and Decline of the National States. Of course, the national features of tribal origin were immediately challenged by the remains of the old territorial kingdoms. The passing of time produced a

progressive reestablishment of the territorial ties, the sedentary and urban elements recovered their preeminence at the expense of the tribal pastoralists, and the kinship relationships were reshaped in the form of administrative structures. The results were different in different areas: in Syria and Palestine a compromise was reached between territorial and tribal elements; in lower Mesopotamia the tribes remained politically separated from (and antagonistic to) the old temple-cities; in Assyria and in Egypt some kind of "nationalistic" feeling was added to the traditional views of centralization and imperialistic expansion.

Later on, the advancing empires of Assyria, Babylon, and Persia successfully acted in order to destroy the nationalities in the subdued regions—in order to produce a homogeneous texture throughout the territory of the empire. The transformation of the conquered kingdoms into "provinces" (later "satrapies"), the destruction of temples and palaces (the seat of the local cultural and religious traditions), the establishment of a unified administration, and the presence of imperial officials, the recourse to cross-deportations (especially affecting the ruling elites), were all powerful means for the overcoming of the national dimension, and even for the linguistic and cultural unification of the Near East. The residual (or renovated) nationalistic movements were by now framed not more in a pluralistic background of contending nations, but in a context of resistance by the local ethnic groups against an all-embracing and superimposed ideology and government—a situation that was inherited by the Hellenistic and Roman empires.

B. "National" Identity in Israel

1. Preliminary Remarks. When dealing with the topic "Nationality and Political Identity" in ancient Israel, a problem is immediately perceived, which is common to every historical subject in OT studies. Scholars can make use of a more traditional approach, by using the statements contained in the OT books as bits of evidence for the times to which they refer, or they can use a more critical approach, by using the same statements as evidence for the times in which they were written. It is evident how different the two counterposed possibilities are: namely, to accept the institutional evolution outlined in the OT (from tribal confederacy to united kingdom, eventually divided, conquered and exiled, and to be restored as a religious community); or to read it as a series of flashbacks, all of them belonging to the postexilic period, and whose connection with the "real" history of previous periods is quite doubtful. In the present article, the traditional frame will be maintained, but the critical caution will be introduced time and again. In any case, the entire institutional development of ancient Israel takes place within the Iron Age (the patriarchal legends can be left aside, of course), in a period when some kind of "national" identification was historically possible—even though the scenery of the first Iron Age is completely different from those of the Assyrian, Achaemenian or Hellenistic empires.

2. The "Tribal" Picture. The picture provided by the OT traditions of the periods of the conquest and of the Judges fits quite properly into the developmental paradigm "from tribe to state"—and it must be said that these traditions provided a basic contribution to the very building of the paradigm in the Semitic world, along with early Islamic history (Moscati 1962). The Canaanite city-states are the representatives of the Bronze Age system of territorial states in the sedentary-urbanized component of the population. The league of the twelve tribes, on the other hand, is a case of pastoral groups giving birth to a larger political unit, to which the term "nation" can be applied—with common leaders (Moses, Joshua, the Judges), with a political structure reproducing the kinship relationships, with the national god Yahweh. The "nation" is already existent before the conquest, so that only a territory is needed to establish a national state. The conquest brings about the inclusion of the former local settlements (villages becoming clans of the Israelite tribes), and the destruction (or more seldom the inclusion) of former polities. After the conquest some areas and cities are "left" outside the Israelite league, so that belonging to the Israelite political unit is (at least tendentially) coincident with the ethnic unit itself. Besides Israel, other national polities exist, the result of foreign immigration (Philistines: but their pentapolis has no political unity) or of parallel developments (Ammon, Moab, Edom).

The "classical" reconstruction (Alt 1925, 1930; Noth 1930) has been criticized and has become obsolete on many points: the pastoral nature of the tribe; the league as an "amphictyony" (de Geus 1976); the

arrival of Israel from outside Palestine; the nomadic origins. A new paradigm has developed in the USA, in which Israel is constituted following an inner social upheaval rather than an immigration (Mendenhall 1962, 1973; Gottwald 1979). This "new paradigm" is certainly important in many respects, yet it changes very little the institutional picture of the premonarchic period: we are in any case dealing with some kind of "national" unity (whatever the origin of its components and the reasons for its constitution). The underscoring of the early and decisive role played by the covenant (Mendenhall) and by the national worship of Yahweh (Gottwald), as well as the counterposition (be it ethnic or social) to the Canaanites in any case strengthens the national hypothesis.

Much more drastic is the criticism coming from European scholarly circles on the historical reliability of the traditional picture, because of the late date of the documents in which the traditions are embedded (a difficulty surmounted by the Alt-Noth school through a high dating of the documentary sources, and practically ignored by the partisans of the "revolution" hypothesis). A "moderate" solution is that the system of the twelve tribes cannot be earlier than the monarchic period (e.g., de Vaux 1973:37–65), and its origin should be sought in the administrative partitions of the united monarchy. This solution would mean the overturning of the traditional paradigm: instead of "from tribe to state" we would have "from state to tribe," and the emphasis would be on the artificial (as contrasted to genetic) origin of the tribal links. A more "radical" solution is that the tribal system is basically a forgery of postexilic times, and that the outer origin of the Israelites as well as their conflicts with the former inhabitants of the land are the reflection of what happened when (and after) some exiled groups came back in Palestine (cf. recently Lemche 1985). In both cases, we have no evidence for any national entity "Israel" in the premonarchical period; and the scenario of the book of Judges is a mythical model for the conditions obtaining in Palestine during the Achaemenian and Hellenistic periods.

Apart from the problem of the late date of the texts, some important arguments favor the "negative" position: the artificial nature of the twelve tribes league (the documents more confidently assigned to an early date preserve the memory of different groupings) and of their political system in general; the legendary (even mythical) nature of the stories about the Judges, and the etiological nature of most stories about the Conquest; the late emergence (not before the exilic age) of the role of the covenant and of the traditions about Exodus and Conquest in the Prophets and the Psalms (Lemche 1985: 306–85); lastly the progressive growth of Yahweh toward a role of "national" god which seems anachronistic in the formative period.

Data outside the OT are extremely scanty for the 13th–12th centuries. The mention of Israel in the Merenptah stela (Ahlström and Edelman 1985) cannot prove nor disprove anything; other topographical or tribal names (e.g., the *Yʿqb-ʾl* of Thutmose III or the **Bny Rhm* of the Beth Shan stela) are even more uncertain. The very existence of a political entity "Israel" before the monarchic period must remain a matter of doubt; and even more uncertain is its institutional structure (including the presence or absence of any "national" self-identification). The solution depends largely on the validity attached to later traditions.

3. The Monarchic Picture. Political conditions change around 1000 B.C. with the constitution of a large kingdom in Palestine, a kingdom largely inhabited by Israelites and considered by the Israelite tradition to complete the trend toward a national state. According to the tradition (esp. 1 Samuel 8), a "people" (*ʿam*) of Israel was already at hand, with its kinship structure, its territory, its common cult and law: the only feature necessary to transform the people into a "nation" (*gôy*) like the surrounding ones, was a kingship (*mamlākāh*), i.e., a politically centralized power (Rost 1934; Speiser 1960). At the terminological level, this "institutional" meaning ("nationality" = "people" + "state") is challenged by a prevailing connotative aspect: "we" are *ʿam*, while "the others" are *gôyîm* (Cody 1964; May 1968). This connotation is based on the privileged appreciation of the kinship relations to define a community from within, and of the political appreciation to define the outer communities. Yet it brings about the prevailing ethnic character of Israel (also in the monarchic period), at the expense of its national unity.

In fact, a noteworthy difference exists between Israel's institutional history as seen by later tradition and in contemporary records. According to the tradition, the national unity was accomplished already by Saul, best represented by David and Solomon, but unfortunately disintegrated into the two separate kingdoms

of Judah and Israel, to be hopefully reconstituted in the future. Unity would be the norm, division an unfortunate accident. But during most of Israelite history, the "normal" condition of a national unity is a memory from the past and a hope for the future. Moreover, if we reject the possibility of any national consciousness in the period of the Judges, then the following process has to be reformulated accordingly: a progressive compaction as a result of the political vicissitudes.

A diachronical analysis makes the situation more precise but also more problematical. The short-lived kingdom of Saul has a kind of national character, in being basically limited to tribal territory, in keeping a part of the former kinship organization, in rising as a defensive need against surrounding nations—but is basically limited to the northern tribes (Ahlström 1986: 85–99). Under David, the kingdom of Israel can hardly be defined as a national state. The division between Judah and Israel is paramount in the formative process, the capital city is chosen outside the tribal territory, and the extent of the kingdom encompasses non-Israelite elements (from the Canaanite towns to the neighboring peoples). The ideal borders of Israel move from a national horizon ("from Dan to Beersheba") to an imperialistic one (from the Euphrates to the "brook of Egypt"). Even the army shifts from national to professional, and the palace administration is largely a legacy of the Canaanite polities. The composite nature of the Davidic state is inherited by Solomon, whose administrative structuring and building programs may have produced some degree of national self-identification (Ahlström 1982), but had been overevaluated by later traditions. The administrative structure provided a model for inner ethnic relationships, the temple became the focus of the national identity, and the royal dynasty (Ishida 1977) was seen as the privileged guarantee of the divine willingness to preserve Israel's freedom and unity.

But was the idea of a "national kingdom" already operating in David's and Solomon's time? Or was it a flashback to the exilic period? In fact the following story of the divided kingdoms seems to imply a low degree of national consciousness. The northern tribes considered the Jerusalem dynasty as foreign to their own traditions and interests; the conflicts between Judah and Israel were almost endemic, yet quite similar to those with other states; the political structure of both kingdoms focused on the respective capital cities; the cult was multicentered (even if Yahweh was given a privileged status in both kingdoms). It is difficult to maintain that the difference between Judah and Israel was in some way less marked or different in nature from the difference, e.g., between Moab and Edom, or between Damascus and Hama. In the same period, the Philistine and the Phoenician city-states were also politically independent inside an ethnic (not a national) unity. As to the very name "Israel," its application to both Judah and the northern kingdom is quite problematic before Josiah's times (cf. the basic materials in Danell 1946). As to the name "Hebrew," its application to the Jewish nationality is very late (Lemche 1979).

The attempt by Josiah to revive the Davidic model of a unified kingdom certainly had a greater impact than the original Davidic reality. In David's times the unity was basically political, on a variegated ethnic basis; in Josiah's times, on the contrary, the national feeling is evident (if the Deuteronomistic history belongs to this period)—unification of cult, promulgation of the divine law, reconstruction of past history as a process finalized to the national unity, role of the covenant with the national god, and counterposition to other nationalities. It is probably with Josiah's reforms that we can more confidently speak of a "nation" of Israel.

The reason for the change has to be looked for in the Assyrian policy of conquest and deportation affecting the northern kingdom. The foreign immigrants in Palestine produced a situation of "inner boundaries." Inside the same area, groups of different ethnic origin were present, and the attempt to preserve an identity gave rise to a sort of national self-identification. When Assyria collapsed, Josiah's attempt to annex the north Palestinian provinces found its ideological justification in tracing a national unity back to the Davidic model through the "twin" kingdoms of Israel and Judah similarly related to Yahweh's role. By this time, the specific self-identification of Israel as the "people of Yahweh" (von Rad 1929; Lohfink 1971), and the nationalistic stance against the neighboring peoples, had received a coherent shaping—to be further elaborated and partly modified in postexilic times, e.g., by the Deutero-Isaiah (Hollenberg 1969; Orlinsky 1970; Wilson 1986; Høgenhavn 1988).

4. The Exilic and Postexilic Pictures. The process went on with the Babylonian conquest of Jerusalem and the deportation of the Judean political elites. Different from the Israelite exiles in the Assyrian empire, who underwent an affective loss of political identity, cultural traditions, and religious cult, and were substituted in Palestine by newcomers of different origin, the Judean exiles in Babylon were able to keep (thanks to a different attitude of the conquerors and the short time of the Exile) and to improve their national consciousness. And when they were allowed to come back to Palestine, they found the area almost free for a new colonization (the Babylonians did not use any cross-regional transfer of population), and put into being a program of national recovery by adding a racial element (prohibition of mixed marriages) to the religious and cultural elements already conceived in Exile.

The most important "pre-Israelite peoples" found in Palestine by the Moses tribes according to the traditions, are artificial formations from the geographical designations of Syria-Palestine obtaining in Babylonia: Amurru and Hatti (Van Seters 1972; Ishida 1977: 466–68). This forgery of nonexistent "nations," and their fate under Josiah's attacks, are obvious models for the struggle of the Judean immigrants against the other Palestinian groups, a struggle certainly endowed with nationalistic implications quite anachronistic one millennium before.

As a kind of paradox, the national unity of Israel was the result, not so much of a political unification, but of the political disaster of the Exile and the return. The national self-identification was achieved, not when the material conditions were more stable and peaceful, but as a reaction against vicissitudes and conditions conceived in order to destroy any national feeling in the melting-pot of the imperial state. As a consequence of this paradoxical situation, the features were privileged in the shaping of the nationality, that were conceivable outside the land: the unity of cult (the Solomonic temple was never so important in Israelite ideology than after it was destroyed), the common law of divine origin, the historical traditions (providing a model for national recovery), and the assumed ethnic unity (in the form of extended kinship ties). On the contrary, the features were lacking of a territorial seat and of a political unification and independence. Land and kingship (the basic prerequisites for any national entity at the time) were projected toward the future, as something needed in order to (re)establish a full national unity. All the differing attempts which took place in the postexilic period—from the building of the Second Temple to the constitution of the Hasmonean kingdom—were conceived of as a restoration of the past, and necessarily produced the myth of a lost national identity and history. But this "former stage" of the national unity never occurred in reality in the forms later presumed in order to fit the political programs of the postexilic community. So the Israelite nationality assumed its form in the very period of its disintegration, as something projected in the past and in the future—but undergoing "presently" to a state of crisis.

Lastly, since the projects of restoration of some kind of political unity and independence were largely unsuccessful (the imperial order of the Achaemenian and Hellenistic periods being incompatible with anything more than a local community centered on the Jerusalem temple), a further shift took place. From the model of the national state emerged that of a religious community (Causse 1937; Ahlström 1986: 101–18), devoid of any political power and competence, and reusing the previous projects of national recovery as a metaphor for the eschatological salvation. The "national" origin of the Jewish religious community kept important features, however, in the ethnic and racial limitations of its membership—to be eventually overcome by the "universalistic" character of Christianity (under the impact of the Hellenistic-Roman cosmopolitism).

NATIONS [Heb ʿ*ammîm* (עַמִּים), *gôyim* (גּוֹיִם), *lĕʾūmmîm* (לְאֻמִּים)]. The study of the nations within the canonical tradition of ancient Israel leads inevitably to the primary tension between the concepts of nationalism and universalism. On the one hand, particularly within the prophetic literature, there are passages which express the narrowest self-interest and even hatred for Israel's enemies among the nations. But alongside these stand passages expressing an exalted vision of worldwide salvation for "the nations." Scholars are divided as to how deeply embedded within the developing canonical tradition of ancient Israel they choose to see the latter development. Nonetheless, it is clear that "Israel as a light to the nations" is no peripheral theme within the canonical process. The nations are the matrix of Israel's life, the raison d'être of her very existence.

The initial period of world prehistory in the book of Genesis ends with the Flood, after which humanity makes a new start from Noah and his sons and separates into families, languages, lands, and nations. The Table of Nations in Genesis 10 lists some seventy entities, which include the whole of the ancient world, as known to the author, divided roughly into racial groups. It is without parallel in ancient literature, for this interest in the nations reflects accurately the biblical emphasis on history as the vehicle of revelation and the nations as the object of God's redemptive purpose.

A. Terminology

1. In the Old Testament. Three words appear in the Hebrew text of the OT which are used more or less synonymously in reference to the nations, each of which may be used in the singular to refer to a particular nation, including Israel.

ʿ*ammîm* (cf. Ugaritic ʿ*m,* "clan"; Vg. *populi* or *nationes;* LXX *ethnē* or *laoi*), "peoples." The stress is on kinship as the basis of the group, at least in the original meaning of the word. In the singular, the term ʿ*am* is used most frequently in reference to Israel as the "people of Yahweh." In such cases the LXX uses *laos.* The LXX uses *ethnē* for the plural in the Pentateuch, Joshua, and Judges; elsewhere both *ethnē* and *laoi* are used.

goÆyim (Akkadian loanword from West Semitic, *gaʿu,* "gang" or "group" [e.g., of workmen]; Vg. *gentes;* LXX *ethnē*), "nations"; KJV alternately "heathen." This term stresses political and social rather than kinship bonds.

lĕ›ummîm (cf. Akkadian *li›immu,* "thousand"; Ugaritic *l›m,* "people"; Vg.. *populi;* LXX *ethnē*), "peoples"; KJV (incorrectly) "the people." Originally the term probably referred to a city which could produce a contingent of soldiers (a "thousand") in time of war. The word is often used in parallel with *goÆyim* within the prophetic literature and Psalms.

A fourth term appears in both Hebrew *›ummôt* (Gen 25:16; Num 25:15) and *›ummîm* (Ps 117:1) and Aramaic *›ummâ* (Dan 3:29) and *›ummayyā›* (seven times) with the meaning "nation(s)," "tribe(s)," "people."

2. In the New Testament. The primary term used in the NT is *ethnē* (Vg.. *gentes*), taken from LXX usage. "Gentiles" is used in reference to non-Jewish nations in contrast to the Jews (Luke 21:24; Acts 9:15; 1 Cor 1:23), or in contrast to followers of Christ (Matt 6:7, 32; 10:5; 20:19; Eph 2:11–12). "Nations" is used in reference to all nations including the Jews (Matt 24:9, 14; Mark 11:17; Rev 7:9). Exceptions to be noted include Acts 13:19; 14:16; and Gal 3:8

In the NT the term *laoi,* "peoples" in the plural, occurs only eight times, four of which are in parallel to *ethnē,* indicating either Semitic style or LXX quotation (Luke 2:31; Acts 4:25, 27; Rom 15:11), and four in Revelation within the formula "nations, tongues, and tribes," reminiscent of Genesis 10 and Dan 3:4–7

B. Israel Against the Nations

1. Holy War as a Celebrated Event in Ancient Israel. The institution of Holy War during the period of the Judges should be distinguished from Yahweh's Holy War as celebrated in the cultus of Ritual Conquest. Yahweh's Holy War is the ritual fusing of the events of the Exodus-Conquest into one great cultic celebration in which the Divine Warrior marched with his hosts from Sinai to Shittim and then across the Jordan River to Gilgal, the battle camp for the conquest of Canaan. The nature of the institution of holy war as reflected in the Song of Deborah (Judges 5) can be reconstructed, at least in part, from an analysis of Yahweh's Holy War as celebrated in the Ritual Conquest tradition. The ark of the covenant was a battle palladium. The tribal groups had designated positions within the battle camp under priestly organization. Moses and Joshua, as "judges" over Israel, filled the role later assumed by the prophets in delivering war oracles to inspire the troops in battle.

The quotation from the Book of the Wars of the Lord in Num 21:14 presents the Divine Warrior as poised on the edge of the promised land, before the most celebrated battles of the Exodus-Conquest. He has come in the whirlwind with His hosts to the sources of the river Arnon in Transjordan. He marches through the wadis, turning aside to settle affairs with Moab before marching against the two Amorite kings to the north, and then across the Jordan to Gilgal and the conquest of Canaan.

The actual conquest of Canaan was apparently reenacted as part of the annual festival tradition within ancient Israel, from the period of the judges down into the monarchic era, and perhaps beyond, as suggested by the so-called "War Scroll" from the Dead Sea community at Qumran. The tribal units of Israel took up their designated positions around the ark of the covenant at Gilgal. From there they set out to conquer Jericho in ritual tradition as part of the spring festival of Passover each year.

2. Egypt and Amalek as Paradigmatic Enemies. The crossing of the Jordan river in the tradition of Ritual Conquest was set over against the crossing of the Red Sea (*yam sup*), or "Sea of Reeds [or rushes]," in which the people of Israel were delivered from their traditional foe, the Egyptians (cf. Exod 15, the "Song of the Sea," and Ps 114:5). After crossing the sea, Israel's first military encounter was against the Amalekites (Exod 17:8–15). Amalek was defeated and cursed in the name of Yahweh, who pledged "war with Amalek from generation to generation" (Exod 17:16). In later tradition Israel was commanded to "blot out the remembrance of Amalek from under heaven; you shall not forget" (Deut 25:19). Though not much is known about Amalek so far as history is concerned, her traditional enmity with Israel surfaces in the story of Saul's demise because of his refusal to slay Agag, king of Amalek, and again in the story of Esther whose archenemy Haman is identified as the Agagite (Esth 3:1, 10; 8:3, 5; 9:25).

The war with Amalek is the first in a series of wars which, together with the defeat of the Egyptians at the Red Sea, constitute Yahweh's Holy War par excellence. Further battles in this series include the war with the Canaanite king of Arad (Num 21:1–3), the wars with the Amorite kings Sihon and Og (Num

21:21–35), and the war against Midian (Num 31:1–54)—all under the leadership of Moses. After Moses' death, Joshua led the people across the Jordan to the second phase of Yahweh's Holy War against Jericho, Ai, and the Canaanite inhabitants of the promised land.

3. The Seven Traditional Enemies of Deuteronomic Tradition. The full list of "seven nations greater and mightier than (Israel)"—the Hittites, the Girgashites, the Amorites, the Canaanites, the Perizzites, the Hivites, and the Jebusites—appears in three passages (Deut 7:1; Josh 3:10; 24:11). Though some of these "nations" are identifiable, the Perizzites and Girgashites remain obscure. Detailed study of the occurrences of these seven names within the biblical tradition suggests that the complete listing of seven nations is probably traditional in nature. Within the holy war materials of the Deuteronomic tradition these seven nations apparently constitute a roll call of enemies within some sort of cultic context.

4. Assyria and Babylon Join Egypt as Paradigmatic Enemies. In the flow of historical events, the northern kingdom of Israel was eventually destroyed by Assyria under Sargon II (722 B.C.E.), and somewhat later Judah fell to the Neo-Babylonian Empire under Nebuchadnezzar (587–586 B.C.E.). The prophetic books of Nahum and Jonah focus on Nineveh, the capital of Assyria, which became a symbol for the archenemy of God's people. In the book of Judith the city of Nineveh, as the capital of Assyria, was said to be ruled by Nebuchadnezzar, in complete disregard of history as such. Nebuchadnezzar was the ruler of the New Babylonian Empire, which destroyed Jerusalem; Babylon subsequently became another symbol of the archenemy (cf. Rev 18:2).

5. The Oracles Against the Nations. Within the prophetic literature of ancient Israel, the oracles against the nations constitute a large and distinctive block of material. The classical prophets of ancient Israel were apparently political figures, sharing in the rule of the people in some way, alongside the king. Jeremiah's self-description of his call to be "a prophet to the nations" (Jer 1:5) speaks of one aspect of this responsibility.

The establishment of the Davidic monarchy and the centralization of Israel's worship in Jerusalem introduced a powerful impulse to the religion of ancient Israel which tended to reshape earlier tradition. The cultus of the premonarchic Covenant League was retained but was subordinated to a royal cultus administered by dominant priestly families under the control of the king. Yahweh's Holy War, as cultic reenactment of the Exodus-Conquest, was no longer climaxed by mere possession of the land of promise. The ark of the covenant was carried in ritual procession to its "eternal resting place" on Mount Zion in Jerusalem. The climax of the Royal Festival became the enthronement of the Davidic monarch in dynastic covenant. The ark of the covenant was subsequently housed permanently in an elaborate temple, constructed under Solomon, which became the center of Israelite worship until its destruction by Nebuchadnezzar in 587 B.C.E.

Beginning with the oracles against the nations in Amos 1–2, the member nations of the former Davidic empire were judged in a highly stylized manner for violation of the treaty stipulations of their "covenant of brotherhood." Motifs from earlier war songs of Israel's Covenant League were incorporated into this poetic composition, which was essentially a reversal of Yahweh's Holy War as celebrated in the Ritual Conquest traditions. The Divine Warrior was now leading his hosts in battle against his own people because they had spurned their covenant obligations. The framework of the idealized Davidic empire as the legal basis for judgment speeches against the nations was expanded in the developing tradition from Amos to Jeremiah. Isaiah's oracles against Assyria, Egypt, Ethiopia, and the insurgent Arab tribes of the East were based on the concept of the universal sovereignty of Yahweh as suzerain of the nations. The intent of the tradition at the hands of Isaiah, Nahum, Zephaniah, and Jeremiah appears to be primarily political. The major thrust of the oracles against the nations in this period was aimed at shaping foreign policy in Judah with respect to the nations concerned.

C. Israel and the Nations in History

1. The Davidic Empire as Political Ideal. Under David, Israel as a political entity was no longer a loosely federated tribal league, but rapidly became the center of an international empire. After defeating the Philistines (2 Sam 5:17–25; 1 Chr 18:1), David first turned his attention to Moab: he defeated Moab, ruthlessly punished their army, exacted tribute, and became their overlord. Next came the Arameans and

the Ammonites. After humiliating David's delegation and thus provoking war with Israel, Hanun king of Ammon summoned his Aramean allies to aid him in battle. David defeated the Arameans and drew up a treaty of peace which made of the Aramean states a kind of province administered from Damascus. He also negotiated a "treaty of friendship" with king Toi of Hamath, making him a vassal within the emerging Davidic empire (cf. 2 Sam 8:9–10). The Ammonite campaign continued under Joab, David's general. When finally forced to capitulate, Ammon became Davidic territory with David ostensibly its king (cf. 2 Sam 12:26–31 and 1 Chr 20:1).

After the Aramean campaign, Edom was attacked and ravaged with dreadful cruelty by Joab and his troops (cf. 2 Sam 8:13–14; 1 Kgs 11:15–17), making David the undisputed master from Egypt to the Euphrates. The Philistines were reduced to their pentapolis and immediate coastal area. David was king of Judah, Israel, Jerusalem, Ammon, and the Canaanite city-states incorporated into Judah and Israel. He ruled through provincial governors or vassal chiefs in Aram, Edom, and Moab and had established treaty relationships with Tyre and Hamath. David had thus become the most powerful ruler in the world of his day, and Israel was transformed from a tribal confederation to suzerain of a league of nations.

Though the Davidic empire as a political reality did not survive the breakup of the United Monarchy in 922 B.C.E., the ideal extent of Israel's suzerainty under David lived on in prophetic circles. Mauchline has demonstrated this persistent belief in the Davidic empire in the 8th and 7th centuries, particularly in the writings of Amos, Isaiah, and Jeremiah. The emergence of both the Assyrian and the Neo-Babylonian empires did not obliterate the prophetic vision of Israel as the kingdom of David at its height in the first half of the 10th century B.C.E. In fact, this political ideal played a formative role in the shaping of the messianic hope of ancient Israel.

At the midpoint of the 8th century, Egypt was divided with numerous petty dynasts competing for the political authority of the decadent 22d Dynasty. Egypt seemed to be moving relentlessly down the road toward disaster and eclipse while Assyria was once again on the rise. From 801 to 746 the Assyrian kings were occupied with difficulties closer to home—north, east, and south of Assyria—and consequently left the West relatively undisturbed. Jeroboam II of Israel was thus able to conquer Damascus and to restore the old Davidic border on the north in eastern Syria (cf. 2 Kgs 14:23–25); while his younger contemporary Uzziah, king of Judah, regained control of the southern desert, the land of Edom, and its sea-trade routes to the south (2 Chr 26:1–15).

To summarize the first half of the 8th century, it may be said that Assyrians, Arameans, and Urarteans fought each other to a standstill in Mesopotamia and Syria. Given the internal stability that chanced to prevail in Judah and Israel at the time, it is no wonder that the divided kingdom briefly regained the economic strength and territorial extent of the Solomonic empire. Assyria's long respite made the people of Israel forget how much the conquests and splendor of Jeroboam's reign were the result of Assyria's maiming Israel's more immediate oppressors. With the rise of Tiglath-pileser III in 745, after the death of Jeroboam II in Israel, things changed. Assyria was now bent on conquest, and Syria-Palestine was a prime target in her march toward Egypt and control of the Near East.

2. An Era of Transition (ca. 750–700 B.C.E.). The accession of the usurper Tiglath-pileser III (745–727) to the throne in Assyria marks the beginning of a new era, for he and his two successors changed the balance of power in the ANE In 745, Tiglath-pileser found Assyria in a difficult, even desperate military and economic situation; but over the next forty years Assyria recovered and consolidated control of all its old territories, reestablishing itself as the preeminent military and economic power of the Middle East. Tiglath-pileser reorganized the nearer Syrian provinces under direct Assyrian rule and divided the former provinces into smaller prefectures so as to secure centralized control of the empire. At the same time he regulated succession to political power in the middle tier of states, including Israel, and waged war against the more distant ones.

Israel was soon beset with internal crises brought on by the new Assyrian policy, and political prominence in Syria-Palestine apparently passed to Judah. The inscriptions of Tiglath-pileser for the year 738 mention the fact that he fought in Judah. Uzziah's daring attempt to halt the expansion of Assyria failed and the league dissolved. By 738, Tiglath-pileser reached the mountains of Lebanon, founding

Assyrian provinces in the former territory of the kingdom of Hamath. The list of kings paying tribute to Assyria at this time includes the kings of Byblos, Tyre, Aram, and Samaria, and even a certain queen of Arabia.

Uzziah died in 735 or 734 and was succeeded by his son, Jotham, who had apparently shared a lengthy coregency with his father. Jotham died in 734 and was succeeded by Ahaz, who was immediately confronted with a political crisis of major proportions: Pekah had usurped the throne in Samaria and, together with Rezin king of Aram, apparently began preparing a new league against Assyria. When Ahaz refused to join this league, the two kings marched against Jerusalem in an attempt to replace him with a certain "son of Tabeel" (Isa 7:6). During the campaign of Rezin and Pekah against Ahaz, the Edomites asserted their independence and invaded Judah from the south (2 Kgs 16:6; 2 Chr 28:17). The people of Philistia also took the opportunity to overcome the cities of the Negeb and the Shephelah of Judah (2 Chr 28:18). If the reconstruction of Aharoni and Avi-Yonah is correct, Rezin, king of Aram, either neutralized Ammon and Moab or engaged their assistance against Judah at this time. Then, in spite of the warnings of Isaiah (Isa 7:4), Ahaz turned to Assyria for aid.

Tiglath-pileser's actions were swift and decisive. From Assyrian inscriptions it is known that he had already set out on a campaign to Philistia in 734. Hanun, king of Gaza, took refuge in Egypt and Tiglath-pileser left troops on the Egyptian border, thus cutting the kings of Palestine off from Egyptian aid. In response to the appeal of Ahaz of Judah, Tiglath-pileser marched against Israel and Aram-Damascus. In the years 734–33, the plains of Esdraelon and Sharon, the region around Mount Carmel, and Gilead in Transjordan were incorporated into the Assyrian provincial system, leaving the city-state of Samaria with only a measure of independence. By 732 the Assyrian victory was complete with the conquest of Damascus and the incorporation of its territory into the Assyrian empire (2 Kgs 16:9). Tiglath-pileser's second western campaign (734–732) was decisive, for from the Taurus mountains in the north to the River of Egypt in the south, the entire Mediterranean littoral now paid him homage, either as province or as vassal kingdom. In 731, Tiglath-pileser's attention was again diverted to other regions with a rebellion in Babylonia, settled in 729 when he set himself up as Pul, king of Babylon (2 Kgs 15:19; 1 Chr 5:26).

Tiglath-pileser died in 727 and his successor, Shalmaneser V (727–722), was occupied for some time securing his throne. Though Israel was not hard-pressed by Assyria, Hoshea continued to pay tribute. Then, in 726, an event to the south altered the situation. 2 Kgs 17:4 records the fact that Hoshea, king of Israel, appealed for aid against Assyria to a certain King "So" in Egypt, who is probably to be identified with Tefnakhte I of Sais. Hoshea, who evidently was no longer as pro-Assyrian as he had been in 732, welcomed the news from Egypt that a new dynasty was emerging in the Delta which promised to unite a badly divided Egypt and return her to her legendary greatness. Reports evidently confirmed the news as Tefnakhte rapidly gained the supremacy of the Delta area and began to move south with his troops. At last the time was right and Hoshea withheld tribute from Assyria, apparently convinced that Tefnakhte would come to his aid.

Tefnakhte's rise to power in the Delta was preceded by the emergence of Piye (*Pi*ʿ*ankhi*), a Cushite ruler in Upper Egypt, whose brother later became the first pharaoh of the Ethiopian 25th Dynasty in Egypt. Piye ordered his troops, which were already in Upper Egypt, northward to besiege Hermopolis, which had just submitted to Tefnakhte. Meanwhile, he dispatched a second army which defeated Tefnakhte's fleet on the Nile and continued on its way to Heracleopolis, the last major city in the Delta still holding out against Tefnakhte. Piye's troops were victorious both by land and by sea, and Tefnakhte saw his empire crumbling even more quickly than it had taken form. When Piye left the Delta to return south, he apparently left the various petty dynasts in their individual cities as vassals. In Upper Egypt his rule continued for an uncertain but brief period.

Meanwhile, Sargon II (722–705) had taken power in Assyria during the siege of Samaria. In his first campaigns following the fall of Israel, he was defeated near Der by Merodach-Baladan, then king of the small kingdom of Bit-Yakin, who had the assistance of the Elamite king Humbanigash. Sargon turned against Syria where, following the death of his brother, Shalmaneser V, the Assyrian rule had collapsed, at least as far north as Hamath. Apparently Piye deemed the time a propitious one to deal a vital blow to

Assyria, for on the historic battlefields of Qarqar on the Orontes, Sargon had met the kings of Hamath and Damascus, and others whom the Egyptian general Re›u (formerly read Sib›u) had been able to muster. Though the fact that this Egyptian was indeed Piye's general cannot be demonstrated, it seems likely that such was the case. The defeat of the allies was complete, and in 720 Sargon pursued the Egyptian contingent as far as Raphia, whence the Egyptian general fled home, presumably to Ethiopia, for Sargon did not cross the Egyptian border.

In 720 Tefnakhte reemerged as king in Sais, apparently by allying himself with Assyria so as to make a new bid for the control of Egypt and to keep Assyrian forces out of the Delta. In 718 he erected a stela which he dated to his eighth year as pharaoh, considering his reign from his earlier rise to power in 726. Tefnakhte's son Bocchoris, who was recognized by all as a pharaoh of the 24th Dynasty, in 716/15 left a monument dated to his sixth year and reigned until 710/09 when Shabaka, brother of Piye, founded the Ethiopian 25th Dynasty, which was involved in much of the diplomatic intrigue in Palestine in the following decades.

The respite following Sargon's first campaign in the West lasted two years (719–718) during which time Sargon was engaged in the far north. In 717, Carchemish conspired against Assyria and Sargon, unleashing a two-year show of strength in the West, defeated Carchemish and marched south to the Egyptian border where, according to a fragment of a clay prism published in 1941, he received tribute from king Shilkanni (Osorkon IV) of Bubastis, the last king of the so-called 23d Dynasty in Egypt. It is significant that Osorkon is called king (*Lugal*) and not pharaoh (^{m}*Pi-ir-Õu*) in this inscription. The *PirÕu* (pharaoh) who was king of Egypt in 715, according to the annals of Sargon II, was probably Bocchoris. Osorkon was a king of Egypt in the western Delta in 716, but Tefnakhte of Sais (in 720) and his son Bocchoris (in 715) were recognized as pharaohs by the Assyrians.

In the midst of these events on the Egyptian border, Ahaz of Judah died and was succeeded by Hezekiah (715–687). Sargon was again occupied on his northern frontier until 712, when Palestine once more felt the full impact of the Assyrian arms. The provocation for Sargon's third and last western campaign came from Ashdod, where a certain Yamani had usurped the throne. Yamani had contacted other Philistine cities, Judah, Edom, Moab, and Egypt in an attempt to stir up a rebellion. Anticipating an Assyrian attack, he fortified Ashdod against siege. When news of Ashdod's revolt reached Sargon, he dispatched his army under a commander-in-chief who "came to Ashdod and fought it and took it" (Isa 20:1). Ashdod and her surrounding territory were organized as a new Assyrian province ruled by a governor.

For the rest of his reign (710–705), Sargon was occupied in Mesopotamia and in Anatolia, where his death on a battlefield in 705 triggered widespread rebellion, beginning with Babylonia. Ashkelon and Ekron took an active part in this rebellion, probably because of the ominous proximity of Assyrian authority in the province of Ashdod. Hezekiah intervened in Ekron deposing the loyal Assyrian vassal Padi, taking him captive to Jerusalem. The increasingly aggressive policy of the Ethiopian dynasty in Egypt was no doubt an important factor in the anti-Assyrian stand of Ashkelon and Ekron. For four years Sennacherib (705–681) took no steps to quell the rebellion. Finally in 701, after settling affairs in Babylon, he marched against Philistia and Judah.

Sennacherib's campaign against Judah in 701 is well known, though still the subject of sharp debate among scholars. The records present an unusually complete account from both sides. The problem arises over the very different interpretations given to the biblical and Assyrian evidence. Albright, Bright, and others have argued that there were actually two contests between Sennacherib and Hezekiah and that the Assyrians won the first but lost the second. Hallo, Tadmor, and others reject the two-campaign theory. It is sufficient here to note, with Hallo, that the accession of Sennacherib in 705 symbolized in many ways the start of a new phase in the Assyrian impact on western Asia.

3. *Pax Assyriaca* (ca. 700–640 B.C.E.). The triumph of Assyria and the subsequent *pax Assyriaca* brought an eclipse to the developing tradition of oracles against the nations within the prophetic literature of the OT, for no such material can be dated to this period with any degree of confidence. During the first half of the 7th century Judah, Moab, Ammon, Edom, and Philistia remained subservient to Assyria as

vassal kingdoms or nominal Assyrian provinces. The other nations addressed in prophetic materials of the second half of the 7th century reveal a rather stormy history for the so-called *pax Assyriaca.*

The conquest of Phoenicia by Assyria was a drawn-out affair which met continued opposition, particularly from Tyre. When Sennacherib marched against Phoenicia, Luli, king of Sidon, fled to Cyprus where he died. The Assyrians installed Ittoba‘al II as king in Sidon, who was in turn succeeded by ‘Abdmilkot. Allying himself with Cilicia, ‘Abdmilkot revolted against Assyria, and this time the Assyrian conquest was followed by destruction and exile of the population. In 677, Sidon was razed to the ground and replaced by the new city of Kar-Esarhaddon. Tyre was spared and a treaty was drawn up which set up an Assyrian governor alongside King Ba‘al. Six years later (671) Tyre revolted, in league with Taharqa (Tirhakah), king of Egypt. Though Esarhaddon’s reign (681–669) in Assyria marked continued decline in Phoenician independence, Tyre remained autonomous under the rule of Ba‘al during the reign of Ashurbanipal (669–630). Sometime after the sack of Thebes (663), Ba‘al rebelled again, and though the revolt was quelled, Tyre was not occupied and merely had to send homage and tribute as a nominal vassal to Assyria.

The emergence of the Ethiopian 25th Dynasty (ca. 710–664) in Egypt set the stage for one of the great power struggles in antiquity. With a direct clash of interest in Lower Egypt and southern Palestine an eventual confrontation with Assyria was inevitable. However, as Gardiner has noted, it was with a third party to this dispute that ultimate victory was destined to lie, namely with Psammetichus (Psamtik) I (663–609), founder of the Saite 26th Dynasty. The campaigns of Esarhaddon and Ashurbanipal from 675 to 663, climaxed by the sack of Thebes, marked the crest of Assyrian expansion. To defeat the Ethiopians, Ashurbanipal apparently used the royal house of Sais to unify Lower Egypt against the Ethiopian king. In so doing the Assyrians set the stage for a second phase in the power struggle. After about a decade on the throne, Psammetichus I shook off the restraint and supervision of the resident Assyrian officials and allied himself with Gyges of Lydia in a successful revolt against Assyria. By the time Ashurbanipal settled affairs with Elam and Kedar around 640, the independence movement of Psammetichus had gone so far that the Assyrian monarch did not care to risk opposing it.

The history of Elam from ca. 700 to 639 is marked by conspiracy, revolt and factional strife, with seven rebellions against Assyria in six decades. It is possible that Egypt (or Ethiopia) was involved in most, if not all, of these revolts, and Judah may have been a party in as many as four of the widespread conspiracies associated with them. In the rebellion of 703–701, Shutruk-nahunte II of Elam (717–699) is singled out as the most prominent ally of Merodach-Baladan of Babylon. Sennacherib put down the revolt, routing the Elamite forces in 703 and again in 700. Between these two conquests of Elam, Sennacherib defeated a coalition of western states including “Hezekiah the Jew,” the princes of Egypt, and the “king of Ethiopia.” From 694 to 689 B.C. the bitter struggle between Elam and Assyria was resumed, no doubt precipitating revolt in the West again as had occurred earlier in the Elamite revolts of 721–720 and 703–700. The involvement of Egypt in such a revolt is reflected in the biblical reference to Taharqa (Tirhakah) in 2 Kgs 19:9 Unfortunately, the Assyrian records are incomplete for the years immediately following the sack of Babylon in 689. A second campaign in southern Palestine on the part of Sennacherib to quell a revolt in 688 is certainly possible, if not likely. The defeat of Elam in 689 marked the end of political unity and the beginning of an era of factionalism there. Nonetheless, the embers of revolt continued to smolder and burst forth in flames of rebellion twice in connection with the Assyrian conquest of Egypt (ca. 675–663).

When revolt broke out in Babylon in 652 under Ashurbanipal’s brother Shamash-shum-ukin, the widespread conspiracy included numerous petty states in Syria-Palestine and pharaoh Psammetichus, who had already freed Egypt from Assyrian rule. If credence is given the Chronicler’s account of the Babylonian captivity of King Manasseh (2 Chr 33:10–17), Judah was a member of the conspiracy, as was the case earlier in 701 and probably ca. 688. The Babylonian revolt led to civil war in Elam, which Ashurbanipal put down. By 646 Elam was once more under Assyrian control, at least for the moment. Six years later the stage was set for a final coup which once and for all put an end to an independent Elamite kingdom. In 639 Susa was taken by Assyria and utterly destroyed.

The Kedarites emerged as the dominant power of the desert league of Arab tribes in Syria-Palestine during the closing years of the reign of Sennacherib (ca. 690–688). The years up to the Babylonian revolt in 652 were relatively tranquil for Assyria in the Kedarite controlled area of Syria-Palestine. Kedar joined in the revolt against Assyria in 652, sending troops under Abiyate to assist Shamash-shum-ukin in Babylon. When the Arab reinforcements were defeated, Abiyate went to Nineveh, where he submitted to Ashurbanipal and was appointed king of the Arabs. Some time prior to Abiyate's return to his people, a certain Uaite› "made himself king of Arabia," thus claiming leadership of the Arab confederacy. Around 640 Abiyate apparently deemed it politic to renounce his fealty to Assyria and to join with Natnu of Nabate and with Uaite› in revolt again. In Ashurbanipal's second campaign against the Arabs (639–637), Uaite› and Abiyate were captured and taken to Assyria. After humiliating Uaite›, Ashurbanipal apparently had mercy on him as he did earlier with Necho I of Egypt, Tammaritu of Elam, and Manasseh of Judah, whom he restored as vassal kings after subjecting them to a humiliating ceremony of submission. That this was the case is suggested by the fact that a later inscription makes reference to Nuhur, the son of Uaite›, who came in submission to Ashurbanipal and was granted his father's throne.

Though the details are not certain, it is likely that the assassination of King Amon in Judah in ca. 640 (2 Kgs 21:23–24) was related to the simultaneous revolt against Assyria on the part of Elam, Kedar, and Tyre. Realizing that the time was not yet right for such drastic action, the "people of the land" put the murderers to death and placed the boy Josiah on the throne in Jerusalem. This action forestalled Assyrian intervention and gave Judah the opportunity to revolt at a more opportune moment.

4. *Regnum Davidicum redivivum* (ca. 640–609 B.C.E.). Little is known about the history of Babylon and Assyria from 640 to 630. Ashurbanipal died ca. 630 and was succeeded by his son Asshuretililani, whose rule was challenged early. In 629 Sinsharishkun, another son of Ashurbanipal, was recognized as king in Sippar and Uruk; and a certain Sinshumlishir, commandant of the Nippur garrison, claimed the throne of Assyria in 627/26. That year has also been described as "the year in which there was no king in the land." In the year 626 the diadem of Babylon passed from the hands of Assyria to the Chaldean Nabopolassar (626–605), who organized a new dynasty in Babylon. The death throes of the mighty Assyrian empire were at hand.

With the decline of Assyria after the middle of the 7th century, the stage was set for the restoration of Judah among the nations. From 648 to his death in 642, Manasseh remained a loyal vassal to Assyria; and his son Amon (642–640) apparently continued his father's policy. When Elam, the Arab confederacy, and Tyre were again in revolt against Assyria in 640, pressure was exerted on Judah to join them. The assassination of Amon was probably an attempt on the part of rebel extremists to force Judah to throw off the Assyrian yoke. Instead, a more moderate group, the "people of the land," regained control in Judah, executed the king's murderers, and installed the eight-year-old Josiah (640–609) as king of Judah. This action apparently staved off Assyrian intervention in Judah, though it seems that the advisers of the young king were merely seeking a more opportune time to restore the "kingdom of David."

In the eighth year of his reign, according to 2 Chr 34:3, Josiah "began to seek the God of David his father." In other words, as early as 632 Josiah repudiated the gods of his Assyrian overlords. Four years later he annexed the Assyrian provinces to the N—Samaria, Megiddo, and probably Gilead. Of the three Transjordan states only Moab, which was but a shadow of her former self, escaped direct territorial incursion on the part of Judah. The Negeb in particular was wrested from Edomite control.

Unfortunately for Judah, the international situation in the Levant in the 7th century was only superficially similar to that of the 10th century, such that it was quite impossible to restore the empire of David for any length of time. Egypt was again seeking an Asian empire of her own, and the temporary vacuum formed by the demise of Assyria was soon to be filled by the Neo-Babylonian Empire. Josiah met his death at Megiddo in battle against the Egyptian forces of Neco II (609–594), who was on his way north to Haran to check the progress of the Medo-Babylonian alliance against Assyria. The death of Josiah in 609 marked the beginning of the end for the kingdom of Judah and for the former members of the Davidic League as well. Judah, Moab, Ammon, Edom, Aram, and Phoenicia were soon to be

swallowed up by the military might of Nebuchadnezzar the Great (605–561). Philistia, Egypt, Kedar, and distant Elam (Persia) were to share the same fate.

5. *Imperium Babylonicum* (ca. 626–582 B.C.E.). The accession of Nabopolassar (626–605) marks the beginning of a new era in the history of the ANE The Babylonian Chronicle for 626 begins with a revolt in Babylon in which Nabopolassar routed the Assyrian garrison established by Sinsharishkun. Since his first official act in the chronicle was to return to Susa the gods carried off to Uruk by the Assyrians some twenty years earlier, it is clear that he either had or hoped to have Elamite (or Persian) support in his struggle against Assyria. By November 624, Uruk was retaken by Assyria; but Sinsharishkun's belated foray into Babylonia in 623 appears to be the action of a hard-pressed man who snatched time for temporary measures to control a local insurrection. Aware that the Egyptians were now potential enemies to any force pushing into Syria, Nabopolassar allied himself with the Medes in order to destroy the great citadels of Assyria along the Tigris.

When Nabopolassar engaged the Assyrians in Syria on July 23, 616, they fled in disarray. In a second encounter in September the "army of Egypt" appeared along with the Assyrians. The penetration of Egyptian forces so far into Syria can only mean that the Egyptians were aware of the growing weakness of Assyria and of Nabopolassar's intention of establishing Babylonian control there. In May 615, Nabopolassar besieged Asshur but was forced to retreat before the forces of Sinsharishkun. By midsummer of 614 an army of Medes was advancing toward Nineveh. Again Shinsharishkun repelled the invaders, at least from Nineveh. Turning downstream along the bank of the Tigris, the Medes attacked Asshur, which was poorly defended, since Sinsharishkun had gone to the defense of Nineveh. The city was sacked and its inhabitants massacred. The destruction of Asshur was such a shocking violation of international practice of the time—which usually permitted a city to ransom itself unless it could be termed "rebellious"—that even the Babylonian Chronicler took pains to dissociate Nabopolassar from this act of savagery. An alliance of "peace and cordial relations" was concluded between Umakishtar, king of the Medes, and Nabopolassar, and it apparently remained in effect through the major campaigns against Nineveh (612) and Haran (610). After 609 the Medes disappear from the extant chronicles.

After two unsuccessful assaults on Nineveh in 612, the wall of the city was finally breached and the Medes and Babylonians poured into the city. Sinsharishkun died, as Shamash-shum-ukin before him, in the ruins of the city. Though Nineveh was utterly destroyed, Sinsharishkun's son Asshuruballit II (611–609) managed to escape, making his way to Haran, the final bastion of Assyria. When the combined armies of Babylonia and the Medes marched against Haran in 610, the Assyrians and Egyptians fled and the city was taken. The Egyptian force was a garrison, which was apparently delayed by Josiah's fateful battle at Megiddo in 609. A vain attempt on the part of Asshuruballit to retake Haran in 609, with Egyptian help, failed. The final curtain had fallen on Assyrian power in the ANE

In March 609, the Babylonians and Medes returned to their own lands, and sometime later, according to tradition, a covenant of friendship between Babylonia and the Medes was sealed by the marriage of Nabopolassar's son Nebuchadnezzar to Umakishtar's daughter Amyntas. With their eastern frontier secured by treaty, the Babylonians gave their attention to affairs in the West.

In the spring of 605 Nabopolassar turned over command of the army to Nebuchadnezzar who, in his first major campaign, took the Egyptians by surprise and defeated them roundly at Carchemish. Though this defeat of the Egyptians marked the beginning of Babylonian dominance in Syria-Palestine, the struggle was by no means over. Entries in the Babylonian Chronicle for the next four years show repeated military expeditions in the West. On August 15, 605, Nabopolassar died and Nebuchadnezzar returned in haste to Babylon to secure his throne. After the ceremonies of accession, he returned to Syria to continue his military exploits. In February 604 he returned to Babylon for the New Year's festival. Later that year he was again in Palestine, where he destroyed Ashkelon. Further campaigns in Palestine in 603 and 602 were designed to eliminate the Egyptian sphere of influence from Gaza north. In December 601, having reduced most of Syria and Palestine, Nebuchadnezzar launched a campaign against the borders of Egypt. In the ensuing battle the Egyptian forces were crippled, but at great cost to Nebuchadnezzar. Nebuchadnezzar was forced to withdraw, and his next year was spent in Babylon rebuilding his army.

Egypt, on the other hand, was so seriously weakened that, for the moment, she was reduced to virtual parity with the lesser states of southern Palestine.

From the death of Josiah at the hands of pharaoh Neco in 609 to the second fall of Jerusalem in 587, the kings of Judah and the other Palestinian states held their thrones at the pleasure of Egypt or Babylon. Foreign policy in Jerusalem and other major cities of the area was determined by which of these two powers seemed stronger or more menacing. After the death of Josiah, Judah became an Egyptian vassal. Jehoahaz, a son and successor of Josiah, was deposed, after reigning only three months, by Neco, who installed Eliakim, another son of Josiah, with the crown name Jehoiakim (609/8–597). After the defeat of Egypt at Carchemish in 605, the area as far south as Riblah was placed under tribute. In 604 Nebuchadnezzar extended his exactions to "all the kings of Hatti land," though Jehoiakim, Adon of Ashkelon, and perhaps others, held out for a time. Sometime in 603, probably after the fall of Ashkelon, Judah also became tributary to the Babylonians. This relationship stood until 601.

The decisive battle between Nebuchadnezzar and Neco at "the borders of Egypt" in 601/600 was a blow to the pro-Babylonian faction in Jerusalem. Jehoiakim withheld tribute in a vain attempt to reassert Judean independence. In 599/98 Nebuchadnezzar sent raiding parties from his Syrian bases to plunder the Arabs. The Babylonians sent raiding bands of Syrians, Moabites, and Ammonites against Judah as well, as late as 598. Josephus has reconstructed this raid, perhaps with the aid of additional sources now lost.

Late in November 598 a mixed force of Chaldeans, Syrians, Moabites, and Ammonites appeared before Jerusalem. The death of Jehoiakim at this time was probably the result of a palace revolt in which "his body was thrown outside the gates of Jerusalem, and left there, like the body of an ass" (cf. Jer 22:19 and 36:30). Jehoiakim was succeeded by his eighteen-year-old son, Jehoiachin, who, three months and ten days later, was carried into exile by the Babylonians on March 16, 597; his uncle Mattaniah was installed with the throne name Zedekiah (2 Kgs 24:17). The treasuries of the palace and temple were looted, and the royal family, together with members of the court, soldiers, and artisans, were deported to Babylon (2 Kgs 24:13–16). In Babylon, Jehoiachin was maintained in nominal captivity along with a group of kings from other lands. Meanwhile, in Jerusalem, Zedekiah was regarded as regent for the exiled king of Judah.

Jerusalem was the focus of an anti-Babylonian coalition in 594 when envoys from Edom, Moab, Ammon, Tyre, and Sidon came in a conspiracy (Jer 27:3). For some reason the revolt did not materialize. In 591 Psammetichus II (594–588) made a trip through *Ḥurru* (Phoenicia), which may have had as its purpose the inciting of further rebellion in Palestine. When Zedekiah foolishly withheld, or perhaps reduced, the amount of tribute paid to Babylon in 590 or 589, Babylonian troops appeared before the walls of Jerusalem. An Egyptian army under pharaoh Apries (Hophra) (588–568) came to the aid of Jerusalem, causing the siege to be lifted temporarily, but the Egyptians were routed and the siege was resumed. Finally, in the summer of 587, weakened by siegeworks, famine, and plague, Jerusalem was stormed and methodically destroyed (cf. 2 Kgs 25:8–21; Jer 52:12–27). Booty and prisoners were transported to Mesopotamia.

The catastrophe which struck Judah in 587 did not immediately affect Ammon, Moab, and Edom. By the beginning of the last decade of the 7th century, Ammon had asserted its independence and rapidly became the dominant state of S Transjordan, expanding as far west as the Jordan valley. Nebuchadnezzar's victory at Carchemish in 605 posed a new threat to the petty states of Palestine, and it is probable that the king of Ammon was among the "kings of Hatti" who paid homage to the Babylonian monarch in 604. After three years, Jehoiakim of Judah revolted, though Ammon and Moab remained loyal and fought with the raiding parties dispatched from Syria against Judah (2 Kgs 24:2). The Ammonites and Moabites remained loyal to Babylon in order to secure protection against the Kedarite dominated Arab confederacy which was encroaching upon the borders of all the states in Transjordan. It was not until 594, after the first fall of Jerusalem, that Ammon and Moab were induced to join with Edom, Tyre, and Sidon in a conspiracy against Babylon.

Though the widespread revolt against Babylon did not materialize, Ammon remained in open rebellion, even to the point of interference in the internal affairs of the remnant of Judah after 587. King Baalis of Ammon was involved in the plot to assassinate Gedaliah, the governor of Judah (Jer 40:14). Apparently

the Ammonite king was trying to gain control of Judah, possibly in the hope of restoring the kingdom of Josiah, this time under Ammonite rule. Though the subsequent political events in Transjordan from 586 to 582 are obscure, it seems probable that punitive measures were undertaken by Nebuchadnezzar. Josephus records a Babylonian campaign in Coele-Syria against Ammon and Moab "in the fifth year after the sacking of Jerusalem, which was the twenty-third year of the reign of Nebuchadnezzar" (*Ant.* 10.9.7). The biblical account in Jer 52:30 apparently describes the same event, noting that 745 Jews were included in the deportation of 582, which was carried out by Nebuzaradan, the doughty Babylonian general who had also executed the deportation of 587. The devastating punitive action of 582 created a political vacuum in Transjordan into which poured the Arab invaders of the Kedarite League, destroying all organized political activity in the area (cf. Ezek 25:4–5, 8–9). By the middle of the 6th century the Ammonite state had collapsed, as witnessed by archaeological explorations which show that sedentary occupation of Ammon ceased almost completely until the early 3d century.

The situation in Moab was similar to that in Ammon. In 604 the Moabite king submitted to Nebuchadnezzar and remained loyal to Babylon in the revolt of ca. 600–597. Though Moab sent envoys to Jerusalem in the conspiracy of 594, she apparently withdrew and returned to nominal vassalage to Babylon. When Judah was destroyed in 587, Moab was spared. Fugitives who fled from Judah were scorned by the Moabites who, according to the prophet Jeremiah, rejoiced over the fate of Judah and proclaimed their own country to be an impregnable fortress (Jer 48:26–30). The haughtiness of Moab produced a flood of condemnation from the prophets of Judah. In the Babylonian campaign of 582, the voice of Moab, like that of Ammon, was silenced. Some of the Moabites were exiled to Babylonia, while others fled to Egypt. The destruction of the line of Moabite fortresses in the first quarter of the 6th century meant Moab's end. Subsequent Arab encroachment destroyed any surviving sedentary culture in Transjordan.

The kingdom of Edom managed to survive the devastations of 587 and 582 in Palestine. Along with the other petty states of the area, Edom submitted quietly to the Babylonian yoke in 604. Though envoys from Edom were present in Jerusalem in the conspiracy of 594, Edom apparently withdrew. When Babylonian forces besieged and captured Jerusalem in 587, the Edomites joined the forces of Nebuchadnezzar and exulted over the destruction of their ancient enemy (cf. Ps 137:7; Lam 4:21–22; and Obad 10–16). After the deportation of the people of Judah to Babylon in 587 and 582, the Edomites moved northward into southern Judah, making Hebron the capital of a kingdom which eventually came to be known as Idumea. Behind them the Nabateans pressed into former Edomite territory and established a kingdom with Petra as their capital.

The fate of Philistia and Phoenicia at the hands of Nebuchadnezzar is not clear, at least in detail. Only the fall of Ashkelon in 604 can be dated. Gaza, which fell into Egyptian hands in the reign of Neco II (609–594), was later listed as a Babylonian dependency along with Tyre, Sidon, Arvad, and Ashdod. Citing an earlier source of Philostratos, Josephus mentions a thirteen-year siege of Tyre, which apparently began in 587, the year Jerusalem fell, and terminated in 573, when Tyre surrendered.

D. The Nations in Prophetic Eschatology and Early Apocalyptic Literature

The fate of the separate nations addressed in the oracles of the OT prophets has been presented in order to explain the transformation of prophecy in relation to the nations, which took place against this background. The death of Josiah in 609 and the conquests of Nebuchadnezzar from 605 to 597 mark the end of an era in the development of the prophetic literature of ancient Israel, and the beginning of a major transformation of the war oracle in particular. Beginning with Habakkuk and Jeremiah's oracle against Elam (Jer 49:34–39), the focus of attention shifted from contemporary events of political history to the realm of eschatology. The primary intent of this new literary mode was no longer that of shaping foreign policy per se, but the preservation of the people of Israel in the impending crisis by means of hope in events yet to come. The fall of Jerusalem in 597 and its final destruction at the hands of Nebuchadnezzar in 587 served to complete this transformation. Loosed from its moorings in the royal court and temple cult, OT prophecy evolved rather quickly from a focus on prophetic eschatology to that of early apocalyptic.

Within this setting those who assembled the biblical material in its present canonical form turned their attention to the deeper meaning behind the historical events. The nation of Israel was not to be understood in isolation from other nations, even her bitter enemies of times past. One of the most interesting examples of this shift in perspective appears in the book of Isaiah at the conclusion to the oracles against Egypt (19:24–25):

> In that day Israel will be the third with Egypt and a blessing in the midst of the earth, whom Yahweh of hosts has blessed, saying:
> "Blessed be Egypt, my people, Assyria the work of my hands, and Israel my heritage."

Both Assyria and Egypt/Ethiopia here take their place alongside Israel as part of the people of Yahweh.

Isaiah's oracle against Arabia (Isa 21:13–17) does not move beyond the Davidic ideal of earlier tradition, as witnessed by the inclusion of Arab tribes within the roll call of nations in Psalm 83 Arab groups were occupying land within the idealized boundary of the former Davidic empire. Moreover, the agreements formulated between the Queen of Sheba and Solomon placed Arabia within the sphere of influence of the United Monarchy. With Assyria and Egypt/Ethiopia, however, no such rationalization was possible. The new model was found within the holy war traditions of ancient Israel, especially the war songs from the premonarchic era. The Divine Warrior was seen to be the suzerain of all nations, the Lord of history, whose dominion knew no geographical bounds. Even mighty Assyria was but the "rod of Yahweh's anger," as the Divine Warrior chastened his chosen people. Once he was through with this unwitting servant, the Divine Warrior would vent his wrath against Assyria as well, to punish "the arrogant boasting of the king of Assyria and his haughty pride" (Isa 10:5–12).

The resurgence of Assyria in the last half of the 8th century was paralleled by a dramatic recovery on the part of Egypt, which eventually succumbed to invasion from the south and political subjugation to Ethiopia. Though these events in Egypt did not immediately threaten Judah, Isaiah incorporated them within his model of the nations under the suzerainty of Yahweh in a series of oracles (Isa 18–20; 30:1–17; 31:1–3). Yahweh, the Divine Warrior, comes riding upon the stormcloud to Egypt, where her gods tremble before him (Isa 19:1). It is Yahweh who stirs up Egyptians against Egyptians in civil struggle (19:2). It is Yahweh who confounds their plans (19:3) and gives them into the hands of a hard master, a fierce king who will rule over them—probably Piye (Pi‹ankhi), or perhaps his brother Shabaka, who founded the Ethiopian 25th Dynasty in Egypt (ca. 710 B.C.E.).

Since these oracles against Egypt already possessed trans-historical elements, it was but a short step to lift them to the realm of eschatology. The judgment of Egypt was portrayed in apocalyptic fashion as the Nile is dried up (19:5–10) and the traditional wisdom of Egypt's sages is turned into confusion such that Egypt staggers "as a drunken man staggers in his vomit" (19:11–15). An altar and a pillar were to be erected in Egypt to Yahweh as a sign and a witness to Yahweh's presence there. When Egypt cries to Yahweh for deliverance from her oppressors, Yahweh will send a savior who "will defend and deliver them" (19:19–20). The picture presented here is indeed remarkable, for Yahweh will one day send a "new Moses" to deliver Egypt from bondage. Yahweh will reveal himself to the Egyptians, who in turn will worship him (19:22). Yahweh will build a highway from Egypt to Assyria for a new exodus, in which both the Egyptians and the Assyrians will participate along with Israel (19:23–25).

The idea of Assyria as "the rod of (Yahweh's) anger" in Isa 10:5 must be understood in terms of its literary context. The "March of Conquest" in 10:27c–34 is more than a description of the approach of Assyrian troops on hapless Jerusalem. It is the Divine Warrior himself who threatens daughter Zion with destruction. The vision continues across the chapter division. In spite of the hewing down of "the thickets of the forest" (10:34), a shoot from the stump of Jesse will become an ensign to the nations (11:1, 10) for an eschatological contest. Although the focus in these passages is on the remnant of Israel, it is clear that Yahweh is Lord of the nations. He will use, however unwittingly, even wicked Assyria to pave the way for a "new Conquest" (11:12–16) which will establish his people in a "new Kingdom" described in messianic terms (11:1–9). We have a transformation of prophetic language and thought which very nearly anticipates that of apocalyptic.

Further evidence of an eschatological transformation that includes the nations within the purview of Yahweh's people is found in Zephaniah. Yahweh's terrifying might "will lay waste all the gods of the earth." They are going to "bow down before him, each in his own place—all the lands of the nations" (Zeph 2:11). The picture is somewhat like that found in Jeremiah's oracle against Elam, in which Yahweh declared that he would establish his throne in that distant land (Jer 49:38). The prophet is projecting his message into the distant future where he sees a new day on the horizon, a day when pagan world powers will submit themselves to Yahweh, the suzerain of the nations.

Cultic gatherings at the Temple in Jerusalem became anticipations of the gathering of all nations to worship Yahweh. Kings from Egypt, Ethiopia, and the kingdoms of the earth, bearing gifts for the temple and singing praises to God, join the procession of the tribes of Israel to the temple in Psalm 68 In Deutero-Isaiah we see the descendants of Israel returning to Zion from exile, in contexts which suggest that the "survivors of the nations" are reckoned among these descendants (Isa 44:1–5; 45:22–25; 49:12–20; 53:10). When, as a result of the suffering and mission of the servant, the peoples at the ends of the earth are waiting for Yahweh's rule, their survivors join themselves to Israel to converge on Jerusalem (55:5). People from nations "of every tongue" join the returning Jews (Zech 8:21–23), and the alienation of the enemy nations is removed when Yahweh changes "the speech of the peoples to a pure speech" so that they may call on his name (Zeph 3:9). Kings lead their nations in a great procession (Isa 60:3, 11), which extends "from sea to sea and from mountain to mountain" (Mic 7:12), bringing the wealth of the nations on camels (Isa 60:5–6), driving before them animals for sacrifice, and carrying the sons and daughters of Israel in their arms (v 4). They join themselves to Yahweh and become his people (Zech 2:11) and go up every year to the Feast of Tabernacles in Jerusalem (14:16).

The destination of this pilgrimage is Mount Zion, which becomes a house of prayer for all nations (Isa 56:7; cf. Mark 11:17). Zion, as the navel of the earth (Ezek 5:5; 38:12) and the throne of Yahweh (Jer 3:17), is also the world mountain symbolizing the supremacy of Yahweh over the nations and their gods (Ps 99:9; Isa 2:2–4 = Mic 4:1–4; Isa 66:20; Dan 2:35). Zion will then be called the birthplace of the nations (Psalm 87). This eschatological pilgrimage will be climaxed by a great "festival banquet on Mount Zion," to which Yahweh will invite "all peoples" as he removes "the veil that is spread over all nations," destroys death, and "take(s) away the reproach of his people" (Isa 25:6–8). Thus will the nations become sons of Abraham and inherit the promised land as their own.

The Jewish mission to the nations in later postexilic times (see PROSELYTE) belongs to this same motif; for the object of the mission was to make Jews of the people of the nations and to bring them to worship Yahweh at Jerusalem. The obvious link with Jewish nationalism and legalism lies behind Jesus' severe condemnation of the proselyte movement (Matt 23:15).

In the exilic period, the motif of dominion over the nations was subordinated to that of the servant who suffers at the hands of the nations and is despised by rulers. In eschatological times, however, kings and rulers will bow down to Israel and serve the servant (Isa 14:1; 49:7, 22–23; 60:10–14; 61:5). Peoples from the nations will come to rebuild Jerusalem as the servants of Israel, and will bring their wealth as tribute (Isa 60:1–3, 10–18) to the glory of Yahweh.

In the postexilic literature the holy war motif reappears, in terms of a new exodus, in which Yahweh will overthrow the nations (Hag 2:7), cast down those who have scattered Judah (Zech 1:21), make the plunderers plunder for Israel (Zech 2:8–9), and trample the people in anger (Isa 63:6). Jerusalem herself will become a cup of reeling to all peoples (Obad 16; Zech 12:2). The eschatological dominion of Israel over the nations is most clearly expressed in Daniel, where the stone "cut out by no human hands," breaks the image into powder and then becomes a great mountain which fills the whole earth (Dan 2:34–35). This stone is God's kingdom, "which shall never be destroyed, nor shall its sovereignty be left to another people" (v 44). In another vision, a Son of Man, who is identified with the "saints of the Most High," is "given dominion and glory and kingdom, that all peoples, nations, and languages should serve him" (Dan 7:13–14).

In early apocalyptic literature (Isa 24–27; Ezek 38–39; Zech 9–14) the enmity of the nations toward Israel grows in intensity until the climactic struggle at Mount Zion, where Yahweh both summons them

and punishes them for their violence on Israel. The author of Daniel places this final struggle in the persecution under Antiochus Epiphanes. This literature reveals the extreme enmity between the Jews and the nations, and the cry for revenge and vindication by direct intervention of God, born of intense suffering. The result is a complete polarization between Israel and the nations in contrast to the situation of earlier periods, so that the word *gôyim* ("nations" or "gentiles"), becomes a technical term denoting non-Jews as enemies and aliens. The retention of the term, however, remains a significant link with the earlier tradition and its emphasis on the mission of Israel to the nations.

E. A New Israel: The Righteous from All Nations

The inclusion of the righteous from among all nations within the "New Israel" of prophetic vision appears to be a specific and sustained challenge to a narrow nationalistic conception rooted in ancient legal pronouncements. That ancient nationalistic perspective surfaced again in the "fundamentalist" reforms of Ezra and Nehemiah which excluded all foreigners. Meanwhile, embedded in the very structure of the canon itself is an alternate point of view, perhaps best illustrated in the book of Jonah and its place within the Book of the Twelve (minor prophets). The message of Jonah is clear: Not only does God have a right to show compassion on Nineveh, the capital of wicked Assyria, but Jonah's anger over God's compassion for that great city is dangerous. The moment that Jonah's anger excludes compassion for the object of that anger it becomes a great evil, one that will destroy him (and Israel as well).

A close look at the four central books within the Book of the Twelve—Jonah-Micah and Nahum-Habakkuk—shows the canonical ambivalence which some scholars would remove from Isaiah 40–55 The fact that Nahum and Habakkuk may be described as a single literary unit is suggested by the following outline:

A. Hymn of Theophany (Nahum 1)
  B. Taunt Song against Nineveh (Nahum 2–3)
    C. The Problem of Theodicy (Habakkuk 1)
  B'. Taunt Song against the "Wicked One" (Habakkuk 2)
A'. Hymn of Theophany (Habakkuk 3)

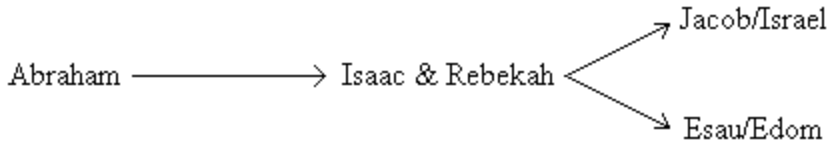
The close relation between the books of Jonah and Micah, on the other hand, is demonstrated by the fact that the missing ending to the book of Jonah is supplied in liturgical use within Jewish tradition by the addition of Mic 7:18–20 to the afternoon reading of Jonah on the Day of Atonement to the present time.

Wicked Nineveh is the subject of both Jonah and Nahum, but in sharply contrasting manner. In Jonah, Nineveh is the focus of God's compassion in what some have called the greatest missionary text in the OT On the other hand, as Robert Pfeiffer once put it, "Nahum's classic paean on the fall of Nineveh is one of the earliest and by far the best of (the) outbursts of hatred for the heathen kingdoms." The conflicting attitudes of nationalism and universalism could not be put in sharper contrast.

The complementary nature of Jonah-Micah over against Nahum-Habakkuk is also seen in a comparison of the second half of each of these literary constructions. Micah's prophecy of the fall of Jerusalem (3:9–12) sets the stage for Habakkuk's reflections on the profoundly disturbing question of why a just God is "silent when the wicked swallows up the man more righteous than he" (1:13).

The dialectic within the prophetic literature of the OT in terms of nationalism and universalism is part of the very structure of the canon itself. It is not to be removed by scholarly reconstruction of the biblical text, nor is it to be explained away by semantics. Even wicked Assyria is the work of Yahweh's hands (Isa 19:24), and as such she enjoys the same potential relationship to Yahweh as did Israel of old. As a light to the nations, the Servant Israel has a mission to the nations. Those who respond to that message, even among the Assyrians, will constitute the people of Yahweh—a new Israel.

A close look at structural detail within the partriarchal narratives in Genesis suggests a remarkable role for Edom in relation to Israel in the purposes of God.



Jacob and Esau are presented as twin brothers and the eponymous ancestors of Israel and Edom, respectively. Z. Weisman has demonstrated the priority of national consciousness as reflected in the Jacob stories over that of the traditions concerning Abraham and Isaac. This observation raises new questions about the canonical process itself in ancient Israel.

It has long been noted that the editorial conclusion for the book of Job places him among the patriarchs in Genesis. From a literary perspective, Job is in effect an adoptive patriarch who takes his place alongside Abraham. The 140 years allotted to Job after his great testing becomes part of a larger structural pattern in which that number is associated with each of the patriarchs. Abraham was 140 years old when his son Isaac married Rebekah. Isaac and Rebekah were in turn married for 140 years; and Jacob was 140 years old at the point of his "wrestling match" at the River Jabbok when his name was changed to Israel (Genesis 32). And, of course, his twin brother Esau/Edom was also 140 years old at this decisive reunion of the estranged brothers. Placing Job within this schema makes of him the literary "twin brother" of Abraham, as suggested in the following diagram:

Job Jacob/Israel

Isaac & Rebekah

Abraham Esau/Edom

The fact that the home of both Job and his friends is so strongly associated with Edom thus takes on deeper meaning, for Job and Esau are associated structurally. In terms of canonical structure Edom seems to be included within a larger conception of Yahweh's people. As Job and Esau are related in chiastic fashion in the above diagram, so are Abraham and Jacob, both of whom are associated with Aram-Naharaim. In terms of canonical structure, the Arameans, too, belong to the people of Yahweh, as the ancient Deuteronomic confession put it: "A wandering Aramean was my father" (Deut 26:5).

At this juncture it is instructive to take a closer look at Deuteronomic legislation with regard to the nations. Both Egypt and Edom are clearly given precedence over Moab and Ammon, the incestuous offspring of Lot in the Genesis narrative (Gen 19:30–38; cf. Deut 23:7–8). The treatment of Moabites and Ammonites is much harsher (Deut 23:3–6). It is possible to see a historical reason for the different treatment of Egypt and Edom over against Moab and Ammon in terms of the idealized program of political expansion in the time of king Josiah. At this time Edom was within the political sphere of Egypt and both stood outside the scope of Josiah's projected political expansion, which included both the former territory of the northern state of Israel and the Transjordan states of Moab and Ammon.

A close look at the canonical process in ancient Israel suggests another point of view concerning the inclusion of Moab within the "New Israel" of prophetic vision. Both the question of genre and setting for the book of Ruth are subject to renewed debate. Apparently only a foreign woman could embody what the author wanted to say—even a Moabite who, according to Deut 23:4, could never enter into Yahweh's assembly. In short, Ruth is conceived by the author as a kind of matriarch by adoption. It is a literary and canonical challenge to a simplistic reading of the book of Deuteronomy, in a manner somewhat parallel to the book of Job, which may be read as a canonical challenge to a superficial reading of the Deuteronomic theology of history. Job suffers not because he violated the terms of the Covenant, but because he was "a blameless and upright man" (Job 1:8), at least within the folktale frame of the book. And, like Ruth, this man from the land of Uz is a foreigner.

In short, Job and Ruth are to the Patriarchs of earlier tradition what the nations are to Israel within the prophetic literature. While universalism can be qualified as a form of nationalism, as Hollenberg has argued, it can also stand alone. Job was admitted to the patriarchal structure of the book of Genesis because he was a righteous man—"blameless and upright, one who feared God, and turned away from evil" (Job 1:1). He was admitted to the community of faith because of the quality of his life. Thus,

universalism need not have national roots as such. But in the end, of necessity, it becomes national because those who swear allegiance to Yahweh, as Ruth did, *are* Israel—that is, the people of Yahweh from among all nations (cf. Isa 19:2).

The covenant community in ancient Israel was open to non-Israelites from the start, according to Deuteronomy, since the resident alien (*ger*) actually participated in the covenant ceremony concluded before Moses' death (Deut 29:10). Even the exiled community of Judahites in Babylonia remained open to foreigners who wished to join it, and there were foreigners who did (cf. Isa 56:2–8). The readiness of strangers to join this politically crushed community is no more astonishing than their acceptance within that community; for it would have been natural for the exiles to have closed ranks tightly. That this did not happen witnesses to the radical hospitality of Israel to foreigners, which was ultimately grounded on a self-conscious representation of God's interest in all the nations.

In the NT there is a consciousness that the promise made first to Abraham was being fulfilled. The evangelists compiled their narratives accordingly. John the Baptist began his preaching with a rebuke to the Jewish nationalists; the children of Abraham are not confined to Israel according to the flesh (Matt 3:9). Jesus is described at the outset as a "light for revelation to the nations" (Luke 2:32); and the early days of his life are placed not in Israel but in Egypt (Matt 2:15). Jesus began his public ministry not in Bethlehem or Jerusalem, but in "Galilee of the nations" (Matt 4:15). During his ministry there, many came to him from among the neighboring peoples (Mark 3:8). Later he made a journey into Tyre and Sidon, beyond the borders of the Jewish state. On this trip he exorcised a demon in the Phoenician girl whose mother recognized him as the giver of the bread of life (Matt 15:21–28; Mark 7:24–30), cured a deaf mute in the Decapolis (Mark 7:31–37), and fed the 4000 in the wilderness (Matt 15:32–39; Mark 8:1–10). Jesus later healed the servant of a Roman centurion, with commendatory words for the faith of this man from the nations (Matt 8:5–13; Luke 7:1–10; cf. John 4:46–54, where this healing is taken as one of the great signs of Jesus' power), and a demoniac in Gerasa, whom he sent as a missionary of God's grace to his own people (Mark 5:19–20). The mission of the 70 whom Jesus sent out is intended to be to the nations (Luke 10:1–16). Jesus gave his disciples the mission to be the servant of light and the salt of the world (Matt 5:13–14; cf. Isa 42:6; 49:6; and on the fact that salt may imply covenant, cf. Num 18:19; 2 Chr 13:5). The triumphal entry into Jerusalem revealed Jesus as the messianic king who will bring the blessings of peace unto the nations (Matt 21:5; cf. Zech 9:9–10). In short, Jerusalem as the city on a hill whose glory cannot be hidden is the signal for an eschatological pilgrimage of the nations (Matt 5:14; cf. Isa 60:1–3). There is to be a gathering of all nations before the throne of the King (Matt 25:32), and the righteous among the nations will receive their inheritance in the Kingdom of God.

The first Christians knew that the risen Christ had sent them to the nations on a mission in line with the eschatological signs of the earthly ministry of Jesus (Matt 28:19–20; Mark 16:15; Luke 24:47; Acts 1:8), the prophecies of Deutero-Isaiah, the royal (messianic) theology, the Sinai covenant, and the ancient promise to Abraham.

Paul found the very purpose of the death of Jesus to be that "in Christ Jesus the blessings of Abraham might come upon the nations" (Gal 3:14; cf. v 8). This fulfillment of the promise to Abraham in Christ brought Israel to a crisis, however, for it implied the end of her national aspirations. According to Jesus, the nations themselves will judge Israel for her hardness of heart (Matt 12:41–42). Peter quoted the promise to Abraham in order to encourage the Jews to take up their mission to the nations (Acts 3:25–26), and Paul quoted Isa 49:6 as a judgment on the Jews for refusing to see their mission to the nations (Acts 13:47). Paul finally concluded that it was in the providence of God that the very disobedience of Israel after the flesh should mean that the blessing would reach the nations through Christ (Rom 11:11–12).

The final appearance of the mission of Israel to the nations is in the book of Revelation, where in the midst of world catastrophe and the martyrdom of Christians there is an "angel flying in midheaven, with an eternal gospel to proclaim to those who dwell on earth, to every nation and tribe and tongue and people" (Rev 14:6).

In the NT, the line was drawn not so much between Jews and the nations as between the Christian community and the nations. According to the Gospels, the Son of Man would be handed over to the

nations (Matt 20:19; Mark 10:33; Luke 18:32), for all nations are at enmity with Jesus and with his disciples (Matt 24:9; cf. 10:7–18; John 15:18–20).

The alliance of Jew and gentile against the followers of Jesus is a prominent theme in the book of Acts (12:1–5; 14:2; 16:10–24; cf. 2 Cor 11:26). Similarly, suffering at the hands of the nations is central in 1 Peter and Revelation, where the nations play a major role in the apocalyptic drama as the enemies of God who trample the Holy City for 42 months (Rev 11:2). Nonetheless, the time has come to destroy the destroyers (Rev 11:18), so that mighty Babylon (Rome), who made the nations drunk (14:8; 18:3, 23; cf. Jer 51:7), will be broken and the nations defeated (16:19). Satan, the deceiver of the nations, will be bound during the reign of the saints (20:3) and then released to deceive the nations once again, prior to the great apocalyptic battle before the "camp of the saints" and the "beloved city" (20:7–9). In the end, the nations are destroyed, Satan is cast into the lake of fire, and the dead are raised for judgment. This marks the end of the nations as enemies of God and the ultimate fulfillment of the OT prophetic vision which foresaw the ingathering of the nations within the kingdom of God.

NAVE See discussion of *hêḵāl* in TEMPLE, JERUSALEM.

NAZARAEANS, GOSPEL OF See NAZORAEANS, GOSPEL OF THE.

NAZARENES The term "Nazarene" has been used in English for several related Greek and Semitic-language terms found in NT and later writings. Some of these terms are more accurately represented by other spellings, and the ways in which these terms became related remain to some extent a matter of debate. In general, Nazarene means either (1) a person from Nazareth, or (2) a member of a religious group whose name may have other connotations.

Two Greek forms, *Nazōraios* and *Nazarēnos,* are rendered in English versions of the NT as Nazarene, corresponding to the more Hellenistic of the two. (Similarly, English uses Essene for *Essaios* and *Essēnos.*) However, in the Greek NT text, *Nazōraios* is the more frequently used form. That *Nazōraios* is the more Semitic of the two is suggested by the Syriac NT, which renders both forms as *Nāṣrāyā.* Matthew, John, and Acts use *Nazōraios* exclusively; Mark and Luke (once or twice, depending on the manuscript) employ *Nazarēnos.* No other NT books use the name.

In the NT, Nazarene most frequently describes a person—namely, Jesus—from Nazareth. Nazareth is not directly mentioned in Hebrew literature until the liturgical poems of Kallir (7th cent. C.E.?). This, together with philological questions on the link between the town name and Nazarene, led to much speculation on the origin of these names (see Schaeder *TDNT* 4:874–79). Archaeological excavation has revealed a Jewish settlement in Nazareth in the 1st cent. C.E. (see NAZARETH), and an inscription from about 300 C.E. found in Caesarea confirms the spelling of the town as *NṢRT* (Avi-Yonah 1962). While one might expect the *Ṣ* (*ṣade*) to be represented in Greek by *s* (*sigma*), parallel cases using *z* (*zeta*) are known. Thus questions on the formation of the gentilic remain. In rabbinic literature Jesus is labeled *YŠHW HNWṢRY,* apparently a *nomen agentis* from the root *NṢR,* meaning, e.g., "observer" (of torah). There are at least two cases in the NT where Nazarene means something different than, or additional to, "from Nazareth." Most of Jesus' followers were not from Nazareth, nor, according to Luke 4, was he well received there. These cases are significant for later use of Nazarene as a group name.

Matt 2:23 has puzzled many by asserting that when Jesus' family arrived in Nazareth it fulfilled what was said by the "prophets" (note the plural) "that he shall be called *Nazōraios*." The text clearly associates Nazareth and *Nazōraios,* but since no Hebrew Scripture mentions Nazareth, readers had to look for other allusions, calling on the Hebrew roots *NṢR* and *NZR.* In the case of *NṢR,* Isa 11:1 prophesies the messianic "shoot (*neṣer*)" from Jesse; additionally *NṢR* as a verb can mean "to observe, to guard." On the other hand, if Matt 2:23 alludes to *NZR,* there are stories of Nazirite vows, consecrating Samson (Judges 13) and others (Samuel in 4Q1 Sam). Jesus was surely not a Nazirite proper, but the LXX associates this root with holiness, and consequently some church writers (e.g., Tertullian, Eusebius) so interpreted the verse. The intention of Matt 2:23 depends in part on the language knowledge and exegetical method of the writer(s) of Matthew (Brown 1977: 207–13). In any case, Matt 2:23 presents *Nazōraios* as a favorable appellation.

In Acts 24:5 Paul appears accused by other Jews as a leader of the "heresy" of the *Nazōraioi.* Though of course he defends his teaching, Paul does not disown the name. Acts also introduces the name Christian (*Christianoi*), which eventually displaced Nazarene as the preferred self-designation of the increasingly Greek and Latin speaking gentile Church. But while those who believed in Jesus as Messiah abandoned the name Nazarene, Jews generally—including Jews who believed in Jesus, but who still observed Mosaic law—kept using Nazarene and its apparent varieties, including Heb *Noṣrim.* Additionally, the name was retained by the churches speaking Syriac (*Nāṣrāyā*), Armenian, and Arabic (*Naṣāra*).

In patristic literature the evolution continued. Writing ca. 200 C.E. Tertullian noted, "the Jews call us *Nazarenos*" (*Against Marcion* 4. 8). A century later Eusebius switched to past tense: "We who are now called Christians received in the past the name *Nazarenoi*" (*onomast.*). Writing about 375 C.E. Epiphanius condemns the *Nazōraioi,* who are not a newly founded group, as a heresy (*Panarion* 29). Jerome followed Epiphanius: "… since they want to be both Jews and Christians, they are neither Jews nor Christians" (Epistle 112.13 to Augustine).

Epiphanius and Jerome (in the works cited) also provide the first clear accounts of the practice in some ancient synagogues of condemning the *Noṣrim* in the blessing or curse on heretics (*birkat ha-minim*): "…

may the *Noṣrim* and *Minim* speedily perish …" (according to Cairo Genizah manuscripts). By this time, Epiphanius and Jerome are not sure whether the curse encompasses all Christians or only Jewish-Christians.

Epiphanius also condemns the *Nasaraioi* (*Panarion* 18) which his sources describe as a pre-Christian, law-observant group. There is no direct evidence that such a group existed. However, Epiphanius may have encountered a claim such as that made by the Mandeans, who call themselves the *Nāṣōrāyā,* the true religious "observers." (This claim parallels that made by other groups, e.g., the Samaritans' self-description as the "true *keepers* of torah.") The Mandeans claim to predate Judaism as well as Christianity.

Another illustration of the question of differing meanings of the terms subsumed by Nazarene appears in the 3d cent. Middle Persian inscription of Kartīr, a Zoroastrian priest who was intolerant of other religions. Kartīr condemned, among others, "… Jews … and *Nazarai*, and Christians …" (lines 9–10; Chaumont). Nazarene here could represent orthodox Christians (if "Christians" in this case refers to Marcionites) or Mandeans or some variety of Jewish-Christians.

To define Nazarene, one must take into account the time, place, language, and religious perspective of the speaker, as well as the meanings of other available religious group names. The development of these names merits further study.

STEPHEN GORANSON

NAZARETH (PLACE). The town of Jesus' youth in Lower Galilee, just N of the valley of Jezreel (M.R. 178234). The Sea of Galilee lies 15 miles to the E while the Mediterranean lies 20 miles to the W Nazareth is identified by Matthew (2:23) and Luke (1:26; 2:4, 39) as the village of Mary and Joseph, the place where Jesus grew up (Luke 2:39, 51) and the village he left to visit the towns and villages of Galilee to begin his ministry (Mark 1:9). Luke mentions a synagogue in Nazareth (4:16) where Jesus spoke as an adult and where his message was not well received (4:28–30). Evidently later in his ministry, it was well known that Jesus was from Nazareth (Matt 21:11), which did not always evoke an amiable response (cf. John 1:45–46).

The etymology of the Hebrew name of the town is difficult. The formula quotation in Matt 2:23, "He went and dwelt in a city called Nazareth [Gk *Nazaret*], that what was spoken by the prophets might be fulfilled, 'He shall be called a Nazarene [Gk *Nazōraios*]' " calls for an explanation. The usual solution is to appeal to Isa 11:1, "… a branch [Heb *nēṣer*] shall grow out of his [Jesse's] roots." In this case Nazareth would mean "branch" or "shoot," indicating the fecundity of the area. But the plays-on-words are more enigmatic than that, and Matthew's formula is used in a form that appears nowhere else in Matthew, suggesting that he is not quoting the OT.

As inferred from the Herodian tombs in Nazareth, the maximum extent of the Herodian and pre-Herodian village measured about × m, for a total area just under 60 acres. Since most of this was empty space in antiquity, the population would have been a maximum of about 480 at the beginning of the 1st century A.D. Nazareth lay beside Yafa or Yafia, a city that Josephus fortified in the first revolt against Rome and in which he lived (*JW* 2.20.6–573; *Life* 52–270). This village was known to be Jewish as late as the 4th century A.D. After the failure of the First Jewish Revolt against Rome, the twenty-four "courses" or divisions of priests from the Temple in Jerusalem fled northward. One priestly family by the name of Hapizez (or Hapises) settled in Nazareth (*Mishmaroth* 18). That Nazareth was the home of a priestly course is repeated in a fragment of a Byzantine period Hebrew inscription, a list of the priestly courses, found at Caesarea in 1962. In the 3d century, Nazareth still had a strong priestly character

according to *Midr. Qoh.* 2.8. In the 3d century the Christian martyr Conon from Nazareth of the family of Jesus was killed in Asia Minor (Bagatti 1969: 16).

The next reference to Nazareth is in the 4th century, when Eusebius mentions that Nazareth is fifteen miles E of Legio, near Mount Tabor. Jerome adds that it was merely a tiny village, a "viculus" (rather than "oppidum"), but neither Eusebius nor Jerome mentions a church (*Onomast.* 138.25; 141.1). Epiphanius (*Adv. Haeres.* 30.1–347) tells the story in his memoirs (377 A.D.) of Count Joseph of Tiberias, who appealed to the Emperor Constantine for permission to build a church at Nazareth, among other places. Constantine agreed, and presumably the church was built. When Egeria visited Nazareth about ten years later, however, she was shown "a big and splendid cave in which [Mary] lived." There was also an altar in the cave and a spring to draw water (Peter the Deacon T). Since this text confuses the remains from the Church of Gabriel and the Church of the Annunciation in Nazareth, Peter has presumably confused Egeria's notes. It is possible that the Helenopolis mentioned in A.D. 444 by Sozomen (*Hist. Eccl.* 2.2) refers to Nazareth and Mt. Tabor, cities of special interest to Helena, the mother of the emperor Constantine. She understood the Transfiguration of Jesus to have taken place on Mt. Tabor. The Piacenza Pilgrim in A.D. 570 says that the house of Mary "is now a basilica." This same pilgrim says he visited the synagogue of Jesus. He admired the beautiful Jewish women of Nazareth and hinted that Jewish-Christian relations were at least on a cooperative level (v161.4). Adomnan (Arculf), who lived about A.D. 679–704, visited Nazareth after the Arab conquest. He saw two churches that correspond to the Church of Gabriel and the Church of the Annunciation or perhaps the Church of St. Joseph and the Church of the Annunciation. According to Willibald (Hugeburc 95.20–25), by 808, Christian-Muslim relations had deteriorated so that Christians paid a "ransom" for the Church of the Annunciation to the Muslims.

Nazareth was excavated from 1890 to 1910 within the precincts of the Church of St. Joseph and the Church of the Annunciation. Vlaminek excavated in 1895 and Viaud from 1907–1909. A Neanderthal skull was found near Nazareth in 1934 about 1.5 miles to the SE Excavations began again in 1954 by Bagatti. Beneath the Church of the Annunciation are some very suggestive archaeological remains. Among them are two small caves with painted plaster, a cross, and inscribed prayers to Jesus in Greek. These could derive from the end of the 3d century, but are most cautiously dated to the early 4th century. These caves are incorporated into a building with mosaic floors that faces S toward Jerusalem. This building, which is oriented N–S, would be interpreted as a synagogue except for a large, equal-armed cross built into its mosaic floor. The excavator interprets this building as a Jewish-Christian synagogue, which may be correct. Between the mosaic floor and the caves, at a level 1.2 m below the main floor of the Jewish-Christian synagogue, is a second 4th-century mosaic with a Greek inscription: "Offering of Conon, Deacon of Jerusalem." This Conon is evidently a namesake of the Conon mentioned above. When the main mosaic in the floor of the synagogue was lifted the excavators discovered a Jewish ritual bath that measures about two m on each side. Seven steps lead down to the water. Since the ritual bath is not oriented either with the synagogue or with its caves, it seems to be earlier than the structure. In the debris that filled the ritual bath was found painted plaster with inscriptions and graffiti scratched onto it in Greek and Syriac. The plaster had belonged to a 4th-century synagogue which was destroyed to give way to the building of a 5th-century church with its attached monastery. In the debris beneath the floor of one of the rooms of the monastery were about seventy architectural fragments that appear to have belonged to the 4th-century synagogue.

In chronological order, the occupational sequence in this area appears to have included: (1) detached caves of indeterminate (perhaps domestic) use, dating before the 3d century; (2) the cutting and use of a ritual bath, perhaps as early as the 2d century but not after the 3d century, perhaps for Jewish-Christians; (3) the building of a synagogue above the ritual bath which incorporated the caves (this was likely the church seen by Egeria and reported by Peter the Deacon); and finally (4) the building of a 5th-century church and monastery which incorporated the caves and floor of the 4th-century synagogue. This may be the church and monastery seen by the Piacenza Pilgrim in A.D. 570. The long continuity of use and incorporation of earlier units in later buildings suggests a continuity of veneration and worship extending back to the Roman period.

Beneath the convent of the Dames de Nazareth about 100 m W of the Church of the Annunciation are remains of houses, a tomb of the Herodian period, and other underground working spaces typical of those found beneath the other churches. It appears that the inhabitants of Nazareth took advantage of the soft limestone to build cisterns, basements, storage bins, and other underground installations, primarily for agricultural use.

The general archaeological picture is of a small village, devoted wholly to agriculture, that came into being in the course of the 3d century B.C. Although there are traces of earlier Bronze Age or Iron Age occupation, none of these suggests a continuity of more than a generation at a time. It is the late Hellenistic period that gives life to Nazareth, as it does with many other sites which have been surveyed or excavated in the Galilee. People have continued to live in Nazareth from the 3d century B.C. to the present day.

JAMES F. STRANGE

NAZORAEANS, GOSPEL OF THE The name (note the spelling: on the name, see Schrader *TDNT* 4:874–79, and Klijn and Reinink 1973:44, n. 2) given by scholars to a presumed Judaic-Christian gospel, now lost. The matter of these Judaic-Christian gospels, namely, the Gospel of the Nazoraeans, the Gospel of the Hebrews, and the Gospel of the Ebionites, has been called the most enigmatic and irritating problem in the NT Apocrypha: enigmatic because all are now lost, and irritating because our knowledge of these early (pre-170 C.E.) gospels comes only indirectly via the Fathers' cryptic and inconsistent remarks. Snippets of text, assigned by scholars to one or the other of these three Judaic-Christian gospels, are quoted by the Fathers (often with no clear attribution) and appear to be preserved *in scholia* (the ZION GOSPEL EDITION). See also HEBREWS, GOSPEL OF THE; EBIONITES, GOSPEL OF THE.

The title "Gospel of the Nazoraeans" is never used by the Fathers. Rather, they speak of a gospel used by the Nazoraeans. It is difficult to ascertain whether this is a distinct gospel or simply the "Gospel of the Hebrews," also cited by the Fathers. The evidence, contradictory and inconclusive, follows.

Epiphanius (*Haer.* 29.7.1–29.9.4) offers the first description of the Nazoraeans and their gospel. According to him, they are like the Jews in everything, save that they accept Jesus as the Messiah. Regarding their origin, Epiphanius appears to know two traditions. According to the first (29.1.2–3; 29.6.23), the name roughly parallels the usage in Acts 24:5, and denotes the earliest (hence Jewish) Christians. According to the second tradition (29.7.7–8), the group originated in Pella, among the Judaic-Christians who fled Jerusalem prior to its destruction in 70 C.E. (cf. Eus. *Hist. Eccl.* 3.5.3). Epiphanius states that they know Hebrew well, and that they possess "the whole (*plērestaton*) gospel of Matthew in Hebrew. It is carefully preserved in Hebrew letters" (29.9.4). Epiphanius, however, never names this gospel, nor does he quote from it. Given his description of the Nazoraeans and their gospel, we may distinguish it from the similar gospel which Epiphanius attributes to the Ebionites, for the Ebionites' gospel "which is called with them 'according to Matthew' which is not complete but falsified and distorted (*oux holō de plērestatō, alla nenotheumenō kai ēkrōtēriasmenō*), they call it 'the Hebrew gospel' " (30.13.1). Epiphanius further reports that the Ebionites have "removed the genealogies of Matthew" (30.14.3). Moreover, Epiphanius quotes from this Ebionite gospel, and it appears to be a harmonization of the Synoptic Gospels and together with some non-received traditions. Thus, we may say Epiphanius knew two Judaic-Christian gospels: one used by the Nazoraeans, and one used by the Ebionites. Both gospels are related to Matthew, and both appear to be in Hebrew (Aramaic).

Jerome is the second Father to speak of a gospel in use among the Nazoraeans, and certain of his statements confirm what we learned from Epiphanius. Jerome states that "Matthew … was the first to compose a gospel of Christ in Judea in Hebrew letters and words for the sake of those of the circumcision who believed … From the Nazoraeans who use this book in Beroia, a city in Syria, I also received the opportunity to copy it" (*de vir. ill.* 3). From time to time in his prolific writings, Jerome refers to a "gospel which the Nazoraeans use," but he never calls it the "Gospel of the Nazoraeans." On the contrary, he

sometimes equates it with the "gospel used by the Ebionites," and even calls it the "Gospel according to the Hebrews." Compare the following: (1) "a gospel which the Nazoraeans and the Ebionites use, which we translated from Hebrew to Greek and which is called the authentic text of Matthew by a good many" (*in Matt.* 12.13); (2) "the gospel which is 'according to the Hebrews' which the Nazoraeans are accustomed to read" (*in Hiez.* 18.5–9); (3) "From the 'Gospel according to the Hebrews.' In the 'Gospel according to the Hebrews' which was written in Chaldaic and Syriac language, but with Hebrew letters, and is used up to the present day by the Nazoraeans" (*adv. Pelag.* 3.2).

Scholars have usually assumed that Jerome knew two gospels—(1) the gospel used by the Nazoraeans, and (2) the Gospel of the Hebrews (also quoted by Origen, *in Io.* 2.12)—and that he frequently confused them when quoting. Jerome's quotations are, by and large, brief.

The difficulty in assigning the various fragments quoted by the Fathers or found in the scholia to one or another of these three Judaic-Christian gospels is formidable. A comparison of the assignments made by Preuschen (1901), James (1924), Klostermann (1929), and Vielhauer *(NTApocr)* makes this apparent. It is worth noting that only when reaching the medieval sources (Vielhauer, frag. 24–36) does one find the name "Gospel of the Nazoraeans" used. And of the twenty-three patristic fragments in Vielhauer's reconstruction, all but three come from the Zion Gospel Edition or Jerome—whose sources and attributions are, as we have seen, less than certain. Lagrange questioned the existence of the Gospel of the Nazoraeans, equating it with the Gospel of the Hebrews. Waitz and Vielhauer argue for three distinct gospels. Given our present state of knowledge, it is difficult to say which, if any, theory is correct.

Nevertheless, the testimony of the Fathers and the whole complex of Judaic-Christian gospel quotations—from whichever of the gospels they may come—serve to establish the following: (1) the Nazoraeans apparently had a particular gospel, perceived to be an ancient/original form of Matthew; (2) this gospel was apparently written in Hebrew characters, probably in the Aramaic language; (3) the descriptions of the beliefs of the Nazoraeans, as well as the various appellations given the gospel ("used by the Nazoraeans"; "Gospel of the Hebrews"; "the Jewish gospel") and the citations, show a distinctive perspective, Jewish in outlook, Semitic in character and expression. When compared with our present (Greek) canonical Matthew, many of the fragments appear to be expansions or interpolations. Logically, however, one would expect to find just the opposite: if, indeed, it was equated with the "original" Matthew, and written in a Semitic language, one would expect it to present the shorter, less-developed text. If one is to take the Fathers' reports of the antiquity of the gospel used by the Nazoraeans at face value, then the fact that many of the fragments now assigned to the Gospel of the Nazoraeans seem to be secondary expansions would lead one to question their assignation.

Since Tatian's Diatessaron has numerous readings similar to those found in the various Judaic-Christian gospels (thus providing a *terminus ad quem*), it should not be overlooked in reconstructing these gospels. Similar parallels have also been noted between the gospel of Thomas and the Judaic-Christian gospels (Quispel 1975; 1981); these too bear consideration in future studies of this elusive and vexing subject.

NEAH (PLACE) [Heb *nēʿâ* (נֵעָה)]. A place on the NE border of the territory of the tribe of Zebulun (Josh 19:13), situated between Rimmon and Hannathon, in the vicinity of the Bet Netofa Valley. The precise location of the site, however, remains unknown.
RAPHAEL GREENBERG

NEAPOLIS (PLACE) [Gk *Neapolis* (Νεαπολις)]. A common name given to many Greco-Roman towns and cities founded near older sites, meaning simply "new city." The Neapolis mentioned in the NT (Acts 16:11) is certainly the seaport town for Philippi, which was 16 km inland. Located on a promontory on the coast of the Aegean Sea (40°56′ N; 24°23′ E), Neapolis had a harbor on both bays.

The first of several sections of Acts in which the author employs the first person plural begins at Troas prior to the voyage by sea to Neapolis. The mention of the seaport and the island Samothrace are unnecessary detail in the account of the trip to the main destination of Philippi (Acts 16:12; cf. Acts 20:6, "And we sailed from Philippi"), but it is detail that is understandable in an alleged eyewitness account: Samothrace, a small island with a 5000-ft. mountain, was an obvious landmark on the voyage, and one tends to note that place where one touched land again. The apostle set foot in Europe for the first time when he landed in Neapolis on the second missionary journey. From there, the travelers would have gone the short distance to Philippi using a part of the Roman highway called the Egnatian Way, which began here at the Aegean and spanned Macedonia to reach the Adriatic.

The earliest record of Neapolis appears to be in a tribute list of Athens from the 5th century B.C., in which it is treated as a city of Thrace rather than of Macedonia (Finegan *IDB* 3: 527), and part of the Athenian Confederacy. Pliny (*HN* 4.18) also treats it as Thracian, but the geographers Strabo (7.330) and Ptolemy (*Geog.* 3.13) link it with Macedonia, as does the Acts account.

The ships of Brutus and Cassius were moored in the W harbor at Neapolis when the conspirators fought Mark Antony and Octavian at the battle of Philippi in 42 B.C. (Appian *BCiv.* 4.106). The name of the city was changed to Christoupolis in later years. The modern name for the town is Kavalla, and apart from coins and inscriptions found there and in nearby Philippi, there are also the ruins of the Roman aqueduct and a shrine to the locally esteemed goddess Parthenos.
CONRAD GEMPF

NEARIAH (PERSON) [Heb *neʿaryâ* (נְעַרְיָה)]. A name held by two persons in the Hebrew Bible. The name means "servant of Yah."

1. Neariah was a leader of the tribe of Simeon in the time of Hezekiah king of Judah. He and other tribal leaders, all the sons of Ishi, led a group of Simeonites to Mount Seir, which was at that time in the possession of the Amalekites. These they drove out; then they took possession of the land. The story appears to be an etiology to explain the presence of this group of Simeonites in Mount Seir and to justify their possession of it (1 Chr 4:42).

2. The fourth son of Shemiah, according to the MT (1 Chr 3:22–23). The phrase "and the sons of Shemiah" in v 22 may be a dittography and many scholars delete it. This would make Shemiah the first son of Sheconiah and Neariah the fifth son.
RUSSELL FULLER

NEBAI (PERSON) [Heb *nêbāy* (נֵיבָי)]. A leader of the people and a signatory to the covenant established by Ezra (Neh 10:19; K *nwby*). The meaning of the name is obscure and at least one scholar has suggested that the place-name, Nebo (Ezra 2:29), has been mistaken for a personal name (Brockington *Ezra, Nehemiah and Esther* Century Bible, 181). It is more likely, however, that a family has assumed the name of the village in which they resided (Meyer 1896: 156; Myers *Ezra, Nehemiah* AB, 177; and Williamson *Ezra, Nehemiah* WBC, 324).

FREDERICK W. SCHMIDT

NEBAIOTH (PERSON) [Heb *nĕbāyôt* (נְבָיוֹת), *nĕbāyōt* (נְבָיֹת)]. A son of Ishmael (Gen 25:13; 28:9; 36:3; 1 Chr 1:29) and, as is the case with all the sons of Ishmael (with the possible exception of KEDEMAH), an Arab tribe (Isa 60:7). The tribe is mentioned in several Assyrian inscriptions from the time of Ashurbanipal; the various Assyrian spellings render ancient N Arabian **Nabayât*, as does the Hebrew form. In the middle of the 7th century B.C., the Nebaioth and the Assyrians entered commercial relations. At the end of his reign, Ashurbanipal claimed to have conquered their "distant" country and to have destroyed their settlements (Eph‘al 1982: 221–23; Knauf 1989: 65–66; 93–96). In Taymanite inscriptions—dated by Winnett (1980) to the 6th century B.C. and by Roschinski, Högemann, and Knauf to the early 4th century B.C. (Knauf 1989: 76–77)—*nbyt* (i.e., **Nabayât*) are mentioned among the enemies of the city of Taymâ›. The Assyrian and the ancient N Arabian references combined lead to the vicinity of Ḥâ›il (27°35′N; 41°42′E) for the tribe's location.

It has previously been assumed that the Nebaioth may be identical with the Nabateans (*Nabaṭ* in Arabic); but both linguistically and historically this equation is untenable (cf. Eph‘al 1982: 233 n. 33; Knauf 1989: 92 n. 507 contra Broome 1973; Bartlett 1979: 62–63). The Nabateans could have formed a Kedarite clan before they ascended to the dominium over N Arabia after the demise of the Kedarite confederation, ca. 400 B.C. See KEDAR; NABATEANS. It is, however, possible that biblical authors of the 6th and 5th centuries B.C. applied the name "Nebaioth" from the list of the "sons of Ishmael," Gen 25:13–15 (originating in the 7th century B.C., see ISHMAELITES) to the Kedarite clan Nabat whom they encountered in their immediate vicinity, within the borders of Edom (Knauf 1989: 108–9). This assumption would explain why the "daughter of Ishmael" married by Esau is always a "sister of Nebaioth," although her name varies in Gen 28:9 and Gen 36:3 Then the parallelism between the "sheep of Kedar" and the "rams of Nebaioth" (Isa 60:7, from the end of the 6th century B.C.) would become more obvious. Finally, the qualification of Nebaioth as Ishmael's firstborn (Gen 25:13) becomes understandable if Nebaioth refers to the Nabateans and if this qualification forms part of the final redaction of the Pentateuch, ca. 400 B.C. By then the Kedarites had been dispersed; earlier, from the 7th through the 5th centuries B.C., Kedar had been the most powerful tribe among the Ishmaelites, and as such could have claimed "primogeniture" with more right than the "distant" Nebaioth.

The formation of the tribal name with the feminine plural affornative belongs to a class of tribal names which is rare in Classical Arabic but frequent among contemporary Arab tribes and clans. Thus the name **Nabayât* provides an example for the antiquity of some features of "modern" Semitic usage.

NEBALLAT (PLACE) [Heb *nĕballaṭ* (נְבַלַּט)]. A town of Benjamin that was repopulated by returning Judeans in the postexilic period (Neh 11:34). It is listed in conjunction with Lod, and has been identified with Beit Nabala (M.R. 146154; 4 miles NE of Lod), a site that has yielded Iron Age II and Persian period remains. On the basis of the name Sin-uballaṭ, Albright (1924: 106 n. 15) suggested that the name may preserve the memory of a 7th century B.C. Assyrian governor, Nabu-uballiṭ.

NEBAT (PERSON) [Heb *nĕbāṭ* (נְבָט)]. The father of Jeroboam I, first king of Israel (1 Kgs 11:26).

The text uses the patronymic to distinguish this king from Jeroboam II (Jeroboam son of Joash). See JEROBOAM. Nebat (or perhaps only Jeroboam himself) is identified as an "Ephrathite," which most scholars take as a synonym here for "Ephraimite." Since Jeroboam's mother is named (unlike the mothers of other Israelite kings) and she is called a widow, some scholars infer that Nebat died young. Šanda (*1 Kings* EHAT, 317) proposes that the name is not in fact a patronymic but a clan name; however, the suggestion that it means "Nabatean" is surely wrong: The Nabateans do not appear in the region until at least three centuries later. Danielus (1967–68:211–12) argues that *nbṭ* means "The Lady," and that "Son of Nbṭ"is a throne name taken by Jeroboam I to honor the cow-goddess Hatḥor, whose cult he would have known in Egypt (1 Kgs 11:40) and to whom the sanctuaries he established at Dan and Bethel would have been dedicated (1 Kgs 12:28–30).

JEROME T. WALSH

NEBIIM The second section of the Jewish division of the Hebrew Bible meaning "Prophets" (Heb *nĕbî᾽îm*). This section is divided, in turn, into two sections, the Former (Heb *rî᾽šônîm*) and Latter (Heb *᾽aḥărōnîm*) Prophets. The Former Prophets include the historical books of Joshua, Judges, 1–2 Samuel, and 1–2 Kings. The Latter Prophets include the three "major" prophets (Isaiah, Jeremiah, and Ezekiel) and the so-called twelve Minor Prophets (Hosea, Joel, Amos, Obadiah, Jonah, Micah, Nahum, Habakkuk, Zephaniah, Haggai, Zechariah, Malachi).

NEBO (DEITY) [Heb *nĕbô* (נְבוֹ)]. The name of a Babylonian deity mentioned only in Isa 46:1, a passage which comes from the pen of an exilic Judean in the Babylonian captivity (ca. 550 B.C.). Nebo, or Nabû, was the tutelary deity of the ancient city of Borsippa, some 15 miles S–SW of Babylon. He achieved great popularity throughout Mesopotamia and the surrounding regions during the 1st millennium B.C. The name of this god appears as the theophoric element in at least three Babylonian names mentioned in the OT: the great king Nebuchadnezzar, the Babylonian official Nebushazban, and the military commander Nebuzaradan (some have included Abednego, but with reservations). The meaning of the name has been contested. At the turn of the 19th century many scholars believed that it meant "proclaimer," "prophet," "announcer" (cf. Heb *nabî᾽*). In recent decades, however, most scholars would share the conclusion of Albright (*FSAC*, 231–32) that the correct etymological meaning is "one who is called (by god), one who has a vocation (from god)" (Rassmussen 1981: 103, 310; *AHW* 697b, 699b).

A. Nebo in the Mesopotamian Pantheon

The earliest extant reference to Nebo/Nabû is attested in the Chronicle of Hammurabi, where in the 16th year it is recorded that "the throne of Nabû [was made]" (King 1898–1900, 3:235, 251). Nabû does not appear in the earliest pantheon of Ur (Roberts 1972: 167–72), nor does his name occur in the royal Assyrian inscriptions before 1115 B.C. *(GARI).* The data concerning Nabû are somewhat meager before 1000 B.C., but they increase dramatically in the Neo-Assyrian and Neo-Babylonian periods, when Nabû became one of the most beloved deities in Mesopotamian religion (see further below).

Late in the 2d millennium B.C. Nabû was considered to be the eldest son of the god Marduk. Accordingly, he was called "Mighty, exalted Lord, who knows all; majestic, ever splendid, the veritable First-born of Marduk" (Ebeling 1953: 13b). Marduk was the son of Enki/Ea (one of the four greatest deities) and the god who had successfully defeated the wicked Tiamat. By virtue of this victory, Marduk received not only the entire universe by right of conquest, but also possession of the sacred Tablets of Destiny (that prescribed the functions of the political, social, and moral order, and that Tiamat had illegally given to her evil ally Kingu) and supremacy over the total assembly of the grateful gods (see *ANET*, 60–62, 501–502). See ENUMA ELISH. As Marduk's firstborn, Nabû enjoyed a most honored status. His mother was the important goddess Sarpanitu, the veritable complement of Marduk, whether as the goddess of childbirth, or in her assistance to the needy and as the source of salvation and life to the

perishing (Ebeling 1953: 69; *BWL* 69.34, 38). In Mesopotamian mythology, the family of Marduk maintained high integrity and a loyalty to its regal responsibility and avoided the sorts of scandals that had marred the reputation of the great god Enlil.

According to the myths, Nabû also married well. One of his wives was the eminently prestigious Sumerian goddess Nana, the divine queen of Uruk who brought to the marriage an equally noble heritage as "the first-born of Anu, surpassing great, whose might is the greatest among all the goddesses." In every way her marriage to her "noble spouse Nabû" was beneficial; she was compassionate, helpful to his Majesty, and greatly loved by him (*LAR* 2: 743–51). The other wife was the great lady Tasûmetum, a Babylonian goddess who was honored in the Babylonian date formula "The year of Tasûmetum" (King 1898–1900, 3:240–41 n.) Their warm and singularly devoted marital relationship is suggested by her association with Nabû in matters of state (e.g., the ratification and guarantee of the treaty between KTK and Arpad in Syria [*ANET*, 659]), her kindly touch with those in need (Langdon 1927: 5; Ebeling 1953: 24, 124–27), and the frequent references to her and Nabû together. Thus Nabû's marriages and his supreme pedigree helped to convince the Babylonian citizenry of the stability and moral foundation of the Babylonian throne.

In the divine assembly, Nabû shared many of the predicates associated with the ancient and distinguished goddess Nidaba, who was the most famous divine exponent of the scribal craft. Likewise, Nabû came to be regarded as the scribe par excellence, a sort of secretary-general and record-keeper of the heavenly council. As such, he was custodian of the Tablets of Destiny that his father Marduk had wrested from the defeated Tiamat and Kingu. This position gave him great power. As scribe (or secretary-general), he had the task of setting in writing the various destinies that were proclaimed orally and to observe any deviations from the desired goals of the decrees. In certain respects, therefore, he could be regarded as a sort of "power behind the throne" of his father, Marduk. Nabû was eminently qualified for such a responsibility, and despite all the historical vicissitudes of 1st-century Mesopotamia, Nabû (along with Marduk, Sarpanitum, and Tasûmetum) was accorded primal responsibility and honor, held in high esteem not only by the Assyrians and the Babylonians, but also later by the conquering Persians.

B. The Cult of Nebo

No summary can replace the animated devotion of the prayers, hymns, dedicatory inscriptions, and other affirmations produced by the devotees of the Nabû cult (many of these may be found in Ebeling 1953 [which brings up to date the monumental work of King 1896]; Falkenstein and von Soden 1953; and Seux 1976). Much additional information concerning prayers and psalms to Nabû (as well as the ceremonies practiced by the Babylonian kings) is available in the Assyrian royal correspondences (Waterman 1930–36), in the historical records (*LAR*), and in the exhaustive studies of the Ashurbanipal era (Streck 1916) and the Neo-Babylonian royal inscriptions (Langdon 1912), supplemented by the results of ongoing archaeological excavation.

The cultic literature of the Nabû rites follows a recognizable literary pattern called a *šu-ila* composition (see esp. King 1896 and Ebeling 1953). The composition generally begins with lavish praise of the nobility, splendor, heritage, accomplishments, etc., of the deity. Then there follows a description of the distress that currently afflicts the suppliant, who then introduces a prayer that distills the thought of the lament. Finally, a vow is proffered to the effect that if deliverance is granted by Nabû, then the grateful suppliant will perform the vow.

Although Nabû's tutelary domain was the city of Borsippa (site of the great temple of Ezida), sumptuous dwellings were provided for Nabû in Calah, Assur, Nineveh, Babylon, and almost every significant city in Mesopotamia (*LAR* 1: 799; Streck 1916, 3: 822–23), an assertion that archaeology has fully substantiated. The worship of Nabû even spread as far as Syria and Syene (Egypt), where some migrant Syrians lived and named the god Nabû more than any other in their correspondences. The liturgies of the Nabû cult were richly devised with numerous and diverse priestly ministrants, each with specific duties. The temple was often the legal center where deeds, contracts, and oaths were recorded, public notices posted, juridical procedures processed, and temple slaves supervised. The temples were

also the refuge of the sick; thus exorcists with their extensive practice of caring for the mentally and physically ill mingled there with sacrificers, musicians, choristers, seers, prophets, and custodians.

The major annual festival in the Assyro-Babylonian period was the New Year Festival, in which the basic foundation of the political order was powerfully reaffirmed through myth and ritual. In this paramount drama Marduk and Nabû played the lead roles. After some initiatory ceremonies beginning on the second day of the month Nisannu, the (statue of) the god Nabû boarded his sacred barge in Borsippa and headed for the capital city of Babylon a few miles away. The excitement in Babylon must have been great when the barge came into view and the noble son of Marduk arrived at the home of his father. Over the course of the next ten days the divine father and son presided over rites that reaffirmed the divine rule and legitimacy of Marduk, that purified the temple and the people, that formulated the decrees for the coming year, that vindicated and reinstated the human king of Babylon, and that affirmed the victorious future of Nabû. All this was intended to undergird national unity and reinvigorate the hopes and positive feelings of the Babylonian citizens. See also AKITU.

The Nabû cult outlasted the Babylonian empire. The Persian conqueror Cyrus was personally committed to the survival of the native Babylonian cults (Oppenheim 1985). It is interesting to note that when the Macedonian Antiochus I Soter (280–262/1 B.C.), by right of conquest, became "king of Babylon," he left an inscription eulogizing Nabû, whose temple in Borsippa he rebuilt (*ANET*, 317). Even as late as the 1st century A.D. a temple to Nabû was built in the oasis city of Palmyra (Teixidor 1979: 106). However, the Nabû/Nebo cult was at its peak during the Neo-Babylonian period, the time when the Judean elite lived in exile in Babylon. The author of Isaiah 46, who lived among them, gives witness to the extravagant processions whereby (statues of?) the gods Bel (= Marduk) and Nebo were paraded before their devotees through the streets of Babylon (vv 1–2). This writer was a keen observer of details: the gods mounted on pack animals, the swaying deities, the weary beasts, the priceless array of the gods. But the writer envisioned a day of judgment fierce at hand, when instead of the adulation of the crowd, it would be the despairing cries of frantic people vacating the capital. The priests have laden the beasts of burden with the gods. They shall not escape but shall fall victim to the enemy; the jeweled adornment of the deities will not save them from the looting of the foe. Nebo and Marduk will then be revealed for what they truly are—simply the impotent creations of mere human beings.

EDWARD R. DALGLISH

NEBO (PERSON) [Heb *nĕbô* (נְבוֹ)]. The ancestor of several men who were required to divorce their foreign wives during the reforms of Ezra (Ezra 10:43 [LXX *Nabou*]; 1 Esdr 9:35 [Gk *Nooma*]). This may be a reference to the Judean *town* of Nebo. See NEBO (PLACE) #2.

NEBO (PLACE) [Heb *nĕbô* (נְבוֹ)]. **1.** A town in NW Moab and one of the final stages of the Exodus (Num 33:47). Nebo may have been founded by people of Babylonian origin since Nebo is the name of a principal Babylonian deity. After the town was taken from the Amorite king Sihon the tribes of Gad and Reuben requested possession of Nebo because the region was suitable for livestock (Num 32:3, 33–38). The Reubenites rebuilt the city and continued to occupy it (cf. 1 Chr 5:8). According to the Moabite Stone (ll 14–18) the town of Nebo came under Moabite domination, and as such Nebo appears in the doom prophecies of Isaiah (15:2) and Jeremiah (48:1, 22) directed against Moab. Though the exact site of the town is unknown it probably was one of the tells near Mount Nebo. Eusebius and Jerome (Lagarde 1887: 283, 96–100; 142, 1–6) located Nebo 8 Roman miles S of Heshbon. During the present century the town has been tentatively equated with *Khirbet ʿAyûn Mŭsā* (e.g., *MBA*, 181), *Luhithu* (cf. Saller and Bagatti 1949:4–5, 204–207), but mostly with *Khirbet el-Mekhayyat*, which is about 5 miles from *Ḥesbân* (e.g., Kaiser *Isaiah 13–39* OTL, 67; Saller and Bagatti 1949:207–217).

Khirbet el-Mekhayyat (M.R. 221131) is situated about 2 miles SE of the hill of *Siyâgha*, traditionally associated with the death of Moses, and about 1.25 miles SW of the highest peak of the Nebo ridge called *Jebel en-Neba.* Saller and Bagatti (1949: 207–209) claim that this identification is confirmed by (1) the local tradition represented by the name *Neba*, and especially (2) the testimony of the *Life of Peter the Iberian.*

Excavations carried out since 1933 (and periodically reported in *Liber Annuus*) reveal a wall, and building activity and cisterns both inside and outside the wall. Though our knowledge of the history of the site is sketchy, it appears so far that the two most prosperous periods in the history of the town of Nebo were Iron Ages I and II and the Byzantine period. Due to variant readings in 1 Macc 9:37 it is uncertain whether the author refers to the town of Nebo. See also NEBO, MOUNT.

2. A town of uncertain location referred to in lists of Israelites who returned after the exile from Babylon (Ezra 2:29). Assuming (1) the validity of the reading "the *other* Nebo" in the parallel account in Neh 7:33, and (2) the return of the exiles to Jerusalem and Judah (Ezra 2:1; Neh 7:6) and its placement after the towns of Bethel and Ai, this Nebo is generally located in Judah, though recently the less likely identification of this Nebo with the Nebo in Moab has been suggested (Cogan 1979: 37–39). Scholars generally tentatively identify Nebo with modern *Nŭbā* (M.R. 153112) approximately 3 miles NW of Bethzur and 2 miles E of *Khirbet Qeila* (Keilah) (e.g., *GP*, 398). Nebo in Ezra 10:43 and 1 Esdr 9:35 is most likely a reference to a person and not a place.

ARTHUR J. FERCH

NEBO, MOUNT (PLACE) [Heb *nĕbô* (נְבוֹ)]. A mountain in Moab, which was the site of Moses' preview of the promised land and the place where he died and was buried (Deut 32:49–52; 34:1–8). The two and a half Transjordanian tribes name it as part of the territory they requested of Moses (Num 32:3). The toponym "Nebo" is often found in biblical texts as both a mountain and as a town in Moab. See NEBO (PLACE) #1.

A. Biblical Citations

The mountain Nebo is remembered in the traditions tied with the conquest of Transjordan and with the last part of the Exodus before Israel's entrance into the promised land (Num 33:47). The connection of Nebo with Pisgah (Deut 34:1) ties the mountain with the geographical descriptions of S Gilead ("and

from Bamoth to the valley lying in the region of Moab by the top of Pisgah which looks down upon the desert" [RSV], or "which is opposite Jeshimon" [MT]; Num 21:20). Num 23:28 adds the toponym "Peor" and reads (MT): "Balak took Balaam to the top of Peor which faces toward Jeshimon." In the description of the territory of the Reubenites and Gadites the area extends "as far as the Sea of the Arabah, under the slopes of Pisgah" (Deut 4:49). The text of Josh 12:3 is inflated: "and the Arabah to the Sea of Chinneroth eastward and in the direction of Beth-jeshimoth, to the sea of the Arabah, the Salt Sea, southward to the foot of the slopes of Pisgah." Consequently, in the list of cities of Reuben one finds in order Beth-peor, the slopes of Pisgah, and Beth-jeshimoth (Josh 13:20).

The toponym "Nebo" as a town recurs among the cities of the same conquered territory (Num 32:3), even though later it is said that Reuben's sons built Nebo (Num 32:38). It was part of the Bela family territory, and formed its boundary with Baal-meon (1 Chr 5:8). In the prophetic texts it is considered a city of Moab (Isa 15:2; Jer 48:1, 22), but in the Mesha Stele (lines 14–18) it is mentioned as a conquered Israelite city (*ANET*, 320).

Later Jewish tradition tells about Jeremiah who, accompanied by the tabernacle and the ark, went to the mountain where Moses had ascended to see the inheritance of God (2 Macc 2:4).

B. Identification

As far as the mountain is concerned, if the Targumic texts are not specific in translating Nebo as the tomb of Moses (Pseudo-Jonathan in Num 32:3, 38; 33:47; Onkelos Num 32:3 and several *midrashim*), Eusebius records that the mountain was on the road from Livias to Esbus (*Onomast.* 16.24) and that it was shown to pilgrims at the sixth mile on the same road W of Esbus (*Onomast.* 136.5). The pilgrim Theodosius (mid 6th century) writes that the death place of Moses could be visited in the neighborhood of Livias (*De Situ* 19). The pilgrim of Piacenza (ca. 570) places the sanctuary eight miles from the Jordan river (*Itinerarium* 18.13). Egeria (end of 6th century) left Jerusalem intending to visit the sanctuary. From Jericho she crossed the Jordan and stopped at Livias. Accompanied by a priest of the city who knew those places well, she took the road from Livias to Esbus on the plateau. At the sixth mile, a detour from the main road led her to the Springs of Moses, from which she climbed to the summit of Nebo to see the Memorial of Moses (*Itinerarium* 10–12). Bishop Peter the Iberian, old and sick and having come to Transjordan to cure himself in the thermal waters of the area, stopped to pray at the sanctuary of Moses where he had once been as a young man before his conversion (*Vita Petri* 85).

An early description of the Siyagha ruins 9 km W of Madaba was given by Le Duc de Luynes in 1864 and subsequently by the members of the American Palestine Exploration Society in 1873 and by the Survey in 1881, who hypothesized its biblical identification. The discovery of Egeria's itinerary in 1884 and of Peter the Iberian's life in 1895 were decisive for the identification of the Siyagha ruins with the sanctuary of Moses. The city of Nebo is apparently mentioned by Eusebius (*Onomast.* 136.14) under the item "Naba, a city of Reuben," which mentions a desert place called Nebo about eight miles S of Esbus. Peter the Iberian's biographer knew a village by that name, inhabited by Christians, which was on the mountain of Nebo (*Vita Petri* 85). In 1863 De Sauky noted the name Khirbet el Mukhayyat, a tell not far from Siyagha that was first explored by the Survey members in 1881 and then by Musil in 1901, who proposed the historical identification with the biblical toponym.

C. Archaeological Exploration

1. The Mountain of Nebo. The mountain Nebo is delimited on the N by wadi Ayoun Mousa and on the S by wadi Afrit, which drains to the W into the Jordan valley. The highest peak is 835 m, and while the others have slightly lower altitudes, none is lower than 700 m The two most important peaks from a historical point of view are to the N—Siyagha (710 m)—and to the SE—Mukhayyat (790 m). Perennial springs gush into the valleys. The mountain region makes a natural balcony providing a dramatic view which includes the Dead Sea and the Jordan valley; the Judean desert from Tekoa to Jerusalem; and up to the mountains of Samaria.

An early human presence is testified by dolmens and menhir, as well as by megalithic circles. An EB III tomb was found in wadi Abu en-Naml, which is a continuation of wadi Ayoun Mousa further E. There is an MB tomb on the slopes of Khirbet el-Mukhayyat, and ceramics of the LB I have been gathered near

some monuments (apparently tombs) on the ridge of el-Mushaqqar and on the N slopes of wadi Ayoun Mousa. Iron Age II sherds were gathered on the surface on the peak el-Mukhayyat.

In 1933, an excavation was conducted on Siyagha under the direction of S. Saller, assisted from 1935 by B. Bagatti. The 1933, 1935, and 1937 campaigns revealed a basilica with mosaics and a monastery that had developed around it. At the same time, a thorough exploration of the mountain was made and several churches of Khirbet el-Mukhayyat were excavated. The results of the work at Siyagha were published in 1941 and those of el-Mukhayyat in 1949. A restoration program of the sanctuary and mosaics at Siyagha was entrusted in 1963 to V. Corbo, who recovered the surface mosaics of the presbytery from the S nave and from the two lateral chapels in the S port to add new elements to the history of the sanctuary. The work, which was interrupted by the Arab-Israeli wars, resumed in 1976 under M. Piccirillo, who continues the investigations.

The original state of the constructions and the beginning of human presence on the summit of Siyagha remain problematic. In spite of some contrary indications, Piccirillo is inclined to believe that the monument as well as its occupation were established in the 4th century with the Christian sanctuary. Originally it had three apses, to which was added an atrium. The cell and the atrium were used for funeral purposes. About the time of abbot Alexis (ca. late 4th century), two funeral chapels were added on the N and S. If the Alexis remembered in the S chapel is the abbot mentioned in the inscription of the presbytery, it would appear that the mosaics were contemporary. The atrium pavement near the S wall was decorated with a braided cross, while the area before the sanctuary, on the highest point of the mountain, consisted of a courtyard surrounded on the N and S by monastery rooms.

In August of 531, the mosaicists Soelos, Kaiomos, and Elias renovated and embellished diaconicon, the baptistry, and the very elegant ciborium. The diaconicon-baptistry stood on the N side of the courtyard and was accessible by stairway in front of the sanctuary.

In 597/98, the sanctuary was completely restructured. The facade of the old church was destroyed and became the presbytery of the new basilica with three naves, which took the place of the courtyard. The mosaic of the central nave with dedicatory inscriptions has been lost. The new sanctuary included a long diaconicon chapel on the N wall which covered the old diaconicon, and a new baptistry along the S wall. During the first decade of the 7th century, the chapel of Theotocos was added. The basilica was supplied with a narthex decorated with mosaics. One approached the basilica by means of five wide steps.

The buildings associated with the renovated basilica are divided into residential blocks around paved courtyards on the N, S, and W sides, and around the church atrium. The excavations revealed that the E sector and perhaps the N one on the steep slopes of Ayoun Mousa were abandoned. The monastery included places cut into the mountain slopes, like the hermitage dug into the rock on the W side, and a complex of rooms covered with mosaics at the time of abbot Procapis (the first decade of the 6th century). For bibliography on Siyagha, see Bagatti 1936; *DBSup* 7: 1122ff.; Corbo 1967; 1970; Piccirillo 1976; Saller 1941–50; and Yonick 1967.

2. The City of Nebo: Khirbet el-Mukhayyat. In 1949 Saller and Bagatti published the mosaics and the inscriptions of four churches. In 1962 J. Ripamouti excavated a small monastery in wadi Afrit, a tower of the Iron Age, and several tombs in the necropolis of the city. From these examinations it is clear that the ruins, which had been naturally fortified, had been inhabited in Iron Age II, in the Hellenistic/Roman period (2d century B.C.–1st century A.D.), and in the Byzantine period (5th–6th centuries).

The acropolis, which was later fortified, includes the churches of St. Georges and of the martyrs Lot and Procopius. The church of St. Georges was built with donations from some village families (ca. 535), and was decorated by the mosaicists Nalium, Kiriacos, and Tomas. Greek inscriptions accompany the mosaic decorations, which include themes of hunting, vine harvest, and agriculture, with personifications of the Seasons and the Earth. There is also an inscription in Christian-Palestinian Aramaic. The church of Sts. Lot and Procopius was built with donations from various women, among whom was Mrs. Roma, and its mosaic work was done at the time of bishop John of Medeba, who resided there in 562. The church preserves one of the most beautiful designs of the Madaba School mosaicists, with symbolic scenes,

Nilotic motifs in the intercolumniation, and scenes of hunting, shepherding, and vine harvest in the central area.

The inhabited area of the slopes of wadi Afrit includes a church to which, at the time of bishop John, a chapel was added on the N side. The church of Amos and Casiseos, named after the benefactors whose names are engraved on the small pilasters of the balustrade, is probably the oldest in the village. The chapel of priest John which borders it was built over earlier remains and included new mosaics executed under the supervision of deacon Kaiomos. The mosaics were done by the same team who worked in the church of Sts. Lot and Procopius with donations from the same benefactors. Besides the usual scenes and personifications, there are two portraits of a lady and a clergyman (perhaps priest John) who took care of the work. The monastic complex, known to Arabs as el-Kenish, is made up of three interconnecting rooms forming the head of the chapel, which are on split levels on the wadi slopes. For bibliography, see Milik 1960; Piccirillo 1973; Saller 1966; 1967; and Saller and Bagatti 1949.

3. The Exploration of Wadi Ayoun Mousa. Explorations have identified the milestones from the Roman-Byzantium period which mark the road from Esbus to Livias. Near the fort of Mehatta, the stones of the sixth mile still exist, from which branches a road leading to the springs. Among the vineyards are three monastic complexes. In the summer of 1984, excavations began of the monastery of Kaiano. The church was built at the time of bishop Cyrus of Medeba (early 6th century) by Casiseus in memory of members of his family who were buried in the two tombs below. This attribution is recorded on two inscriptions in Greek and is repeated on an inscription in Christian Palestinian Aramaic. The church was rebuilt and the mosaics redone at the higher altitude with the donations from Salamanus, Paul, Maxim, and Lady Harton, probably at the end of the century. See Piccirillo 1984; Puech 1984.

D. Conclusion

From the archaeological excavation it is clear that the biblical toponym Nebo has been preserved by the city of Nebo. The summit of Siyagha acquires importance with the construction in the 4th century of the sanctuary dedicated by the Christians of the region to the memory of Moses. However, even earlier the mountain was already known by this name, as it is testified by the *Onomasticon.*

MICHELE PICCIRILLO

NEBUCHADNEZZAR (PERSON) [Heb *nĕbûkadne (ʾ)ṣṣar* (נְבוּכַדְנֶאצַּר)]. Var.

NEBUCHADREZZAR. The second king of the Chaldean dynasty of Babylonia, successor to his father Nabopolassar. Nebuchadnezzar (Akk *Nabu-kudurri-uṣur*) ruled for 43 years (605–562 B.C.). Before his reign began, he developed a considerable reputation as a field commander. In early 605 B.C. he took the initiative against Egyptian armies located south of Carchemish on the Euphrates River and won a decisive victory. After word was received of Nabopolassar's death, Nebuchadnezzar returned to Babylon to formally ascend his father's throne. He then left his capital city for Syria where, over the next three years, he forced a number of cities, including Damascus, to accept Babylonian suzerainty and provide tribute. From 601 to 598 B.C., his armies not only fought the Egyptians and their pharaoh Necho II (610–595 B.C.)

but also penetrated Arabia, where they were able to carry off much plunder. While it appears that he suffered heavy losses in the engagement with Egypt in 601 B.C., he nevertheless (in 599) prepared to deal with Syria and the kingdom of Judah, whose king Jehoiakim subsequently lost his throne. In March of 597 B.C., Nebuchadnezzar besieged Jerusalem and placed Zedekiah, Jehoiachin's uncle, in control. Josephus, in his *Jewish Antiquities*, and the OT relate an account of a second siege of Jerusalem in 586 B.C. that resulted in the destruction of Solomon's temple and the beginning of the so-called Babylonian Captivity of the Jews that was to last until 538 B.C. Unfortunately, the Babylonian Chronicle breaks off after the entry for 594 and, thus far, no corroboration of this second campaign into Judah can be found in the cuneiform sources. In fact, his later campaigns against Tyre and Egypt referred to by Josephus cannot be precisely dated or completely accounted for in the cuneiform evidence. Nebuchadnezzar died in 562 B.C. and was succeeded by his son Amel-Marduk (OT Evil-Merodach) who, according to Jer 52:31, released the imprisoned Jehoiachin, former king of Judah, and gave him an allowance.

Nebuchadnezzar's reign was also marked by significant building activity in Babylon and elsewhere. Temple restoration projects were organized throughout southern Mesopotamia. No fewer than five walls were built to enclose Babylon. The so-called "Summer Palace" was constructed in the part of the city still carrying the name "Babil." But the S Palace was the most important, not only because of its size, but because it was located near the Ishtar Gate and the Processional Way, one of the many streets that were a feature of the "inner city." Extensive work was done on the Etemenanki, the ziggurat of Babylon that found its way into the OT as the infamous Tower of Babel. According to the classical sources, Nebuchadnezzar married Amytis, daughter of the Median king Astyages, and constructed the royal gardens near the N palace. These Hanging Gardens were created to remind his wife of her mountainous homeland, and were remembered by later writers as one of the seven wonders of the ancient world.

Nebuchadnezzar's own contemporary cuneiform sources (Grayson *TCS* 5), including the important Babylonian Chronicle, are largely incomplete and provide us with relatively little information about the important events of his reign. As a consequence, we know perhaps less about the actual historical events of the reign of Nebuchadnezzar than about those associated with almost any other king of the Chaldean period. Nevertheless, he turns up in more secondary sources for the Chaldean period than any other monarch of his dynasty, and in many of them, descriptions of the king's deeds bear no relationship to historical accuracy. In addition to the books of Jeremiah, 2 Kings, 2 Chronicles and Daniel of the OT, no less than ten of the rabbinic commentaries mention his name. Also, he appears in six books of the Apocrypha, in several Arabic commentaries, and in the extant writings of classical and medieval Greek and Latin authors. These latter sources, ranging from Berossus' *Babyloniaca* to the *Chronicle* of the Venerable Bede, speak not only of Nebuchadnezzar's conquests but also place particular emphasis on his building activities in Babylon. The question, then, that must be addressed concerns the reason for his prominence in these sources. Certainly, one explanation lies in the fact that the Greek mind idolized the monumental. Any famous metropolis that could not easily be visited by anyone was a topic of great interest and it was incorporated as a noteworthy feature into the historian's work. Thus it is not surprising to find that Babylon fascinated nearly everyone. Its imposing walls and ziggurat were, literally, unreal. Since the creation itself was extraordinary, the creator of such a marvel had to be extraordinary also. Thus the classical writers characterized Nebuchadnezzar's building activities in a variety of ways. On the one hand, he emerged (in the writings of Berossus and Megasthenes) as the creator of a monument of imposing size and enduring quality who was given ability by Marduk to restore Babylon and build its walls. On the other hand, writers of the so-called "universal histories" (such as Strabo and Diodorus Siculus) lost Nebuchadnezzar's achievements among those of several other kings who together constituted an image of a "superfigure" who was either a god or godlike. Actual human achievements were cast in the guise of a superhuman with actual historical names being (if at all) of only secondary concern or consideration.

Understandably, the element of conquest was of greater concern to the Hebrews. In Nebuchadnezzar's case, the capture of the city of Jerusalem, the dismantling of the temple of Solomon, and the deportation of captives were acts never to be forgotten. The author of such horrible deeds had to be portrayed in such

a way as not only to place emphasis on destruction and wickedness but also to show that the apparent power or might of the king of Babylon was merely the result of Yahweh's punishment of the Hebrews. The book of Daniel is a case in point. The king was only a tool to be used in the teaching of a lesson. In this light, the characterization of Nebuchadnezzar had to be richly embellished with elements drawn from a number of sources, folkloristic or otherwise. In the process, however, the Hebrew writer made use of historical materials associated with the reign of Nabonidus (556–539 B.C.), not because he was confused but, rather, because of the fact that Nabonidus just happened to appear in his own and later sources in such a way as fit the situation involving Nebuchadnezzar that was being described. Nebuchadnezzar's "image" need not harmonize with historical accuracy; indeed, it knew no limits of time or space and was applicable to all periods of history.

NEBUSHAZBAN (PERSON) [Heb *nĕbûšazban* (נְבוּשַׁזְבָּן)]. One among a list of Babylonian officials who played a role in taking Jeremiah from imprisonment in the court of the guard and entrusting him to Gedeliah (Jer 39:13–14). Nebushazban held a position entitled Rabsaris. While knowledge of the functions of Babylonian officials is sketchy, the position is thought to be a high military or diplomatic office—in the Neo-Assyrian period he would have been the "chief eunuch," but according to Bright (*Jeremiah* AB, 243) this is no longer a valid designation in the Neo-Babylonian period (see also Carroll, *Jeremiah* OTL, 691). The text does not indicate the specific role Nebushazban may have played either in the capture of Jerusalem or the release of Jeremiah. Another list of Babylonian officials occurs in Jer 39:3 in which SARSECHIM is titled Rabsaris. However, it is widely held that the Hebrew of Jer 39:3 is confused, and the verse is typically reconstructed with the aid of Jer 39:13 to include Nebushazban (Bright, 243). The name in Akkadian would be *Nabˇ-šūzibanni* "Nabû deliver me" (cf. *IDB* 3: 530).

JOHN M. BRACKE

NEBUZARADAN (PERSON) [Heb *nĕbûzarʾădān* (נְבוּזַרְאֲדָן)]. A high-ranking Babylonian official who played a key role in the destruction of Jerusalem in 587 B.C.E. and subsequent deportations of portions of the Judean population (2 Kgs 25:8–11, 18–21; Jer 39: –14; 52:30). In addition, Nebuzaradan is identified as the Babylonian official who after the fall of Jerusalem participated in freeing Jeremiah from prison and entrusting him to the care of Gedeliah (Jer 39:11–14; cf. Jer 41:10; 43:6). Nebuzaradan's title was literally "chief butler" ("*rab tabbāḥîm*" cf. Gen 37:36). However, this title is clearly archaic. The functions of Nebuzaradan which are described in 2 Kings and Jeremiah indicate that he was a ranking military official. English translations often identify him as "captain of the guard" (RSV, ASV, KJV). In 2 Kgs 25:8–11, Nebuzaradan is presented as commander of the forces which invaded Jerusalem and the Babylonian official responsible for the destruction of the temple, the king's palace, and other prominent Jerusalem residences. Nebuzaradan oversaw the deportation of the Judean population following the fall of Jerusalem in 587 (2 Kgs 25:11–12, 18–21). Nebuzaradan also is mentioned in connection with a later deportation during the 23d year of Nebuchadnezzar in 582/1 B.C.E. (Carroll, *Jeremiah* OTL, 569–70).

Though the historical accuracy of the accounts of the release of Jeremiah from prison after the fall of Jerusalem are dubious (Bright, *Jeremiah* AB, 244ff; Carroll, 695ff), the narrative in Jer 39:10–14 indicates that Nebuzaradan was charged by Nebuchadnezzar to see that Jeremiah would not be harmed. Nebuzaradan entrusted Jeremiah to Gedeliah, the newly appointed Babylonian governor of Judea. Others in Judea were apparently dealt with similarly by Nebuzaradan (cf. Jer 41:10; 43:6).

Nebuzaradan's name means " 'Nabu' has given offspring." In later traditions, he is regarded as a proselyte (perhaps based on Jer 40:2–6; Carroll, 692).

NECKLACE See JEWELRY.

NECO (PERSON) [Heb *nĕkōh* (נְכֹה)]. An Egyptian Pharaoh of the 26th Dynasty (Saite), and son of its founder, Psammetichus I (Psamtik; 663–609 B.C.E.). Neco (or Necho) ruled from 609 to 595 B.C.E. He is most well known for his role in the death of Josiah of Judah at Megiddo in 609 (2 Kgs 23:28–30 = 2 Chr 35:20–27), and for his brief control over Syria-Palestine in the closing years of the 7th century B.C.E. According to Babylonian sources, he was a major foe of Babylon during the last years of Assyria in the late 7th century B.C.E.

The sources for Neco's reign are biblical, Akkadian, and classical, and so are written from a perspective which does not reflect the Egyptian point of view. They consist of part of the biblical account of the last decades of the kingdom of Judah (2 Kings 23–24), some highly emotive poetry from the prophetic tradition (Jer 46:1–12), fragments of the neo-Babylonian Chronicles, and the history of Herodotus. Of the sources, Herodotus appears to be the most suspect since he offers no account of Neco's involvement with the great events of the fall of Assyria. However, both the biblical and Akkadian records have a distinct agenda of their own and are also highly selective with their information. The biblical accounts of the involvement of Neco in the death of Josiah do not agree on all details.

From this selective data we can reconstruct the following sketchy outline of Neco's career and the events leading up to it. In the early 7th century B.C.E. Asûsûrbanipal of Assyria (ca. 668–627 B.C.E.) invaded Egypt and dispersed the princes of the Delta, among them Taharqa and Neco (I) (*ANET*, 294–97), then sacked the capital of the 25th (Ethiopian) Dynasty at Thebes. Neco I was later killed by the Ethiopian Shabaka, but his son, Psamtik I (664–610 B.C.E.), consolidated his power at the new capital Sais with the help of Ionians and Carians, and embarked on campaigns to the N and E. Conflict with Syria-Palestine culminated in the Egyptian capture of Ashdod in 635 B.C.E. (Hdt. 2:157). The son of Psamtik, Neco II, took advantage of a weakened Syria, and expanded Egyptian trade to the E and W (Hdt. 4:42). He then turned to warfare with his eastern neighbors, including the Syrians and Arabs, and captured the border town of Gaza, an event which is probably reflected in Jer 47:1–7

The activities of Neco impinge more directly upon the history of Judah with a reconstruction of the moves of Neco found in biblical and Akkadian sources. 2 Kgs 23:29–35 (= 2 Chr 35:20–36:4) refer to Neco's move to the N to aid Assyria in 609 B.C.E. From Akkadian sources (Wiseman 1956: 54–63; *ANET*, 305), we learn that Neco had taken an army N to help Aššuruballiṭ retake Harran from a small Babylonian garrison. A Babylonian counterattack, under Nabopolassar was unsuccessful, but with the Assyrians and Egyptians engaged at Harran, the Babylonian army plundered at will in N Assyria. It is possible that Aššuruballiṭ died in this campaign. In any event, he is not heard from again.

By 606 B.C.E. the Egyptian army was now at the gates of Carchemish, but not necessarily under the direct leadership of Neco, and successfully campaigned against Kimuhu (Commagene) and Qaramati. The Babylonian army, now under the crown prince Nebuchadrezzar, attacked in the following year and completely routed the Egyptian force. According to the record, "… the Egyptian army withdrew before [Nebuchadrezzar]. He accomplished their defeat and to non-existence [beat] them. As for the rest of the Egyptian army which had escaped from the defeat … the Babylonian troops overtook and defeated them so that not a single man escaped to his own country" (Wiseman 1956: 67–69). This complete annihilation of the Egyptian army was celebrated with equal glee by the prophet Jeremiah (Jer 46:2–12). In the following year Nebuchadrezzar attacked the S Levant as far as Ashkelon, but an attack on the border of Egypt was repulsed by Neco in 601 B.C.E. Neco was now confined to his former territory. "… the king of Egypt did not come again out of his land, for the king of Babylon had taken all that belonged to the king of Egypt, from the Brook of Egypt (Wadi el-Arish) to the River Euphrates" (2 Kgs 24:7).

It was during the first advance of Neco northwards (609 B.C.E.) that Josiah met him at Megiddo, and died (2 Kgs 23:29–33). After a brief reign by Josiah's son, Jehoahaz, Neco set Eliakim (Jehoiakim), Josiah's younger son, on the throne of Judah, and for the next few years Judah was a tribute-paying vassal of Egypt (2 Kgs 24:31–35). It was presumably during the advance of the Babylonian army in 604 B.C.E. to

the borders of Egypt that Jehoiakim changed his allegiance to Babylon. However, Nebuchadrezzar's failure to enter Egypt in 601 B.C.E. encouraged the king to throw off the Babylonian control (2 Kgs 24:1) and to look to the S for support, despite prophetic warnings (Jer 46:14–28). Following the repulsion of the Babylonian army, the two nations of Egypt and Babylon ceased hostilities, and nothing more is heard directly of Neco. He died in 595 B.C.E. and was succeeded by his son, Psammetichus (Psamtik) II.

In 2 Kgs 23:28–30 and clearly in 2 Chr 35:20–27 the impression is given that Josiah died in battle against Neco. Some, however, have doubted this and have argued that Neco arrested and executed Josiah (Cogan, Tadmor *2 Kings* AB, 300–301), who had gone N, not seeking battle, but simply to meet Neco. This is possible but unlikely. The reason for Josiah's move can only be guessed at, but it makes sense for him to fear both a revival of Assyrian power in Judah, and a resurgent Egypt. Strategically, a battle at Megiddo was the best option, but the strategy misfired, and like his predecessor Thutmoses III in 1468 B.C.E., Neco defeated a local force at this important site.

NEDABIAH (PERSON) [Heb *nedabyâ* (נְדַבְיָה)]. Nedabiah occurs only in 1 Chr 3:18 where he is listed as the seventh son of Jeconiah/Jehoiachin. Otherwise the name is found in extrabiblical material.

RUSSELL FULLER

NEGEB In the Bible the word "Negeb" (Heb *negeb*), or "Negev," refers to one of the main regions of Palestine S of the hill country of Judah, W of the Arabah, and NE of the Sinai peninsula (see Gen 12:9; 13:1). The Hebrew word seems to mean "dry south country." This entry contains three articles, one surveying the archaeological remains of the Negeb in the Bronze Age, the second surveying the archaeological remains in the Iron Age (Israelite period), and the third covering the Hellenistic-Roman period.

D. The Biblical Narrative
E. Summary

A. Environmental Background

The modern Negeb is a rough triangle with its E border running N from the Gulf of Aqaba/Eilat through the Arabah valley to the Dead Sea; its W border begins at the same point, running NW to Raphiah. The N border, less clearly defined, is sometimes considered coincident with the Nahal Beer-sheba drainage, although for some scholars is as far N as Kiryat Gat and the Nahal Shiqma drainage. However, the hilly regions to the E and the coastal area to the W are excluded. On a general level, the Negeb is an extension of the Arabian-Saharan subtropic desert zone and shows geographic continuity with Sinai. Although the biblical Negeb is generally considered to have incorporated the N Negeb exclusively, the Bronze Age predates most of the biblical narrative, and archaeological remains S of Beer-sheba are of considerable interest and importance.

The physical geographical-climatic divisions of the Negeb played a significant role in determining the nature of settlement in the Bronze Age, so that to a great extent regional contrasts are reflected in the archaeology. Thus settlement in the loessial semi-arid plains of the *N Negeb,* generally above the 200-mm isohyet considered to be the threshold for viable dry farming, is dominated by urban centers and associated villages. In contrast, the arid degraded steppe of the *Central Negeb.* Highlands, receiving only between 75 and 150 mm of rainfall yearly, hosted a variety of pastoral nomadic adaptations with much less emphasis on agriculture. Settlement in the harsh desert regime of the *S Negeb* (averaging less than 50 mm of rainfall per annum) is characterized by both pastoral sites and encampments and, apparently, copper mining-trade sites. Significant E–W climatic gradients also affected settlement, so that, for example, there may be major differences in settlement patterns within subregions such as the E versus W halves of the Beer-sheba Basin.

In addition to these physical geographic and climatic factors, there is accumulating evidence of Bronze Age climatic change which may have played an important influencing role in Negeb settlement. Summarizing briefly, the Chalcolithic period in the N Negeb, preceding the EB Age, shows evidence of wadi alluviation, continuing on a somewhat lesser scale into the early part of the EB This accords well with other lines of evidence from both the Negeb and the rest of the country indicating a moister phase in this period. The length of this phase is difficult to determine, but it seems to have been followed by a period of unstable climate and subsequently a period of desiccation, corresponding roughly to the EB IV and the MB This is difficult to demonstrate specifically in the Negeb, but can be seen in adjacent areas, as in Dead Sea lake levels, alluvial fills around Nahal Lachish, and arboreal pollen decline in the Upper Jordan valley. The dry period may have continued into the Iron Age.

B. Settlement History

The chronological sequence in the Negeb during the Bronze Age shows several culture-stratigraphic disconformities and gaps which vary in length and areal scale in the different subregions. See Fig. NEG.01.

1. Northern Negeb. The final phases of the Beer-sheba Chalcolithic culture, dating to ca. 3700 B.C. (calibrated radiocarbon years) are followed by a much less widespread EB I. The chronological span of this phase has not been established. In the NW Negeb, at sites such as En Besor and Gaza H, somewhat later at the Besor Bridge site, and farther N as at Tell AREINI, there seems to have been significant Egyptian presence. In the E, as at ARAD and (small tell) MALHATA, Egyptian influence seems much less evident.

The EB II shows the rise of Tell Arad as a fortified town which clearly played a central role in Negeb economic systems. There appears to be a concomitant decline in the number of smaller sites in the region.

The abandonment/destruction of Tell Arad by the end of the EB II seems to correspond to a shift in urban settlement to the N and W, to such sites as Tell el HESI and Tell HALIF, leaving the Beer-sheba basin with little evidence of occupation in this period, although Tell ʿIRA shows some EB III occupation. These sites were themselves abandoned in the EB IV; occupation seems to have been on a significantly smaller and non-urban scale in this period.

Reurbanization in the MB centered around the NW Negeb, at sites such as Tell Haror, Tell Nagila, and, closer to the coast, Tell JEMMEH and Tell el FARA (S). In the E, (large) Tell MALHATA and Tell Masos show occupations in this period. In this region one can trace a general line of cultural continuity through the LB, although the Beer-sheba basin shows little evidence of sedentary populations throughout the MB and LB

2. Central Negeb. Chalcolithic settlement is sparse, but is followed by a major peak in the EB Literally hundreds of sites, probably related to a system of sheep/goat pastoralism and copper trade, have been discovered as a result of intensive survey work. Although this peak has traditionally been attributed to the EB II to correspond to the rise of Arad as an urban center, there seems no compelling reason to reject an EB I date for some of the sites, especially in light of EB I presence in Sinai. Ceramic evidence is inconclusive, although there are indeed types which may be attributed to the EB I. Attribution to the EB III is somewhat more problematic, since contiguous regions do not show unambiguous evidence of EB III

occupation, and ceramic assemblages contain no hints of EB III. This apparent decline in settlement corresponds well with the eclipse of urban Arad and the end of Canaanite outposts in Sinai.

The tendency to see a settlement hiatus in the EB III in the Central Negeb is supported by the major changes evident in the region in the EB IV. Aside from significant transformations in material culture, including ceramics and stone and metal tools, the EB IV shows marked changes in settlement patterns. Sites such as Ein Ziq, BEER RESISIM, Mushabe Sadeh, Nahal Nizzana, Har Zayad and to a lesser extent, MOUNT YERUHAM, show densely clustered villages of up to 200 structures, far larger than sites from the EB I–II. Furthermore, the focus of settlement shifts from the W edges of the highlands along the axis from Har Karkom–Har Harif to Ramat Barnea (in the EB I–II) further N and E more to the center of the highlands in the EB IV.

Unlike the N Negeb, in the Central Negeb there is virtually no evidence of occupation, permanent, ephemeral, or otherwise, during the MB or LB. The significance of this gap has been debated, one school claiming it reflects a major demographic decline in the region (some claiming total abandonment), and a second suggesting it merely reflects reduced archaeological visibility due to a reversion to more nomadic lifestyles which left few recoverable residues.

3. Southern Negeb. In this region, as exemplified by the TIMNA‘ and Uvda valleys, a local culture, sometimes referred to as the Timnian, spans the transition from Chalcolithic to the first stages of the EB. Biqat Uvda sites attributed to the EB II also show N influences, both architecturally and in the ceramic assemblage. The problem of EB III sites is similar to that in the Central Negeb, and the general cultural discontinuity between the EB I–II and the EB IV also resembles that found farther N except in the absence of comparably large EB IV village sites.

As in the Central Negeb, in the S Negeb there is little or no evidence of “indigenous” occupation during the MB and LB However, in the Timna‘ valley impressive remains of LB Egyptian copper mining colonies have been excavated.

C. Society and Economy

During the EB I, as mentioned above, the NW Negeb shows a major Egyptian presence; interpretations range from conquest, colonization, and annexation to Egypt to trade, trade stations, and trade quarters in some sites. Material culture shows a mix of Canaanite elements with locally produced Egyptian types. Most sites have been incompletely excavated and are difficult to characterize. Nevertheless, the settlement system can be generally described as one of hamlets, villages, and perhaps a central town at Areini. Economy was based on village farming and animal husbandry, and given the Egyptian presence, trade can be assumed to have had a significant role as well. In the NE Negeb, EB I society can be characterized as one of village organization and subsistence farming. There is little evidence of large-scale Egyptian presence in the region.

It is difficult to distinguish EB I from EB II in the Central and S Negeb. However, using the local Sinai-Nawamis (Timnian) culture as a comparative base, (possible) EB I sites show affinities to those of Sinai, with hints of Egyptian influences in the ceramics and lithics. Sheep/goat husbandry was the dominant economic mode.

The concomitant development of urban (and fortified) Arad and the organized copper trade from S Sinai in the EB II had its ramifications for the entire Negeb. Egyptian influence wanes in the N, and examples of “Aradian” architecture and ceramics appear at numerous sites throughout the Negeb. The increased Canaanite presence in the Central and S Negeb, almost unquestionably stimulated by copper exploitation both in S Sinai and the Timna‘ valley, seems to have effected major growth in the pastoral nomadic population, as well as tying it more closely to the N economy. Thus, this period shows the development of a classic system of urban/village heartland and pastoral nomadic hinterland, with a typical nomadic dependence on the economies of the N. Archaeologically this is reflected in the animal bone assemblages, central pen-attached room architecture, disappearance of arrowheads from the lithic assemblages, and trade items such as some ceramics, metals, shells, and flint tools. Fields of round secondary burial tumuli are often found in association with these pastoral sites and may be a Negeb version of the Nawamis tombs

of S Sinai. Possible ritual sites, such as at Har Karkom and in the Ramon Crater (Makhtesh), have also been discovered.

This general framework seems to have collapsed with the decline of Arad and the copper trade. Reasons for this are debated and include invasion and destruction, climatic change, and internal social dissolution. It is possible that reassertion of Egyptian control over SW Sinai also played a role. EB III cities such as at Tell Halif and Tell Hesi, although showing good evidence for Egyptian trade, do not show the desert contacts evident in EB II Tell Arad. As in N Israel, the EB III in the N Negeb is dominated by complex city sites supported by agricultural hinterlands.

The decline of urban civilization in the EB IV has been interpreted as the result of invasion, internal collapse, plague, climatic catastrophe, and various combinations of these factors. EB IV sites in the Negeb as a whole are dwarfed by the large sites of the Central Negeb, which have been viewed as the remains of large seasonal base camps of pastoral nomads. However, their size, the permanent nature of the agriculture, and the proximity of the sites to water suggest they may have been occupied year-round. Typically the sites show round rooms with central columns, often attached to one another in a room-small courtyard complex. Rectangular tumuli are often associated with the larger sites. The subsistence base of this culture is difficult to reconstruct since, aside from the presence of grinding stones, there is little evidence for agriculture; from the presence of ovicaprids and pens, pastoralism clearly played a significant role. Discoveries of caches of copper ingots indicate that the metal trade persisted, if not perhaps on the same scale as in the preceding EB II. Other sites in the S Negeb are considerably smaller and more ephemeral, although showing similar material culture. In the N Negeb, sites from this period have been little investigated.

MB and LB cities in the N Negeb at Tells Masos, Malhata, Nagila, Fara (S), Haror, Sera‘, Jemmeh, etc., show impressive and sophisticated fortification systems, public structures, and possibly elite residences. These sites fall into the general mode of the MB–LB Canaanite culture of N and central Palestine. They show international connections, especially with Egypt, and sites such as Malhata, Haror, Fara (S), and Masos may be Egyptian (Hyksos) garrisons. Tombs seem to show status differences within the population. Subsistence economies were based on grain agriculture and animal husbandry. Historical and political events in this period in the N Negeb are tied to the coastal plain and the Shephelah and as such are less associated with the Negeb as a geographical unit. The transition from MB to the LB in this region is marked by the reduction of some of the Egyptian fortresses, but shows essential cultural continuity.

The S Negeb in the LB, at Timna‘, again shows Egyptian mining colonies. Of special interest is the temple to Hathor at Timna‘. These discoveries can be tied to the Egyptian control of SW Sinai.

D. The Biblical Narrative

It is difficult to tie the biblical narrative to Negeb Bronze Age sites and locations with any certainty, especially in the Central and S Negeb, where there are virtually no written records associated with the sites. Thus, in the N Negeb, Tell Haror can be reasonably associated with GERAR, and Tell el Fara (S) with Sharuhen, but even the identification of Tell Arad with its pre-Iron Age biblical counterpart is problematic, as is the identification of the biblical Besor with Wadi Gaza. In the Central Negeb, if on the one hand identifications such as Ein el Qudeirat with KADESH-BARNEA seem well founded in the Iron Age, they present problems for earlier parts of the biblical narrative. The virtual absence of remains from the MB or LB in this area (and the rest of the Central Negeb) contradict the 38-year Israelite settlement recounted in Exodus. Similar problems attend virtually all attempts to identify specific sites (especially Mt. Sinai) in the Central Negeb with places mentioned in Exodus.

E. Summary

The Negeb in the Bronze Age cannot really be seen as a stable culture-geographic unit. The nature and borders of settlement shift considerably with each archaeological phase, so that in different periods, subregions may be either “abandoned” or incorporated into the N sphere, or may undergo significant shifts in type of settlement. This dynamism, or perhaps better, instability, is a function of basic tensions in man-desert adaptations, stimulated by external historical processes and/or minor climatic changes. Tying

the biblical narrative to the archaeological history remains a speculative endeavor except in specific circumstances.

IRON AGE

Within its biblical limits, the Negeb embraced mainly the area of the Arad and Beer-sheba valleys, a flat upland region, measuring ca. 40 × 40 km, in S Judah. See Fig. NEG.02. The region is covered by loess soil and has a semi-desert climate, with an annual rainfall of around 200 mm. This amount of rainfall is insufficient for intensive, high-yield agriculture, but permits subsistence cultivation and sheepherding.

The main wadis of the biblical Negeb are Wadi Gerar and Wadi Beer-sheba. These are the two largest tributaries of Wadi Besor, which drains the region into the Mediterranean. Along these streambeds and their tributaries exist active wells, with especially high-yielding wells found in the vicinity of Tel Masos, Tel Malhata, and Tel ʿAroer in the E Negeb.

The name "Negeb" derives from the Hebrew radical *ngb,* meaning "dry" or "dryness." In biblical terminology *negeb* is often synonymous with *darom,* that is, "south" or "southern direction." Throughout the history of Israel, the Negeb has been a region of strategic importance, both as a landbridge and as a buffer between the S deserts of the Negeb mountains and the Sinai, and the settled country in the N The S deserts were often occupied by hostile wandering tribes, thrusting N into the settled country, sometimes to conquer and displace its population, and sometimes for the purpose of robbery and despoliation. In response to this threat, the central authorities established a series of fortified settlements in the Negeb during the periods of the United Monarchy and after.

The Negeb was part of the tribe of Judah, as well as of the tribe of Simeon, which had been absorbed by the latter (Josh 15:20–32; 19:1–9). The tribe of Judah also absorbed various other tribal elements, including families of the Kenites (Judg 1:16), Jerahmeelites (1 Sam 27:10), and Cherethites (1 Sam 30:14), as well as sons of Caleb (1 Sam 30:14). The Kenites apparently lived in the E Negeb, the Jerahmeelites in the SE, the Calebs in the NE, and the Cherethites in the W of the Negeb. These localities

were named after the tribal families. The area of the tribe of Simeon is generally located in the central Negeb, though some scholars place it further to the NE

The earliest occupation evidence for the Israelite period is at Tel Masos, where a settlement was established at the end of the 13th century B.C. However, no remains of Canaanite settlement from the LB have so far been discovered in the region.

This lack of evidence has created difficulties with regard to the biblical accounts of the Israelite settlement and the reported battles with the Canaanites over ARAD and HORMAH, which are described as Canaanite cities (Num 21:1–3; 33:40) and are said to have been destroyed by Joshua (Josh 12:14). Modern scholars have tried to overcome these difficulties in various ways. Glueck (1968: 114–15) suggested that the king of Arad was not the ruler of that city but merely the chieftain of a wandering tribe in the area. On the other hand, Mazar (1965) proposed to identify Arad with Tel Malhata (though no Canaanite remains from the LB were found there either). See MALHATA, TEL. The suggestion that the conquest of Arad is an etiological story reflecting the biblical writer's experience of the ruined early Canaanite city was advanced by Fritz (1966). Aharoni (*LBHG,* 215–16), based on the list of cities conquered by Shishak during his campaign in Canaan in 925 B.C., which mentions two forts named Arad (*Arad rabbâ* and *Arad lĕ bêt yeruhem,* abbreviated for *Arad lĕ bêt yerehmi*ʾ*elî*), would identify the former (*Arad rabbâ*) with Tel Arad and the latter (*Arad lĕ bêt yeruhemz*) with Tel Malhata. Naʾaman (1980) suggested a location for Ḥormah at Tel Halif (and not at Tel Masos, as frequently proposed), giving as one of his reasons for this identification that Tel Halif has an occupation stratum from the Late Canaanite period (though this stratum is not from the period of Israelite settlement, but dates to the Iron Age period).

During the period of the Judges, the Negeb was only thinly settled, with few permanent settlements. To this period are assigned stratum II at Tel Masos, strata VII–VI at BEER-SHEBA, and stratum III at Tel Esdar. See ESDAR, TEL. Recently a large settlement has been discovered E of Tel Beer-sheba on one of the tributaries of Wadi Yatir; the pottery of this settlement dates apparently to this period (11th century B.C.). The settlement was unfortified, and its population probably engaged in sheepherding, commerce, and perhaps agriculture.

The wars conducted by Saul against the Amalekites were in defense of these border settlements, which, however, were destroyed at the end of the 11th century, perhaps by one of the wandering desert tribes (like the Amalekites) pushing up from the S.

In the 10th century B.C., probably in Solomon's reign, new fortified towns were erected on the destruction layers of the previous settlements. Such new fortified towns were excavated in stratum V at Tel Beer-sheba and at Tel Malhata, while perhaps the fort of stratum at Arad belongs to this period. In their layout, planning, and construction, these new fortified towns and forts reflect the official state policy of creating a S defense line, probably as a shield against Egyptian attacks. They were, however, destroyed during Shishak's invasion of Judah.

The settlements of the Negeb highlands (some of which are described as "forts" in the research) are dated by some scholars to the 10th century and by others to the 11th century B.C. It was at this time that the Israelite population apparently began its expansion into the Negeb highlands. Some of these settlements, including those uncovered at RAMAT MATRED, were apparently civilian agricultural estates, while others probably served as garrisons for army personnel commanded to defend this border region. Given the mobile nature of warfare in the desert and against wandering tribes, one would not expect to find fortified settlements of the tower-fortress type; and accordingly the settlements that were erected in strategic places in the lowland and on hilltops are best defined as military garrison forts.

During the 8th and 9th centuries, the Judean occupation of the Negeb remained sparse, confined almost exclusively to fortified settlements, as at Beer-sheba, Tel Malhata, and Arad. In the 8th century, the Negeb borderland was the scene of many Assyrian campaigns against Philistia and Egypt; some scholars believe that in one of his campaigns against Philistia in 720 B.C., Sargon II penetrated the area of Judean settlements, inflicting widespread destruction. The destruction of stratum II at Beer-sheba may be assigned to this year, though Aharoni, the excavator of the site, attributes the destruction of this stratum to Sennacherib's campaign of 701 B.C. Others date the destruction of stratum II as late as Nebuchadnezzar.

In the 7th century, there was an upturn of settlement activity in the Judean Negeb. Only at Beer-sheba was the settlement not revived after its destruction; other destroyed sites were rebuilt. New settlements were also established during this century at Tel ʿIra, Tel Masos (a small settlement), Horvat ʿUza, and on the N outskirts of Beer-sheba. See AROER (PLACE), ʿIRA, TEL; ʿUZA, HORVAT.

The most prominent of these new settlements was the strategically sited and well-fortified settlement at Tel ʿIra, which may perhaps be identified with the biblical Ramah of the Negeb. In all probability it became the central town of the Judean Negeb, replacing Beer-sheba, which had ceased to exist at that time.

The settlement pattern of the E Negeb for this period shows great density, resulting probably from the efforts of the central administration to secure this S border against both attacks by Arab tribes and the attempts of Edom to seize parts of the Negeb, which it desired to control the transit routes to the seas. However, this defensive effort of the Judean kingdom was also aimed against Babylonia, which conducted its first military campaign against Judah at the end of the 7th century. There is increasing evidence that the Edomites actively participated in the destruction of the Judean Negeb cities, which significantly weakened Judah before its final demise. Aside from the traditional enmity that existed between Judah and Edom, which is amply attested in the Bible, there is archaeological evidence of hostile Edomite presence in the E Negeb during this period. This evidence includes pottery finds from all the mentioned Judean sites (and especially Qitmit), as well as written documents, of which the most important are Arad ostracon no. 24 (in which the commander of Arad is ordered to send reinforcements to Ramat Negeb "lest Edom arrive there") and the Edomite ostracon from Horvat ʿUza. The combined archaeological evidence can be taken to indicate that large areas of the E Negeb were annexed at the end of the First Temple period by the Edomites, who perhaps were also responsible for the destruction of the Judean cities during the Babylonian campaign against Jerusalem in 586 B.C., or a few years thereafter.

ITZHAQ BEIT-ARIEH

HELLENISTIC-ROMAN PERIOD

There is growing evidence that the history of the Nabateans in the Negeb did not begin in the Hellenistic period, as formerly thought, but began in the Persian period, if not earlier. Archaeological evidence for this period is extremely scarce, but it is scarce for the Hellenistic period as well. Outstanding are the pits in which Persian pottery was found at Horvat Ritma in the central Negeb. Theoretically these pits mark the arrival of nomadic Arabs to the central Negeb. See also NABATEANS.

In studying the history of the Arabs of the Negeb, known as "Nabatean" from the end of the 4th century B.C.E. onward, scholars have tended to discredit Herodotus' account, limiting it generally to the statement "the Arabs call Dionysus Orotalt; and Aphrodite, Alilat" (3.8). Whereas the identity of Orotalt is disputed, Alilat is identified with al-Ilat, or Allat, the chief goddess of the Nabateans. But Herodotus supplies much more information. In his discussion of Cambyses' campaign against Egypt, Herodotus paid much attention to the matter of water supply: "I will tell of a thing that but few of those who sail to Egypt have perceived. Earthen jars full of wine are brought to Egypt twice a year from all Greece and Phoenicia besides: yet one might safely say that there is not a single empty wine jar anywhere in the country … Each governor of a district must gather in all the earthen pots from his own township and carry them to those waterless lands of Syria; so the earthen pottery that is brought to Egypt and unloaded and emptied there is carried to Syria to join the stock that has already been taken there" (3.6). But the Arabs supplied Cambyses' army with water in a different way: "… the Arabian planned and did as I shall show: he filled camel-skins with water and loaded all his live camels with these; which done he drove them to the waterless land and awaited Cambyses' army" (3.9). And as is Herodotus' habit: "I must relate the less credible tale also, since they tell it. There is a great river in Arabia called Corys, issuing into the sea called

Red. From this river (it is said) the king of the Arabians carried water by a duct of sewn oxhides and of other hides of a length sufficient to reach to the dry country; and he had many tanks dug in that country to receive and keep the water. It is a twelve days' journey from that river to that desert. By three ducts (they say) he led the water to three several places" (3.9).

Herodotus' account is confirmed by the more recent and more accurate account of Hieronymus of Cardia related by Diodorus. After describing the Nabatean Arabs this source concludes, "Consequently neither the Assyrians of old, nor the kings of the Medes and Persians, nor yet those of the Macedonians have been able to enslave them, they never brought their attempts to a successful conclusion" (2.48.5). This source is more specific on the matter of water supply: "As the earth in some places is clayey and in others of soft stone, they make great excavations in it, the mouths of which they make very small, but constantly increasing the width as they dig deeper, they finally make them of such size that each side has a length of one plethrum. After filling these reservoirs with rain water, they close the openings, making them even with the ground, and they leave signs that are known to themselves but are unknown to others" (19.94.6–8). This notice not only tallies in every detail the description of the cisterns excavated by the Nabateans in the Negeb, but fits well the nature of the lithology of the central Negeb, and not of any other Nabatean region.

The only positive evidence for the presence of the Nabateans in the Negeb in the first half of the 2d century B.C.E. is the Elusa inscription, antedating by half a century the evidence from any other Nabatean site. The other finds at Elusa, Oboda, Nessana, and more recently at Moyet Awad in the Arabah and some sites along the SW shore of the Dead Sea are coins of the Hellenistic period, "Megarian" bowls and Eastern Sigillata wares, and numerous stamped jar handles originating in the Greek islands, the wine jars of Herodotus. As the Nabateans refrained from drinking wine at this early period (cf. Diod. 19.94.3–4), these wine jars were an improvement on the more perishable skins which they used for the transportation of water on their journeys in the desert.

On no site in the central Negeb were discovered any traces of buildings which date earlier than the last quarter of the 1st century B.C.E. This again agrees with Hieronymus'-Diodorus' description: "It is their custom neither to sow corn, plant fruit-bearing trees, use wine, nor construct any house; if anyone is found acting contrary to this, death is his penalty" (19.94.3–4). Only very recently have archaeologists been able to find traces of Nabatean tent encampments of this period.

Most of the 1st century B.C.E. is not represented by any finds in the whole of the central Negeb. The retreat of the Nabateans from the Negeb was an outcome of the aggressive policy of Alexander Jannaeus and his predecessors. Not only did Nabateans lose territories which they held in Moab, but they also lost the harbors of Gaza, Anthedon, Raphia, and Rhinocorura (cf. *Ant* 13.395). It is only with the ascendancy of John Hyrcanus II that the fortunes of the Nabateans began to change (Ant. 14.18). Herod apparently restored to the Nabateans use of the S harbors, which brought a new prosperity, and marks the beginning of the Middle Nabatean Period (30 B.C.E.–50 C.E.). During this period the Petra-Oboda-Gaza road was built. The road follows Nahal Neqarot (Wadi es-Siq) necessitating the construction of a caravanserai at Moyet Awad, and forts and water stations at other locations. In some sections the road was cleared of stones and marked by curbstones and unepigraphical milestones. A secondary road led from Petra to Mampsis, joining the Oboda-Gaza road NE of Oboda. This road, too, had a caravansarai and minor stops and water stations along its course. Thus the region which during the Early Nabatean Period had only a few sites, developed no less than six. The main caravan stop, and the backbone of the whole system, must have been at Oboda, and included a large temple, which in addition to its regular religious functions apparently served also as a bank. The army which protected the whole region was stationed in the large camp, and large camel sheds supplied the necessary vehicles for the caravan traffic and its protection. Another temple apparently existed at Elusa, a caravan halt at Mampsis, and a fort at Nessana. The noncombatant population must still have lived in tent encampments, traces of which have been discovered at Elusa, Oboda, and Biq‘at Uvdah, NW of Eilat, from which a road branched off to Nessana and Gaza. The destruction of this system apparently occurred in 50 C.E., when newly invading Arab tribes, who had been weakened by the loss of international spice trade to the Romans, flooded the Nabatean realm. This

historical picture, corroborated by the archaeological finds at Oboda and other Nabatean sites in the Negeb, is now confirmed by the history of Nabatean coinage, which showed a steep decline in silver content in 50 C.E.

The reign of Malichus II (40–70 C.E.) seems to have been a period of decline in the Negeb, as it was elsewhere in the Nabatean realm. The accession to the throne of Rabel II marks the beginning of a new prosperity. The Nabateans, who lost a large share of trade, began to develop agriculture. At first this was based on horse breeding, apparently developing the Arabian horse which became renowned in subsequent centuries. This is mainly attested at Mampsis, but similar stables were found also at Sobata and Oboda. Barley was grown for food in the surrounding valleys. At the beginning the Nabateans terraced narrow valleys only, but they later cultivated wider valleys, depending on the supply of rainwater from much larger catchment areas. This new development was so important that the event was celebrated by religious festivities, and the king was honored by a new title: "He Who Brought Life and Deliverance to His People," which is attested on numerous inscriptions at Oboda and the surrounding hinterland. During this period the Nabateans began to construct spacious dwellings to compensate for the loss of freedom they had enjoyed with their tents. Nothing portrays this change of life better than the production of pottery. The luxurious Middle Nabatean wares, which equaled the quality of their sumptuous architecture, gave way to pottery types better suited to rich farmers. The annexation of the Nabatean kingdom to the Roman empire on March 22, 106 C.E., did not adversely affect the prosperity of the Nabatean Negeb. The construction by Trajan of a new road to connect the *Via Nova* with a road from Jerusalem, Hebron, and Mampsis must have contributed to the well-being of the Negeb. This economic boom continued well into the 3d century C.E., when Palestine was subdivided into three separate provinces and the Negeb formed the backbone of the large new *Palestina Tertia.* Most of the evidence for this period still comes from Oboda. Although Nabatean-Aramaic gave way to Greek, and the old Semitic cults assumed a Roman disguise, the builders of the new temple at Oboda all bore Nabatean names. King Oboda, after whom the city was named, and who was deified after his death, was venerated at this temple as Zeus-Obodas. The work of constructing a new quarter at Oboda was entrusted to a Nabatean architect from Petra, who followed assiduously Nabatean methods of planning and construction. Although the evidence is not as decisive as at Oboda, this prosperity in the post-Nabatean Period was shared also by Elusa, Mampsis, Sobata, and Ruheibah.

The accession to the throne of Diocletian, and the great interest which he took in the E, was a turning point for the towns of the central Negeb. The Nabateans, who were at home in the desert, felt it unnecessary to protect their towns with walls. On the other hand, Diocletian, who consolidated the *limes Palaestinae* along the *Via Nova*,found it necessary to fortify Mampsis, which was the weakest link in the system of the Negeb. Citadels for the protection of the towns people were built at Oboda and at Mampsis. The construction of the wall at Mampsis became an obstacle to further urban development. The policy instituted by Diocletian was apparently followed also by Constantine the Great and his house. In the second half of the 4th century C.E. began the struggle between Semitic-Roman paganism and Christianity. Soon after the middle of the century the first churches were built at Oboda, Mampsis, Sobata, and Nessana. Literary evidence shows that Elusa played an important role in the advent of Christianity, and that opposition to the new religion was stronger in this large town, which had been a center of Roman cultural life. From a study of personal names, it is clear that even in this late period the Nabateans were still the dominant element in local population, and that even in the Church they contributed the rank and file.

Agriculture formed the basis of the local economy, as seen in the large number of papyri found at Nessana which refer to the cultivation of wheat, barley, vegetables, and fruit trees of various kinds. Archaeological data indicate that olive oil production and wine also contributed significantly to the prosperity. The climatic conditions of the region made it possible to produce wine of a quality good enough to compete with the wines of S Europe. Local trade and the pilgrimages to the holy places in S Sinai were factors of lesser economic importance.

In 636 C.E. the Negeb was conquered by the Moslems. Mampsis was apparently destroyed in an earlier raid, and Oboda, which apparently put up a strong opposition, did not survive this conquest. However, the towns in the W part of the region survived at least until the end of the 7th century C.E. Although there was apparently no direct pressure, the necessity to pay heavy taxes for the upkeep of the Islamic army and population weakened these towns, and disturbed the delicate balance between survival and ruin in the Negeb. Another factor which might have sealed the fate of the towns of the Negeb was the loss of a market for the main product of the towns of the Negeb—wine.

AVRAHAM NEGEV

NEHELAM (PLACE) [Heb *hanneḥĕlāmî* (הַנֶּחֱלָמִי)]. An appellation of Shemaiah, a prophet among the exiles in Babylon who wrote a letter to the religious officials of Jerusalem in which he opposes Jeremiah (Jer 29:24, 31–32). Though the RSV treats this as a proper name, the Hebrew does not seem clearly to support this interpretation. The word in Hebrew is a gentilic formation and appears most likely to be an adjective which modifies the proper name "Shemaiah." A solution to the problem may be found in a possible parallelism between Shemaiah the Nehelam and Jeremiah of Anathoth (Jer 29:24–28). Anathoth in Hebrew also has the gentilic formation—Jeremiah of Anathoth (Heb *bĕyirmĕyāhû hā·ănnĕtōtî;* Jer 29:27). This might indicate that Nehelam is a place name, perhaps the town of Shemaiah's origin. However, no such place is known or referred to elsewhere in the OT, though this does not exclude the possibility that Nehelam refers to an obscure location. Muilenberg (*IDB* 3: 532–33) notes that LXX B reads *ailameiten* (Elamite), but also suggests that Nehelam may be a family name. Carroll (*Jeremiah* OTL, 564) proposes that Nehelam is a "literary creation" to set Shemaiah the Nehelam opposite Jeremiah of Anathoth. Yaure (1960: 306–309), taking Nehelam as a *Nip·al* form of *ḥlm* "to dream," proposes that Nehelam means "dreamer" (i.e., he is a prophet whose inspiration is derived from dreams). So, Shemaiah is a prototype of Elymas in Acts 13:6–12 However, this proposal has found little support (cf. Carroll, 564; Bright *Jeremiah* AB, 209; *IDB* 3: 533).

JOHN M. BRACKE

NEHEMIAH (PERSON) [Heb *nĕḥemĕyâ* (נְחֶמְיָה)]. 1. A leader of the Jewish community who returned to Palestine with Zerubbabel shortly after 538 B.C.E., the end of the Babylonian exile. Ezra 2:2 lists this Nehemiah (Gk *neemias/neemios*) third in a list of twelve names, immediately after the names of Zerubbabel and Joshua. This order is followed in the parallel passages Neh 7:7 (Gk *neemia*) and 1 Esdr 5:8 (Gk *neemiou/neemias*).

2. Neh 3:16 mentions one "Nehemiah the son of Azbuk, ruler of half the district of Beth-zur." It is unclear whether this Nehemiah or his father ruled this half-province. He worked under the direction of Nehemiah ben-Hacaliah on the project to rebuild the city walls of Jerusalem in the 5th century B.C.E. STEVEN R. SWANSON

3. The son of Hacaliah who is the central figure in the book of Nehemiah and one of the most convincing human personalities in the Bible. The dating of his primary reform activity begins in 445 B.C., the 20th year of Artaxerxes (Neh 1:1; 2:1)—although Josephus refers to Xerxes' 25th year (*Ant* 11.5 §168) and his 28th year (§179; see note in LCL 6: 400). In contrast with Ezra, Nehemiah "was a successful man of action. Through his energy, unselfishness, and cleverness he brought new life to the dying Jewish community in Jerusalem" (Pfeiffer *IDB* 3: 534). This convincingness does not mean that every detail in his transmitted history is unambiguous. Around every great leader cluster legends and midrash. See EZRA-NEHEMIAH, BOOKS OF.

Already in Neh 1:1–2:9 the colorful presentation of Nehemiah's emergence leaves us with one massive uncertainty. In 1:1 was he just "cupbearer," or table servant to the king? The "cupbearer" attested throughout centuries of Persian history and legend was a favorite and trusted youthful official. Such a position would indeed best account for the instant success of his carefully nurtured attack on the monarch's resistance (1:4; 2:1–4; the king's only reply was "How soon will you come back?"). It would also account for the prompt success of his wall building (6:15) and whatever else he later set his hand to (5:6ff; 13:8, 10, 15, 23).

The "honorable and privileged" dignity of the cupbearer ("wine taster," or at least trusted authority responsible for the king's nutriment reaching him free of poisoning) to Van den Born (*EDB,* 1626–27) "seems to suggest that he was a eunuch." But that was the requirement for the quite different but equally trusted office which we still today call "chamberlain"; though Myers (*Ezra, Nehemiah* AB) from 2:6 concludes that Nehemiah's duties extended to the harem. The real reason for suspecting Nehemiah was a eunuch is of a quite different order. "Eunuch," not cupbearer, is the reading of the usually more reliable Greek texts corresponding to Neh 1:11 (i.e., Esdras-B 11:11 except Alexandrinus and a Sinaiticus corrector). The confusion is quickly seen to be an inner Greek problem; though *oinochoos,* "wine pourer," corresponds to Hebrew *masûqeh* (causative participle of *šāqāh,* "to drink"), it strongly resembles *euno-echos,* "bed-holder." Since "eunuch" was the name of an official probably higher and better known in Greek circles, we may suppose that this term was chosen simply as "trusted high official" without anatomical implications: either as the most primitive rendition of *masûqeh,* or as an early scribal correction of *oinochoos* which won almost complete acceptance. In any case "eunuch" as a physical condition is totally alien to the exuberance and forcefulness shown throughout Nehemiah's career (Yamauchi 1980).

Another dilemma with which the very opening of the book of Nehemiah confronts us is momentous in itself but minor for our portrayal of his personality. The event which prompted his taking action (1:3) was "the wall of Jerusalem broken down and its gates destroyed by fire." Since this is last minute news brought by his brother Hanani, the reference can hardly be to Nebuchadnezzar's destruction of Jerusalem in 2 Chr 36:17 (cf. 2 Kgs 25:10). This wall destroyed only in 446 has been equated to a rebuilding already undertaken by the temple builders (Ezra 4:12, related rather to Ezra himself [rejected by Williamson 1987:75; *Ezra, Nehemiah* WBC, 59] or to rebellions in the area of Judah attested in secular history (Morgenstern 1957). While keeping open the relevance of these efforts, we see no imperative need to suppose that the Jerusalem disaster which grieved Nehemiah was anything but a local mishap without any international or even political involvements.

Like Gelin in his thumbnail sketch, which is still the best (1960: 23, summarized in *JBC* 24: 100 and *NJBC*), we may take up at once the aspect of Nehemiah's character which most calls for attention and debate. Was he really "vain" (2:10, 18; 5:15; 6:11)? But to "explosively emotional" we will add a more challenging question which Gelin's summary ignores. Was not Nehemiah's "vanity" ultimately a form of separatism and xenophobia?—doubtless an understandable form, as exemplified in an overachiever, yet one which may give us an important key to the place he has earned in history.

His characterization of two Jerusalem locals as "outsiders," Sanballat the Horonite and his toady, Tobiah the Ammonite (2:10, 19), is followed by a confidence in God which excludes that they can "have any part or justification or *zikkārôn* ."*Zikkārôn* can mean remembrance, memoir, or monument. Does it hint that Nehemiah is already thinking of the wall as a "monument more enduring than bronze" to his own achievement, or at least to that of the returned exiles? Verse 20 contains a clear implication that the never exiled Jerusalemites might have already wanted, or would eventually desire, to share in the wall building.

Such a desire is admittedly far clearer in Ezra 4:2 Though that verse in its context is related not to the wall but to the Temple building of a century earlier, the continuation is a letter to Artaxerxes protesting *wall* building in Jerusalem (vv 12 and 16; *city* rebuilding in Artaxerxes' answer in v 21). Thus Ezra 4, at least vv 7–22, may well be seen as belonging to the Nehemiah context (6:7 "report to the king"; the alternative transposition of Ezra 4 to Ezra 10, perhaps echoing 9:9, "protection in Judah and Jerusalem," has to suppose that part of Ezra's failure lay in trying to build a wall, *the*wall *later*destroyed [Neh 1:3]).

A radical change within the Sanballat-Tobiah party is recorded: though Nehemiah 4 shows only their taunts and opposition, in Nehemiah 6 they are desirous of dialogue. Neh 6:2 interprets this offer a priori as a plot, and Neh 6:10–13 makes much more explicit a more sinister plot, but one only suspected (though prudently) by Nehemiah. If, however, we make a judicious effort to focus on only the recorded facts, apart from Nehemiah's frankly hostile innuendos, we may find it possible and plausible to maintain that the local low-class inhabitants of Jerusalem were just as Judean and Yahweh-worshiping as those who returned from exile, though mingled among them and in administrative positions were many "Samaritans" (name applicable in general to non-exiled Judah, made subordinate to the province of Samaria). Of these in turn, *some* (though hardly a [Beth-]Horonite from the Samaria-Judah border, or even an Ammonite) might have been in part descendants of the Mesopotamians installed under Sargon in 721 (2 Kgs 17:24; cf. Ezra 4:10). These merit also elsewhere in the Bible the taunt of "foreign captives" (Neh 4:4). The intrenched Jerusalemites, rabble and leaders, despised the wall building project as hopeless at first, then came to fear it as a threat to their "Persian peace," but finally, seeing that it was likely to succeed, sued to have a part in it. But Nehemiah, more than ever after seeing how successful he had been in the face of their opposition, refused to allow all the "people of God in Jerusalem" to unite, and stuck intransigently to his claim that only the upper-class Judeans who had suffered in Babylon were the true Jews.

If this reconstruction of the facts is at least to some extent admissible, it would account for the praise of Nehemiah without Ezra in Sir 49:11 (especially in Cazelles' [1954] view that Ezra's aim was to conciliate the "Samaritans" not only of Judah, and thus bring them to accept "his" Pentateuch). But the more permanent Ezra-glorifying tradition in *m. ʾAbot* 1:1 (Ezra's wall was the Law) fitted a situation in which the "true Judeans" no longer wielded the power, but lived as a resistant minority in the midst of encroaching "non-observers."

To this question of how (pardonably) overbearing or "vain" Nehemiah really was, a further answer is provided by the "Nehemiah-memoir" thesis (von Rad 1964). The (apparent) fact that he wrote his own memoirs at all, and in such a style as to put his achievements in so favorable a light, must indeed be taken to imply a personality forceful and self-assured like Caesar or Churchill; his record, like theirs, is not only justified by the facts it narrates, but also shows considerable literary skill. In comparison with so plausible a "Nehemiah-memoir" thesis, there is hardly likelihood of any "Ezra-memoir" at all.

A further question then becomes relevant: whether the "Nehemiah-memoir" was a religious duty to be walled up in a shrine like our "cornerstone documents," destined to be seen by human eye either never or long past the time for vanity. Though some such religious intention may have been invoked, it seems safe to say that whoever wrote the "Nehemiah-memoir" in first person was guided chiefly by an eye on an immediate readership. On the other hand, the prayerful doxologies of Neh 1:11; 5:19; 6:9, 14; 13:14, 21, while losing nothing of their touching personal sincerity, fit the hypothesis of a secret votive document for the Temple even better than a report to the public.

Amazingly, throughout this belligerent account up through Neh 5:13 the only title under which Nehemiah postures proudly is "cupbearer," or rather his own personal prowess and leaderliness. Also in his admirable but autocratic intervention against usury abuses (5:1–13, where v 10 admits that he himself

is one of the guilty), he invokes no title or authority whatever except common sense and good-natured bullying (doubtless as in Neh 13:25). But with Neh 5:14 we learn for the first time, and quite obliquely from a date *twelve years later* than the events described, that he had been appointed not Judah's governor but "*their* governor (*peḥām*) in the land of Judah." Yet in Neh 7:2 he puts his brother Hanani in charge of Jerusalem, not "as governor" nor "to take place as governor," along with Hananiah (who was already *śar* of the citadel, not *peḥâ*, though similarly rendered "governor" in RSV). Only dubiously as associated with Ezra's speech in Neh 8:9, Nehemiah is called *tiršātā*› (not *peḥâ*), echoed even more dubiously in Neh 10:2—Eng v 1

The repopulating of Jerusalem in Neh 11:1, confidently attributed by Pfeiffer (*IDB* 3: 534) to Nehemiah, is in fact an anonymous popular move, mentioning neither him nor any title. And the Zerubbabel-era genealogies which follow end up mysteriously in 12:26, "These were in the days of Joiakim the son of Jeshua son of Jozadak and in the days of Nehemiah the *peḥâ* and of Ezra the priest, the scribe." What follows in Neh 12:27–30 is the dedication of the wall, exactly what we would have expected at Neh 7:1—but here with no mention of Nehemiah at all in either the third (as since 8:9) or first person. But suddenly in 12:31, in the first person Nehemiah intervenes to direct the procession upon the wall (then v 47 mentions him only noncommittally and in the third person). And what follows in 13:1–5 was while Nehemiah (in first person) was not in Jerusalem. Upon his return (with the king's permission, but no mention of old or new title other than his customary bumptiousness [13:6]) he angrily throws furniture around and gets Tobiah thrown out of his choice Temple quarters. He further defends Levite perquisites, but as fact finder and public-spirited citizen accusing the officials (*rîb, sĕgānîm,* 13:11; "I appointed" treasurers in 13:13 MT is an emendation unacknowledged in RSV 13:12). Again in 13:17 he accuses the nobles (*rîb, ḥōrîm*), and takes the law into his own hands—with his personal servants) (v 19), and threatening bodily violence (v 21). All these virtuous even if not nonviolent activities of Nehemiah are as much in the religious as in the civil sphere, and despite some verbs of commanding in the first person account, no mention is made of a title or office.

In the whole book it is patent that the personality and leadership of Nehemiah were relatively independent, not indeed of the Persian king's authority and good will, but of whatever official title Nehemiah may have had; indeed this fact enhances his stature as human being and achiever. Without reopening the debate about civil authority titles in Ezra-Nehemiah (North 1972; see also EZRA-NEHEMIAH, BOOKS OF; McEvenue 1981; Nober 1961), and while noting respectfully that our claim of no civil authority function at all has met with less acceptance for Nehemiah than for Ezra, we may firmly reiterate two basic issues of common sense and universal experience hardly overcome by the exceedingly problematical philology of *peḥâ* and *tiršātā*›*:* (1) Human nature tends inexorably to give people on a higher social level a title safely nobler than what the facts require; and to retain temporary titles long after their actual function. (2) The work Nehemiah is shown doing is that of a building contractor, an amateur but highly endowed contractor; this work itself involved insistence on justice and brotherhood (Nehemiah 5); and his success with these rather religious aspects of his proper task impelled him toward cognate ventures in which either he himself seems to recognize he was overstepping whatever authority he had (e.g., the sabbath in 13:19), or the text is dubious as to whether Ezra or another is acting (mixed marriages 10:1—Eng9:38; 13:1–3). As for Neh 5:14, its chief thrust is his justified boast that he did not "eat like a lord" (*peḥâ*) among his collaborators; and the undeniably arresting phrase "from the time I was appointed their *peḥâ*" loses much of its force in view of the debates aroused by 5:15 inserting Nehemiah into a series of former governors (including Zerubbabel?; note also Ginzberg 1947:4.352 "Zerubbabel *was*Nehemiah"; and also Smitten's (1974) defense and Emerton's (1972: 177–79) rejection of Kellermann's (1967: 154–59) claim that Nehemiah was of Davidic lineage). Ultimately even if Nehemiah had some genuine civil function, it plays a negligibly slight role in evaluating the genial personality and self-sacrificing religious devotedness conspicuous in the actual work which he is shown doing.

NEHEMIAH, BOOK OF See EZRA-NEHEMIAH, BOOKS OF.

NEHUM (PERSON) [Heb *nĕhûm* (נְהוּם)]. One of the first citizens to return to Judah from the captivity of the Babylonian exile (Neh 7:7). This name may, however, be a scribal error. We expect the name "Rehum," which is found in a parallel list in Ezra 2:2 (cf. 1 Esdr 5:8). Note that this is the only occurrence of the name "Nehum," while "Rehum" occurs quite frequently in the books of Ezra and Nehemiah.
NORA A. WILLIAMS

NEHUSHTA (PERSON) [Heb *nĕḥuštā*› (נְחֻשְׁתָּא)]. Mother of Jehoiachin, King of Judah (2 Kgs 24:8). Nehushta's name occurs in the regnal formula of her son in 2 Kings, but is missing from the parallel account in 2 Chr 36:9 She is the daughter of Elnathan, and one of three queen mothers from Jerusalem (the others being Jecoliah and Jehoaddan). Nehushta is referred to, but not named, in two lists of captives taken from Jerusalem by Nebuchadrezzar in 598/597 B.C.E. (2 Kgs 24:12, 15) and in two passages in Jeremiah (13:18; 29:2). In the latter she is given the title *gebira* ("great lady"), which designates her official position at court. See also JEHOIACHIN; QUEEN.
LINDA S. SCHEARING

NEHUSHTAN [Heb *nĕḥūštān* (נְחֻשְׁתָּן)]. See SERPENT, BRONZE; HEZEKIAH.

NEIEL (PLACE) [Heb *nĕ‹ê›ēl* (נְעִיאֵל)]. A town in the allotment of Asher (Josh 19:27). Most scholars identify Neiel with Khirbet Ya‹nin (M.R. 171255), on the E edge of the Plain of Acco (see *LBHG,* 382).
DAVID SALTER WILLIAMS

NEKODA (PERSON) [Heb *nĕqôdā*› (נְקוֹדָא)]. **1.** Eponymous ancestor of a family of Nethinim, or temple servants (Ezra 2:48). The "sons of Nekoda" (LXX *nekōda*) returned from captivity in Babylon to Jerusalem and Judah with Zerubbabel. They are mentioned in the parallel lists in Neh 7:50 and in 1 Esdr 5:31 (Gk *noeba*). Suggestions for the meaning of the name link it with *nāqōd* "speckled, spotted" or Akk *niqūdu* "moorhen" (*HALAT* 2: 680; cf. IPN 225).

2. Eponymous ancestor of a family of returned exiles (Ezra 2:60). The "sons of Nekoda" were unable to prove their Israelite descent. Probably their family records had been lost or destroyed in the exile (see Fensham *Ezra Nehemiah* NICOT, 55). They were among a group of families that returned under Zerubbabel from exile in Telmelah, Telharsha, Cherub, Addan, and Immer (Ezra 2:59–63). The name also appears in the parallel lists in Neh 7:62 and in 1 Esdr 5:37 (Gk *nekōdan*).

KENNETH HUGH CUFFEY

NEMUEL (PERSON) [Heb *nĕmû᾽ēl* (נְמוּאֵל)]. Var. JEMUEL NEMUELITE. Name of two individuals in the Hebrew Bible. The exact meaning of the "Nemuel" or "Jemuel" is uncertain (Fowler *TPNAH,* 121, 123).

1. A head of the tribe of Reuben (Num 26:9), and brother of Dathan and Abiram.

2. A Simeonite and ancestor of the Nemuelites (Num 26:12; 1 Chr 4:24). Nemuel is also called Jemuel in Gen 46:10 and Exod 6:15 This name change probably results from scribal confusion over the Heb *nun* and *yod.* Nemuel is the preferred reading.

JOEL C. SLAYTON

NEOLITHIC See PREHISTORY.

NEPHEG (PERSON) [Heb *nepeg* (נֶפֶג)]. **1.** A Levite included in the genealogy that functions to legitimate Moses and Aaron (Exod 6:14–27). His father was Izhar, descended from Levi's son Kohath, and his brothers were Korah and Zichri (6:21).

2. One of thirteen sons of David listed as having been born to David's wives in Jerusalem (2 Sam 5:15; 1 Chr 3:7; 14:6), in addition to his six sons born at Hebron. His mother's name is unknown: four of the thirteen were Bathsheba's sons; the remainder were born to unnamed wives. Besides these thirteen, David had numerous (unnamed) sons born to his concubines, according to 1 Chr 3:9 The occurrence of Nepheg's name after NOGAH in both lists in 1 Chronicles and the latter's absence from the MT in Samuel has led to the suggestion that the name Nogah was a corruption of Nepheg. See also DAVID, SONS OF.

DAVID M. HOWARD, JR.

NEPHILIM [Heb *nĕpilîm* (נְפִלִים)]. A group of antediluvians who were the product of the union of the sons of God (*hā᾽ĕlōhîm*) with the daughters of humans (*hā᾽ādām*) (Gen 6:1–4). They are described as heroic (*hāggibbōrîm*) and famous (*᾽anšê hāššēm*). In Genesis 6, the Nephilim are connected with the multiplication of humanity on the face of the earth (v 1) and with the evil of humanity which brings about God's judgment in the form of the flood (vv 5–7). Verse 4 includes a reference to later (postdiluvian) Nephilim. The majority of the spies who were sent by Joshua to spy out Canaan reported giants whom they called Nephilim, and who are designated in the account as the sons of Anak (Num 13:33). The reference to Nephilim as ancient dead warriors in Ezek 32:27 requires a textual change from the MT's *nōpĕlîm* (Zimmerli, *Ezekiel* Hermeneia, 168, 176; Hendel 1987a: 22).

Their heroic attributes were noted in translating Nephilim in the versions. Both the LXX and the Vulgate render the expression as *gigantes.* The Syriac has *gnbr᾽.* The Samaritan Pentateuch and Targums also follow this custom (Alexander 1972), using either *gybryh* (Samaritan), *gybrym* (Neofiti), or *gbr᾽* (Onkelos). *Targum Pseudo-Jonathan* translates Nephilim with the names of the fallen angels (*šmḥz᾽y w᾽z᾽l*) mentioned in *1 Enoch* as leading the rebellion. Nephilim are referred to as "giants" in the Apocrypha/Pseudepigrapha, usually with reference to their pride and wickedness, and to God's judgment upon them (e.g., Bar 3:26–28). The fullest development appears in *1 Enoch* 6–19, and this is followed by allusions in the Dead Sea Scrolls, the Midrashim, and the NT (Dimant 1974; Hanson 1977).

2 Peter 2:4 and Jude 6 are the NT allusions to the Nephilim. Here they are identified as angels who rebelled and have been imprisoned by God. They lead a list of biblical examples of rebels and their punishments current in contemporary Jewish paraenisis (Bauckham, *Jude, 2 Peter* WBC, 46–47). Although elements of Greek Titan mythology have been identified here and in Gen 6:1–4 (Kraeling 1947, who separates the *gibbōrîm* from the Nephilim), the presence of a common source for the traditions of *1 Enoch* and those of the Greek world is more likely (Bauckham, *Jude, 2 Peter* WBC, 50–53, 248–49). Speiser (*Genesis* AB, 46) identifies this source as Hurrian. Kilmer (1987) has sought to identify the Nephilim with the *apkallu* of Mesopotamian tradition.

The root *npl,* "to fall," seems to be the basis of Nephilim, i.e., "the fallen ones." This may refer to their fall from heaven, their "fall" into sin, or their fallen status as dead at the time when the events are recorded. The earliest use of the W Semitic *npl* supports the last option. It occurs in a military context, the 14th century B.C.E. letter of Lab'ayu of Shechem to the pharaoh (EA 252, lines 25–27), "Fall under them that they may smite you!" The sons of Anak, who are identified with the later Nephilim in Num 13:33, are also identified with the Rephaim in Deut 2:11 As the Rephaim are understood as ancient warriors slain by Israel and others, so the Nephilim, "the fallen ones," are those who are doomed to die.

Source critics have ascribed Gen 6:1–4 to J, while recognizing it as uncharacteristic (*WPGI*, 329; Gunkel, *Genesis* BKAT, 52; Noth 1948: 29). Recent studies have ascribed the text to a Canaanite origin (Westermann, *Genesis* BKAT, 499–500) or to later editorial activity (Scharbert 1967: 66–78; Schreiner 1981: 65–74). Hendel (1987a; 1987b) argues that the improper mating of deities and humans was the original reason for the Genesis flood. However, later additions to this tradition changed the reason to the matter of a general evil in the imaginations of humanity.

As fathers of the Nephilim, the identity of the sons of God is important in understanding whether the Nephilim of Genesis 6 were semi-divine or completely human. The sons of God (*hā›ĕlōhîm*) have been understood as nonhumans (gods, angels), rulers, or descendants of Seth. The first interpretation is supported by the term's use in Ugaritic myths, in the OT (Ps 29:1; Job 1:6), and in the intertestamental and NT material noted above. It allows for a real contrast with "daughters of men," which would be nonspecific if it were to mean daughters of nonrulers or daughters of the descendants of Cain (Cassuto 1973; van Gemeren 1980–81; Wenham, *Genesis 1–15* WBC, 139–40). Further, the mating of deities with women appears in ANE and Greek mythology (Bartelmus 1979: 36–78). Support of identification with rulers may be found in a similar designation given to the Ugaritic king Keret and to the Davidic king (2 Sam 7:14; Ps 2:7), and in traditional Jewish exegesis (Alexander 1972; Tsukimoto 1979: 19–21). The Sethite interpretation has few modern adherents (Junker 1935; for a reversal of this argument, in which the Sethites are the daughters of man, cf. Eslinger 1979).

For Wenham (*Genesis 1–15* WBC, 141), the key seems to be the limitation of human life span in v 3 The daughters of men willingly cohabited with divine beings in order to produce offspring who would gain much longer life spans and perhaps achieve immortality. By rejecting this attempt, God has established a rigid distinction between the mortal and the immortal (Clines 1979: 33–37; Petersen 1979: 58– 59; Schreiner 1981: 70–72). The mating of the sons of God with the daughters of men became but one example of the "cosmic imbalance" created in Genesis 1–6

RICHARD S. HESS

NEPHISIM (PERSON) [Heb *nĕpîsîm* (נְפִיסִים)]. Var. NEPHUSHESIM. Eponymous ancestor of a family of Nethinim, or temple servants (Ezra 2:50; K *nĕpîsîm*, Q *nĕpûsîm; naphisōn*). The "sons of Nephisim" returned from exile in Babylon to Jerusalem and Judah under Zerubbabel. The name occurs in 1 Esdr 5:31 (Gk *naphisi*). In the parallel list in Neh 7:52 it appears as Nephushesim (Heb K *nĕpûššîm,* Q *nĕpîššîm; nephōsasim*). The form in Nehemiah could result from a superimposition of two variant spellings on each other, one with *ś* (MT understands this as *sû*), the other with *s* (*IDB* 3: 536). It is also possible that an *s* was placed as a superscript over *ś* to distinguish it from *š.* A scribe who was not acquainted with this device then incorporated the superscript letter into the text (Honeyman 1944: 47–48). The group may be descended from the Ishmaelite clan of Naphish (cf. Gen 25:15; cf. *HALAT* 2: 669–70).

KENNETH H. CUFFEY

NEPHTHAR [Gk *nephthar* (νεφθαρ)]. The name that Nehemiah and his associates gave to the precious thick liquid that ignited the sacred fire of the altar sacrifices (2 Macc 1:36). The author relates it to the common word "naphtha," and erroneously implies that it has a Hebrew etymology, perhaps from *pṭr,* "separate, set free," and, by extension [?], "purify" (Goldstein, *2 Maccabees* AB, 181). See also NAPHTHA.
GARY A. HERION

NEPHTOAH (PLACE) [Heb *neptôaḥ* (נֶפְתּוֹחַ)]. A location on the boundary between Judah and Benjamin (Josh 15:9; 18:15). It has been identified with present day Lifta (Arabic name), that is, Me Neftoah (modern Hebrew name), about 3 miles NW of Jerusalem (M.R. 168133). The name appears only in the phrase *maʿyan mê neptôaḥ* ("spring of the waters of Nephtoah"). Scholars have often recognized the name of the Egyptian Pharaoh Merneptah in *mê neptôaḥ*. The entire phrase, then, would mean "the well of Merneptah," which could be identified with the wells of Merneptah referred to in Papyrus Anastasi III ("Journal of a Frontier Official," *ANET*, 258), which dates to about the end of the 13th century B.C.E.
WESLEY I. TOEWS

NEPHUSHESIM (PERSON) [*npwšsym* (נפוּשׁסים) (Kethib); *nĕpîššîm* (Qere)]. The "father" of a group of temple servants (Neh 7:52). The parallel list in Ezra 2:50 has *npysym* (Kethib), *nĕpûsîm* (Qere), "Nephisim" (RSV). See also NEPHISIM; NAPHISH.

NER (PERSON) [Heb *nēr* (נֵר)]. 1. The son of Jeiel, the founder of the postexilic settlement at Gibeon (1 Chr 9:36; Rudolph *Chronikbücher* HAT, 81). The name has accidentally fallen out of the parallel text in 1 Chr 8:30 It is possible that it represents a clan rather than an individual in the genealogy.

2. The son of Abiel (1 Sam 14:51), father of Abner, brother of Kish, and uncle of Saul ben Kish, the first king of Israel (1 Sam 14:50). Nothing is known of his life. His name appears regularly as a patronymic in connection with Abner ("Abner ben Ner"), and is known from the Saulide genealogies in 1 Sam 14:47–51 and 1 Chr 8:29–40; 9:35–44 In the latter two genealogies, Ner is listed as Kish's father instead of as his brother. A plausible explanation of the inconsistency of Ner's status is easily found. In addition to redefining Ner's place in the ramage, the genealogies in 1 Chronicles have omitted the names of the Saulide ancestors Abiel, Zeror, Becorath, and Aphiah, which were readily available from 1 Sam 9:1

It appears that the Chronicler intentionally did so in order to be able to graft the Saulide genealogy onto the postexilic genealogy of Gibeon. The occurrence of the name "Ner" among the postexilic settlers at Gibeon easily allowed the Saulide family tree to be added by identifying the postexilic Ner with Saul's uncle Ner. The move required the elimination of the earliest four ancestors of Saul, and Ner's relocation in the line of descent from a parallel ramage to Saul's direct line of descent.

The association of a clan of Ner with Gibeon seems to have had a long history, which is corroborated by the appearance of the name Ner'a on some wine jar handles excavated from the fill of the great pool at Gibeon (Demsky 1971: 22). The handles are generally dated on the basis of paleography to the 7th–6th century B.C. (Avigad 1959; Cross 1962). The resettlement of Ner in Gibeon in the postexilic period can almost certainly be seen to be a return of the group to its ancestral home, which can be dated as far back as the 11th century B.C., if one is willing to associate Saul's uncle Ner with Gibeon as well.

NEREUS (PERSON) [Gk *Nēreus* (Νηρευς)]. A Roman Christian who received greetings from Paul in Rom 16:15 He probably was a gentile Christian (Lampe *StadtrChr,* 58), because Paul usually mentioned specifically if persons in the list of Romans 16 were Jewish-Christian "kins (wo)men" (Rom 16:7, 11, 21). While the latter term is absent in his other letters, Paul in Romans, after chaps. 9–11 (cf. 9:3), was interested in emphasizing Christians' ties to Israel. It can be assumed therefore that he purposefully applied or omitted the label "kins (wo)man" in Romans 16 (The only exception is Aquila at the beginning of the list, about whom so many other characteristics were reported that his Jewish background was passed over.) A member of a Roman house-church (Lampe *StadtrChr,* 301), Nereus, his sister Philologus, Julia, and Olympas were mentioned individually, while the other participants were mentioned only generally as "all the saints who were with them." The five persons therefore may have played leading roles in the house-church. As the inscriptions of the city of Rome show, the name "Nereus" was commonly held by slaves (Lampe *StadtrChr,* 142, 145, 148, 152–53). Thus Nereus was most likely a slave or freedman; so was his sister.

PETER LAMPE

NERGAL (DEITY) [Heb *nērgal* (נֵרְגַל)]. The name of the god whose idol and cult were introduced into Samaria by the people of Cuth, who had been deported there by the Assyrians (2 Kgs 17:30). The name of this deity is also an element in the name Nergalsharezer (Jer 39:3, 13). Nergal—Sum [E]N.ERI.GAL, "Lord of the Great City (i.e., of the Underworld)" or *Nergal*$_x$ (KIS.UNU.GAL)—was the Sumerian netherworld god of Kutha, a city about 20 miles NE of Babylon. Kutha was thought to have been the earthly residence of all the underworld deities (Buccellati 1982: 3). The Akkadians identified Nergal with their own underworld deity Erra, so that by the 1st millennium B.C. the names became virtually interchangeable. Both gods were associated with fire, famine, drought, plague, and sudden death.

In one tradition, Nergal's consort was Ereshkigal, sister of Inanna-Ishtar and mistress of the underworld. The fragmentary text *Nergal and Ereshkigal* (*ANET,* 103–104) offers a glimpse into Nergal's domestic behavior: in a quarrel with Ereshkigal, he grabs her by the hair, throws her to the floor, and threatens to cut off her head. In other traditions Nergal's mate is either ominously named Lāṣ, "No Exit," or identified as the mother-goddess Mamma, who was more specifically the wife of Erra (Roberts 1972: 44).

The West Semites identified the Akkadian Nergal with Resheph, also a god of the underworld. By the 4th century B.C. the Cypriots in turn identified Resheph with Apollo in his more negative aspects (Fulco 1976: 49–54). The description of *rešep* and *qeṭeb* in Deut 32:24 (RSV "burning heat" and "pestilence") and of Apollo in the *Iliad* (1.45–52) match very closely the depiction of Nergal's activities as recounted in the 1st millennium B.C. annals of the various Assyrian and Babylonian kings (e.g., *ANET,* 538).

NERGAL-SHAREZER (PERSON) [Heb *nērgalśar-ʿeṣer* (נֵרְגַלְשַׂר־אֶצֶר)]. Var.

NERIGLISSAR. Included in the list of Babylonian officials in Jer 39:3, 13, Nergal-sharezer was connected with the fall of Jerusalem and the subsequent release of the prophet Jeremiah. Nergal-sharezer is thought to be Neriglissar, King of Babylon from 560 to 556 B.C.E.

Regretfully, textual problems in Jer 39:3 make the identification of Nergal-sharezer more difficult. Nergal-sharezer is mentioned twice in this verse: the first mention states that he was the prince of Sin-magir, and the second, which matches Jer 39:13, refers to him as an official whose title is Rabmag. Thompson (*Jeremiah* NICOT, 644) argues that the name is a common one and that two different identically named persons are intended in v 3. By contrast, Bright (*Jeremiah* AB, 243) and Rudolph (*Jeremiah* HAT, 245) believe the two occurrences of Nergal-sharezer refer to the same person who is both prince of Sin-magir, a province in Babylon (Bright, 243), and holder of the title Rabmag. The function of this office is not known (cf. Wiseman (1956: 38, 94).

It is widely held that Nergal-sharezer is the brother-in-law of Nebuchadrezzar's son, Amel-marduk (562–560 B.C.E.), whom Nergal-sharezer succeeds as King of Babylon. It is not clear how Nergal-sharezer came to power, although evidence suggests he may have instituted a revolt and murdered his brother-in-law, Amel-marduk (Wiseman 1985: 10–11; Wiseman 1956: 38–39; Josephus *AgAp; BHI,* 352). *The Chronicles of the Chaldaean Kings* (BM 25142, Wiseman 1956:75–77) record an account of an extensive and successful military conquest of Neriglissar in 557/6. This campaign pushed into W Cilicia (SW Asia Minor) against King Appuasu to punish an attack on a Babylonian protectorate in that region (Bright *BHI,* 243).

Nergal-sharezer's name includes that of the Babylonian sun god, Nergal. The name means "Nergal, protect the king."

JOHN M. BRACKE

NERI (PERSON) [Gk *Nēri* (Νηρι)]. The father of Shealtiel and son of Melchi, according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:27). D omits Neri, substituting a genealogy adapted from Matt 1:6–15 for Luke 3:23–31 The name Neri occurs nowhere else in the biblical documents, including Matthew's genealogy, and falls within a list of seventeen otherwise unknown descendants of David's son Nathan (Fitzmyer *Luke 1–9* AB, 500). In 1 Chr 3:17 and Matt 1:12, the father of Shealtiel is said to be Jeconiah, not Neri, which has led to several proposals to explain the apparent discrepancy (for a survey see Marshall 1978:163–64). Plummer (*Luke* ICC, 104), assuming that Zerubbabel and Shealtiel in Matt 1:12 and Luke 3:27 are the same person, argues that, since Jer 22:30 states that Jeconiah had no children, the line of David could not proceed through him: "The three pedigrees (of Matt 1:12; Luke 3:27; 1 Chr 3:17) indicate that an heir for the childless Jeconiah was found in Shealtiel the son of Neri, who was of the house of David *through Nathan.* Thus the junction of the two lines of descent in Shealtiel and Zerubbabel is fully explained. Shealtiel was the son of Neri of Nathan's line, and also the heir of Jeconiah of Solomon's line; and having no sons himself, he had his nephew Zerubbabel as adopted son and heir." A major problem with this view is that Jer 22:30 on the most plausible reading does not say that Jeconiah was to be childless (cf. 1 Chr 3:17–18, where seven sons are listed), but that, "as far as throne succession was concerned, he was as good as that"

(Bright *Jeremiah* AB, 143; cf. Johnson 1969:183–84). A second proposal (see Johnson 1969: 243–45, where the text is quoted) cites Eusebius *qu. Marin* 3.2 which records that Eusebius knew of some, possibly including Luke, who thought that Jeconiah was passed over in the genealogy because the curse on Jeconiah made messianic descent through his line impossible. Johnson goes on to emphasize the implications of this for his view that the Lukan genealogy reflects belief in Jesus as prophet (note mention of Nathan) (contra Abel 1974:209). As Johnson points out, however, it is difficult to know who exactly—Eusebius or Luke—was meant to have believed this theory. A third position, suggested by Jeremias (1969: 295–96), is that even though nowhere else in the OT except 1 Chr 3:17–19 is it said that Zerubbabel was a descendant of Jehoiakim, the author of 1 Chronicles may have "wrongly considered as the grandson of the last reigning king, the restorer of the Temple upon whom for a long time political hopes were concentrated, and upon whose descendants still in later years the messianic hope was fixed." And fourth, Kuhn (1923: 214; see also Hervey 1853:92–93, 148–49) argues that Neri, as well as several other men in this section, is a corruption, in particular here of Heb *mlkyrm* found in 1 Chr 3:18, on the basis that Gk *nēri* and *melchi* are derived from a single name: Heb *nrymlky* (meaning "my king is my light"), possibly making it into 1 Chronicles through the corrupted intermediate form *mlkynrh* (Kuhn believes he can prove the change from Heb *nry* to *rm*). This proposal has not won widespread acceptance, especially since there is serious question whether the genealogy at this point is based on 1 Chronicles (Marshall 1978: 164; cf. Jeremias 1969:295–96).

STANLEY E. PORTER

NERIAH (PERSON) [Heb *nērîyâ* (נֵרִיָּה)]. The son of Mahseiah and father of Seraiah (Jer 51:59) and Baruch, the scribe or secretary of Jeremiah the prophet (Jer 36:4; see also 32:12, 16; 36:8, 14, 32; 43:3, 6; Bar 1:1). Seraiah, an officer of the king (see Keil n.d., 317), seems to have been entrusted with carrying and then reading an oracle from Jeremiah, when Seraiah accompanied Zedekiah, king of Judah, to Babylon (Jer 51:59; cf. v 61). Baruch, Jeremiah's scribe and biographer, usually remains in the background, except in Jer 45:1 and the following verses, where he reveals his despair, presumably brought about by the writing of Jeremiah's scroll of judgment (Bright *Jeremiah* AB, 185). Avigad (1978: 53–56) believes that two recently discovered seals, possibly from an official archive, refer to biblical Neriah. One seal mentions a "Berechiah son of Neriah [Heb *nryhw*] the scribe," and can be interpreted as referring by way of his full name to biblical Baruch as a royal rather than private scribe, and one with access to the temple and royal precincts (cf. Muilenburg 1970:227–30). The second seal refers to a "Seraiah (ben) Neriah [Heb *nryhw*]," presumably Baruch's brother. On the basis of Baruch and Seraiah both being educated and literate men, possibly each with a public position of importance, it can be speculated that Neriah was a man of not insignificant abilities and probably of some position and means, although he is otherwise unknown to the biblical documents.

NERO (EMPEROR). Nero was the fifth Princeps to rule Rome under the political system created by Augustus after civil war had ended the Roman Republic. He was also the last Princeps who could claim blood descent from Augustus, for the next round of civil wars, in A.D. 68–70, ended the Julio-Claudian dynasty.

———

A. Early Life

L. Domitius Ahenobarbus, as Nero was called at birth, was the only child of Julia Agrippina, the great-granddaughter of Augustus, and Cn. Domitius Ahenobarbus, whose family belonged to the ancient nobility and whose father had married a niece of Augustus. Born on 15 December A.D. 37, when his uncle Gaius Caesar (Caligula) had been on the throne for less than a year, the young Domitius was soon deprived of his mother, sent into exile by her brother in the autumn of 39, and of his father, who died toward the end of the next year. Within a few months, however, Gaius was murdered, and Claudius, his successor as Princeps, restored the boy's property and recalled his niece Agrippina from the island of Pontia. In 49 Agrippina married her paternal uncle, a type of union previously regarded as incestuous but now authorized by senatorial decree, and, in the next year, Domitius was adopted by his stepfather, acquiring at the age of twelve the name Nero Claudius Caesar Germanicus.

Though the Principate was not an avowed monarchy and there could therefore be no law of succession, Nero had now clearly displaced Claudius' own son Britannicus as the expected political heir. He was not only the older son of the current ruler (adoption had long been common practice in Roman aristocratic families and no distinction was made between adopted and natural sons): he was also a direct descendant of Augustus, a fact that he and his mother never ceased to publicize. Then, in 53, he was married to Octavia, the daughter of Claudius by his former wife Valeria Messallina.

Agrippina saw to it that Nero received a good training in oratory, for the ability to make a good speech was expected of the Princeps, just as it had always been of men in public life. She had prevailed on Claudius to cancel the sentence of banishment he himself had imposed on the distinguished orator, writer, and philosopher Lucius Annaeus Seneca. He now prepared Nero for his oratorical debut in the Senate, where he pleaded for concessions on behalf of various cities of the empire, in Latin or Greek, as appropriate.

When Claudius died on 13 October 54, the way had been prepared for Nero's accession. He was escorted into the camp of the Praetorian Guard by Sextus Afranius Burrus, who owed his position as sole Prefect to Agrippina. The Senate echoed the salutation of the Guard, conferred the necessary powers on Nero, and then declared Claudius a god and Agrippina his priestess. The will of Claudius was suppressed, so that his intentions with regard to Britannicus, like the question of whether his death was natural or contrived, remained a matter for speculation.

B. The First Years of Rule

The ancient tradition is unanimous on the excellence of Nero's initial years of rule. Indeed, two 4th-century writers, Aurelius Victor (5.2–4) and the unknown author of the *Épitome de Caesaribus* (5.2–5) ascribe to the later emperor Trajan the view that, for a quinquennium, Nero surpassed all other Princeps. Though little reliance can be placed on the ascription to Trajan and the five years have been variously located in the first, last, or middle portion of the reign, the contrast made by both authors with the rest of

Nero's life suggests that they are alluding to his first years as Princeps, a period hailed as a Golden Age by contemporary poets (Calp. Sic. 1.42; *Carm. Einsidl* 2.22; Sen. *Apocol* 4.1, vv. 8–32).

Two of our most important literary sources, the biographer Suetonius and the Greek historian Cassius Dio (whose work is preserved for this period only by Byzantine excerpters), suggest that the young emperor at first left the business of government to his mother. Dio adds that Seneca and Burrus took over control after a few months, leaving the emperor free to concentrate on the pleasures of youth. The Roman historian Tacitus, however, has a more subtle view. He regards the influence of Agrippina, given visible form on coins of December 54 showing the heads of Agrippina and Nero facing each other, as a matter of appearance only, and the role of Nero's contrasting but concordant advisers as one of guiding the young Princeps in government, not of replacing him. Various indications tell in favor of Tacitus' picture, which is substantially the same as that offered for public consumption in Seneca's essay *De Clementia,* published in late 55 or 56. There Seneca explains that Nero will enjoy great security and affection if he perseveres in his liberal and generous conduct, and he portrays Nero as reluctant to sign the death warrants presented by his Praetorian Prefect.

In *De Clementia.* Seneca criticizes by implication the cruel and irregular exercise of jurisdiction by Nero's predecessor and thereby endorses the reversal of the Claudian style of government announced in Nero's accession address to the Senate, also written by Seneca. The imperial widow will not have liked that any more than she will have relished the dismissal early in 55 of her ally, Claudius' powerful ex-slave M. Antonius Pallas, from his post as chief accountant (*a rationibus*).

Earlier still, there had been criticism of Claudius in the *Apocolocyntosis,* Seneca's satirical account of his deification, which was probably presented to the court at the Saturnalia festival in December of 54. This work is revealing not only about the real balance of power, but about Nero's role in government, for it combines the criticism of his predecessor with two themes also found together in contemporary poetry: praise of Nero's artistic interests and political approval of his adherence to legal forms and his protection of senatorial freedom. The young Princeps must then have prided himself on both counts. Indeed, it is possible to view Nero's interest in poetry, music, and chariot-racing, which had overshadowed his traditional training in oratory from his early years, not as a distraction from government but as part of his conception of it. The philhellene emperor clearly felt that he had a mission to civilize the Roman upper classes and bring them to appreciate and practice the esthetic, intellectual and athletic skills that had always been regarded as respectable by their Greek equivalents. Thus in 59 he celebrated the first shaving of his beard with a festival for which the upper classes were encouraged to take lessons in singing and dancing. A year later he introduced for the first time at Rome public games in the Greek fashion, to be celebrated every five years. Men of high rank participated in contests of oratory, poetry, singing, and playing the lyre. It was only at the second celebration of the games in 65 that the Princeps himself performed.

The political message of the new régime had been made clear in Nero's first speech to the Senate (Tac. *Ann* 13.4; Suet. *Nero* 10). Excesses of court influence were renounced: to the audience that meant that there would be no more commands obtained through powerful secretaries like Narcissus (Suet. *Vesp* 4.1), no more grants of citizenship secured through bribery (Acts 22:28), no more malicious prosecutions engineered by imperial ladies like Messallina (Tac. *Ann* 13.43). In fact, not only was Agrippina prevented in the first months of the reign from joining her son on his dais, not only was Pallas dismissed from his post, but the imperial ex-slaves who served the emperor in various secretarial capacities disappear entirely from the ancient accounts until after 61 when we begin to hear of such notorious minions as Polyclitus, Epaphroditus, Patrobius, and Helius.

Nero had also promised to end the practice of exercising imperial jurisdiction behind closed doors, a practice which had facilitated improper influence. Trials of this kind were usually for treason (*maiestas*), an elastic charge even in the Republic. Claudius is credited with keeping a promise to end *maiestas* charges (Dio 60.3.15). If his promise covered all charges under this statute, he had disregarded it, but, more plausibly, it covered only charges involving disrespect to the emperor which the law had come to cover by interpretation since the late reign of Augustus (Tac. *Ann* 1.72). In that case, he had kept his

promise yet undermined justice by showing extreme credulity toward charges of a more orthodox type and by trying such cases *intra cubiculum*, which made convictions easier to obtain. Nero is not known to have tried any cases in this manner or to have allowed *maiestas* charges in the extended sense to be brought until 62 (Tac. *Ann* 14.48).

The new Princeps had further assured the Senate that he would not monopolize jurisdiction in general—another allusion to Claudius, whose passion for jurisdiction had led him to take cases that would normally have come before other tribunals and to sit among the advisers when ordinary magistrates tried cases. But it would be wrong to conclude (as does Sherwin-White 1963:110–11) that Nero neglected his judicial duties, for his biographer describes his procedure in detail (Suet. *Nero* 15), while Seneca's treatise *De Clementia* is largely concerned with the administration of justice by the Princeps and closely reflects the freedom, especially in the matter of penalties, that characterized the *cognitio* procedure of the imperial and senatorial courts.

Nero closed his accession manifesto with a general formula for a division of responsibilities between himself and the Senate. The narrative of Tacitus, however, who vouches for the emperor's fidelity to his promises, shows that the formula was understood, not in the sense of a clear constitutional division, but as an assurance that the Princeps would show increased respect for the authority of the Senate. Symbolic of the new attitude was the legend *ex senatus consulto* appearing consistently on the silver and gold coinage. Though it is not clear whether this is an authorization mark of some kind or relates to the types and legends on the coins, some advertisement of respect for the Senate is clearly intended.

C. Deterioration and Opposition

The tradition of the Quinquennium Neronis reflects a contemporary view that the murder of Agrippina, thought to be organized by her son, marked the turning point of the Neronian Principate (Tac. *Ann* 15.67): Nero's responsibility for the death of Britannicus in 55, though credited by some, was not so widely rumored. For Tacitus, however, the political deterioration of Nero's government, as opposed to his own moral decline, did not begin until 62, when a *maiestas* charge of the dubious kind was admitted, Burrus died, and Seneca withdrew from his active role as adviser. Nero's increased cruelty and exhibitionism coincided with the increased influence of his dissolute friend Ofonius Tigellinus, who took over part command of the Praetorian Guard, and of Nero's paramour Poppaea Sabina, whom he finally married in 62, after divorcing his unloved and barren wife Octavia.

One of Nero's persistent problems, in fact, was the presence of a considerable number of dynastic rivals, as the descendants of Augustus and his successors multiplied. Moreover, the Senate could in theory confer the relevant powers on any appropriate candidate, and Republican nobility still counted for much. That fact was ultimately to be demonstrated in 68 by the successful coup of Servius Sulpicius Galba, but three years earlier there was an abortive conspiracy to replace Nero with C. Calpurnius Piso. It was mounted by senators, *equites*, and officers of the Praetorian Guard, including its other Prefect, Faenius Rufus. Though there is no sign of the involvement of senatorial army commanders that was later to lead to Nero's overthrow, the causes of dissatisfaction were already present. Nero had extended his crimes outside the palace. The disappointment of his hopes for an heir from Poppaea, who was pregnant when he married her but gave birth to a girl who lived only a few months, had led to fear and persecution of aristocrats related to the imperial house, like the Junii Silani. Nero also offended conservatives by planning to perform in public at Rome at the Neronia scheduled for that summer, having already made his debut in 64 at the Greek city of Naples.

The emperor's popularity with the propertied classes had been further undermined by a natural disaster which devastated the city of Rome and placed the economy under strain. In the early hours of 19 June 64, a fire broke out in shops around the Circus Maximus and spread north through the valley between the Palatine and the Esquiline. It lasted for nine days in all and reduced three of the fourteen regions of the city to rubble, leaving only four regions untouched. The emperor was energetic in providing emergency shelter, clearing debris, and helping with reconstruction. But it soon became clear that he intended a reconstruction of Rome involving not only a new code of safety for building construction, but the use of land, previously in private occupation, for a grand palace and spacious parks in the center of Rome. The

precious metal coinage shows the financial strain of Nero's efforts: both the gold and silver were reduced in weight and the silver content of the *denarius* lowered by more than 10% in addition. The ancient authors attest the resentment that Nero's plans aroused. The planned extension of the city, if carried out, would no doubt have relieved the housing shortage caused by his wider streets and by the sprawl of the Golden House which even included a lake where the Colosseum now stands. But Nero never lived to realized his conception, which was probably to provide Rome with a fine center of government open to the public: it must be remembered that emperors, like ordinary Roman magistrates, had always conducted business in their own residences.

The scale and fury of the fire, the fact that its second outbreak occurred on Tigellinus' estates, and perhaps knowledge of Nero's dissatisfaction with the limits of his own first palace the Domus Transitoria, then being built, gave rise to the rumor that Nero had deliberately started the blaze. The Princeps first attempted to quash the story by religious ceremonies to appease the supposed anger of the gods. When this failed, Nero decided to direct popular hostility toward an unpopular minority whose refusal to join in the recent pagan ceremonies may have attracted attention at this point. On the Christians were visited cruel punishments, including one particularly appropriate to the alleged crime: they were crucified and used as living torches to light the Emperor's races in the Vatican Circus (Tac. *Ann* 15.44; Suet. *Nero* 16.2). A corrupt passage of Juvenal (1.155) suggests that Tigellinus had a hand in the punishment, perhaps taking revenge for the damage to his property.

Though Tacitus says that Nero's cruelty aroused pity for the Christians and though the Domus Aurea displaced houses of the poor as well as of the rich, Nero never seems to have lost his popularity with the ordinary people of Rome, who loved his generosity and his games (Tact. *Hist* 1.4.3; Suet. *Nero* 57.1). The threat came from the upper classes, and especially from senators who found themselves in positions of authority in provinces where the propertied elite had become discontent. For after the fire at Rome, confiscations are attested in Gaul, Spain, Africa, Britain, Judea, and Egypt, to say nothing of the art treasures that were brought from Greece to adorn the Domus Aurea.

Nero now decided to fulfill his ambition to compete in the traditional Greek games. In September 66 he left for Greece, despite the detection of another conspiracy at Beneventum, a town that he could be expected to visit on his way to Brundisium. Some of the Greek festivals had to be rescheduled, so that the Emperor could compete and win in all of them during his visit. The highpoint was his liberation of Greece from Roman administration and taxation, announced at a special celebration of the Isthmian Games at Corinth on 28 November 67. The text of Nero's speech in Greek is preserved on an inscription (*ILS* 8794).

While in Greece, Nero deposed and executed three senatorial commanders of the highest rank. But disaffection was rumbling in the West. At last Nero, in response to the warnings of his ex-slave Helius, returned to Italy. Soon after, in March of 68, Julius Vindex, the governor of one of the Gallic provinces, rose in arms. Although he was defeated two months later by the governor of Upper Germany, Verginius Rufus, Nero's failure to respond quickly and decisively had encouraged others to defect. The Praetorian Guard were told that he had already fled abroad and declared for Galba. The Senate followed suit, decreeing Nero a public enemy. Nero took refuge in the villa of his ex-slave Phaon, and there he committed suicide, reputedly lamenting, "What an artist dies with me!" (Suet. *Nero* 48–49).

D. Foreign Policy

Nero, like his predecessors, was mainly content to follow the guidelines laid down by Augustus in foreign affairs. Two problems dominated his reign: Britain, of which the southern part had been made a Roman province by Claudius, and the eastern frontier. In Britain Nero's governors set out to end the resistance of the Welsh tribes and of the Druids who were defeated in their stronghold on Anglesey. The most significant fighting, however, came in Norfolk, where the tribe of the Iceni resisted Roman annexation after their king died. They were joined by the Trinovantes who resented the veteran colony, with its expensive cult of Divus Claudius, planted in their midst at Colchester.

In the East, ever since the conquests of Pompey the Great had brought the Roman Empire up against the Parthian dominions, the problem had been to secure stable control of the border kingdom of Armenia,

where the Augustan policy was to have a "client king" selected by Rome. Nero's general Domitius Corbulo finally negotiated a new arrangement, in the latter part of 63, by which a member of the Parthian ruling house would hold Armenia, as the Parthians had repeatedly tried to do, but would publicly recognize Roman suzerainty. The new settlement was to prove stable, but it committed Rome to providing more military support in the area than the Augustan arrangement. Further to the N, Nero annexed the kingdom of Pontus and was planning to take personal command of an expedition against the Sarmatians N of the Dariel Pass in the Caucasus. Tribal movements there had already had repercussions as far as the Danube.

E. Provincial Administration

The historian Tacitus found an exception to the excellence of Nero's early years of rule in the laxness with which provincial governors had been brought to justice. Nero's good relations with the Senate led him to cooperate with senatorial reluctance to sentence their peers on the testimony of their subjects. As for the appointment of governors, his record was mixed until his last years, when his fear of giving power to potential rivals led him to install undistinguished, though not necessarily incompetent, men in key military provinces.

His most disastrous appointments were in Judea, where the decision taken by Claudius, after the death of Herod Agrippa I, to return to the Augustan policy of direct rule imposed on Nero the obligation to find *equites* of particular skill and tact to serve as procurators. Antonius Felix, the brother of the influential Pallas, had been appointed as procurator late in Claudius' reign. Despite his tactless marriage to the Jewish princess Drusilla, he was retained by Nero, though it is not clear for how long. It is worth noting, however, that the Eusebian-Jerome date of 56 for the appointment of his successor Porcius Festus accords well with the evidence of Tacitus (*Ann* 13.14; 21–22) that Pallas was dismissed in 55 but that Agrippina, his political ally, regained some influence at the end of 55. For the decision to remove Felix would, on this chronology, have been taken in 55 and his acquittal, when tried in Rome on charges brought by the Jews of Caesarea, would then fall in 56 and could be plausibly attributed to the influence of Pallas, as Josephus notes (*Ant* 20.182).

Of Nero's four procurators, only Porcius Festus escapes censure from Josephus. Felix is represented as cruel and murderous, Lucceius Albinus as venal, and Gessius Florus as exhibiting the vices of the others in heightened form. All found themselves unable to maintain order in the province. Rebellion finally broke out in the summer of 66 when rebel forces took possession of Masada and massacred the Roman garrison there while others took control of the temple in Jerusalem and banned the daily sacrifices for the Emperor. Nero was in Greece when, on 8 November 66, he heard of the defeat of the governor of Syria Cestius Gallus, who had marched to Jerusalem in hopes of restoring order. Nero appointed the future Emperor Vespasian, then in his entourage, to take command of the Jewish War.

The two Neronian procurators whom Paul encountered are portrayed in a more benign light by the author of Acts than by Josephus. Antonius Felix is shown observing the traditions of Roman criminal justice; moreover, the tribune of the auxiliary unit in Jerusalem who arrests Paul, Claudius Lysias, is punctilious himself and clearly expects his superior to behave similarly. Once Paul revealed his possession of Roman citizenship, the tribune released him from his bonds and asked the Sanhedrin to investigate the Jewish charges against him (22:30). He was consistently concerned to protect his Christian prisoner from mob violence, to the extent of dispatching him in the dead of night to the procurator at Caesarea with a large escort for protection, just on the strength of evidence from Paul's nephew that there was a Jewish plot against his uncle. Lysias sent along a letter to Felix stating that he had uncovered only charges concerning the violation of Jewish law, "nothing deserving execution or imprisonment" (24:29), and that he had told Paul's accusers to go and confront him at Caesarea. Felix, having ascertained that Paul came from Tarsus in Cilicia, an area probably subject to the governor of Syria at that period, decided not to bother the senior senatorial legate, who was also his own superior in times of crisis, but to try the case himself when the Jewish accusers arrived (24:35). Though the advocate for the Jerusalem priests cleverly adduced a charge of fomenting agitation among the Jews throughout the world—a menace that Claudius' Letter to the Alexandrians shows was a real worry to the Roman government—Felix stated that

he must wait for the testimony of Claudius Lysias and then kept Paul in comfortable custody, allowing his friends access to him (24:23).

The bad motives attributed to Felix—hope of a bribe from his Christian prisoner and a weak wish to conciliate the Jews (24:26–27)—do not seriously darken the portrait of a man described by the Jewish accuser as a guarantor of peace and a reformer benefiting his Jewish subjects, but also shown as willing to listen to Paul's lecture on morality and the new faith (24:24–25). Even his retention of Paul in custody for two years is understandable: other Roman governors, including the upright Cicero (*ad Att* 6.1.7), are known to have avoided decisions that could earn them criticism, and Felix will have been aware that two of his predecessors had been recalled for trial. Moreover, Paul seems to have welcomed the chance to harangue the procurator and his Jewish wife, for he did not exercise his right of appeal at this stage (Sherwin-White 1963:53).

In Acts, Porcius Festus also insists on the Jews coming to Caesarea, the procurator's seat of administration, to accuse Paul (25:5), finds nothing substantial in their charges which mostly concern Jewish law, but hesitates to offend the Jews and suggests a trial at Jerusalem, where he might have allowed an advisory role to members of the Sanhedrin. Scholars are not agreed as to whether Paul's defense, "Neither against the laws of the Jews, nor against the temple, nor against Caesar, have I offended at all" (25:8), is evidence that treason against Rome, if only in the form of causing a riot, was alleged by the Jews. In any case, once Paul expressed his right as a Roman citizen to appeal to Caesar in order to avoid the proposed trial, Festus, having consulted his *consilium* in the traditional Roman way, decided neither to drop the proceedings altogether nor to pursue the trial to an acquittal (which would not have violated the appeal) but to send Paul to Rome for trial (25:12, 21).

Though there is broad agreement among scholars on the type of jurisdiction exercised by Roman governors of all categories, namely *cognitio*, an accusatory procedure not bound by statute and allowing the governor discretion in countenancing charges and in deciding penalties, there is less certainty about the scope and nature of appeal in this period and about Paul's request in particular. The Greek word attributed to Paul in Acts 25:11, *epikaloumai*, is the standard Greek equivalent of the Latin *appello* (Plut. *Marc* 2.4; Dio 51.19,6), addressed in the Republic to the tribunes of the plebs, but under the Empire to the Princeps when it came to replace the old *provocatio* to the people. Since, however, in the juristic sources, appeal always seems to occur after sentence, an attempt has been made to reinterpret Paul's demand as one for transfer of jurisdiction (Garnsey 1970: 182–85). But the alleged right of *reiectio Romae* is poorly attested (Cotton 1979: 45), and it has been more plausibly argued that appeal could, at least in the early Principate as in the Republic, be laid against a magistrate's authority at various stages in the proceedings, including both before and after sentence (Lintott 1972: 264). See also APPEAL TO CAESAR.

F. The Neronian Persecution

Without firm evidence of the date and circumstances of Paul's martyrdom, it is difficult to relate his two-year imprisonment in Rome, attested in Acts 28:30 to the Neronian persecution of 64. Paul is said to have comforted his fellow passengers on the stormy voyage to Rome by recounting a dream in which an angel tells him that he will survive to stand before Caesar (Acts 24:27; Fox 1987: 430). If we are meant to take this as a true divine prediction, Paul must eventually have been tried by the Emperor. Unless a very late chronology for Paul's journeys is adopted, it will not do to explain the delay by Nero's negligence, for during his years of good rule, as we have seen, Nero was conscientious about jurisdiction. It is better to remember that Paul's trial would not deserve high priority, in Roman terms, and that his accusers may have taken some time to pursue their case, if they ever did.

Nothing suggests that the charge against Paul was Christianity, or anything other than offenses against Jewish law and the fomenting of unrest among the Jews. That will not have been new to the Romans, if we can trust the story in Suetonius of Jewish unrest in Rome under Claudius *impulsore Chresto* (*Claudius* 25.4).

Nero's ability to distinguish Jews from Christians, whom he singled out in 64 as scapegoats, should probably be traced, as Edward Gibbon surmised, to his wife Poppaea, rather than to Paul's accusers. For Poppaea is described by Josephus as *theosebēs* (*Ant* 2.195), and she had recently met Josephus, securing

for him the release from custody of some Jewish priests (*Life* 16), and had succeeded in overturning a decision by the procurator of Judea in favor of King Herod Agrippa (*Ant* 20.195). It is ironic that, because of her friendship with the wife of Gessius Florus (*Ant* 20.252), she is held responsible for imposing the last and worst of the Neronian procurators on the people she favored.

For the Christian sources, Nero was the first to persecute the Christians (Melito in Eus. *Hist. Eccl.* 4.26.9; Tert. *Ad Nat.* 1.7.8/9; *Apol.* 5.3/4), and this was the one Neronian practice (*institutum Neronianum*) to survive. The account of Tacitus, however, shows us a very different situation from the later Trajanic one, revealed in Pliny's famous letters (*Ep* 10.96–97), where the charge is Christianity, and apostasy secures pardon. In 64, Nero, by blaming the fire on the Christians as a group, could then treat a confession of Christianity as proof of incendiarism. On his assumption, that while Christians these people had committed the crime for which they were now to be punished, later apostasy from the religion was clearly irrelevant. When Tacitus says that the Christians were convicted "not so much for the crime of arson as for hatred of the human race" (*Ann* 15.44), he is not making a statement about the legal position but about the political reality that enabled Nero to punish for arson, people who were already hated for their exclusiveness. The historian's own attitude illustrates the point, for, in going on to describe the Christians as "guilty and deserving of the worse punishments," he is not endorsing Nero's view of the fire (he had already given his own view of its cause) but popular ideas of Christian conduct.

G. The False Neros

The secrecy of Nero's death and burial (Suet. *Nero* 50) lent plausibility to a belief in his survival current in the eastern part of the Empire, where he had enjoyed a certain popularity. In 69 "Achaea and Asia were alarmed by a false report of Nero's return" (Tac. *Hist* 2.8). The imposter, who resembled Nero facially and was skilled in singing and playing the cithara, collected a following of slaves and impoverished adventurers, but his claim to be supported by the legions of Syria and the East was alarming enough for him to be assassinated by order of the Roman governor of Galatia-Pamphylia. Then, in A.D. 80, an Asiatic named Terentius Maximus made the same claim and won the support of the Parthian King. The Parthians went on to support another imposter in 88–89, and Dio Chrysostom, writing about this time or later, says of opinion in the East (*Or.* 21.10), "Even now his subjects wish he were alive, and most men believe that he is." It is notable that even Greek writers like Plutarch, Philostratus, and Pausanias, whose Roman connections and sympathies led them to share the Roman assessment of Nero's crimes and artistic aspirations, soften their judgments because of his one great act, the liberation of Greece (Plut. *Ant.* 87; *Mor.* 505C, 567F; Philostratus *Apoll.* 5.7; Paus. 7.17.3).

The Jews and Christians, deliberately perverting the Greek hope that the philhellene emperor would return, portrayed him as an avenging spirit who would punish their Roman persecutors. In the Jewish Sibylline oracles, written not long after the destruction of the temple in Jerusalem in 70, Nero has fled to the Parthians and will cross the Euphrates to destroy Rome and the whole world (4.119–24, 138–39; 5.137–52, 362). The Christian oracles see Nero as the antichrist whose persecution of the Christians prepares for the destruction of Rome (8.70, 88–90). The Christian Fathers and later Christian writers continued and established this hostile tradition, thus endorsing the view of Nero's original pagan historians.

MIRIAM T. GRIFFIN

NERVA (EMPEROR). Marcus Cocceius Nerva was born in Narnia (Italy) on November 8, probably in A.D. 35, and became emperor after Domitian's assassination (September 18, 96). The Cocceii, despite their faint links with the Julio-Claudians (possibly through Nerva's mother), lacked illustrious lineage, yet they could trace their ancestry back as far as a consul of 36 B.C., and were one of the few lineages able to do so at the end of the 1st century A.D.

Not much is known of Nerva's early career. There is no evidence that he was a jurist like his famous grandfather in the days of the emperor Tiberius (Tac. *Ann* 6.26), nor that he ever commanded an army or governed a province. He was a poet and impressed Nero by his ability, for Nero dubbed him the "Tibullus of the age" (Mart. *Spect.* 8.70.7). Nero was also impressed by his assistance in the detection of the Pisonian conspiracy of 65, which resulted in the execution or forced suicide of many eminent Romans: both he and the praetorian prefect Tigellinus "were awarded triumphal honors … and busts of them were placed in the palace in addition to triumphal statues in the Forum" (Tac. *Ann* 15.72). What precisely Nerva did to merit such unparalleled honors is not recorded, nor is there any hint that he was in danger of retribution or retaliation on Nero's death. Quite the contrary, for he managed not only to survive the vicissitudes of the Civil War (A.D. 68–69) but also to emerge as a favorite of the new regime, holding ordinary consulships at critical periods, i.e., in 71 (under Vespasian) and in 90 (under Domitian). Normally these offices were reserved for Vespasian, Titus, Domitian, or some imperial relative, and Nerva is the only non-Flavian to have held two of them in this period. Later writers, possibly in an effort to explain his almost uncanny ability to survive each change of ruler and, at the same time, to acquire even greater honors from the new regime, allege that, during the last years of Domitian's reign, he was banished and that his life was in danger. However, this is regarded as highly unlikely.

More controversial is Nerva's role in Domitian's assassination. His activities at the time of the Pisonian conspiracy, together with his well-rewarded support of Vespasian and Domitian, must surely have rendered him an unlikely confidant of those who planned Domitian's death. Yet Dio Cassius (67.15.5), although not Suetonius, claims that the conspirators warned Nerva of their intentions. Also, support comes from the *Fasti Ostienses*, which show that Nerva speedily replaced Domitian: he was named emperor "on the same day" as the assassination.

Nerva's selection may seem surprising. His "advantages" were negative: he offended no one, he was 60 years old, he had no children and so could not establish a dynasty, he had no connections with the military: essentially, he was safe. But these qualities do not necessarily lead to sound administration.

The quality of his brief sixteen-month reign is debatable. Domitian's memory was officially condemned, his statues melted down or destroyed, his legislation abrogated, and informers prosecuted. A number of measures obviously designed to win support were introduced: the customary donative was paid to the army and the people; the postal service became more the responsibility of the central government, minimizing its burden on local areas and individual cities; the water supply was reorganized; and the *alimenta*, a system of support for poor children, may have been inaugurated at this time rather than in Trajan's reign. So, while Nerva's setting up an economic commission to recommend savings does not prove that a financial or budgetary crisis existed, it need hardly cause surprise if such a crisis did exist.

Even less satisfactory was his relationship with the army. Apart from Nerva's assumption of the title *Germanicus* and references to both a victory in Pannonia and to a war against the Suebi, we have no indication of official military activity during his reign. On the other hand, it is clear that he could control neither the Praetorian guard nor one of the senior military commanders. The result, according to Pliny, was that the "country was in peril and the whole realm tottering to a fall" (*Pan.* 5.5–6). The Praetorian guard, under the command of Casperius Aelianus, demanded the execution of Domitian's murderers: Nerva had to agree to the request and Parthenius and Petronius were killed—an obvious display of the emperor's impotence. Another problem was the attitude of the army commander in Syria. Pliny refers to "someone who was then [i.e., in 97] in the East, at the head of a powerful and celebrated army, about whom serious though unconfirmed rumors were circulating" (*Ep* 9.13.10). The identity of this "someone … in the East" has long puzzled scholars, but it now seems that he was Marcus Cornelius Nigrinus

Curiatius Maternus, commanding the 4 legions of Syria. His precise activities have not been discovered, but it is argued that he was later executed by Trajan, as was Casperius Aelianus.

Nerva's attitude toward Judaism and Christianity was less repressive than his predecessor's. Eusebius notes that the apostle John was recalled from exile and resumed residence at Ephesus (*Hist. Eccl.* 3.20); presumably, Domitilla was treated in a similar fashion. On a coin, Nerva also claimed to have removed certain injustices (perhaps false charges) associated with the collection of the Jewish tax. The precise nature of the reform is not known, but, when taken in conjunction with Dio Cassius's statement that "no one was allowed to accuse other people of treason or Jewish life" (68.1.2), it seems clear that Nerva's regime was more tolerant, or at least less harsh, than Domitian's.

As his position deteriorated during the summer of 97, Nerva resorted to the expedient of adoption. He selected (or was persuaded to select) the governor of Upper Germany, Marcus Ulpius Traianus, who was given the title *Caesar;* subsequently the senate conferred on Trajan all the imperial powers, making him virtually co-ruler with Nerva. The decision, whether forced or not, proved to be a wise one, and when Nerva died on January 25, 98, the transfer of power was accomplished smoothly and peacefully.

BRIAN W. JONES

NESSANA (M.R. 095031). A town in the W part of the central Negeb, 52 km SW of Beer-sheba, known by the Arabic name *Aujah el-Hafir.*

A. Identification and History

The ancient name of the site is not mentioned in any of the historical sources, and were it not for the discovery of the ancient papyri on the site, the name "Nessana" would not have been known. Its exact meaning is unknown. Perhaps it comes from the Semitic word niṣan, meaning "bud."

The site is on one of the major ancient caravan routes, leading from Aila on the Red Sea through the W fringes of the Negeb to Rhinocorura and Gaza, and over Elusa to Beer-sheba, Hebron, and Jerusalem. The earliest remains on the site were sherds: Rhodian, Coan, Pamphylian, and Italian stamped jar handles of the Hellenistic period. Among the comparatively numerous numismatic finds were coins of Ptolemy IV (212 B.C.E.), Ptolemy VII (127–126 B.C.E.), and John Hyrcanus I (134–104 B.C.E.). The excavators did not hesitate to relate these finds to the Nabateans, who had already established in the 3d century B.C.E. a caravan stop at this place. Mistakenly they assigned the Nabatean fort to this period.

From the Middle Nabatean period (30 B.C.E.–50/70 C.E.) came much Nabatean and Early Roman pottery and coins of Aretas IV (9 B.C.E.–40 C.E.), Malichus II (40–70 C.E.) or Rabel II (70–106 C.E.). Probably in this period the fort was built on the N part of the acropolis, and much of the grafitti originated (which the publisher assigned to the 3d century C.E.).

The late 2d–early 3d century C.E. is represented only by two coins of Septimius Severus (193–211 C.E.). The number of coins increases greatly at the beginning of the 4th century, with the accession of the House of Constantine. However, the excavators tend to assign the major construction operations on the acropolis to Theodosius II (408–450 C.E.). This date is based on the assumption that a military unit by the name of "the Most Loyal Theodosians," mentioned in one document at Nessana, was recruited by him and that it was stationed in Nessana. However, the document in question, although found at Nessana, did not originate there, but at Rhinocorura, at which two brothers, "natives of the village Nessana," served in the above-mentioned unit. Moreover, Theodosius I (379–383 C.E.) and not II was an active military monarch, and was probably the one to recruit the unit. In any case, the history of Nessana does not differ much from that of Mampsis and Oboda; the construction of the citadel on the acropolis must be assigned to the times of Diocletian and Constantine. This new date also affects the ecclesiastical history of Nessana. According to the excavators, the North Church formed part of the citadel, and they suggest at least one part of it,

identified as a chapel, was built at the same time as the citadel. Should the new date be accepted, the construction of this church must be reassigned to the second half of the 4th century C.E., a date assigned also to the early churches in the other towns of the Negeb.

The Byzantine period was one of great prosperity for Nessana. The acropolis served as a military, ecclesiastical, and possibly an administrative center, and the town extended along the W slope and beyond the wadi on the W. Farms surrounded the town, and the prosperity of Nessana continued until the end of the Byzantine period. The Moslem conquest of Nessana initiated a gradual decline. In addition to the ceramics, evidence for this period comes mainly from the large number of papyri dating to the latter part of the 7th century C.E. Most important for the study of the decline are documents in which the townspeople are requested to pay to the Arab military and civil authorities taxes in wheat, oil, and money. The omission of wine may help explain the fate of Nessana—grape wine must have been the most important product of Nessana, and with the loss of a customer, the Byzantine army, Nessana was doomed.

B. History of Research

E. Robinson (1838) visited Aujah, but identified it with Oboda. After visits by E. H. Palmer in 1871 and P. J. Lagrange in 1897, A. Musil in 1896 and 1902 drew the first detailed plan of the site (1907: 88–109). Musil's description is of great importance, because the Turkish authorities built an administrative center at Aujah el-Hafir that destroyed the ancient lower town, which Musil said was surrounded by a wall with gates. No trace of this wall has survived. When E. Huntington visited the site in 1908 the Turks had completed their work. One of their buildings was erected above a church which had been decorated with multicolored mosaics, and was dedicated in 502 C.E. He described two collonaded streets, each 200 m long. A German team headed by T. Wiegand drew a plan of the North Church in the acropolis and found fragments of Greek papyri. The painted Nabatean pottery they identified as "Coptic," and during their visit the newly built Turkish center had already deteriorated badly. P. H. Haensler, a German physician in the service of the Turko-German army, spent two months at Nessana, describing the extant remains and copying Greek inscriptions found during the looting of the North Church.

J. H. Iliffe visited the site in 1934, and from 1935 to 1937 extensive excavations were conducted. These concentrated only on the acropolis, where there was still hope of salvaging some of the ancient remains. The greatest achievements of the expedition were the excavations of the North Church and the discovery of the unique archive of papyri.

C. Excavations

1. The Nabatean Fort. The fort was on the N end of the acropolis. Since the North Church was built over the fort, few details of the fort are known. It measured 27 × 25 m, and was fortified with round towers and a retaining wall on its S side. From the little-detailed plan, it appears that the rounded towers and retaining wall were meant to support the building after it had been shattered by an earthquake. The rest of the building, which apparently consisted of a central court with a central cistern and with rooms around it, was destroyed almost to its foundations. The stones in the construction of the fort were differently dressed than those of the other buildings at Nessana. According to A. Negev, some stones in the foundations of the court were dressed in typical Nabatean fashion. The excavators dated the fort to the 2d century B.C.E. This date is based on mixed pottery found at the foundations, which included both Hellenistic and Early Roman-Middle Nabatean pottery. It thus seems that it should most probably be dated late 1st century B.C.E. to early 1st century C.E.

2. The Citadel. This large structure (85 × 35 m) occupies the central part of the acropolis. It is strengthened by rectangular corner towers, and two towers on its W side, which face the desert. It had gates on the S and E, facing the lower town. In an early phase, the citadel had eighteen rooms along its W wall; an additional nine rooms were built later on the E. In the SW part of the court is a large, rectangular cistern (ca. 5 × 15 m) covered by a roof resting on seven arches. The excavators suggested that the citadel was used as a headquarters, arsenal, and stables for the military camels, but not as barracks. They also suggested that the large court was used in times of emergency to protect the civilian population. The excavators suggested that after 600 C.E., the citadel was excavated by the military, and was annexed to the North Church to house a monastery.

3. The North Church. The North Church abuts the N wall of the citadel. Because of the steep slope on the W, the entrance to the building was on the E. A long monumental staircase leads from the town below to a narrow atrium (named "East Court"), which has a cistern under its floor. At a later stage, a portico was added E of the atrium. A door in the SW corner of the atrium opens on a narrow corridor ("Room 10"). To the S are two rooms, which the excavators assumed had been a chapel used by the soldiers before the construction of the larger church. This was, however, a mortuary chapel, in which a priest and a deacon were buried in 464 and 475 C.E., respectively. One of the epitaphs mentions a "holy martyrium" and the other a "holy place," which probably refer to the whole church; according to other inscriptions found in the building, it was dedicated to the saints Sergius, Stephen, and Bacchus. A corridor leads to a small court ("South Court") and to Room 8, where the papyri were found; two other doors lead into the basilica. The basilica (10.70 × 19.0 m) is a rectangular hall with a single apse, attached to the back wall by a short support. Within the apse are remains of the bishop's throne and at its sides near the walls of the apse are traces of two small columns. These columns apparently supported small altar tables for the placement of reliquaries. The church was eventually lengthened by 3.0 m W of the basilica is a baptistry with a semicircular font built into the floor. In addition to the hundreds of papyri found in the church, there were discovered 90 inscriptions, graffiti, and paintings.

4. The South Church. This church (20.8 × 14.1 m) was on a low hill S of the acropolis, and is one of the few churches in the Negeb initially built as a triapsidal church. There is a small atrium of porticoes on the S and E, and the basilica is entered by two doors instead of the usual three. S of the basilica are a chapel with an apse at its E end and three small rooms, one of which is entered by a door behind the apse. One of these rooms, S of the atrium, could have served as a prothesis. There were apparently rooms, or one long hall also N of the basilica. An inscription engraved on a capital reads: "Holy Mary, Mother of God, help and pity thy slave—year 496" (601/2 C.E.).

There were also two churches in the lower town, the East Church or Monastery Church, and the South Church. Both were razed by the Turkish authorities. An inscription in the mosaic floor of the East Church was copied by Huntington in 1909: "For the salvation of the benefactors Sergius, ex-assessor and monk, and Pallus his sister, and John the deacon, her son, curialis of the metropolitan city of Emesa. In the year 496, in the 5th indiction, on the 20th of the month Gorpiaeus" (i.e., September 7, 601 C.E.). It is noteworthy that the 7th century C.E. began at Nessana with the construction of two new churches, or at least with the construction of one, and the laying of a mosaic floor in the other.

5. The Papyri. The discovery of the hundreds of papyri at Nessana—both literary and nonliterary—is certainly the most important contribution to the study of the history of the whole region in the Byzantine and Early Arab periods. Among the literary papyri are a Latin-Greek glossary of the *Aeneid* of Virgil and fragments of *Aeneid* II–VI; a group of ecclesiastical literature includes fragments of the Gospel of John, Acts of St. George, fragments of the Pauline epistles, letter of Abgar to Christ and Christ's reply, the Twelve Chapters of Faith, and another theological fragment. Among the secular literature are a Greek glossary and legal fragments. The nonliterary archive includes 195 documents and fragments of documents. These include contracts referring to everyday life (marriages, divorces, inheritances, divisions of property, sales, loans, receipts, letters on ecclesiastical affairs, allotments of taxes, and accounts of cavalry units). To the period following the Arab conquest belong bilingual Greek-Arabic documents dealing with the payment of taxes, demands to supply guides for journeys to the Holy Mountain (in Sinai), lists of fields and crops, and protests against the payment of heavy taxes. The latest documents found at Nessana are of the late 7th century C.E.

D. Summary

Nessana was founded by the Nabateans at the beginning of the Hellenistic period (Early Nabatean period) as one of three major caravan stops on the routes from N Arabia to the Mediterranean. At the beginning of the Early Roman period (Middle Nabatean period) the Nabateans built a fort on the site. The history of the site in the 2d and 3d centuries C.E. is not at all clear. During the reigns of Diocletian and Constantine, a citadel was built on the site to house units of local militia, apparently soldiers recruited from the local population, who were allotted farms. By the middle of the 4th century at least part of the

population was Christian, and the construction of churches began. The town thrived until after the Islamic conquest, perhaps until the 8th century C.E., when the burden of heavy taxation caused its decline.

AVRAHAM NEGEV

NETAIM (PLACE) [Heb *nětā‹êm* (נְתָעִים)]. A town of Judah where royal potters resided (1 Chr 4:23). See GEDERAH. Most scholars feel that the site of Netaim is unknown, although Albright (1925: 50) suggested an identification with Khirbet en-Nuweiti, south of the Wadi Elah.

DAVID SALTER WILLIAMS

NETHANEL (PERSON) [Heb *nětan›ēl* (נְתַנְאֵל)]. A personal name meaning "God has given."

1. The son of Zuar, mentioned in chaps. 1, 2, 7, and 10 of Numbers along with the chiefs of the tribes of Reuben, Simeon, Judah, Zebulun, Ephraim, Manasseh, Benjamin, Dan, Asher, Gad, and Naphtali. Nethanel is identified as the chief (*nāśî›*) of the tribe of Issachar in Num 1:8, 16; and 2:5b. In the register in Num 1:5–16, Nethanel and the other chiefs are designated as the "summoned ones of the assembly" (*qĕrû›ê hā‹ēdâ* [Q]; "the elect of the congregation") who were to assist Moses and Aaron in registering the adult males of their tribes. In Numbers 2, Moses and Aaron were given instructions in (1) the order in which the tribes were to encamp around the tabernacle and (2) the order in which the tribes were to march. Nethanel and the tribe of Issachar were to encamp with the tribes of Judah and Zebulun on the E side of the tabernacle. When camp was broken and the tribes set out, Issachar was to be second in order, following Judah. (See Num 10:11–28, which reports Israel's breaking camp and setting out from Sinai.) The order in which the tribes and their leaders are mentioned in Numbers 7 (which reports the gifts of the tribal chiefs for the tabernacle and altar) and Numbers 10 is the same as that observed in Numbers 2 A different order, unique in the OT, is seen in Num 1:5–16 (Another difference to be noticed in these texts is that the father of Eliasaph the chief of Gad is identified as Reuel in Numbers 2 and as Deuel in Numbers 1, 7, and 10 in the MT and RSV Eliasaph's father is called Reuel consistently in the LXX [Gk *ragouēl*]. This may well reflect a desire of the LXX translator to achieve consistency rather than bearing witness to another textual tradition.)

2. The fourth son of Jesse, a brother of David, was named Nethanel according to the Chronicler (1 Chr 2:14). That the names of all the children of Jesse are given might be taken as characteristic of the Chronicler's concern with the tribe of Judah and with the family of King David. Braun says that making David the seventh son rather than the eighth may reflect a desire to depict David as a uniquely favored child, but adds that he could point to no other symbolic use of a number in the Chronicler's work (*1 Chronicles* WBC, 34). It should be noted that 1 Sam 16:10–11 and 17:12–14 speak of eight sons of Jesse, and 1 Chr 27:18 mentions a brother of David named Elihu.

3. One of the priests who was to sound a trumpet before the ark as the Levites were bringing it into Jerusalem at David's direction (1 Chr 15:24).

4. A Levite, identified as the father of Shemaiah, the scribe who recorded David's organization of the priests and Levites by ancestral houses (1 Chr 24:6).

5. The fifth son of Obed-edom, listed by the Chronicler as a gatekeeper in 1 Chr 15:16–24 (see also 1 Chr 15:21 and 16:5). This may reflect the changing status of those who claimed Obed-edom as their ancestor.

6. One of the princes sent by Jehoshaphat in the third year of his reign to teach in the cities of Judah (2 Chr 17:7). Myers (*2 Chronicles* AB, 99) proposes that the fact that laymen were mentioned as teachers points to a tradition older than the Chronicler, since the Chronicler considered the Levites to have had the primary responsibility as teachers. He considers 2 Chr 17:8 as a possible addition by the Chronicler. The nature of the "book of the law of Yahweh" which the officials, Levites, and priests took with them is not known. Williamson holds that the Chronicler understood it as primarily religious in character, based on what we now know as the Pentateuch (*1 and 2 Chronicles* NCBC, 282–83) but agrees with Myers' suggestion (*2 Chronicles* AB, 99–100) that the book referred to in the Chronicler's sources may have been a royal law code. Commentators have also discussed the possibility that the report of the teaching mission in 2 Chr 17:7–9 represents another version of the report of judicial reform in 2 Chr 19:4–11

7. One of the levitical officials who with his brothers Conaniah and Shemaiah offered pascal lambs and cattle for the Levites for the Passover celebrated in the reign of Josiah (2 Chr 35:9). In 1 Esdras 1:9 Nethanel (Gk *Nathanēl*) and the others are identified as commanders of a thousand (Gk *chiliarchoi*) while the LXX of 2 Chr 35:9 calls them chiefs (Gk *archontes*).

8. A priest of the family of Pashhur, he was required to divorce his foreign wife during Ezra's reform (Ezra 10:22). The list of those who divorced their foreign wives and disowned the children born to them may seem "extraordinarily small considering the furor and the census figures in chapter ii" (Myers *Ezra-Nehemiah* AB, 87). Myers discusses three possible explanations: (1) the problem was not as serious as it would seem on the surface; (2) the list preserved is only a partial list perhaps reflecting only the upper classes; or (3) the reform was not successful (ibid., 87–88). Stating that the first explanation can be easily dismissed, he favors the second explanation (ibid., 87–88). Blenkinsopp, on the other hand, argues that the reform was not successful (*Ezra-Nehemiah* OTL, 197–201).

9. The head of the priestly house of Jedaiah (Neh 12:21).

10. One of the musicians who participated in the dedication of the rebuilt wall of Jerusalem (Neh 12:36). Blenkinsopp (*Ezra-Nehemiah* OTL, 342–43) and Myers (*Ezra-Nehemiah* AB, 200–204) emend the MT of Neh 12:35a, moving the conjunction from the beginning of v 35a to the beginning of 35b in order to show that Zechariah (who is a descendant of Asaph) and the others who used the "musical instruments of David the man of God" were levitical musicians. Nethanel was in the procession led by Ezra the scribe.

KEITH L. EADES

NETHANIAH (PERSON) [Heb *nětanyâ* (נְתַנְיָה); *nětanyāhû* (נְתַנְיָהוּ)]. Five people in the Bible bear this name, which means "Yahweh gives." Names compounded with the theophoric element *yāh/yāhû* plus the verb *ntn* produce such nomenclature as Jonathan (see *TPNAH,* 352; cf. the theophoric element *ʾel* in such names as Elnathan, Nathanael, and Nathanel). Of the twenty occurrences in the OT, five have *-yāhû* as the final element and fifteen have *-yāh;* the name appears once also in the deuterocanonical writings (Gk *Nathanias*). The Akkadian equivalent produced with the verb *nadānu,* "to give," and the name of the deity is also common (see CAD 11/1: 42; *AN,* 357).

1. One of the musicians associated with the school of Asaph, adept in percussion and stringed instruments as well as vocal rendition of the liturgy (1 Chr 25:2, 12). Nethaniah and his three associates were members of the larger confederation of the six sons of Jeduthun, and the nine students of Heman forming altogether the masters of the royal choir school. The term prophesy (v 1) is characteristic of temple music; it has its origin in the early prophetic guilds where emotional extravagances were practiced. In this new musical consortium the music would be prophetic, but with the emotional and ecstatic patterns moderated (see Dalglish 1962:214–20).

2. One of the nine Levites whom Jehoshaphat sent to the citizenry of Judah in his third regal year together with five princes of the realm and two priests to inculcate the basis of Judean religion in the nation (2 Chr 17:8).

3. The father of Jehudi and the son of Shelemiah, the son of Cushi (Jer 36:14). Nothing is properly related of Nethaniah, but it may be inferred that he was present in Jerusalem, if not at the royal palace, when Jehudi read the words of Jeremiah before Jehoiakim, king of Judah, and would therefore be alive in the year 604 B.C. That his son had such immediate entrée to the aristocracy and the royal court appears to confirm what may be drawn from the recital of his genealogy to the fourth generation, that he was ensconced in Judean nobility. That the princes chose Jehudi to be their liaison to Jeremiah suggests that the family was of esteemed fidelity to have one of its members serve as an internuncio between the prophetic and the political in the days when the two parties clashed.

4. The father of Ishmael, a royal military official and the infamous murderer of Gedeliah, the governor of Judea, newly appointed by the high command of the Babylonians. In the twenty-four times that the name Ishmael appears (2 Kgs 25:23, 25; Jeremiah 40 and 41), seven omit the patronymic, while seventeen instances carry the reading "the son of Nethaniah." The text indicates three generations of the family and includes the note that it belonged to the royal family (2 Kgs 25:25). What the relationship was between the tempestuous and irresponsible son and the father is not provided in the narrative.

5. A son of Bani; he was required to put away his foreign wife (and children) during Ezra's reform (1 Esdr 9:34). In the parallel account in Ezra 10:39, he is called Nathan. See NATHAN #6.

EDWARD R. DALGLISH

NETHINIM [Heb *nětînîm* (נְתִינִים)]. A class of "temple servants" (RSV) who appear in the postexilic period. The Hebrew Bible has seventeen references to the Nethinim, all in Ezra and Nehemiah (Ezra 2:43, 58, 70; 7:7; 8:17, 20 [2x]; Neh 3:26, 31; 7:46, 60, 73; 10:29—Eng v 28; 11:3, 21 [2x]), with the single exception of a reference in 1 Chr 9:2 In every occurrence, the word has the definite article (*hannětînîm*) and never appears in the singular. Etymologically, the word is a past participle of the root *ntn*, "to give." Thus it means, literally, "those who have been given." This is confirmed by the fact that the single instance in which the LXX does not transliterate the Hebrew word (most often as *hoi Nathinim*), it is rendered "the given ones" (Gk *hoi dedomenoi;* 1 Chr 9:2).

The mention of the Nethinim is in the context of those who returned to Jerusalem from exile in Babylon. The first group (Ezra 2:43–54 = Neh 7:46–56 = Esdr 5:29–32) led by Zerubbabel included 392 temple servants and sons of Solomon's servants (Ezra 2:58 = Neh 7:60; cf. 372 in 1 Esdr 5:35). The second wave (Ezra 8:16–20) initiated by Ezra included 220 more members of this clerical order. In Nehemiah 7 this original list is taken up again as the prologue for an appeal by Nehemiah for settlers to move into Jerusalem proper (Myers *Ezra-Nehemiah* AB, 164). There are questions which pertain to the dating, provenance, and purpose of these lists, but they do not affect our discussion of this subject.

The Nethinim are one of the five clerical orders associated with the temple in Ezra-Nehemiah: priests, Levites, gatekeepers, singers, temple servants (Neh 10:28). Ziha and Gishpa are said to be in charge of these temple personnel (Neh 11:21, omitted in the LXX). The temple servants are said to live within a specific precinct on the Ophel in Jerusalem (Neh 3:26, 31; 11:21), as well as in other cities (Ezra 2:70 = Neh 7:73).

The fact that a number of the names of the Nethinim are foreign has led to speculation that they had their origins among groups of prisoners of war or conquered peoples. In Josh 9:23, 27 the Gibeonites are given the task of cutting wood and carrying water "for the house of God," ostensibly because they deceived the Israelites into making a covenant with them. But the story may reflect the practice of using subject peoples for menial tasks (cf. Num 31:30, 47). Though Ezra 8:20 ascribes the origin of the Nethinim to "David and his officials," Ezek 44:7–9 condemns the practice of using foreigners in the temple services (*AncIsr,* 89–90).

Whatever the scruples of Ezekiel, by the time of Ezra and Nehemiah the Nethinim appear to be well-recognized and important members of the religious establishment. The initial disinterest of the levitic families in Ezra's mission appears to be overcome by the active recruitment of significant numbers of the Nethinim to participate in the venture (Myers *Ezra-Nehemiah* AB, 70). There is evidence in the Talmud (*m. Yebam.* 2:4; *m. Qidd.* 4:1) that the Nethinim were viewed as foreigners, and the designation of them by Josephus as *hierodouloi* ("sacred slaves," *Ant* 11.5.1 §128) implies their function as the menial laborers of the temple. Their position in the Ezra-Nehemiah context, however, is more elevated. They are even exempt along with priests and Levites from certain taxes (Ezra 7:24). In 1 Esdr 1:3, the Levites are called *hierodouloi* of Israel, the same term used for the Nethinim by Josephus.

The general impression is that the Nethinim are an accepted and rather well placed group within the religious community and, consequently, in the general community. Though they do not fully belong in the priestly ranks, they are close to the Levites in the hierarchy and are clearly seen to be in a position superior to the "servants of Solomon" and the other groups assigned to more menial tasks.

JOSEPH P. HEALEY

NETOPHAH (PLACE) [Heb *nĕtōpâ* (נְטֹפָה)]. NETOPHATHITES.

A town in the hill country of Judah, located near Bethlehem and Anathoth (1 Chr 2:54; Ezra 2:21–23; Neh 7:26).

According to 1 Chr 2:54, the Netophathites were descendants of Caleb through Salma. The town was the home of two of David's "mighty men," Maharai and Heleb (2 Sam 23:28–29; 1 Chr 11:30) who served as captains for the tenth and twelfth military divisions (1 Chr 27:13, 15). 2 Kgs 25:23 suggests that the family of Seraiah, son of Tanhumeth, who supported governor Gedaliah after the latter was appointed by Nebuchadrezzar, was from Netophah. However, a parallel passage in Jer 40:8 indicates that it was the "sons of Ephai" who came from Netophah.

Ezra 2:22 indicates that 56 Netophathites (cf. 1 Esd 5:18, fifty-five) as well as 123 men from Bethlehem joined those who returned with Zerubbabel from Babylonian captivity. The total of these two groups (179) is at variance with Neh 7:26 which says that the total number of men from these two towns was 188. A number of Levites who returned from the Exile settled in the villages of the Netophathites, even though the territory was not originally assigned to them (1 Chr 9:16). Some of these Levites sang at the dedication of the rebuilt wall of Jerusalem (Neh 12:28).

Byzantine sources appear to preserve two forms of the name—*Natoupha* and *Metopa.* Conder believed Kh. Umm Tuba, near Bethlehem, preserved these ancient names. Kolb and Alt, on the other hand, felt that the two Byzantine names must be distinguished and that only the latter be identified with Kh. Umm Tuba. They proposed to identify biblical Netophah with Kh. Bedd Faluh (M.R. 171119), a site which rests on the spur of a ridge created by the conjunction of two valleys ca. 5.5 km (3.5 mi) SE of Bethlehem.

Mazar suggested that Ramat Rahel (M.R. 170127) would make a better candidate because of its proximity to Jerusalem (Neh 12:28), a suggestion maintained by Avi-Yonah. However, Aharoni's failure to find Iron I remains at the site (from the time of David's mighty men), led him to abandon this identification. Most scholars now seem to prefer Alt's original identification with Kh. Bedd Falul. A nearby spring, ʿAin en-Natuf, may preserve the ancient name.

NETS See ZOOLOGY.

NETWORK A word appearing in technical descriptions of two sacral appurtenances. First, it translates Heb *resûet* ("net") and refers to the bronze grating on the altar made for the Tabernacle (Exod 27:4–5; 38:4). See also GRATING. Second and more frequently, however, it translates Heb *śĕbākâ* (also "net") and is used in reference to part of the ornamentation on Jachin and Boaz, the two bronze pillars that flanked the entry to the forecourt of Solomon's Temple. Since the Hebrew word denotes a window lattice (2 Kgs 1:2) and is found in parallel with *rešet* (Job 18:8), its general nature as a kind of grillwork around the capitals of the two pillars seems clear. Perhaps it served as a device for hanging the pomegranate decorations (1 Kgs 7:17, 18, 20; 2 Chr 4:12, 13; 2 Kgs 25:17 = Jer 32:22–23); or like *resûet,* it may have been a grating to cover the "bowls," which were also part of the capitals (2 Kgs 7:40, 41; cf. 2 Kgs 25:17 and Jer 52:22–23). Whatever its exact function, it contributes to the intricacy of the metalwork used to decorate the two pillars and so participates in forming the striking visual appearance of these symbolic features of the Temple. See also CAPITAL.

CAROL MEYERS

NEW [Gk *kainos* (καινος), *neos* (νεος)]. In the NT, the idea of "new" is most commonly represented by the use of two adjectives, *kainos* (42 times) and *neos* (23 times), which in the English language versions of the Bible are generally translated "new." Many scholars, particularly on the basis of the 19th-century lexographical studies of R. C. Trench and H. Cremer, distinguished the meaning of the two adjectives, ascribing a qualitative aspect to *kainos* and a temporal aspect to *neos.* There is, however, ample reason to affirm that in their NT usage the two terms are essentially synonymous. The interchangeability of the two adjectives in such passages as Mark 2:21–22 (Matt 9:16–17; Luke 5:36–39) and Heb 8:8, 13; 9:15; 12:24, as well as the parallelism between and probable dependence of Eph 4:22–24 upon Col 3:10, underscore the essential synonymity of the two terms. *Kainos* represents a more literary usage, while *neos* represents more popular terminology which has made its way into Koine Greek literature.

A. The Profane Use

If a distinction is to be made apropos of the NT usage of these terms, it a distinction between a merely profane (or narrative) use and a more theological use. A profane sense is to be discerned in the gospels' reference to the new tomb in which Jesus was buried (Matt 27:60; John 19:41). A profane sense is also to be discerned in the use of the comparative of *neos* (*neōteros*) as a pronominal adjective to designate a young person, thus the younger son in the Lukan parable (Luke 15:12, 13), young stretcher bearers (Acts 5:6), the young person cited in a traditional proverb (John 21:18), and the young person as the subject or object of community regulations (1 Tim 5:1, 2; Titus 2:4, 6; 1 Pet 5:5; cf. Luke 22:26). Community regulations on young widows are also found in the NT (1 Tim 5:11, 14). The profane sense of "new" is likewise reflected in the related expression "from youth" (*ek neotētos;* Mark 10:20; Luke 18:21; Acts 26:4).

B. The Theological Use

A manifestly theological connotation of the adjective "new" is found in such NT expressions as new commandment (John 13:34; 1 John 2:7, 8; 2 John 5), new covenant (Luke 22:20; 1 Cor 11:25; 2 Cor 3:6; Heb 8:8, 13; 9:15; 12:24), new creation (2 Cor 5:17; Gal 6:15), new earth (2 Pet 3:13; Rev 21:1), new Jerusalem (Rev 2:12; 21:2), new heavens (2 Pet 3:13; Rev 21:1), new hymn (Rev 5:9; 14:3), new name (Rev 2:17; 3:12), new person (*anthrōpos;* Eph 2:15; 4:24; Col 3:10), new teaching (Mark 1:27), and new tongues (Mark 16:17).

C. Old and New

"New" is a relational term, implying both comparison and contrast. These aspects of the term are most apparent in the expressions "new covenant," "new commandment," and "new creation," especially in those passages (Heb 8:8, 13; 9:15; 1 John 2:7, 8; 2 Cor 5:17) where the NT authors explicitly dwell on the newness of the subjects at hand.

In the letter to the Hebrews, where only the new covenant is explicitly described as new (*kainos* in Heb 8:8, 13; 9:15; *neos* in Heb 12:24), the author introduces the idea of a "new covenant" by citing Jer 31:31–34, in explanation of his own contrast between a first and a second covenant (Heb 8:7). According to the author the new or second covenant is so much better than the old that, in a commentary on the biblical text, he claims that the new covenant has made the old obsolete (Heb 8:13). Jesus Christ is the mediator of this new covenant (Heb 9:15; 12:24), a covenant established in his blood (12:24). Essential to the author's idea of newness are the dimensions of uniqueness and permanence, and thus finality.

Specific reference to the prophecy of Jeremiah is absent from the other NT references to the new covenant, but the language of both the eucharistic passages (Luke 22:20; 1 Cor 11:25; some manuscripts of Matt 26:28; Mark 14:24) and Paul's reference to ministers of a new covenant (2 Cor 3:6) apparently allude to the biblical text. The eucharistic meal and the ministry are realities in a new and definitive, because divinely and ultimately established, order of things.

In this way, "new" acquires an eschatological connotation. This eschatological dimension is related to a Jewish understanding of time and an apocalyptic world view in which all of history is under the direction of God and oriented to its ultimate realization. Newness is characteristic of God's ultimate and definitive action in history.

The eschatological aspect of "new" also is present in the use of the neuter nominative form of the adjective (*kainon,* equivalent to the adverb, in Matt 26:29; Mark 14:25) when Jesus speaks of eating anew in the kingdom, thereby making reference to the traditional motif of the messianic banquet.

Within the Johannine school, the love commandment is described as a new commandment (John 13:34; 1 John 2:7, 8; 2 John 5). The commandment is new because of its christological focus. The commandment is a final gift of the departing Jesus and has Jesus himself as its foundation. The Johannine epistles recognize the traditional nature of the love commandment, affirming that it is part of the baptismal catechesis ("which you have heard from the beginning," 1 John 2:7; 2 John 5) and is, in this respect, an old commandment. Nonetheless the commandment is new precisely because of its christological aspect ("true in him"). As such it is an ultimate reality, belonging to the true light, which is already shining, in contrast to the darkness, which is passing away.

The eschatological dimension of "new," specified by its christological reference and the aspect of finality, is also clearly present when the apostle Paul writes, in an apocalyptic vein, of the new creation (2 Cor 5:17; cf. Gal 6:15). The new creation is "in Christ." It stands in contrast with the old creation which has passed away.

D. Eschatological Aspect

The eschatological aspect of "new" is predominant in the apocalyptic scenarios of the book of Revelation, which speak of the new heavens and the new earth (Rev 21:1; cf. 2 Pet 3:13), the new Jerusalem (Rev 2:12; 21:2), a new hymn (Rev 5:9; 14:3), and a new name (Rev 2:17; 3:12). Elements of comparison and contrast are present in all of these descriptions, but finality is the preeminent aspect. Because of these apocalyptic scenes, R. A. Harrisville (1960: 18–20) cites a dynamic quality as a distinctive aspect of the NT idea of newness.

This eschatological dimension of "new" is also clearly present within the deutero-Pauline writings. Both Ephesians and Colossians speak of the new person (*anthropos;* Eph 2:15; 4:24; Col 3:10). In these writings the christological reference and the element of finality are integral to the meaning of "new," just as they were in the apostle's own work (1 Cor 11:25; 2 Cor 3:6; 5:17; Gal 6:15).

The eschatological aspect of "new," without, however, its Pauline and Johannine specificity, is clearly apparent in the expression "new tongues," found in the canonical conclusion to Mark, where it is part of an eschatological summary (Mark 16:17–18). There the adjective characterizes the spirit-provoked phenomenon of glossolalia.

E. Contrast

Elsewhere in Mark the element of contrast comes to the fore in the evangelist's use of "new." Jesus' new teaching stands in contrast to the teaching of the scribes (Mark 1:27; cf. v. 22). Matthew, who wants to highlight the continuity between traditional teaching, the teaching of Jesus, and the teaching of the

Church (Matt 3:2; 4:17; 10:7), has omitted "new" from his parallel commentary on the reaction to Jesus' teaching (Matt 7:28–29).

The element of contrast also characterizes the use of "new" in a series of metaphorical remarks attributed to Jesus, especially apropos new wine and new wineskins (Matt 9:17; Mark 2:22; Luke 5:37–39), and new patches and new clothes (Mark 2:21; Luke 5:36). In their present context these metaphorical expressions symbolize the radical newness of Jesus' eschatological presence (cf. 1 Cor 5:7). See also *TDNT* 3:447–51 and 3:896–901.

RAYMOND F. COLLINS

NEW COMMANDMENT In the Johannine literature a new commandment (*entolē kainē*) is mentioned four times (John 13:34; 1 John 2:7, 8; 2 John 5). John's new commandment of love is of a somewhat different order from the Synoptics' teaching on love, where the focus is on the significance of the law (Matt 5:43–47; 22:39; Mark 12:31; Luke 6:27–28, 32–35; 10:27–37).

Within the Johannine gospel the new commandment is presented as a gift of the departing Jesus to his disciples. As such, it is one of the great realities of salvation given by Jesus, along with the Spirit, the bread of life, living water, eternal life, peace, glory, the word of God, and the power to become children of God. The specificity of the new commandment of love is to be found in its object ("one another," that is, the members of the community) and its christological reference ("as I have loved you"): Jesus is the model, ground, and means of the disciples' love for one another.

The Johannine love commandment is a new commandment because of this christological reference: a new and definitive era of salvation has been inaugurated with the presence of Jesus. A manifestation of this new era is to be found in the love the disciples have for one another, a love which participates in the Father's love for his Son ("*as* I have loved you," cf. John 3:35; 5:20). For John, the new commandment is constitutive of the Church insofar as the disciples of Jesus are recognizable by their mutual love (John 13:35) and insofar as their mutual love binds them together as a community.

The description of the love commandment as a *new* commandment apparently became problematic when the Johannine community was troubled by gnosticizing elements which reveled in a new Christian experience at the expense of Christian tradition. The tension of the situation led the author(s) of 1–2 John to affirm that the new commandment was, in fact, the old commandment. That is, the love commandment had not only been taught in the baptismal catechesis of the Johannine community, it had also been part of the Gospel proclamation from the very outset.

NEW COVENANT [Heb *bĕrît* (בְּרִית).*ḥădāšâ* (חֲדָשָׁה)]. A phrase appearing in Jer 31:31, and only there in the OT, which denotes the basis on which a future relationship between God and his people will rest following the collapse of the Mosaic covenant and Israel's loss of nationhood in 587 B.C. This new relationship, which God himself will create, is anticipated in other terms by Jeremiah and also by Ezekiel, Second Isaiah, and Malachi. The new covenant forms the centerpiece of a larger eschatological hope which includes a new act of salvation, a new Zion, and a new Davidic king. The belief in a new covenant existed among the Essenes of Qumran, but it was the Christian Church that laid real claim to Jeremiah's promise, establishing the new covenant finally as its charter of faith. In the NT the phrase

"new covenant" appears in Luke 22:20, in Paul's Corinthian correspondence (1 Cor 11:25; 2 Cor 3:6), and in the Letter to the Hebrews (Heb 8:8, 13; 9:15; "fresh covenant" in 12:24). See also COVENANT.

A. Old Testament

The new covenant prophecy in Jer 31:31–34 is one of four brief eschatological utterances that conclude an earlier edition of Jeremiah's Book of Comfort (chaps. 30–31). A rhetorical structure calls attention to the eschatological nature of these utterances ("Behold the days are coming" in 31:27, 31, 38; cf. 30:3), and indicates that the promised future will contain both continuity and discontinuity with the past (*ʿôd,* "again" in 31:23, 39; and *lōʾ … ʿôd,* "not … again" in 31:29, 34a, 34b, 40; cf. Lundbom 1975:32–36). Discontinuity gets the accent in the new covenant passages. Whereas the *tôrâ* remains in the new covenant and the obligation to comply with its demands still exists, conditions for compliance are vastly improved because Yahweh promises to write his *tôrâ* on the human heart.

Scholars have considered two major questions when discussing the concept of a "new" covenant: (1) whether this covenant really is "new," and (2) whether the Mosaic covenant over against which the new covenant is compared continues to be viable. Zimmerli (1965: 80) believes that Jeremiah announces the end of the Mosaic covenant. Von Rad (*ROTT,* 212–13) agrees that the old covenant really was broken; nevertheless, the revelation it contained was not nullified in whole or in part; so far as content goes, the new covenant also neither alters nor expands the old. What may certainly be said is that for Jeremiah the gulf between the new covenant and the old is greater than for any who preceded him. The new covenant will be more than a renewed Mosaic covenant, such as those formalized in the plains of Moab (Deut 5:2–3; 28:69 [—Eng 29:1]), at Shechem (Joshua 24), or in Jerusalem at the climax of the Josianic Reform (2 Kings 23). It is a really "new" covenant, one that marks a new beginning in divine-human relationships and one which is grounded in a wholly new act of divine grace, i.e., the forgiveness of sins (Jer 31:34; cf. Ezek 36:25–28).

The forgiveness of sins did not undergird the Mosaic covenant, in fact it played no part at all in that covenant's understanding—either in the earliest formulation or in the formulation appearing in Deuteronomy. The act of divine grace undergirding the Mosaic covenant was the deliverance from Egypt (Exod 20:2; Deut 5:6). In Deuteronomy the nation is promised life if it obeys the covenant; if it does not obey, Yahweh will rain down a multitude of curses, the most serious of which will be the loss of the land. The essential Deuteronomy (i.e., chaps. 1–28) makes no provision for a restored divine-human relationship once the covenant is broken and the curses have fallen (4:29–31 is exilic or postexilic). Disobedience is simply not the problem for Deuteronomy that it is for Jeremiah and Ezekiel (*ROTT,* 270). Deuteronomic theology is best summed up in Joshua's words to the people at Shechem: If you disobey the covenant Yahweh will *not* forgive your sins; instead he will punish you (Josh 24:19–20). A later theology concludes the Holiness Code in Leviticus 26 There, provisions are made for the forgiveness of sins, after which Yahweh says he will begin again with Israel on the basis of his covenant with Abraham (Isaac and Jacob) and his remembrance of the land (Lev 26:40–45).

The new covenant is new because Yahweh's *tôrâ* will be written on the human heart. The Sinai covenant was written on tablets of stone (Exod 24:12; 31:18; *et passim*). In the homiletical rhetoric of Deuteronomy, however, the *tôrâ* was supposed to find its way into the human heart (Deut 6:6; 11:18). But Deuteronomy knows—as does Jeremiah—that the heart is deceitful and layered with evil (Deut 10:16; 11:16; Jer 4:4). Jeremiah is the more negative in assessing the human condition. He says sin is "engraved" on the tablet of the heart (17:1), that the heart is "deceitful above all things" (17:9). In addition he believes the people have not the ability within themselves to make their relationship with God right again (e.g., 2:25; 13:23; cf. *ROTT,* 216–17). In any case, prior "heart talk" in Deuteronomy and Jeremiah is

background for and determines the articulation of the new covenant promise. Jeremiah on another occasion says that Yahweh will give Israel a (new) heart (24:7). Ezekiel expects for Israel a new heart and a new spirit (Ezek 11:19; 36:26); both they were to acquire for themselves (18:31), a demand of course incapable of fulfillment.

According to ancient Hebrew thought, the "will" took up residence within the heart (Johnson 1949: 79). So if the *tôrâ* is written on the human heart, people will have the will to obey it; moreover, they will no longer have to admonish one another to "know Yahweh," for everyone will know him (Jer 31:34). Knowing Yahweh here and elsewhere requires the expanded meaning of "knowing and doing the *tôrâ*" (Hos 4:1–2; Jer 5:4–5). In Deuteronomy the people must continually be told, "Be careful to do (the commands)" (5:1, 32; 6:3, 25; etc.), "Take heed … lest you forget the covenant/Yahweh" (4:23; 6:12; 8:11; etc.). The liturgical injunctions in 6:6–9 and 11:18–20 admonish them to keep Yahweh's words in their hearts as well as in other more conspicuous places. In the end, however, admonitions such as these and more from the prophets were made to no avail. Disobedience exceeded all limits and the Mosaic covenant was undone.

In Jer 32:37–41, which is a parallel passage to 31:31–34 (*ROTT,* 214), the covenant of the future is described as an "everlasting covenant" (*bĕrît ʿôlām*). The term "everlasting covenant" appears also in Jer 50:5 Previously, only the unconditional covenants given to Noah, Abraham, Phinehas, and David (Freedman 1964; *TDOT* 2: 270–72), along with a few lesser ones, were taken to be everlasting. Unconditional covenants were at home in southern theology, i.e., in P traditions (Gen 9:16; 17:7, 13, 19; Exod 31:16; Lev 24:8; Num 18:19; 25:13) and psalms from the Jerusalem temple (Pss 89:20–38—Eng 89:19–37; 111:5, 9; cf. 2 Sam 23:5). At some point before the Exile, the covenants to Abraham and David were expanded so as to cover Jerusalem and the temple (Isa 37:33–35 = 2 Kgs 19:32–34; Pss 105:8–11 = 1 Chr 16:15–18; 132:11–18; cf. Isa 31:4–5; Jer 7:1–15). Ezekiel and Second Isaiah look forward to an everlasting covenant between Yahweh and the nation (Ezek 16:60; Isa 55:3; 61:8) which they describe elsewhere as a covenant of "peace" (Ezek 34:25; 37:26; Isa 54:10) or one in which Yahweh's Spirit will indwell the people (Ezek 36:27–28; Isa 59:21). These varied descriptions of the future covenant were part of the larger messianic hope taking shape at that time. The servant figure of Second Isaiah will personally embody the new covenant (Isa 42:6; 49:8), and through this servant other nations will be brought into covenant relation (Isa 55:1–5; Muilenburg, *IB* 5: 405). One finds a universalism in Second Isaiah not existing in Ezekiel. Malachi's "messenger of the covenant," finally, is cast as a priestly figure (Mal 3:1; cf. 2:1–9).

B. Literature of Judaism Including Qumran

In postexilic Judaism the covenant idea contains all the ambiguity characterizing the larger eschatological hope generally. National life has been reconstructed along the old lines, which is to say the Mosaic covenant is again central and the Law (Torah) occupies a position of supremacy. In Nehemiah 9–10 a "faith covenant" (*ʾămānâ* in 10:1—Eng9:38) is made to walk according to Yahweh's *tôrâ* given through Moses. Ezra prays that the people will thereby return to the "faithful heart" of Abraham (9:7–8). At the same time a new covenant is looked for in the future, at which time the Messianic Age will dawn. Bar 2:35 speaks of an everlasting covenant which will secure Israel's tenure in the land. In *Jubilees,* where the Law has eternal validity and the Messianic Age is thought to have already begun, an everlasting covenant is described in which the people on their part will confess sin, and God on his part will create a holy spirit in the people and will cleanse them (*Jub.* 1:22–24).

Among the Essenes at Qumran the new covenant finds fulfillment in a separated community (*yḥd*) which believes it is living in the "last days." This community has important similarities to the early Church. Members of the Qumran community swore an oath to uphold a covenant variously described as a "covenant of God," an "everlasting covenant," a "covenant of repentance," a "covenant of steadfast love" (*ḥsd*), and a "new covenant." The Essene covenant theology is contained in two sectarian documents found among the Dead Sea Scrolls: the *Manual of Discipline.*(1QS), and the *Damascus Document.*(CD) which also goes by the name of the Zadokite Document. The latter was known before the Dead Sea discoveries, two fragmentary medieval codices having been found in the genizah of the Cairo Synagogue

in 1896. These were published in 1910 (*APOT* 2: 785–834; Rabin 1958). The *Damascus Document* contains three references to a "new covenant" which people have entered into "in the land of Damascus," a cryptonym for their place of exile in the Qumran desert (cf. Amos 5:26–27). The "new covenant" references are 6:19; 8:21 = 19:33/34; and 20:12 in Rabin (also Gaster 1976), and 8:15; 9:28, 37 in *APOT* 2. Seven mss of the *Damascus Document* were found in Cave 4, some tiny fragments also in Caves 5 and 6 (Cross 1961: 82; *IDBSup,* 210). Of these only the Cave 6 fragments have been published. See DEAD SEA SCROLLS. Also in the *Pesher on Habakkuk* found at Qumran (1QpHab) there may originally have been a reference to the "new covenant" in 2:3; however, the MS has a lacuna where scholars think "covenant" once stood, leaving the reading uncertain and opinions about it divided.

The Essene Jews who separated themselves from the rest of Judaism and relocated in the Qumran desert did so in order to be reborn as the New Israel. According to Cross (1961: 80) the word "community" (*yḥd*) as used in the *Manual of Discipline* is eschatological, i.e., it means "Israel of the New Covenant." People entering this new covenant were required to return to a serious study of the Mosaic Law; required also of each member was strict obedience to the Law's demands as understood in light of interpretations given by the priestly hierarchy. At the top of this hierarchy was the Teacher of Righteousness, the original leader of the sect, and also the author, perhaps, of the *Manual of Discipline.* The *Damascus Document* is from a later period after the Teacher's death (Cross 1961: 121). The community bore an unmistakable stamp of legalism; nevertheless that legalism was informed by the prophets whose great legacy at Qumran was the conviction that sin lay deep within each human soul and only through repentance and purification was a restored relationship with God possible. The *Damascus Document* in 19:16 (*APOT* 2: 9.15B) called the Qumran covenant a "covenant of repentance" (*bryt hšwbh*). Repentance had to precede purification, which was accomplished in the initiatory baptismal rite (Black 1961: 94).

This new covenant was to be everlasting. Whatever else this signified, it at least meant that anyone entering the covenant was expected to remain within it for life (1QS 3:11–12). The covenant was renewed annually, at which time all members underwent evaluation. This covenant had its obligations, and like the Mosaic covenant, these obligations were fortified with blessings and curses (1QS 2:1–18). The *Manual*reads much like Deuteronomy. The main difference between the two is that in the *Manual*the older corporate sense is gone; the blessings and curses, for example, fall now upon individuals. The *Manual*does not foresee any abrogation of the covenant as a whole nor does it imagine the noncompliance might lead to the whole community being destroyed. The same can also be said of the Church (cf. C below). On the other hand, the individual responsibility presupposed in the *Manual*appears not to result from any inner motivation, at least not the sort Jeremiah envisioned in his new covenant prophecy. God is said to have placed a holy spirit in the people of Qumran (1QS 3:7), but they still need admonitions to obey, as both the *Manual*and the *Damascus Document* make clear.

The new covenant idea undergoes no further development in Judaism. The Midrashim contain merely a few citations of Jer 31:33 for purposes of focusing on the old problem of remembering the Torah. *Midr. Cant.* 8:14 interprets the phrase about God writing the Torah on people's hearts to mean that God recalls for the people what they themselves have forgotten and what has led them into error. More often in the midrashic literature, the Jeremiah verse is given a meaning closer to the one it had originally: that forgetting the Torah can be expected in the Present World, and only in the World to Come, when the Torah is (truly) written on the heart, will people no longer forget it (*Midr. Qoh.* 2:1; *Midr. Cant.* 1:2; *Midr. Pesiq.* 107a; *Midr. Yal.* on Jer 31:33; cf. Str.-B. 3:89–90, 704).

C. New Testament

The Christian Church, from earliest times, claimed the promise of Jer 31:31–34 and understood itself to be the people of the new covenant. It also thought of itself as a new people (1 Pet 2:1–10): Israel reborn, but a more inclusive Israel to which gentiles now belong. It comes as somewhat of a surprise then to find so little said in the NT about a new covenant. G. E. Wright (1971: 986) attributes the paucity of references to legalistic connotations which the term "covenant" had in the NT period. He says "covenant" had come to mean almost exclusively obedience to the law; for this reason NT writers were uncomfortable with the term, using it only to point out that in Christ the covenant was not law but faith or life in the Spirit. NT

rhetoric at this point contrasts sharply with Jewish rhetoric and rhetoric found in the Essene sectarian documents from Qumran.

The words "new covenant" are placed on the lips of Jesus only in the longer text of Luke 22:20, where, at the Last Supper Jesus passes the wine and says, "This cup … is the new covenant in my blood." Scholarly opinion is divided about the originality of this reading, though the longer text does have wide support. This Lucan text, in any case, depends most likely upon 1 Cor 11:25, where Paul cites a Last Supper tradition antedating him, perhaps reflecting usage in the Antioch Church (Jeremias 1955:127–31): "This cup is the new covenant in my blood." Mark 14:24 records Jesus' words as, "This is my blood of the covenant," a modification in the direction of Exod 24:8 (*TDNT* 2:133; Richardson 1958: 230; cf. Heb 9:20). Matt 28:26 adds "for the forgiveness of sins," which is new covenant language from Jer 31:34 (Dodd 1953: 45). In some ancient mss both the Mark and Matthew texts have the word "new" added. Some form-critics conclude that neither "new" nor "covenant" was spoken by Jesus (*BTNT* 146; Jeremias 1955:110–15), which is to say the Last Supper liturgy was originally more brief and in each of the synoptic passages has undergone expansion. Even in its most radical reconstruction, the Last Supper liturgy clearly conveys the idea that Jesus' death, or his shedding of blood, seals the new covenant which God now makes with humankind. Sacrificial terminology from Exod 24:3–8, all but absent in the Prophets (but see Zech 9:11), has come to dominate the covenant idea where it takes on fresh new meaning.

Paul refers to himself and the Corinthian laity as "ministers of a new covenant" (2 Cor 3:6) where Jer 31:31–34 appears to be in the back of his mind. This covenant has found expression in the *hearts* of the Corinthians, wherein the "Spirit of the living God" resides (vv 2–3). It therefore contrasts with the "old covenant" of Moses (vv 14–15) which was written on stone (v 3).

Paul might have said more about the new covenant were it not for his concern to establish a more ancient base than Jer 31:31–34 for the new faith in Christ. The important promise for Paul is the one given to Abraham, that through him all the families of the earth would be blessed. Paul grounds the blessings through Christ in the Abrahamic covenant so they may apply equally to Jews and gentiles (Gal 3:14). Paul must short-circuit the Mosaic covenant if he is to realize his goal of evangelizing the gentiles, for the Mosaic covenant was made only with Israel (cf. Rom 9:4; Eph 2:11–13). Moreover, the Mosaic covenant contains the law which is now a burden to everybody—Jew and gentile. In Paul's view the law only brings people under its curses. But Christ, by dying on the cross, becomes himself a curse which redeems those under the law who have faith in him (Gal 3:10–14). The new covenant, therefore, contains only blessings which makes it just like the Abrahamic covenant. The Mosaic covenant serves Paul only for the purpose of making a contrast with the Abrahamic covenant. In his allegory in Gal 4:21–31, Paul sees the Abrahamic covenant (fulfilled through Sarah) leading to freedom, sonship, and the Jerusalem above; the covenant made at Sinai (called Hagar) leads to present Jerusalem, i.e., the Jews and Judaizers, and thus slavery.

As a Christian, Paul has a major problem knowing what to do with the law (Torah). The law is supposed to belong to the new covenant, but the coming of Christ has eclipsed the law. Paul resolves this problem to some extent by adopting a developmental attitude toward the covenants. Among the former covenants the Abrahamic covenant is primary, and it was not annulled by the Mosaic covenant which came later (Gal 3:17). Paul exploits the dual meaning of *diathēkē* as "covenant" and "will" (or "testament") in Gal 3:15–18 in order to make this point. The Mosaic covenant, when originally given, was accompanied with great splendor, though it was a splendor that faded (cf. Exod 34:29–35); now there is no splendor at all associated with the Mosaic covenant because of the surpassing splendor of Christ, whose new covenant is eternal (2 Cor 3:7–11). Paul also betrays a developmental attitude toward the covenants when he views the Mosaic law as a schoolmaster that must discipline a people not yet mature (Gal 3:23–24). With the coming of Christ, however, those having faith are no longer subject to their former schoolmaster (vv 25–26). In Romans, Paul says Christians are discharged from the law (Rom 7:6), that Christ is the end of the law (10:4). Yet Paul does not want to dispense with the law; in fact, he claims to uphold it (3:31). His other statements, however, distance him irrevocably from Judaism, for whom the law is central and

eternally binding. For Paul, Christ is central, and the new covenant written by his life-giving Spirit surpasses all other covenants and is eternal.

Paul's law and grace dichotomy (Rom 6:14) stems from the lack of a typology in his thinking between the new covenant in Christ and the Mosaic covenant. Were such a typology made, Paul would have to concede that the Mosaic covenant/law had its own accompanying act of divine grace, which was the Exodus from Egypt.

Paul's views on sin and reconciliation in Romans lack covenant language *per se,* nevertheless they rest almost certainly on broad-based assumptions about the new covenant which existed in the early Church. According to Paul's gospel both Jew and gentile are under the power of sin, both stand in need of forgiveness, and both are reconciled to God by Jesus' death on the cross. In Ephesians too (whether or not it is Pauline) the blood of Christ is said to bring gentiles near to God, even though formerly they were strangers to the covenants of promise (Eph 2:12–13).

In Rom 2:14–15 Paul seeks parity between Jew and gentile by stating that upright gentiles not possessing the Jewish law show nevertheless "that what the law requires is written on their hearts." Such people also possess a "conscience" (*syneidēsis*). The first remark about a law-equivalent "written on the heart" appears to be a borrowing from Jer 31:33 (cf. Str.-B. 3:89–90); the following remark about a "conscience that bears witness" derives most likely from Stoic or Jewish-Hellenistic philosophy. Paul's precise understanding of how the new covenant manifests itself among the gentiles is by no means transparent in these verses, but one should note that his thinking nevertheless runs parallel to Jeremiah's new covenant passage where the promise of a law written on the heart is followed by the promise of a new inner motivation to know and do the law (Jer 31:34).

In Rom 11:25–32 the new covenant prophecy is given a most extraordinary interpretation, unlike any other in the NT and certainly unlike any made subsequently by the Church Fathers. Elsewhere the referent for the new covenant is the Church, who is the New Israel; here the referent is the Israel that remains hardened to the gospel (Dodd *Romans* MNTC, 182). Paul says that at some future time, when the full number of gentiles have come in and the Parousia of Jesus occurs, *all.* Israel will be saved. Isa 59:20 is quoted in support of the Parousia (v 26); next comes the new covenant prophecy: "And this will be my covenant with them, when I will take away their sins" (v 27). The OT passage or passages here quoted cannot be identified with certainty. The first part of v 27, "And this will be my covenant with them," is thought to be a continuation of the previous quotation of Isa 59:20 into v 21a The second part of the verse, however, "when I take away their sins," has to be from somewhere else. Some suggest this phrase comes from Isa 27:9b, which in the LXX compares nicely, except for the singular "his sin." The plural "their sins" concludes the new covenant passage of Jeremiah (LXX 38:34), where also in v 33 the beginning words are "For this is the covenant." Paul could then be giving a freely rendered abridgment of Jer 31:33–34 (Dodd *Romans* MNTC, 182). An abridgment of this same Jeremiah passage is found in Heb 10:16–17 Regardless of what precise passages make up this florilegium, Paul gives the new covenant promise its most inclusive meaning possible: he believes this covenant really is for everyone.

Paul's lack of a typology between the Mosaic covenant and the new covenant in Christ is compensated for, to some extent, by theology embedded in Matthew and John's gospels. Indirectly, and in different ways, some scholars suggest that both gospel writers draw a parallel between Jesus and Moses. Matthew depicts Jesus as the "new Moses" leading a "new Exodus"; the Sermon on the Mount is Jesus' "new Torah" (Davies 1969: 10–32). Although the new Torah is significantly less burdensome than the old (Matt 11:28–30), no antithesis is intended between the two; the new comes to complete the old (5:17). Matthew does, however, intend an antithesis between the new people of God and the old. Jesus pronounces his "blessings" on the new torah (5:3–11); but on the old he pronounces "woes" (23:13–36). These blessings and woes are structurally balanced in the gospel and most likely constitute an adaptation of the old covenant form found in Deuteronomy (Deut 11:26–32; 28). The language, however, is toned down by Matthew. The words *makarioi* (blessed) and *ouai* (woe) translate the Hebrew *ʾašrê* and *hôy,* both less strong than the covenant words *bārûk* (blessed) and *ʾārûr* (cursed). Jesus does not go so far as to curse the scribes and the Pharisees. Also, with the blessings and woes spoken to different audiences, the

new people of God receive neither woes nor curses, only blessings. This amounts to Matthew saying that there can be no abrogation of the new covenant and no destruction of the Church (Matt 16:18).

John in a different way presents Jesus as a "new Moses" (Glasson 1963). But for this gospel writer Jesus gives no new Torah, unless one identifies such in the new commandment to "love one another" (John 13:34). Jesus himself is the Logos. John therefore makes a law/grace dichotomy similar to Paul's: "For the law was given through Moses, grace and truth came through Jesus Christ" (1:17). The Holy Spirit is John's answer to the new inner motivation required to know and do the Torah. He dwells within the believer (14:17) and in Jesus' absence will bring his teachings (torah) to remembrance (14:26). He will also convince the rest of the world of sin, righteousness, and judgment (16:7–11).

In the letter to the Hebrews the new covenant is given its most prominent place in the NT The new covenant passage from Jeremiah is quoted twice, once in its entirety (8:8–12) and once in abridged form (10:16–17).

For this NT writer, Christ is the great high priest of the heavenly sanctuary (7:26), one who has "obtained a ministry which is as much more excellent than the old as the covenant he mediates is better, since it is enacted on better promises" (8:6). The Mosaic covenant, which is here called the first covenant, was shown to be faulty because people under it turned up faulty (8:7–8a). Reference here is presumably being made to the first covenant's provisions for noncompliance, i.e., the curses. The new covenant prophesied by Jeremiah has better promises: it contains God's unconditional commitment to forgive sins; it is eternal (9:15; 13:20); and Jesus is the covenant's surety (7:22). According to Hebrews, Jeremiah in announcing this new covenant treats the Mosaic covenant as obsolete. That obsolescence is just now being seen as the first covenant is ready to vanish away (8:13).

Jesus is the "mediator of the new covenant" (9:15; "better covenant" in 8:6; "fresh covenant" in 12:24; cf. 1 Tim 2:5–6; Isa 42:6; 49:8). In Judaism the covenant mediator was Moses (cf. Gal 3:19) and after his death the high priest (Richardson 1958: 229). Jesus becomes mediator of the new covenant by virtue of his death on the cross, which the author of Hebrews explains in priestly and sacrificial categories understood within Judaism (9:1–14). Special appropriation is made of the Day of Atonement ritual (Leviticus 16). As the high priest who enters once and once only the Holy Place with his own sacrificial blood, Jesus secures for God's elect their eternal redemption (9:11–12, 24–28; cf. 7:27). This death purifies human consciences (9:14; 10:22; cf. Rom 2:15), something not possible with the earlier sacrifices (9:9).

The Holy Place—or Heavenly Sanctuary (9:24)—is for the elect also the Promised Land of rest and inheritance (4:9–11; 9:15). In raising the subject of inheritance the author of Hebrews uses both meanings of *diathēkē:* "covenant" and "will" (9:15–22; cf. Gal 3:15–18). A will does not take effect until the death of the one who makes it, i.e., the testator. Jesus is therefore the testator of the new covenant. At his death the elect receive their inheritance, which is redemption from transgressions under the first covenant. The blood performs the same function of ratification in the new covenant as it did in the old (9:18–21; cf. Exod 24:6–8). The author echoes a common Rabbinic theme when he says that without the shedding of blood there is no forgiveness of sins, or no atonement with God (9:22; cf. Lev 17:11).

In the abridged quotation from Jeremiah in 10:16–18, the accent is on the concluding words of the new covenant promise which state that God will no longer remember the peoples' sins. Earlier in chap. 10 the author maintained that yearly sacrifices on the Day of Atonement—as well as daily sin offerings—were ineffectual because they had to be repeated. Jewish teachers would find such an argument unconvincing; indeed it is flatly contradicted in *Jub.* 5:17–18. Nevertheless, for this writer Jesus makes the single offering of his body, which for all time perfects the sanctified elect (10:10, 14). Once the forgiveness of sins is granted, there is no longer any sin offering which can be made (10:18, 26).

The "once for all" view of Jesus' sacrifice is matched in Hebrews with a "once for all" view of repentance, enlightenment (baptism), and sanctification of the believer. If one deliberately sins after coming to a knowledge of the truth, that person profanes the blood of the new covenant and has only God's vengeance to look forward to (10:26–31). This exaggerated view of Christian sanctification has the effect of recasting the new covenant in terms of the old, and it also qualifies the "blessings only" promise

made to the Church. Although curses are not explicitly placed on individuals who lapse under the new covenant, they are implied (6:1–8; 10:26–31). The idea that deliberate sin makes a sin offering inefficacious is found in Num 15:30–31 (*t. Yoma* 8:9 applies the same principle to the Day of Atonement ritual; cf. Buchanan *Hebrews* AB, 144). But in a closing benediction the author of Hebrews prays that the Lord Jesus, "by the blood of the eternal covenant," will equip the elect to do God's will (13:20–21).

D. Patristic Literature to A.D. 325

The Church of the 2d and 3d centuries carried on its polemic against two major opponents, one external to the Church, the other internal. The external opponent was the Jews from whom an all-gentile Church had now been completely cut off. The Fathers saw the Jews as a rejected people, one which the Church had supplanted in God's economy of salvation. Against the Jews they contrasted the new and old covenants, or the new and old "laws," if topics such as circumcision happened to be at issue (Tert. *Adv. Judaeos* 3). By the end of the 2d century the phrase "New Testament" (="New Covenant") was the name given to the Gospels and other apostolic writings which the Church took to be Scripture (Iren. *haer.* 4.15.2). The Hebrew Scriptures were called the "Old Testament" (Melito of Sardis fr. 4; Iren. *haer.* 4.15.2), a designation found already in 2 Cor 3:14 where Paul alludes to the *reading* of the "Old Covenant" in the synagogue.

The internal threat to the Church was heresy, above all Gnosticism which peaked in the mid-2d century. The most serious aberration of Christian thought to impact covenant understanding came from Marcion (A.D. 100–160), a gnostic in the minds of some, but for others one who merely had affinities with Gnosticism. Marcion wanted to cut off Christianity from Judaism—completely and for all time. Against Marcion, and others such as Valentinus, who was a true gnostic, the Fathers fought to preserve Christianity's Jewish roots, arguing that the God of the NT was not distinct from the God of the OT, that the Holy Spirit in the NT was the same Holy Spirit found in the OT, and that NT Scripture itself was inextricably bound to OT Scripture—indeed it was a fulfillment of it. Gnostics minimized the historical foundations of Christianity; they were more concerned with creation than covenant, which explains perhaps the noticeable absence of discussion about the covenant in Gnostic treatises, including the horde of texts recently found at Nag Hammadi. In a rare quote of the words of Institution for the wine in *Pistis Sophia* (4.141), the wine and/or blood—along with fire and water—are mysteries which have the ability to purify sin (Schmidt 1978: 366–69).

The Fathers explained the rejection of the Jews by citing the "calf incident" in the wilderness at which time the Mosaic covenant was promulgated (*Ep. Barn.* 4: 14; Iren. *haer.* 4.15.2; Tert. *Adv. Judaeos* 3; cf. Exodus 32). Origen (*Cels.* 74–75) typed the Jews on the basis of this incident, i.e., the incident explained how it happened that the Jews rejected Jesus.

The *Epistle of Barnabas* does not mention the new covenant, but rather "the new law of our Lord Jesus Christ," which contrasts with the older law of sacrifice in that it is "without the yoke of necessity" (*Ep. Barn.* 2 [*PG* 2: 729–30]). The Christian has forgiveness from sins through Jesus' blood (chap. 5). For Barnabas there was only one covenant, received by Moses, but immediately lost due to the sin of the calf. In reality, Israel never had a covenant with God. Christians are heirs to this one covenant through Christ in whom it is sealed upon their hearts. Barnabas thus argues that the one covenant cannot belong to both Jews and Christians (*Ep. Barn.* 4; 13–14; cf. *BTNT*, 98, 110–11). Promises of a future covenant cited from the OT are Ezek 11:19; 36:26 (chap. 6) and Isa 42:6–7 (chap. 14).

Justin Martyr in his *Dialogue with Trypho the Jew* recognizes two laws or covenants (*dial.* 10–12, 67, 118, 122–23). The old through Moses has been abrogated and remains only for the Jews, although Justin asks rhetorically if even this is so since the Jews do not believe their own Scriptures (*Dial.* 29). The new law and covenant through Christ in any case replaces the old; it does not require circumcision along with other lesser observances, and it is final, eternal, and universal in scope (*dial.* 11). Jer 31:31–32 and Isa 51:4–5 point to Christ as the new law and covenant, also to Christians who are the true spiritual Israel (*Dial.* 11; cf. 123). Isa 42:6–7 likewise points to Christ, and its promise of a covenant which will be a "light to the nations" finds fulfillment in illumined gentiles, who under the new covenant are the true proselytes (*dial.* 122).

Irenaeus (*haer.* 4.15.1) says that when the Israelites made the calf they decided in favor of slavery. This did not cut them off from God, but it did subject them to a state of servitude for the future (cf. Gal. 4:21–31). Stephen in Acts 7:38a–43a referred to the calf incident and God's decision to give up the Jews to slavery, and is cited (40.15.1). The old covenant, under which the Jews lived until the coming of Christ, is law; the new covenant under which Christians live, promised in Jer 31:31–32 and Ezek 11:19; 36:26 (4.33.14) and not fulfilled by Zerubbabel when temple worship was restored after the Exile (4.34.4), is gospel, or a "covenant of liberty" (4.9.1–2; 16.5; 33.14; 34.3–4). It was fulfilled in Christ. Both old and new covenants were prefigured in Abraham (4.25.1, 3). The older law predicted the new covenant, which in turn became a fulfillment of it (4.34.2). The new covenant also canceled the old covenant (4.16.5). Irenaeus reflects the typological thinking of Hebrews when he says the old covenant was a *type* of heavenly things—things now existing in the Church (4.32.2). The Bishop of Lyons, however, was also capable of process thinking. In his view divine grace multiplies over time and Christian living is a process of maturation. God's new covenant of liberty bestowed more grace than the old covenant of bondage. Then, as the Christian's love toward God increases, God bestows more and greater gifts (4.9.2–3). Life under the new covenant also calls for greater faith, which means a higher quality of living (4.16.5; 28.2). Since the new covenant grants real liberty, the Christian is more significantly tested in doing what God requires (4.16.5).

Tertullian cites the new covenant promise of Jeremiah to show the Jews that circumcision is replaced by a new law unlike any previously given (*Adv. Judaeos* 3). The old law made customary the *lex talionis;* the new urges mercy and converts one to peace (cf. Iren. *haer.* 4.34.4 on the new covenant bringing peace). Gentiles are admitted under this new law. In fact, a curious reversal has taken place: the Jews, who were known by God and made the recipients of his many benefits, forgot him and turned to idolatry, i.e., the calf; the gentiles originally did not know God, nevertheless they forsook their idols and converted to him by accepting the new law in Christ. Jer 31:31–32 is quoted against Marcionism to show that the old covenant was only temporary, since it needed changing. Isa 55:3 promises in addition that the old covenant will be replaced by an eternal covenant which will run its course in Christ (*adv. Marc.* 4.1; cf. Just. *dial.* 12; 118 on the new covenant as an eternal covenant).

Clement of Alexandria, who was a Christian philosopher, saw in Jer 31:33–34 an indication that God had implanted his heavenly teaching, or laws, into human minds and hearts. These laws enable all people to know him and to be the recipients of his grace (*Protr.* 11 [*PG* 8, 233–34]). Clement says the old covenant disciplined people with fear, but in the new covenant fear is turned into love (*paed.* 1.7 [*PG* 8: 321–22]; cf. Just. *dial.* 67 who says the new covenant no longer builds on "fear and trembling"). Clement does recognize that the law given through Moses was an ancient grace, but it was only temporary; eternal grace and truth came through Jesus Christ.

Origen (*c. Cels.* 74–75) says the Jews fashioned the calf because they did not believe the marvels of Egypt, the Sea, and the Wilderness. In keeping with their character of disbelief they refused to accept the coming of Jesus and the "second covenant," which were equally marvelous. Christian preachers, says Origen, like the Apostles are to be "ministers of the new covenant" (2 Cor 3:6), i.e., messengers who ascend high mountains by preaching good news to the poor (*comm. in Jo.* 1.11; cf. Isa 52:6–7; 40:9). Paul was a "minister of the new covenant," distinguished not by voluminous writings but by the preaching he did under the power of the Spirit (*comm. in Jo.* 5.3; cf. Rom 15:19). Origen therefore wonders if he himself will qualify as a "minister of the new covenant" with all the writing he is doing (*comm. in Jo.* 5.4).

Lactantius (*Div. Inst.* 4.20) reiterates themes developed by the earlier Fathers. Jer 31:31–32 shows that Jews are disinherited and that Christians—thanks to the death of Jesus—are now heirs to the kingdom. The "House of Judah" in v 31 refers to those called out from among the gentiles. There are two testaments: the old, which is used by the Jews, and the new, which is used by Christians. The new fulfills the old and is more complete than the old. As a result of being adopted under the new covenant, the gentiles are freed from their chains and brought into the light of wisdom (Isa 42:6–7).

Against Marcion and others, the Fathers argued that although there were two covenants (and two peoples), there was but one God (Iren. *haer.* 4.9, 15, 32–33; Tert. *adv. Marc.* 1.20; 4.1; Or. *comm. in Jo.* 1.14). Clement of Alexandria argued against the Valentinians that the Holy Spirit operating in the Church was the same Holy Spirit which operated in the OT ([*exc. Thdot.* 24 *PG* 9, 671–72]). Irenaeus saw in both Testaments the same righteousness of God when God takes vengeance, although he believed that in the NT, vengeance was more real, more enduring, and more rigid (*haer.* 4.28.1).

The Marcionite heresy required also from the Fathers a defense of the unity of Scripture. Origen did this with eloquence. He said all the sacred writings were in fact one book (*comm. in Jo.* 5.4; *comm. in Mt.* 2.15), "one perfect and harmonized instrument of God" (*comm. in Mt.* 2.1). The OT was the beginning of the gospel of Jesus Christ; from another point of view, John the Baptist was a *type* of OT (*comm. in Jo.* 1.14–15). If Origen was the most eloquent in defending the unity of Scripture, Tertullian was the most open in acknowledging Scripture's diversity, but he said that amidst all the diversity there was still no inconsistency with one and the same God (*adv. Marc.* 4.1).

NEW EARTH, NEW HEAVEN The expression "new heaven, new earth" (Gk *ouranos kainos kai gē kainē*) is found in the preface to the vision of the new Jerusalem in Rev 21:1 (cf. 20:11). It is an element of the expectation of cosmic upheaval common to apocalyptic literature. It occurs in a partially plural form in 2 Pet 3:12 as "new heavens and a new earth." Its source is probably to be traced to Isaiah, where "new heavens and a new earth" are integral to the prophetic promise of restoration (65:17; 66:22).

It is uncertain if the new heaven and new earth in Rev 21:1 are renewed versions of earth and heaven, or replacements for them that result from the return to primeval chaos and destruction by fire. Both expectations were common to Jewish tradition (Str-B 3:843–44). The renewal tradition is exemplified by *2 Bar.* 57:2 "… and the belief in the coming judgment was brought about, and the hope of the world which will be renewed was built at that time …" (*OTP;* cf. *2 Bar.* 32:6; 2 Esdr 7:75; *Jub.* 1:29; 1 Cor 7:31; *1 Enoch* 45:3–5). The replacement tradition was adopted by the NT and the early Church and is exemplified by 2 Pet 3:10–13: "… the heavens will be kindled and dissolved, and the elements will melt with fire! But according to his promise we wait for new heavens and a new earth in which righteousness dwells" (RSV; cf. Matt 5:18 = Mark 13:31 = Luke 16:17; 1 John 2:17; *Did.* 10:6; *2 Clem.* 16:3; *1 Enoch* 72:1; 83:3–5; 91:15–16; cf. Ps 102:25–27). The most widely accepted interpretation of Rev 21:1 is that it is illustrative of the replacement tradition.

The major distinction between the former heaven and earth and the new heaven and earth is the absence of the sea (Rev 21:1; cf. *T. Mos.* 10:6; *Sib. Or.* 5:447). The sea may symbolize the primeval ocean out of which the first heaven and earth were made. The sea was the source of the beast (13:1) and the great harlot is seated upon many waters (17:1), and thus may symbolize incomplete sovereignty over the powers of chaos and sin. The absence of the sea in the new heaven and new earth indicates that the long

awaited purging of sin from creation has been accomplished (Rom 8:18–22; Rev 21:27; 22:14–15). This is echoed in 2 Pet 3:13, where righteousness dwells in the new heavens and new earth.

NEW GATE (PLACE) [Heb *ša῾ar-yhwh* (שַׁעַר־יהוה).*heḥādāš* (הֶחָדָשׁ)]. A gate of the Temple's inner or upper court that probably was located to the S of the inner court and led to the royal residences (possibly identified as the Upper Gate and/or the Gate of the Guards). It was at the New Gate that a royal judiciary came to listen to the people's complaints against Jeremiah's prophecy concerning the ruin of Jerusalem and the Temple (Jer 26:10). It was also from the New Gate that Baruch (Jeremiah's scribe) read the prophecies of Jeremiah (36:10), whose words were subsequently read before King Jehoiakim (36:20–26). In close proximity to the New Gate was the chamber of Gemariah, the son of Shaphan the scribe, whose family distinguished themselves in their reverence for the Torah and in their support of Jeremiah (2 Kgs 22:3–20; 2 Chr 34:8–20; Jer 26:24; 29:3; 36:10, 25).

For a time (at least until the reign of Jehoiakim, 597 B.C.E.), the New Gate was so called as it was probably the Upper Gate rebuilt by Jotham (758–743 B.C.E., 2 Kgs 15:35; 2 Chr 27:3), possibly in response to his father's unauthorized intrusion into the Temple (2 Chr 26:16–21; 27:2).

DALE C. LIID

NEW JERUSALEM [Gk *Ierousalēm kainē* (Ἰερουσαλημ καινη)]. This expression is found in the Bible only in Rev 3:12 and 21:2 The vision of the New Jerusalem begins in 21:2 with the announcement that it is coming down from heaven to unite the new heaven and the new earth. The New Jerusalem refers to the capital of the new creation in which the presence of God is with humankind (21:3). As indicated by 3:12, where the faithful of the church of Philadelphia are promised that the name of the New Jerusalem will be written upon them, the citizens of the New Jerusalem are those who have not denied Christ, and have remained faithful to his word (cf. 21:7).

The concept of the New Jerusalem derives from the OT exilic and postexilic prophetic expectation of the restoration of Jerusalem, the return of God to his Temple, and his acknowledgment by all the nations. The restoration of Jerusalem is the focus of the promises and the salvation of God (Isa 2:1–5; 49:14–18; 52; 54; 60–62; 65:17–25; Jer 31:38–40; Mic 4:1–4; Zechariah 14). The actual restoration in the Persian Period was disillusioning, and in later Jewish literature the expectation of Jerusalem restored was replaced by Jerusalem supernaturally transformed by God (Tob 13:8–18; *T. Dan.* 5:12–13; *Sib. Or.* 5.420–27; *1 Enoch* 90:28–29) or a Jerusalem from heaven which would replace the earthly Jerusalem altogether (2 Esdr 7:26; 10:25–28; 13:36; *2 Bar.* 4; 32:1–4). The idea of a Jerusalem in heaven was appropriated by the NT (Gal 4:26–27; Heb 11:10; 12:22; 13:14; cf. Phil 3:20).

The OT image of the people of God as his bride is often associated with the renewal of Zion, the renewed Jerusalem (Isa 49:10; 54:1–8; 61:10; 62:4–5). The NT contains the image of the Church as the bride of Christ (Eph 5:25–33). In 2 Esdr 10:25–28, Zion, represented as a woman, is transformed into a heavenly city. In light of these images, the imagery of the bride and New Jerusalem present here in Rev 21:2, 9 (cf. 19:7–8) indicates that the New Jerusalem, while distinct from its citizens, partly symbolizes the redeemed.

The New Jerusalem is described in detail in Rev 21:1–22:5 The description contains many details which are similar to descriptions of the restored or transformed Jerusalem of the OT and the Jerusalem from heaven of later Jewish literature (Isa 54:11–12; Tob 13:16–18), as well as descriptions of the heavenly city of the gods found in Babylonian sources. The city is portrayed as the Temple of God (cf. 21:3, 22) and the new Paradise of the re-creation anticipated in apocalyptic literature (cf. 22:1–5; *2 Bar.* 4; *4 Ezra* 8:52; *T. Dan.* 5:12–13; cf. Ezek 47:1–12).

NEW TESTAMENT SEMITICISMS See SEMITICISMS IN THE NT.

NEW TESTAMENT, OT QUOTATIONS IN THE The OT quotations in the NT express the historical fact that early Christianity has significant roots in the religion of Judaism, as well as the theological fact that paramount theological statements and arguments of NT writers are made in continuity with the OT, which they call Scripture (*graphē*). In terms of the latter, these quotations are indeed symptomatic of the fundamental fact that the outlook, content, and language of most NT writers are essentially determined by the OT It is necessary to point out, however, that there is no evidence for an uninterrupted continuity from the OT to the specific theological statements of the NT writers. The gospel of the cross and resurrection of Jesus Christ is more than just the eschatological result of the OT

A. Fundamental Concerns

The reader of the NT writings is apt to gain the impression of a fundamental continuity, especially because of the frequent appeal of some NT writers to OT sayings which are often introduced by stereotypical *formulae quotationis* (see below). Hence the question arises, whether these quotative formulas are intended to substantiate the NT proclamation by virtue of their OT testimony. To the extent that it represents the Scriptures of early Christianity, the OT is uncontestably authoritative and, in this sense, is cited as holy Scripture. Yet for some of the NT writers, its authority structure in relation to the NT kerygma and to the proclamation of Jesus is only marginally the object of theological reflection. In keeping with ancient Jewish interpretation of Scripture, the interrelationship of the two or three authoritative dimensions (especially the scheme of "promise and fulfillment" and the methods of typology and allegory) reaches a certain balance. In the NT this interrelationship is once again hermeneutically presupposed, rather than delineated.

The crucial theological question is, from what perspective or with what preunderstanding did the NT writers read the OT as Scripture? For almost all NT writers concerned, this preunderstanding may be circumscribed—though individually quite diverse, as follows: the announcement of the eschatological redemptive event which God has accomplished in Jesus Christ, is the content of the OT writings. In this sense they understand the OT as the manifold promise of Christ. This is true a fortiori when they work with the "promise-fulfillment" schema which had already been constitutive for the deuteronomistic historiography and, principally, also when they use the allegorical or typological method. In this regard

the manner of Scripture usage is comparable to the interpretation of Scripture practiced at Qumran, though not in terms of content, but in form (cf. e.g. Isa 40:3 in Mark 1:3 and 1QS 8:13ff). Of course, this kind of interpretation of Scripture diminishes the literal sense, if it does not indeed lose its meaning altogether.

A distinction is therefore to be made between the *Vetus Testamentum per se* and the *Vetus Testamentum in Novo receptum.* Over against the Vetus Testamentum per se, the latter constitutes a new theological entity. It is the task of NT theology to extricate this entity in the individual mosaic pieces and to assemble them so as to show the theological features (Hübner 1990: 37–76). It can be argued that especially the OT quotations in the NT are of considerable importance in such a picture. The text basis of the Vetus Testamentum in Novo receptum, however, is primarily the Septuagint (on certain modifications, see below). Much theological argumentation in which the NT writers engage by means of OT quotations would lose its own power of argument, if it were to be predicated upon the original Hebrew text which differs from the LXX in a given instance (e.g., Deut 27:26 in Gal 3:10). Nevertheless it is constitutive of the theological particularity of the Vetus Testamentum in Novo receptum that it is largely based on the LXX

B. Quotative Formulas

The larger part of the OT citations begins with an introductory formula (*formula quotationis,* hereafter abbreviated fq., [pl.] fqq.) and is thereby characterized as a quotation in its form. At times the occurrence of a quotation is obvious even in the absence of such a formula.

Beginnings of a fq. occur already in the OT, e.g., 2 Kgs 14:6 "according to what is written in the book of Moses,"4 Kgdms 14:6 (LXX) "as it is written in the book of the laws of Moses." This is paralleled in the Qumranian "as it is written" (1QS 5:15; 8:14; 4QFl 1, 2:12; CD 7:19). Thus the rabbinic *kktwb.*(Aram *kdktyb*) as [it] is written) which is not attested until after the NT era, may well have been used in rabbinic exegesis during NT times.

To this exegetical tradition, therefore, belongs the most frequent NT fq. "as it is written" or "thus it is written," " (for) it is written" or similarly (62 times), particularly in the Synoptics and Paul. Next to these we find other forms of *grapho* (to write), e.g., "as it has been written" or variations of "the scripture says." The latter formula provides the transition to the fqq. which are built upon a form of *lego* (to say). In lieu of the Scriptures, their writers may be cited, e.g., Isaiah (John 1:23) or David (Acts 2:25). Apart from those cases in which God, Christ, or the Holy Spirit is introduced as speaker in the quotation, using the first person singular (Romans 9–11, Acts, and Hebrews), God himself is not mentioned as speaker in the fqq. In the Pauline corpus, *kathos eipen ho theos* "as God said" is singular in 2 Cor 6:16 But this citation is part of an interpolation into the Pauline text. In all ten instances, *legei kyrios* "the Lord says" is part of the quotation or an addition to the quotation by the NT writer (Ellis 1978: 182–87).

An exception is found in the fqq. of the fulfillment quotations of Matthew, namely "in order that that which was said by the Lord through the prophets may come to pass saying …" or similarly, which are constitutive of his theological conception. John's fulfillment quotations which are also theologically relevant are less stereotypical formulations. Likewise characteristic for Matthew are the Scripture references in Matthew 5 which are introduced with *ekousate hoti errethe (tois archaiois)* "you heard that it was said (by the ancients)" and surpasses or renders ineffective with an antithesis.

Occasionally (especially in Paul, see below) a single fq. introduces combinations of quotations (merging two or more Scripture statements) or mixed quotations (parts of one Scripture statement are inserted into another). Neither of these phenomena is typically Jewish and, consequently, not likely borrowed from Jewish exegesis.

C. Quotations of Scripture and Midrash

The Midrash Jewish exegesis was indeed familiar with collating Scripture statements which were to interpret one another. To date, however, Judaic scholarship (Bloch *DBSup* 5: 1263–81; J. W. Doeve, R. Le Déaut, G. Vermes, and A. G. Wright) has not yet reached a consensus on this. To what extent specific types of midrashim, such as the Proem Midrash (Peticha), do indeed have NT parallels, is difficult to determine in each case (on this, see Ellis 1978:154–62; Koch 1986: 224–27; Hanson 1974: 201–24).

Since the relationship between the method of NT quotation and the Midrashim is still unclear, no further reference will be made.

D. Textual Criticism

Although most NT writers cite the OT from the LXX and an appeal to the Hebrew original warrants serious consideration only in specific cases (e.g., in some of the fulfillment quotations in Matthew), there are frequent divergences between the text of the LXX and the NT quotation. The hypothesis of P. Kahle did not succeed, according to which the history of the LXX did not begin with an original text, but rather with multiple, targum-like Greek translations of Hebraic popular texts. See SEPTUAGINT. It is appropriate to assume with D. Barthélemy, R. Hanhart, and others, that continued recensions of the LXXwere made in the direction of content agreement between the Greek translation and Hebrew original, and that this process is also reflected in the quotations in the NT (Hanhart 1984: 400–09).

E. Scripture Quotations in NT Writings

1. Paul. Among the Pauline letters acknowledged as authentic, Scripture quotations are found only in Romans, 1–2 Corinthians, and Galatians, and among the Deutero-Pauline letters only in Ephesians and 1–2 Timothy. But even in the letters of Paul the quotations occur with considerable diversity. One encounters very frequent citations in Galatians 3, Romans 3f. and especially Romans 9–11 (with approx. 25 quotations, i.e., more than half of all the quotations in Romans). 1 Corinthians has only 17 quotations, 2 Corinthians at best 11, while Galatians, with only six chaps., has 10 quotations (with minor variations, depending on the method of counting). Because of the combinations of quotations which are frequently found in Paul, the number of cited Scripture statements is higher than the number of formal quotations.

The issue of which letters contain quotations must also be considered in relation to which of the OT books Paul cites. Isaiah is cited 28 times (in 25 cited texts), the Psalms 20 times (in 29 cited texts), Deuteronomy and Genesis 15 times each (in 13 and 12 cited texts, respectively), and the Minor Prophets 8 times (in 12 cited texts). Five quotations or less are found in Exodus, Leviticus, Proverbs, 1 Kings (LXX) and Job (according to Koch 1986:33). A negligible number of quotations are disputed with regards to their source (e.g., 1 Cor 2:9). Koch (1986: 35) unjustly argues against Paul's citing of Jer 9:23–24 in 1 Cor 1:31 and 2 Cor 10:7, especially since the use of Bar 3:9–4:4 in 1 Cor 1:18–31 can also be documented (Hübner 1984b: 161).

In the 10 citations in Galatians, Genesis is used four times, Leviticus twice, and Deuteronomy twice, while Isaiah and Habakkuk are used only once. The quotations from Genesis are drawn from the narrower frame of Genesis 12–27, due to the Abrahamic theme, since judaistic opponents of Paul demand the circumcision of the gentile Christian Galatians, presumably by appealing to Genesis 17 Next to Hab 2:4, the central argument for Paul, however, was Gen 15:6 In contrast, six of the 17 quotations in 1 Corinthians (likely written after Galatians) are from Isaiah. Since 2 Corinthians may be composed of five individual letters, little can be determined concerning favorite OT writings in the 10 quotations. The picture in Romans is all the more noteworthy. That the Genesis quotations are found in strategic positions, namely three times in Romans 4 and 9 respectively, can be explained from the theme of these chapters. But apart from Gen 15:6, the Genesis quotations in Romans are not of primary relevance to the theological argument. Notably, none of the three Genesis quotations in Rom 9:6–9 is introduced by a fq. One must ask, therefore, whether Paul actually uses these quotations as Scripture evidence. At any rate, all three quotations are used as a spoken word of God, as an announcement of what he intends to do or of what is to happen, according to his will: *klēthēsetai* in Gen 21:12 (Rom 9:7) is the theological passive ("they will be called"). In Gen 18:10, 14 (Rom 9:9) God speaks in the first person plural; in Gen 25:23 (Rom 9:12) *errethē autē* "it was said to her" is once again in the theological passive. Consequently, because Paul's motive in using all three Genesis quotations was not primarily that they were written in Scripture, but that they were spoken by God (the key term in Rom 9:6–29 is *kalein* "to call"), the quotation of Mal 1:2–3 in Rom 9:13 likewise should not be understood as Scripture evidence in the strict sense of the word, despite the fq. *kathōs gegraptai* "as it is written." A Scripture quotation cannot prove an already spoken word of God; it can only confirm it. The real strength of the "written word" lies in the

fact that in it God once again speaks with the divine "I" (on the divergent argumentative functions of Paul's Scripture statements, see Koch 1986:257–85). On Romans 9–11, see Hübner 1984a).

In the final pericope of Rom 9:6–29, Paul appeals to the prophets exclusively and, significantly, the otherwise stereotypical "as it is written" does not occur here. Since God calls gentiles to be his people, according to Hos 2:25, in Rom 9:25 he is the subject of the fq. "as indeed in Hosea he says." Likewise peculiar are the fqq. in Rom 9:27, 29: "Isaiah cryed out over Israel" and "as Isaiah predicted." Paul most frequently cites from the book of Isaiah. In 16 or 17 quotations, 19 or 20 references from Isaiah are used, 10 or 11 of which occur in Romans 9–11 alone. But the theological relevance of the dominance of Isaiah is not only rendered effective through the formal quotations, but also in 11:26 "and so all Israel will be saved; as it is written …" God himself ushers his initially partial redemptive activity regarding Israel (cf. 9:27) into his comprehensive redemptive activity. Rom 11:26 makes implicit reference to Isa 45:25 (see also Isa 45:27; Hübner 1984a: 113). The linguistic circumstances that the semantic field of Isaiah (especially Isa 45–66) is largely identical with Romans 9–11, raises the assumption that Paul read Isaiah from his Christian preunderstanding and such references as Isa 45:17, 25 appeared to him to be revelatory of the mystery mentioned in Rom 11:25 Paul in general, and Romans 9–11 in particular, demonstrates that the observation of the OT context is essential for the exegesis of the Scripture quotations in the NT (Hanson 1983: 7). The independent and theologically productive character of Paul's use of the LXX can be derived symptomatically from the combination of quotations in Rom 3:10–18 (Koch 1986: 180–84; "an intentional composition" of the apostle, comprised predominantly of references from the Psalms).

Thus we find a relationship of interdependence between kerygma and Scripture: Paul reads the Scripture on the horizon of the kerygma, that is on the horizon of his doctrine of justification and interprets it accordingly. Conversely, via reading the Scripture from the vantage point of faith as preunderstanding, he gains such decisive convictions as that of the eschatological redemptive justification of Israel (Rom 4:23–24).

Koch correctly points out that for Paul the Scripture attests to the Gospel, hence it is a word addressed to the present; in this case the Gospel is a precondition for understanding the Scripture, as seen especially in 2 Cor 3:12–18 (1986: 331–41). On the basis of three assumptions, it is possible to lay claim to Scripture as witness of the Gospel (1986: 344–47): (1) Based on a radically changed frame of understanding: Paul assumes the conviction from the pre-Pauline communities that "messianic announcements of Scripture are to be understood as fulfilled in Christ." (2) By means of a distinctly selective use of Scripture: Quotations from Leviticus and Numbers are largely missing. (3) By means of massive changes, in part, in the wording of the Scripture quotations: Paul has changed 52 of the 93 quotations.

Of course, one may be of a different opinion in individual instances, as a purview of his prize example of Rom 10:6–8 shows (Koch 1986: 129–32). There are convincing reasons, in this case, for the argument of W. Sanday and A. Headlam (*Romans* ICC, 286–90) and others, that Paul does not adduce a Scripture quotation when he uses statements from Deut 9:4; 30:12, 14 by introducing them with the fq. "but the righteousness based on faith says, …" and then juxtaposes them to the undisputed Mosaic quotation of Lev 18:5, introduced with the fq. "Moses writes concerning the righteousness of the Law thus …" (Hübner 1984a: 85–91).

While Paul uses Scripture quotations en masse for his gospel of justification, he is also capable to do entirely without Scripture quotations when he expresses something unique to him. It is striking, for instance, that he cites Scripture only sporadically in Romans 5–8, and not at all when he unfolds the Christian's existence in the Spirit in Rom 8:1–17

2. Deutero-Pauline Letters. No Scripture quotation is found in Colossians, although its author refers back to authentic Pauline letters which contain formal quotations. To begin with, this is paralleled by the author of Ephesians who likewise forgoes Scripture quotations in chaps. 1–3 which are theologically crucial for him. Not until Eph 4:8 does one encounter Ps 67:19 (LXX). The bulk of this quotation corresponds to the LXX, but diverges significantly in matters of content. Most likely this is not done deliberately against the OT text, since the writer of Ephesians may have taken recourse to a Jewish

tradition of exegesis (see commentaries). What is crucial, however, is that the quotation is interpreted christologically in Eph 4:9–11 Except for this quotation, all others in Ephesians are in an immediate, paraenetic context. 2 Thess 1:9–10 is likely not to be construed as a quotation. But the Pastoral Epistles do contain some quotations.

3. Synoptics. a. Jesus and the OT. The question of Jesus' use of Scripture is one of the most disputed in exegetical scholarship. The spectrum of opinions ranges all the way from the argument that Jesus, as a Jew, respected the uninterrupted authority of Scripture, to the assertion that the specifics of his preaching were expressed symptomatically in a view critical of the Scriptures, even in the annulment of the Law's central claims. One must maintain that, apart from the fulfillment quotations in Matthew, in the Synoptic Gospels Jesus himself generally appeals to Scripture. He cites it as the authoritative word of God and, in doing so, uses the invincible term *gegraptai* "written." He cites Moses (Mark 7:10; 10:6–8), the prophets (Mark 7:6–7; 11:17), David (Mark 12:36) and the Psalms (Mark 12:10–11, 36).

In sharp contrast is the fact that in his own authority he relativizes statements of the Law (Mark 10:6 [Gen 1:27; 2:24] against Mark 10:4 [Deut 24:1–4, verbalized by the Pharisees]), exceeds them (Matt 5:21, 27), or even annuls them (Matt 5:31–32, 38–39, 43–44 as annulment is disputed). The annulment of the Levitical food regulations in Mark 7:15, however, is made without reference to Leviticus 11 and Deuteronomy 14

The more convincing arguments favor the hypothesis that Jesus indeed relativized or even annulled statements of the Law. Such sayings as Matt 5:18 (=Luke 16:17) are not authentic sayings of Jesus. To be sure, Jesus is able to render affirmative quotations of OT sayings. Typically, for instance, he uses the commandment concerning the parents in the Decalogue, Exod 20:12 = Deut 5:16, against the Pharisiac notion that because of Num 30:3 even an immoral qorban pledge dare not be broken. His struggle is not primarily against strange abuses, as manifested in a qorban pledge entered immorally; the issue is the correct understanding of God. One cannot refuse the dissolution of an immoral pledge for the sake of the glory of God, when people are treated unjustly thereby. Jesus appeals to the Decalogue because for him it holds absolute importance as expression of the will of God. Hence, Jesus does not advocate a formal principle of Scripture.

b. Synoptic Gospels. All of the 18 quotations in Mark (with minor variations in number, depending on the computation) are also found in Matthew (yet, if Mark 1:11 is quasi-mixed, this would not be true of Matt 3:17). Luke, however, did not utilize some of these quotations in his gospel because he ignored the particular Markan pericopae for theological reasons. Over and above Mark, Matthew and Luke share from the logia source Q especially the Scripture quotations from the pericope of Jesus' temptation in Matthew 4 (= Luke 4).

Only a small portion of the Markan Scripture quotations in the mouth of Jesus refers to authentic sayings of Jesus. The entire gospel of Mark is predicated upon one fulfillment quotation. According to Mark 1:1–4, the appearance of John the Baptist occurred "in the wilderness" at the beginning of the Gospel, "as it is written in Isaiah the prophet." The quotation introduced with this fq. contains not only Isa 40:3 (LXX), but also the mixed citation from Mal 3:1 and Exod 23:20 The Gospel is then signaled as the fulfillment of the Scriptures from the outset. To begin with, the fulfillment quotation in Mark 1:2–3 focuses primarily on John the Baptist, yet it emphatically points out the path of Jesus; the *hodos* "way" motif is central to the gospel of Mark, drawn up from the perspective of Jesus' passion, with the path of Jesus leading to Jerusalem (Mark 8:27; 9:33–34; 10:17, 32, 52; Steichele 1980: 79–80).

If the question "Who and what is Jesus" (Steichele 1980: 37), central to the fulfillment quotation in Mark 1:2–3, permeates the whole Gospel, it is necessary to ask whether the voice from heaven in Mark 1:11, with its two OT components of Ps 2:7 and Isa 42:1 (Jesus as son of God and servant of God), should not be regarded as more than a mere allusion. God himself cites the sayings of the OT which are messianically understood, and so fulfills his own holy scripture.

This quotation of the Scriptures at the beginning of Mark has its parallel in the quotation of Ps 21:2 (LXX), voiced by the crucified Jesus, in Mark 15:34 The salvation expressed in the thanksgiving hymn of Psalm 21 must be considered here. The resurrection in which the community believed, is the

presupposition for describing the passion of Jesus by means of this Psalm (Gnilka 1979: 322). This is further supported by the allusion to Ps 21:19 (LXX) in Mark 15:24 That the passion was prophesied in the OT, in Mark's understanding, can also be seen in the quotation of Zech 13:7 in Mark 14:27 which is introduced by *gegraptai* "written" (cf. Mark 14:49). In the Spirit, David already attested to the majesty of Jesus, Ps 109:1 LXX in Mark 12:36 Further, the quotation of Ps 117:22–23 (LXX) is christologically significant.

Matthew particularly belongs to those writings of the NT whose theology, as far as content is concerned, is essentially determined by the reception of the OT. Of course, the status of the scholarly inquiry continues to be controversial on some crucial points. In general, however, the distinction of two types of OT quotations proposed by H. J. Holtzman, has been accepted: (1) reflection quotations which are joined to a narrative and comment on the narrative as fulfillment of a prophetic promise; (2) context quotations which are themselves an integral part of the narrative. There is, however, no consensus on the precise number of fulfillment quotations. In any case, the following quotations must be considered: Matt 1:22–23; 2:15, 17–18, 23; 4:14–16; 8:17; 12:17–21; 13:35; 21:45; 27:9 The following are subject to debate: 2:5–6; 3:3; 11:10; 13:14–15

Modern scholarship is fairly unanimous on the issue that the fqq. of the fulfillment quotations are to be traced back to the redactional work of the evangelist, but not on the issue that this also applies to the quotations themselves. The situation which has been noted repeatedly since W. C. Allen (*Matthew* ICC, 281) demands an explanation, namely that, on the one hand, those quotations which the evangelist adopted from Mark or Q, or personally inserted as context quotations, were either left unchanged or only marginally changed, in light of the LXX On the other hand, the fulfillment quotations, in part, show an affinity to the Hebrew original (occasionally also with a distinct dependence upon the LXX, as e.g., in Matt 1:23, partly as mixed quotations comprised of LXX components and a verbatim translation of the Hebrew original when the latter differs from the LXX). It has been held as unlikely, however, that the same author would strive for as close an affinity to the LXX as possible in one part of his quotations, while favoring more closely the Hebrew original in another part. As an escape from this dilemma, therefore, various forms of a hypothesis have been suggested, according to which the evangelist made use of an existing tradition in his fulfillment quotations. In this case it is highly unlikely that he follows an oral tradition of a liturgical practice familiar to him (Kilpatrick 1946; Matthew is Mark liturgically revised). Likewise, the argument of F. C. Burkitt (1907) and J. R. Harris (1916–20) that the evangelist borrowed the quotations from a collection of testimonia, fails to convince.

Conversely, K. Stendahl's hypothesis of a "School of Matthew" is an attempt at explanation worth discussing. As for E. von Dobschütz (1928: 338–48), if the evangelist was a converted Rabbi and if he actively participated in the life of the Church, it is "tantamount to saying that there was a school at work in the church of Matthew" (Stendahl 1967: 30). The interpretation of Scripture practiced in that church, for Stendahl, was "the Matthean type of midrashic interpretation; … it closely approaches … the midrash pesher of the Qumran Sect" (1967: 35). The peculiar treatment of the texts of the fulfillment quotations in the school of Matthew, therefore, should be seen as analogous to the commentary of Habakkuk in 1QpHab, in which "a violation of the consonant text" of Habakkuk was carried out with creative liberty (1967: 190–202). Thus Stendahl's hypothesis is certainly capable of providing a plausible explanation for the difference between the extant type of the fulfillment quotations and the text type of the remaining quotations in Matthew.

B. Gaertner (1954: 1), however, has been able to adduce considerable arguments for the fact that Stendahl's hypothesis of a fairly liberal usage of the Habakkuk text is subject to serious doubts. The pesher interpretation in the Qumran commentaries is based on an uninterrupted continuity of the text (that is, in the CD it emerges as previously fixed text segments), while the interpretation of the scripture by Matthew could be named a messianic *interpretatio pūnctūalis.*

But even if these objections to Stendahl are taken seriously, it still remains to be taken into consideration that both the community at Qumran and the writer of Matthew read and interpret the

prophetic texts as promises of an already fulfilled presence of salvation, or of one which is being fulfilled. Hence the hermeneutical premise is common to both.

Another presupposition in Stendahl's argument is questionable, namely the assumption of an "unbroken line from the School of Jesus via the 'teaching of the Apostles,' the 'ways' of Paul … to the rather elaborate School of Matthew with its ingenious interpretation of the OT as the crown of its scholarship" (1967: 34). Whether we are allowed to understand Jesus as a teacher of a "school," however, is extremely doubtful.

Recently attempts have been made to relativize the discrepancy between the text form of the fulfillment quotations and that of the remaining quotations in Matthew. Thus R. H. Gundry argues as follows: "contrary to former opinion, the Matthaean formula-citations do not stand out from other synoptic quotation material in their divergence from the LXX, but the formal quotations in the Marcan (and parallel) tradition stand out in their adherence to the LXX" (1975: 5). But he encumbers his argument heavily with the hypothesis which has been held prior to him (among them E. J. Goodspeed), that "the Apostle Matthew was a note-taker during the earthly ministry of Jesus … from whose material the synoptists drew" (1975: 182–83). His result: "Matthew was his own targumist and drew on a knowledge of the Hebrew, Aramaic, and Greek textual traditions of the OT" (1975: 172). But quite apart from the untenable argument that Matthew had written the words of Jesus in shorthand, even his own evaluation of the text forms of the quotations in Matthew cannot remove the discrepancy under discussion within these quotations; it can at best mitigate it (see especially the summary, 1975:147–50).

According to G. M. Soares Prabhu, too, all the fulfillment quotations in Matthew have "the same adaptive, context-directed character." From this he concludes that they are "free targumic translations made from the original Hebrew by Matthew, in view of the context into which he has inserted them" (1976: 104). His—albeit quite brief—investigation of the context quotations certainly cautions against too blatant an assertion that the LXX is the Bible of Matthew. But neither has he succeeded in demonstrating the nonexistence of the fact that there are, in principle, two divergent text forms in the OT quotations in Matthew.

While some queries with regard to the construction of the quotations in Matthew remain, statements about the theological intention of the evangelist can be made with greater certainty. Its characteristic expression is found especially in the fqq. of the fulfillment quotations: what took place in the Christ event—e.g., the virgin birth, according to Isa 7:14 (Matt 1:22), or the return from Egypt, according to Hos 11:1 (Matt 2:15)—happened in order to fulfill what the prophets had said. To be sure, this theological intention would be turned on its head, if one were to view the evangelist as a theologian who thinks from the perspective of the OT, that is, of the promises of the OT. Rather, he is thinking from the perspective of the fulfillment in Jesus Christ. Not until Israel's Scripture is read from the perspective of the Christian faith can the former be understood as Scripture of the fulfillment.

The opinion of P. Vielhauer, according to whom the evangelist is not concerned with the fulfillment of the Scripture in Jesus, but rather with the fulfillment of particular sayings in the details of the life of Jesus (1975: 362) is to be rejected. Even the appeal to what the prophets have said in the disputed fulfillment quotation in 2:23 contradicts that, but even more so 26:54, 56: The writings of the prophets must be fulfilled in the passion.

The quotations of Matthew continue to present scholars with extremely difficult tasks. Attention must be given to the inquiry into the extent to which, if at all, the respective OT context is to be considered in understanding the citations (A. T. Hanson's claim), in what sense, if at all, one is allowed to speak of an atomized exegesis by Matthew (against this, Gundry et al.), and to what extent the evangelist, or his school, practiced Jewish exegetical methods.

It is also true of the Lukan writings that the author's appeal to the OT by far exceed what can be read explicitly from the Scripture quotations. Allusions to the LXX occur frequently (as well as some possible traces of a direct use of a semitic text) in the poetic elements of the infancy narratives in Luke 1–2, with features resembling quotations. These hymns are indeed to be regarded as pre-Lukan (see commentaries) and cannot say much, therefore, about the evangelist's attitude to the OT Characteristic of his theological

conception are those quotations which he alone features and in which his theological intention can be discerned.

While Mark presents the pre-Easter Jesus at least in a certain distance to the law of Moses (Mark 7:15 is not in Luke), already in the infancy narratives Luke stresses the faithfulness to the Law by the parents of the Baptist and by the parents of Jesus. As declaration concerning the complete obedience to the Law by the Baptist's parents, Luke 1:6 corresponds to Luke 2:23, a quotation of Exod 13:2, 12, 15 (LXX text only in part), which is introduced with "as it is written in the law of the Lord" followed by a quotation of Lev 5:11 (cf. Lev 12:8), which is introduced with "… according to what is said in the law of the Lord." The combination quotation in Mark 1:2–3 which contains a mixed quotation, is rectified by Matthew as well as by Luke (both bring in Mal 3:1 and Exod 23:20 only in the baptist pericope of Matthew 11 = Luke 7). In Luke 3:4–6—a fulfillment quotation, as in Mark 1:2–3—Luke expands the reference from Isaiah and thereby lends it more weight. It is of special programmatic significance that in Luke 4:18–19 Jesus quotes Isa 61:1–2; 58:6 in his inaugural sermon in Nazareth and applies it to himself. Isaiah has promised him as the Christ and stipulated his tasks. More than the other Synoptics, Luke submits the messianic ministry of the earthly Jesus to the prophetic promise. Luke then adds as a commentary "Today the scripture has been fulfilled in your hearing" (v 21).

It is not clear whether or not the statement of Luke 7:22 which consists of several sayings of Isaiah (Isa 29:18; 42:18; 26:19; 61:1), in Jesus' answer to the Baptist, should be regarded as quotation uttered by Jesus. Luke may well have understood it as such, since Isa 61:1 is mentioned again.

Only Luke relates the passion event to Isaiah 53 In Luke 22:37 (Gethsemane scene) Jesus applies Isa 53:12 to himself "and he was reckoned with transgressors." Here Luke varies from the LXX text, a certain proximity to the MT is unmistakable. Holtz (1968: 41–43) considers the LXX "most likely" to be the source; but against this is the fact that not a single LXX manuscript has the text found in Luke. It may be regarded as certain that there is no authentic saying of Jesus here (Rese 1969: 164).

The quotation of Hos 10:8 in Luke 23:30, which comes across as a saying of Jesus, belongs to Luke's own material (LXX text, though with transpositions). From Psalm 21 (LXX), quoted twice in Mark, Luke uses only Ps 21:19 (LXX) (Luke 23:34). Yet the crucified Jesus no longer utters Ps 21:2 (LXX), but instead Ps 31:6 (LXX) (Luke 23:46, the text is almost entirely LXX). The passion which was purposed by God and announced by the prophet Isaiah, cannot afford Jesus to utter a single word of Godforesakenness.

In the same way the resurrected Jesus also instructed the Emmaus disciples, in Luke 24:44, that everything written in the Law of Moses, the Prophets and the Psalms, had to be fulfilled. Jesus himself "opened" their understanding for them to comprehend the Scriptures, that "it is thus written" that Christ suffers and is raised from the dead on the third day. Furthermore, it is written that in his name repentance for the forgiveness of sins will be proclaimed to all people. Hence, Luke 24:44–47 is a programmatic reference which presents the Christ event as the salvific event in keeping with the Scriptures and, at the same time, serves as the transition to the second volume of Luke's two volume work, Luke-Acts. Accordance with the Scriptures constitutes an essential and central element in the theology of the gospel of Luke, which finds its clear expression in the Scripture quotations.

4. Acts. Depending on the count in the book of Acts, most of the slightly more than 20 quotations are used in Peter's speeches and sermons in chaps. 1–3, in Stephen's speech in chap. 7, and in Paul's first speech given in Pisidian Antioch, in chap. 13 James appeals to a Scripture quotation during the Jerusalem council. Most of the quotations are thus encountered in speeches or sermons. In addition, in Acts 8:32–33 the Ethiopian eunuch reads a text from Isaiah aloud (see ETHIOPIAN EUNUCH); Acts 13:22 may possibly have to be viewed as a mixed quotation. Paul documents his faithfulness to the Law and his loyalty to the state with a quotation from the Pentateuch in Acts 23:5, and, finally, a quotation at the end of Acts, intended as a programmatic quotation functioning as Scripture evidence, underscores the mission-theological intention of Luke. It is precisely at the pivotal points of his second work that Luke placed key Scripture references.

In Peter's Pentecost sermon is found the eschatological quotation of Joel 3:1–5 in Acts 2:17–21 and the christological quotations of Ps 15:8–11 (LXX) and 109:1 (LXX) in Acts 2:25–28, 34–35 (prophetic

announcement by Deuteronomy, cf. also Luke 20:42–43; according to fq. in Acts 4:25 David speaks "by the Holy Spirit" [see commentaries regarding text-critical problem]).

In Paul's first sermon which expresses the failed announcement of salvation to the Jews by means of a salvation-historical sketch—the christological quotations of Ps 2:7 (LXX); Isa 55:3; Ps 15:10 (LXX) in Acts 13:33–35, and the quotation of Hab 1:5 which is introduced in Acts 13:40–41 by a fq. whose locus is a warning leveled predominantly against the Jews. This quotation has its counterpart in the gospel to the gentiles of Isa 49:6 in Acts 13:47, after the stir: God himself had destined Paul (and Barnabas as well) to be the light for the salvation of the gentiles.

In the speech of James (Acts 15:15–17) Luke quotes Amos 9:11–12 as Scriptural proof for the mission to the gentiles: God will rebuild David's fallen tent (interpreted christologically, since Christ is its referent), in order that "all the peoples" may seek the Lord.

Paul's mission-theological reflection at the end of the book, Acts 28:25–28: Via Isaiah the prophet the Holy Spirit has already announced to the fathers the blindness of the Jews in Isa 6:9–10 Hence "this salvation" (namely the salvation of the Jews) is sent to the gentiles. Acts concludes, then, with the emphatic recognition that the Scriptures of the Jews negate salvation to the same Jews and according it to the gentiles.

Theologically significant is the Ethiopian eunuch's quotation of Isa 53:7–8 in Acts 8:32–33 That which is encountered for the first time in the synoptic tradition in Luke 22:37, namely the quotation of Isa 53:12 which Jesus uses and applies to himself, is continued here: Isaiah 53 refers explicitly to the passion of Jesus.

Which OT books Luke knew, is a matter of dispute. According to T. Holtz, on his own he used only the Minor Prophets, Isaiah, and Psalms recognizably and, with some degree of probability, it may be assumed that he was acquainted with the LXX text of the Book of the Twelve Prophets and of Isaiah, which has affinities to the text type of the codex Alexandrinus (1968: 169). However, Holtz also claims that Luke did not know the Pentateuch (at least Exodus to Deuteronomy), that he used quotations from it only through secondary mediation, and that he stands virtually alone in his lack of knowledge of the Torah (1968: 171). This argument, however, is not uncontested (see Rese 1969:211).

In Acts the fqq. are conspicuous. Of the Minor Prophets Joel is mentioned by name in Acts 2:18; as for the other two Minor Prophets, Amos and Habakkuk, they are only mentioned as "prophets": Amos in Acts 7:42; 15:45 and Habakkuk in Acts 13:40 Does the reference to the "book of the Prophets" in Acts 7:42 mean the Minor Prophets? In a formal sense, this finds its correspondence in the fq. of Acts 1:20: "for it is written in the book of Psalms" which introduces Ps 68:26 (LXX) and 108:8 (LXX). In Acts 28:25–26 Isaiah is introduced by mention of his name, while the Holy Spirit is explicitly mentioned as the actual speaker. But in Acts 7:48 he is simply introduced with "as the prophet says." Is Isaiah the prophet? In Acts 13:34 and 13:47, however, God is said to be the speaker in these quotations from Isaiah. Elsewhere God appears as the speaker in some references to God's direct address, e.g., to Abraham in Acts 3:25 (Gen 22:18). In quotations from the Psalms, David is mentioned as the speaker several times (Acts 2:25, 34; 4:25). The special introduction of Ps 2:7 in Acts 13:33 is unique: "as it is written in the second Psalm." In the two instances where Deuteronomy 18 is quoted, Moses is the speaker (Acts 3:22; 7:37). It is noteworthy, therefore, that Luke was apparently more concerned to posit important OT characters, such as David, Moses, or Isaiah, or even God himself, or the Holy Spirit, as speakers (note the frequent form of *legein* or *lalein*, "to say") in the formal Scripture quotations. Out of over 20 quotations only 5 are introduced with a fq. in which the term *gegraptai*, "written," occurs. The written character of the quotation, for Luke, seems to be of secondary importance.

5. The Gospel of John. The picture given by the Scripture quotations in John appears to be rather confusing at first glance, because there is no easily recognized pattern by which these quotations were placed within the overall structure of John. A further element of uncertainty is apparent, since the literary-critical questions of John continue to be completely fluid, and since only a literary-critical analysis of this NT writing could indicate where exactly it is the evangelist wants to use a quotation.

Certain structural elements, however, can be discerned clearly. Five quotations are introduced with the fq. *gegrammenon estin,* "it is written," or similarly (John 2:17; 6:31; 45; 10:34; 12:14; see also 8:17, where the evangelist begins with the peculiar fq. "in your law it is written that …" [codex Sinaiticus: *gegrammenon estin,* "it is written"], apparently to introduce Deut 17:6 or Deut 19:15; there are striking differences in comparison with the OT text, however). The fulfillment quotations are notable as well, but these are not encountered until John 12:38, and their fq. is generally something like, "in order that the scripture might be fulfilled" (12:38; 19:24 and 19:36 as the evangelist's remark; 13:18 and 15:25 as Jesus' statement).

If one inquires as to who is the respective speaker in the quotations, no clear direction emerges in this case either. The Baptist produces the first quotation; frequently it is the people, or Jesus, or the evangelist who wrote the Scriptures. Likewise, the inquiry into the underlying text yields no clear answers. Occasionally there is verbal agreement with the LXX text (there are only four clear LXX quotations); in most cases, however, there are considerable modifications with regard to the LXX Sometimes there may be dependence upon the Hebrew original, while other times neither the LXX nor the Biblia Hebraica can be discerned as the primary text. In some references to the Scriptures it is not possible to determine a clearly verifiable OT reference.

According to Rothfuchs (1969: 153) the evangelist consistently uses *ho logos,* "the word," when the locus of the fulfillment quotation is established with fair accuracy. The fqq. of the fulfillment quotations use *hē graphē,* "the scripture," when no locus is mentioned. Further, the fqq. of most other quotations use neither *ho logos* nor *hē graphē;* instead they merely use forms of *legō* "to say" and *graphō* "to write," while a locus may or may not be given (with the exception of John 7:38). Rothfuchs also correctly observes that by *hē graphē* the evangelist has in mind "the locus of the Scripture reference," all the more so since he uses the plural *hai graphai* "the scriptures" (John 5:39) for the whole scripture. Of the four fqq. using *ho logos,* only two introduce an OT quotation, while the other two refer to a saying of Jesus as fulfilled (John 18:9, 32), without stating explicitly the particular saying of Jesus to which reference is made.

A clear perspective is further obtained from another observation made by Rothfuchs. With the exception of John 12:38–40, all of the fulfillment quotations have to do with Jesus' enemies and their actions (1969: 170). Thus the two quotations from Isaiah in John 12:38–40 take on a more distinct profile. The failure of humanity, expressed in the remaining fulfillment quotations, is ultimately traced back to God himself who blinds their eyes and hardens their hearts. Therefore, as indirect fulfillment quotations Isa 53:1 and 6:10 are of central significance in the framework of the Johannine conception, because they lend clarity to the theological purpose of the remaining fulfillment quotations.

The quotations of Isa 53:1 follow the LXX text verbatim, but the first part of the quotation of Isa 6:10, however, shows major divergences. R. Schnackenburg (1984: 143–52) has demonstrated that the evangelist deliberately changed the text of Isaiah here. He eliminated the idea of hearing and established the sequence of "eyes-heart," in order to show that God's oppressive action begins in the external realm of man and penetrates into his inner being (see also the Pharisees' failure to see in John 9). Hence the evangelist used the LXX text where he deemed it appropriate to his theological conception, and radically changed the biblical text where, in his own estimation, he considered it inappropriate.

The christological conception which is expressed by means of the modification of the text, actually receives its clarity in the commentary on the quotation in John 12:41, where the immediate context of the quotation is given by appealing to Isa 6:1; Isaiah did not see the glory of God, but of Christ (see John 1:18; Schnackenburg 1984: 151). The evangelist's interpretation of the immediate context is an important indication for the assumption that his way of referring to the Scriptures was the result of his independent pursuit of it, all the more so since the same can also be shown elsewhere in John.

Among the climactic statements of the evangelist is John 19:28–30 where the death of Jesus is said to be the triumphant conclusion of his work (see John 12:32, "and I, when I am lifted up from the earth …"). In v 28, "to fulfil the scripture" *hina teleiōthē* instead of *hina plērōmē* is predicated upon Jesus' last word "it is fulfilled" *tetelestai* in v 30 The death of Jesus, which is theologically interpreted from the vantage point

of his exaltation, is the center of the Johannine "theology of the cross." It is theologically important that precisely this death constitutes the fulfillment and completion of Scripture. The theology of the cross and the theology of Scripture are inseparably intertwined in John. A closer evaluation indicates, therefore, that the picture of the quotations in John, which appeared to be so confusing at first, is actually well thought out and well structured.

The argument of E. D. Freed, according to which the evangelist was dependent upon the Synoptics in his literary use of Scripture, is to be rejected; his following statement, however, should be given serious consideration: "But in no other writer are the OT quotations so carefully woven into the context and the whole plan of composition as in Jn" (1965: 129).

6. Hebrews, James, 1 Peter. The question of which LXX text the author of Hebrews used has still not been completely resolved. Many quotations are based on the A-text, while some are based on the B-text. Is the source a recension based on traditions which were later taken up in codices A and B? According to E. Ahlborn, the question of which LXX text the quotations in Hebrews follow is often misleading because the mss. in the respective OT books belong to divergent recensions (1966: 10). "An Alexandrian recension as source for Hebrews is out of the question … Likewise Alexandrinus per se as source for the quotations, is eliminated; rather it is plausible that A knew Heb and used it" (1966: 141).

Nowhere among the fqq. does one find *kathōs gegraptai,* "as it is written," or something similar; instead fqq. with forms of the verb *legein,* "to say," are used continuously. It is important that the quotations are spoken; the quotations cite God as the speaker, at times also the Son of God (2:12–14); 10:5–7) and the Holy Spirit (3:7–11; 10:15–17), but rarely one of the OT characters (occasionally Moses; but does 9:19–20 constitute a quotation in the true sense of the word?).

The quotations are used as proof in the framework of christological intention. In Hebrews the support by the spoken word of God is analogous to the support of Scripture in other NT writings. Thus God speaks to his Son (1:5–13) and the Son to his Father (10:5–7). In quotations with a paraenetic purpose the Holy Spirit is introduced as speaker (3:7–11; 10:15–17). Thus God speaks as the Father to the Son (and vice versa) and God as the Holy Spirit to the Church. The dominant role of the Psalms in the quotations in Hebrews is reflected in that the words of the Father to the Son are taken from the Psalms. Among the approximately 30 Scripture quotations there are 15 taken from the Psalms. Pss 2 and 109 (LXX) are particularly important for the theology of Hebrews (Christ as the Son of God and as priests). In contrast to many other NT writings, Isaiah is hardly ever referred to in Hebrews. However, while the exposition of the high priestly office of Jesus in Hebrews constantly alludes to the OT cultic regulations, this cult is hardly deemed worthy of a quotation (only in Exod 25:40 in Heb 8:5, as a cultic instruction from God to Moses, and Exod 24:8 in Heb 9:20, but as a statement of Moses). As high priest, Jesus speaks against the OT cult in 10:5–7 (from Ps 39:7–9 LXX). While his high priestly office is described in cultic categories, in principle it actually denotes the negation of cultic existence. There is a dialectic between the OT cult being surpassed and of being rendered ineffective. The Hebrew writer's method of exegesis is noteworthy because of the way in which quotations are handled. Shorter passages of a longer quotation are repeated and then commented upon individually (see 3:7–9; 10:5–7). In this connection, the current literature tends to point to Jewish exegetical methods as parallels (especially F. Schröger, passim). G. W. Buchanan perceives Hebrews as "homiletic midrash, which is based in Psalm 110" (1972: xix–xxx).

In James, three of the four quotations in James 2 are used in conjunction with the topic of the law (Lev 19:18 in Jas 2:8; two commandments of the Decalogue in Jas 2:11; especially Gen 15:6 in Jas 2:23 against Paul or a misunderstood Paulinism). Of the eight scripture quotations in 1 Peter, three are from Isaiah and three from the Psalms.

NEW YEAR FESTIVAL See AKITU.

NEZIAH (PERSON) [Heb *nĕṣîaḥ* (נְצִיחַ)]. The name of a family of temple servants who returned to Palestine with Zerubbabel shortly after 538 B.C.E., the end of the Babylonian exile. The name appears in Ezra 2:54 in the phrase "the sons of Neziah" (Gk *nasoue/nasous/nethie*), where the temple servants are distinguished from the people of Israel, the priests, and the Levites. The parallel verse Neh 7:56 (Gk *nisia/n (e)is (e)ie*) and the later parallel 1 Esdr 5:32 (Gk *nasi/nasith*) also list "the sons of Neziah."
STEVEN R. SWANSON

NEZIB (PLACE) [Heb *nĕṣîb* (נְצִיב)]. Town situated in the Shephelah, or lowlands, of Judah (Josh 15:43), within the same district as Libnah and Mareshah. This settlement, whose name perhaps means "post" or "garrison" (from *nṣb*, "stand, station oneself"), is listed among the towns within the tribal allotment of Judah (Josh 15:21–62). The ancient town is most often identified with modern Khirbet Beit Nesib (e.g., Aharoni *LBHG*, 382), approximately 15 km E and slightly N of Lachish and 12 km NW of Hebron (M.R. 150110). Given that the location is appropriate and that the ancient and modern names are

clearly related, this identification seems secure. However, archaeological confirmation of occupation during the appropriate time period has yet to be found.
WADE R. KOTTER

NIBHAZ (DEITY) [Heb *nibḥaz* (נִבְחַז)]. Among the foreigners whom Sargon II settled in Samaria after deporting the local population are listed (2 Kgs 17:30) the people of Avva (var. Ivvah, 2 Kgs 19:13) with their gods Nibhaz and Tartak. The many variations of the first god's name in the ancient sources indicate that the deity was foreign and unfamiliar even to the early editors. There is no satisfactory explanation of Nibhaz's name in contemporary scholarship. One early suggestion (see Cogan and Tadmor *2 Kings* AB, 212), that Nibhaz is the Elamite god Ibnahaza and Avva the Elamite Ama, is unlikely on both geographical and chronological grounds (for context see Edzard *WbMyth* 1).

In the Persian-period Aramaic papyri from Hermopolis, Egypt, the proper name *ʾIsm-madbaḥ* is encountered. The second element, *madbaḥ*, seems to mean "Altar," personified as a deity. As such, it would correspond to the *Dii Madbachṓ* and more fully Gk *Dii Bōmṓ* ("Zeus Altar") of N Syrian inscriptions. Some have proposed that Nibhaz is a miswriting or corruption of Madbaḥ (see Gese et al. 1970: 169 and summary in Milik 1967:577–78, 605).

Milik (1967: 578, 606) makes a yet more plausible suggestion: the LXX variants of the name would indicate that the original form ended in *-r*. If so, the name probably would have been *Nabā-ḥāzer,* "Nabu-Returns." Compound Nabu names were common at the Aramaic-speaking Jewish community at Elephantine, Egypt (Porten *ArchEleph*, 166). The context of 2 Kings 17–19 would suggest a N Syrian background for Avva and Nibhaz[er?], and there is reason to make associations between Aramaic-speaking Syria and Egyptian diaspora communities. See also ASHIMA. The Babylonian Talmud (*Sanh.* 63b) read *nibḥan,* deriving it from the root *NBḤ,* "to bark," and translated it as "dog," an interpretation which fit nicely the anti-idol tenor of the passage.

WILLIAM J. FULCO

NIBSHAN (PLACE) [Heb *nibšān* (נִבְשָׁן)]. Town situated in the wilderness of Judah (Josh 15:61), within the same district as En-gedi. This settlement is listed among the towns within the tribal allotment of Judah (Josh 15:21–62). Recent archaeological work in the Buqeiah valley has uncovered three Iron Age fortress farms which may be associated with the towns of this district (Stager 1976). If the list in Jos 15:61–62 runs N to S, then ancient Nibshan is probably to be located at Khirbet el-Maqari, approximately 9 km SW of Khirbet Qumran (Boling and Wright *Joshua* AB, 392; M.R. 186123).

WADE R. KOTTER

NICANOR (PERSON) [Gk *Nikanōr* (Νικανωρ)]. The name Nicanor appears several times in 1 and 2 Maccabees. It is difficult to determine whether there were two or three separate individuals bearing this name.

1. The governor of Cyprus (2 Macc 12:2). Because this Nicanor has a relatively low rank, he is not to be confused with the other references to "Nicanor" in 1 and 2 Maccabees.

2. The soldier who had been in command of the elephant corps and who was appointed by Demetrius I as governor of Judea, charged with the responsibility of capturing and killing Judas Maccabeus, scattering those forces loyal to him and setting up Alcimus as high priest (2 Macc 14:12ff). Some would distinguish this Nicanor from the Nicanor mentioned in other passages (so Goldstein *I Maccabees, II Maccabees*, AB). However, there are no insurmountable problems with the assumption that all the references to Nicanor in 1–2 Maccabees (except 2 Macc 12:2, which pertains to Nicanor #1 above) allude to the same

individual; consequently it seems reasonable to assume (with Abel 1949 and Habicht 1976) that there was only one distinguished person named Nicanor fighting Judas Maccabeus, not two.

On this assumption, Nicanor was therefore the son of Patrocles (1 Macc 8:9). He is usually identified with the close friend of Demetrius I who was with him when he was hostage in Rome (Polybius 31.14 (22).4; and cf. *Ant* 12.402). However, Nicanor already held a high position under Antiochus IV, before Demetrius I came to power. He is first mentioned in the battle of Emmaus as one of those (along with Ptolemy and Gorgias) to whom the battle against Judas Maccabeus depicts Gorgias playing the major military role, but in the 2 Maccabees version Nicanor has the leading role. In 2 Maccabees this incongruency is explained by the fact that Gorgias, who was sent to join Nicanor in command, was a commander with military experience (8:9); 2 Maccabees therefore focuses on Nicanor to show him as an example of an enemy to the Jews (8:11) who, with God's help, is punished and defeated (vv 24–28, 34–36). This brought to an end the first phase of Nicanor's involvement with the Jewish revolt.

The second phase came at the time of Demetrius I, who began to rule in 162 B.C.E. Assuming that he is the same Nicanor mentioned in Polybius, then he should have earlier visited Rome and taken part in Demetrius' flight from there and in Demetrius' successful campaign to regain the Seleucid throne. Demetrius then sent Nicanor to quell Judas' revolt: Judas had not acquiesced with the installment of Alcimus as high priest. Again Nicanor is depicted as being extremely inimical to the Jews, but this time by the writer of 1 Maccabees (7:26–35). It seems that his army was not large enough for the task (probably because Demetrius was preoccupied on other military fronts), hence Nicanor tried to overcome Judas not by force but either through strategum (according to 1 Macc 7:27–31) or reconciliation (according to 2 Macc 14:18–25). This proved unsuccessful, and at a battle at Chapharsalama Judas was victorious.

In spite of the discrepancies in our two sources, and probably after the Jews received harsh treatment from the frustrated and hostile Nicanor, the two armies met a second time, this time at Adasa. There, even though he enjoyed some military support (1 Macc 7:39), Nicanor was defeated and killed. The victory was commemorated by an annual holiday on that same day, the 13th of Adar (1 Macc 7:48–49). Some uncertainty exists about the year in which the battle of Adasa occurred, but most commentators date it to 160 B.C.E. This whole event is treated in detail and with much embellishment in 2 Maccabees 15 There Nicanor, the sinner and blasphemer, received from God's hand the retribution he deserved (cf. also *Meg. Ta῾an.* on the 13th of Adar).

NICODEMUS (PERSON) [Gk *Nikodēmos* (Νικοδημος)]. A fairly common Greek name in the 1st century meaning "conqueror of the people." Its Semitic equivalent was "Naqdimon," sometimes shortened to "Naqai." The biblical individual of that name is mentioned only in the gospel of John (3:1, 4, 9; 7:50; 19:39). Nicodemus is portrayed as a Pharisee who was also part of the ruling class in Judea (3:1), presumably a member of the Sanhedrin. John 19:39 implies that he was quite wealthy, and in 3:10 Jesus addresses him as the preeminent teacher of Israel. The above, combined with the fact that "rulers" and "Pharisees" are distinguished elsewhere in the gospel (cf. 7:48; 12:42), suggests that Nicodemus was a prominent figure within the governing group.

Nicodemus first appears in John 3:1–12, where he visits Jesus by night and is confronted with the "born-again" discourse. About six months before the crucifixion the "chief Priests and Pharisees" seek to have Jesus arrested as a deceiver (7:32, 45–52). Nicodemus protests, arguing that the law required them to give Jesus a fair hearing (7:51). He is accused, in response, of having joined Jesus' Galilean followers (7:52). Nicodemus last appears after Jesus' death, bringing a large quantity of spices to anoint Jesus' body (19:38–42). The three Nicodemus episodes in the Fourth Gospel are connected by editorial marks in 7:50 and 19:39

Though Nicodemus is often portrayed as timid, Robinson (1985: 284) is probably correct in seeing him as quite courageous. Most likely, Nicodemus came by night, not out of fear, but to avoid the crowds that would have interrupted his interview with Jesus. His reaction to the council's desire to arrest Jesus was boldly calculated to bring out the irony of their lawless act at the very moment in which they were ridiculing the lawless behavior of the "crowd" (7:49–51). And he certainly showed more courage at the Cross than did the absent Disciples of Jesus.

There is no serious reason to doubt that Nicodemus was a historical individual. It is questionable, however, whether the gospel material leads to the conclusion that he became a disciple of Jesus. Brown (*John* AB, 130) sees Nicodemus as the counterpart to Judas: he moves from darkness to light (3:2), just as Judas moved from light to darkness (13:30). Along with him Beasley-Murray (*John* WBC, 47), Cotterell (1985: 238), King (1986: 45), Morris (*John* NICNT, 210) and Schnackenburg (1980–82, 1: 364–65) understand the actions of 19:38–42 to be those of a secret but committed disciple of Jesus. However, secret discipleship is not a complementary designation in the Fourth Gospel (12:42, 43). And it is possible to understand the extravagance of Jesus' burial not as an act of love and respect as do Bultmann (1971: 680n4) and Schnackenburg (1980–82, 3: 295), or as a pointer to His royalty as do Morris (825) and Brown (60), but as a failure to understand the cross combined with a lack of faith in the resurrection (see De Jonge 1971: 342 and Sylva 1988: 148). Thus, Michel (1981: 231), Pamment (1985: 71, 73), and Sylva (1988: 149) argue that Nicodemus remained on the fence throughout the gospel, never making a positive decision for Jesus.

Considerable study has investigated whether Nicodemus might be equated with one or more individuals in the Talmud or in the writings of Josephus. Helpful summaries of the evidence can be found in Klausner (1929: 29–30), Robinson (1985: 284–87) and Str-B 2:413–19, but the evidence is insufficient at this point to draw any firm conclusions. The total absence of Nicodemus in the Talmud would not be surprising if he indeed became a Christian.

Christian tradition suggests that Nicodemus gave evidence in favor of Christ at the trial before Pilate, was deprived of office and persecuted by hostile Jews as a result, and was ultimately baptized by the apostles Peter and John. The *Acts of Pilate* became known as the *Gospel of Nicodemus* in the Latin tradition after the 14th century.

Numerous parallels between John 3:1–2 and 2:23–25 and the frequent use of plurals in 3:1–12 indicate that within the gospel itself, Nicodemus functions as a representative of those who had a partial faith in Jesus as a result of the "signs" which Jesus did. For the evangelist such individuals are in darkness, not in light (note the genitive usage of "night" in 3:2 cf. 12:37, 42, 43). As a ruler, teacher, and Pharisee, he demonstrates for the author of the gospel that the very best that the Judaism of his day could offer was inadequate to rightly comprehend the significance of Jesus.

On the positive side, however, Nicodemus functions, along with the Samaritan woman, as an illustration of the power of the Christian gospel to attract whoever might believe, regardless of education, wealth, piety, or circumstances (John 3:16; 12:32). The Fourth Gospel reflects a situation at the close of the 1st century where Pharisees were divided over the significance of Jesus as they had been seven decades earlier (cf. 9:16). The Nicodemus episodes appealed to those Pharisees who, like Nicodemus, had only a relative acceptance of Jesus, to come to the "light." (John 3:18–21) Without a more complete decision they would not be able to fully understand Jesus or the nature of the salvation that he brought.

NICODEMUS, GOSPEL OF See PILATE, ACTS OF.

NICOLAITANS [Gk *Nikolaïtai* (Νικολαΐται)]. A group mentioned in Revelation in the letters to Ephesus (2:6) and Pergamum (2:15). The former reference tells us only that the risen Lord commends the church at Ephesus for joining him in hating the works of the Nicolaitans. The latter reference is more informative, for the risen Lord chastises the church at Pergamum for holding the teaching of the Nicolaitans. By way of a similitude, the teaching of the Nicolaitans is defined as that of Balaam of the OT and Jewish tradition: eating food sacrificed to idols and immorality (Num 25:1–2; 31:16). Since these same two sins are listed at Thyatira as the teaching of a self-proclaimed prophetess named Jezebel (2:20–25), it is probable that, although not specifically named, the Nicolaitans were present there also, and that she was a Nicolaitan prophetess.

The risen Lord presents the Nicolaitans as a great threat to the churches he addresses. He commends the church of Ephesus for hating them (2:6; cf. *Ign. Eph.* 6:2; 9:1), and declares to the church of Pergamum that he will come and war against the Nicolaitans with the sword of his mouth (2:16). To the church of Thyatira he promises that those who refuse their teaching will receive no other burden, and encourages them to hold fast until he comes. As for Jezebel, she will be made sick, her less ardent followers will be thrown into great tribulation unless they repent, and her more ardent followers will be struck dead (2:20–25).

The Nicolaitans are not merely a subgroup in the church who were more lenient toward pagan religion and society. In the letters their thought is called a teaching (Gk *didachē;*.2:14, 15, 20, 24), and they may have claimed inspiration for this teaching (2:20). Their leaders may have called themselves apostles (2:2) and prophets (2:20), and been actively seeking disciples. They were permissive about both eating meat offered to idols and immorality. The former is the purchase of previously consecrated meat at the marketplace or the actual participation in pagan religious festivals where such meat was served. The latter is either a synonym for idolatry, or, as seems more probable in connection with pagan practice at religious festivals, sexual license. Both eating meat offered to idols and immorality were in direct contradiction to the Apostolic Decree, which forbids gentiles to practice either (Acts 15:20, 28–29; 21:25). This antinomianism may be a misrepresentation of the Pauline doctrine of liberty, as was the case with the antinomians of 2 Peter, who are also likened to Balaam (2:15; 3:15–16; cf. Jude 11).

The Nicolaitans appear to have gnostic tendencies. Irenaeus (*Haer.* 3.11.1) states that the Nicolaitans had disseminated doctrine similar in kind to the gnostic heresy of Cerinthus. Their teaching could have been based on a dualism claiming that what was done in the body had no bearing on the soul. Jezebel may have claimed to know the "deep things (of Satan)" (2:24), a claim reminiscent of the gnostic secret knowledge. If Jezebel and her group described the deep things as being "of Satan," then she may have claimed to possess knowledge which prevented being overcome by sin while being a libertine. "Of Satan" may also be an ironic twist added to denigrate the opposition (cf. 2:9, 3:9 for such irony).

Apart from these observations and suggestions, nothing can be confidently known about the Nicolaitans other than what is stated in Revelation. Irenaeus (*Haer.* 1.26.3) basically repeats the biblical material, adding the assertion that the Nicolaitans were heretical followers of Nicolaus, the proselyte of Antioch who was chosen to be one of The Seven (Acts 6:5). Hippolytus (*Haer.* 7.24) underscores Irenaeus, adding that Nicolaus departed from true doctrine. Clement of Alexandria (*Str.* 2.20) claims that Nicolaus was an ascetic, and then current Nicolaitans were not his true followers because they perverted his teaching that it was necessary to abuse the flesh. The *Apostolic Constitutions* (6:8) describe the Nicolaitans as "shameless in uncleanness." Tertullian (*Adv. Marc.* 1.29; *De proescr. haeret.* 33; cf. *De Pudic.* 19) speaks of the lust and luxury of contemporary gnostics he calls Nicolaitans, but distinguishes them from the Nicolaitans of

Revelation by calling them another type, a Satanic sect, more specifically called the Gaian heresy. Eusebius (*Hist. Eccl.* 3:29) notes that the Nicolaitans claimed Nicolaus, arose briefly, and died out.

When all this patristic evidence is compiled, we still do not know the connection, if any, of Nicolaus to the Nicolaitans, or the connection of the Nicolaitans in Revelation to later sects of the same name. Contemporary scholarship is skeptical that the 2d century manifestation of the Nicolaitans is linked to the Nicolaitans of Revelation. All that can be said is that the biblical presentation of the Nicolaitans was part of a heresiological tradition associated with later Gnosticism and other heresies.

Perhaps the designation "Nicolaitan" was not the name of the sect in Revelation at all. The close association of Balaam and the Nicolaitans in Rev 2:14–15 may be the result of a wordplay. It has been proposed that Nicolaitan is an etymological play on the Hebrew name "Balaam." Balaam (*bil*ʿ*ām*) can be the contracted form of *bāla*ʿ ʿ*am* ("he has destroyed the people") or *ba*ʿ*al* ʿ*am,* ("lord of the people"). Nicolaitan also could be the Greek equivalent of *nikạ laon* ("he has conquered the people").

In support of this proposal, a similar Hebrew wordplay with the name Balaam is found in *t. b. Sanh.* 105a. There are other wordplays using Balaam in the first century (e.g. Philo, *Cher* 32). Jezebel and Balaam are cryptic descriptions rather than the self-designations of the groups so characterized. Jezebel represents the active promotion of idolatry and immorality for her sanction of Baal worship in Jerusalem. Balaam represents idolatry, immorality, and false teaching for taking Balak's advice and leading the Israelites into idolatry and immorality with the Moabite women. Thus Nicolaitans may be a cryptic name for the sect in Revelation used to associate them with the negative traditions about Balaam.

NICOLAUS (PERSON) [Gk *Nikolaos* (Νικολαος)] One of the seven Hellenists chosen to supervise the daily distribution for dependent widows in the early Jerusalem church and designated a proselyte from Antioch (Acts 6:5). The name is derived from the Greek verb "conquer" (*nikaō*) and the noun "people" (*laos*).

Since the following narratives indicate that Stephen and Philip were born Jews and the grammar of the sentence clearly applies the description "proselyte" only to Nicolaus, the implication is that the others in the list were born Jews and he alone had come into Judaism from paganism by way of circumcision (Pesch 1986: 229; Kuhn *TDNT* 6:742–44). Cadbury (1933: 59–74) thought that others in the list might have been gentiles. But this theory is dispelled by Nicolaus' position in the list as last. Gentiles would have been listed after born Jews and proselytes.

It has been conjectured that either Luke or one of his sources was connected with Antioch on the Orontes. The mention of Nicolaus as being from Antioch is sometimes thought to be another example of the city's prominence in Acts in support of this theory.

The notation of Nicolaus as a proselyte may also be significant for Luke's theology. Jack Sanders (1987: 137–39) has argued that the appearance of Nicolaus at this point in Acts is important in terms of understanding Luke's view of the spread of the gospel in ever-widening circles from its Jewish parent. Nicolaus is the first named gentile to come to faith (cf. the implication in Acts 2:10). If Sanders is correct, Nicolaus is, for Luke, part of a "gray area" between Jews and gentiles. He is not totally Jewish and not totally gentile and thus can function as a bridge as Luke moves the gospel away from Judaism toward gentile Christianity.

Early church tradition (Iren. *Her.* 1.26.3; Eus. *Hist. Eccl.* 3.29.1–3) connected this Nicolaus with the later Nicolaitans first mentioned in Rev. 2:6 This connection seems to have arisen by inference from the name and there is no definite knowledge about Nicolaus beyond what is recorded in Acts.

THOMAS W. MARTIN

NICOPOLIS (PLACE) [Gk *Nikopolis* (Νικοπολις)]. The name of several cities of the Greco-Roman world that had Greek-speaking populations and were founded in commemoration of military victories. Cities bearing this name were found in Epirus, in most of the provinces of Asia Minor, and in Egypt. Sometime around A.D. 63–65 the apostle Paul arranged to meet Titus in one of these cities (Titus 3:12). The identification of the specific Nicopolis is facilitated not only by Paul's description of it as a good place to spend the winter but also on the basis of Paul's recorded travels.

Nicopolis of Pontus, the location of Pompey's victory over Mithridates in 66 B.C. (Strabo 12.555), was at a strategic position in the Roman communication system and was growing during the 1st century, but it lay far from Crete and from Paul's known journeys. The Nicopolis in Bithynia (Pliny *HN* 5.150), or in Cilicia (Strabo 14.676) would have provided uncomfortable winter quarters. The Nicopolis in the Delta region of Egypt near Alexandria, that had been founded by Caesar Augustus (Josephus *Ant* 5.11.15 § 273) would have provided a comfortable climate, but it also lies outside Paul's reported travels. Some cities named Nicopolis were founded by later Roman leaders and thus would not have been the site of the meeting between Titus and Paul.

The most likely site for the meeting was the Nicopolis in Epirus; this same Nicopolis is also known as Nicopolis of Achaia. This variance has resulted because Tacitus (*Ann.* 2.53) described it as an Achaian town, whereas Ptolemy (*Geog.* 3.13) ascribed it to Epirus. The two terms are designations for large portions of what is today modern Greece. It was located on the W side of the Greek peninsula across the sea from the S end of the Italian peninsula (39°02´N; 20°44´E). The city was built on the isthmus of the Bay of Actium. Augustus founded the city in commemoration of the important naval victory over Mark Anthony in 31 B.C. which took place in the bay. The undisputed Princeps established the city as a Roman colony. The show piece of Nicopolis was a memorial dedicated in 29 B.C. to Neptune and Mars. The monument was decorated with a number of rams from the front of ships captured during the naval conflict. The city dominated the trade of the region and was the venue for a quadrennial festival which rivaled the Olympic games. Herod the Great, in his typical flair for promoting his own position with Augustus, made generous donations toward the construction of a temple there, as well as for numerous other public buildings (Josephus, *Ant* 16.5.3 § 147). The city became the home of the exiled philosopher Epictetus in A.D. 89 (Aulus Gellius *Attic Nights* 15.11.5). The site is occupied today by the modern village of Smyrtoula.

Paul's intention to meet Titus in Nicopolis sometime after being released from prison in Rome would have been a continuation of his evangelistic endeavor. It is widely held that after traveling through Miletus and Corinth, Paul made his way to Nicopolis, where he was arrested and returned to Rome in a second Roman imprisonment.

Codex Alexandrinus appends a note to the epistle to Titus indicating that the letter was sent from Nicopolis, but this note is not attested in other ancient manuscripts. It contrasts with Titus 3:12, which suggests that Paul was *near* Nicopolis, not *in* Nicopolis. Paul is usually thought to have written the letter from Corinth.
ROBERT W. SMITH

NIGER [Gk *Niger* (Νιγερ)]. The second name of Simeon, who was part of a group of prophets and teachers in the church at Antioch (Acts 13:1). The name is a Graecized form of the Latin word for "black," thus it is assumed that this Simeon was of African origin. This African connection has led to speculation that he is to be identified with Simon of Cyrene (Luke 23:26). It has also been suggested that the grammar of the sentence may specify that Niger was a prophet (with Barnabas and Lucius, Saul and Manean being teachers). But it is more likely that Luke has stylistically varied the list by shifting particles. Another speculation connects this Niger with the Simeon mentioned in Acts 15:14

The list seems to assume that Niger was an Antiochean. This may reflect Luke's general interest in Acts with this city and perhaps provide a further clue for the provenance of Acts. The list, and Niger's place in it in Acts, illustrates the diversity of the community at Antioch, highlighting the Lucan theme of the universality of the gospel.

THOMAS W. MARTIN

NIGHT HAG See LILITH (DEITY).

NILE (PLACE) [Heb *yĕ›ōr* (יְאֹר), *nāhār* (נָהָר); *yām* (יָם)]. The river that essentially defines Egypt.

This article consists of two entries. The first surveys OT references to the Nile River, while the second provides a geographical overview of the river's role in constituting Egyptian life.

OLD TESTAMENT

The term most commonly used to refer to the Nile River or its tributaries (particularly the Delta region) in the Hebrew Bible is *yĕ›ōr.* This Hebrew word is generally thought to be a loan word from Eg *i (t)rw,* "river, Nile, a river/stream [of the Nile]" (*WbÄS* 1: 146–47; Lesko 1982–89 1:60; de Buck 1948:1; Lambdin 1953: 151; see Kadish 1988 for a discussion of the word's possible origin); and is often followed by the adjective ‹€ *(j),* "great" (i.e., the "Great River") to denote the Nile generally and its central artery within the Delta system (Gardiner 1947: 153*–68*; Bietak 1975: 118–25).

In the Pentateuch, the Nile is most prominent within the story of Joseph (Genesis 41) and the Exodus tradition (Exodus 2, 7–8). In Gen 41:1–3, Pharaoh sees in his dream seven healthy cows emerging from the Nile and feeding on the "reed grass" (Heb *›āḥu,* from Eg *3ḫ[w],* "papyrus thicket"; see Lambdin 1953:146) near the river. In his recounting of the dream to Joseph, Pharaoh (or rather the narrator) adds the Heb *śĕpat,* "lip, edge," to *yĕ›ōr,* i.e., "In my dream I saw myself standing at the edge of the Nile" (v 17). The same phrase (Heb *śĕpat hayĕ›ōr*) is also found in Exod 2:3, where the text states that the child (Heb *yeled*) Moses was placed "in the marsh (*sûp*) at the river's edge" (see Ward 1974:343 for "marsh" instead of RSV "reeds").

Certainly the most celebrated biblical narrative concerning the Nile is that relating the story of the plagues, specifically the first two where the river turns to blood (7:15–24) and frogs emerge from its waters, infesting the land of Egypt (7:25–8:11 [Eng 8:1–15]). According to the text (7:20), Moses lifted his staff and struck the waters of the Nile in the presence of Pharaoh and his servants, whereupon all the waters of the Nile turned to blood. The intended effect of this miracle upon Pharaoh was, however, lessened by the fact that Egypt's "magicians" (Heb *ḥarṭummîm,* a problematic term generally believed to be of Egyptian derivation; see Lambdin 1953:150–51 and Quaegebeur 1985) were able to do the same (7:22), although one naturally questions how they accomplished this feat. One would have to assume that the miracle was first reversed, i.e., the blood—which was now throughout all the land of Egypt (v 21b)—became water once again, thus allowing them to demonstrate their comparable powers. In the same fashion (but this time Aaron wields the staff), the second plague brings frogs from the "waters of Egypt" (8:6) upon the land. There is some confusion within the text concerning the origin and extent of these two plagues—whether they were restricted to the Nile (as in 7:17, 20–21a; 8:3, 9b, 11) or encompassed all bodies of water (7:19, 24; 8:1–2 [—Eng 8:5–6]; see Fohrer 1964; Childs *Exodus* OTL, 130–62; Zevit 1976 for a discussion of the source-critical problems and final redaction of the plague narrative). With respect to the latter position (i.e., all bodies of water), Zevit (1976: 199–202, 210–11; 1990:22) has noted that these descriptions echo the language of Genesis 1, and are intended by P to evoke the "undoing" of Yahweh's creation (compare, e.g., "their bodies of waters" [Heb *miqwēh mêmêhem*] in exod 7:19 with "the gathering of waters" [Heb *miqwēh hammayim*] in Gen 1:10).

As with the crossing of the Red Sea, scholars have never tired of seeking natural explanations for these otherwise miraculous events. The most widely cited treatment of the plagues from this perspective is that of Greta Hort (1957–58), who attempts to demonstrate that "the salient features of each plague are also the salient features of one specific natural phenomenon, and that the plagues follow upon each other in the Bible in the sequence which such phenomena would have in nature" (85). Thus, the "blood-red" color of

the waters of the Nile was brought about by an abnormally high inundation (contra the earlier view of a low Nile, e.g., Petrie 1911:35–36), which in turn raised the level of flagellates within the water to a point where the fish could no longer survive. The numerous dead fish then made the water foul and undrinkable, and, according to Hort, at that point the already reddish water of the high inundation "became truly blood-red in colour" (94). As for the plague of frogs that followed, Hort explains that invasion of dry land as the result of the masses of dead and decomposing fish along the banks of the river that threatened the frogs' normal habitat (96–97).

The most frequent objection to Hort's rather elaborate scenario (apparent as she progresses through the plagues) is that she fails seriously to consider the source-critical/redactional history behind the formation of the narrative (e.g., Greenberg 1969:202). According to Zevit (1976: 195–96), the "plasticity" of the plagues tradition, reflected in their varying order in Psalms 78 and 105, "tells against any attempt to explain the order of the ten plagues as reflecting a connected series of natural catastrophes," although he does not deny the possibility that "some actual natural disasters ultimately lie behind the various traditions" (see also Zevit 1990:42). (Note also the comments of Beegle 1979:117–18 and the insightful critiques of Greenberg 1969:200–3 and de Vaux *EHI*, 360–62.)

While she is not interested in literary analysis per se (e.g., p. 85), Hort's conclusion that the narrative is indeed historical implies some type of unity, even if at the hands of its latest redactor who placed the plagues in their correct historical sequence (note her revealing, if not confusing, statement on the "original account" of the first plague [p. 95]). While she often relies upon the details of the text and, indeed, maintains that it is in these that her case is strongest, Hort must at times "interpret" certain passages. For example, she consistently refers to the "blood-red colour" of the Nile, while the biblical writer(s) state that the Nile actually became blood (note Exod 4:9), and infer that the death of the fish was due to this change (Exod 7:20–21). Ironically, Hort employs natural means to explain what was clearly perceived by the biblical author(s) as a purely miraculous event—one whose sole purpose was to magnify the superior power of their god, Yahweh—and thus defeats the purpose of the biblical text. The writer does not speak in terms of a natural catastrophe, but wishes the reader to understand that this occurrence is strictly beyond the normal course of affairs (high inundations were not previously unknown or unique), and thus evidence of the hand of Yahweh. Ultimately, Hort's rationalistic explanations reveal more about the mind-set of the modern interpreter than the biblical text itself (see also the comments of Childs *Exodus* OTL, 168; Coats 1988: 12–13).

Attempts to support the historicity of the first plague through an appeal to the Egyptian text *Admonitions of Ipuwer* (e.g., Zevit 1990:20), which states "Lo, the river is blood" (Eg *iw ms itrw m snfw;* see Gardiner 1909:27 and plate 2, 10; translation from Lichtheim *AEL* 1: 151) overestimate the historical value (and misunderstand the genre) of this text (note esp. the comments of Lichtheim [149–50] on the literary topos "national distress"; also Kemp in *AESH* 74–75). Hort contends (as she must) that this statement in the *Admonitions* refers to "the dreaded calamity of *too high* a rise of the Nile" (92), but elsewhere in the same text one finds passages that indicate otherwise. For example, prior to the above quotation, one reads, "Blood is everywhere, there is no shortage of dead … Many dead are buried in the river [*itrw*], the stream [*nwj*] is the grave, the tomb has become a stream" (Gardiner 1909: 25–26; *AEL* 1: 151). Thus, the writer has prepared the reader for what follows, i.e., the numerous dead bodies in the river have turned it to blood.

Aside from this Egyptian text, Hort's treatment of the first two plagues is conspicuous by its absence of reference to ancient Egyptian texts concerning the Nile or inundation—from the 13th century or any other period of Egyptian history—that might support her scenario. (Another Egyptian example of the "water into blood" motif, although unrelated to the Nile, is found in a late demotic text of Roman date; see Montet 1968:95–96, citing Maspero; Lichtheim *AEL* 3: 148.) The ancient Egyptians kept detailed records of Nile levels (crucial in the modern reconstruction of Egyptian chronology; e.g., von Beckerath 1966) and were fully aware of the destructive consequences of too high an inundation (e.g., the flooding of temples; under Sebekhotpe VIII [13th Dyn.], see Habachi 1974 and discussion in Baines 1974 and 1976; under Osorkon III [23 Dyn.], see Breasted *ARE* 4: 369; von Beckerath 1966:44–45; Edwards in *CAH*^{a} 3/1:

567) and modern Egyptologists increasingly recognize the socioeconomic impact of these fluctuating levels upon the course of Egyptian history (e.g., Bell 1975; Butzer 1976: 26–38; 1984). Thus, it is all the more puzzling that such a catastrophic series of events related to the Nile should fail to prompt even the slightest mention in Egyptian texts from the alleged period of their occurrence. The traditional response to this uncomfortable silence has been that it was not in the best interest of the Egyptians to cite such embarrassing "defeats," but one does find other such catastrophes narrated within Egyptian inscriptions (e.g., the account of the destructive storm during the reign of Ahmose [1550/1539–1525/1514 B.C.E.; see Vandersleyen 1967], where no attempt is made to hide the negative effects of the disaster, as one finds, e.g., with the high inundation under Taharqah [690–664 B.C.E.; see Macadam 1949:27; Kitchen 1986: 388–89]). While highly conservative regarding the historicity of other events recorded in the book of Exodus, it is instructive to note the cautious approach of Sarna, who remarks of the plagues tradition that "the entire account has a didactic and theological purpose, not a historiographic one. In order to underline and emphasize these points, the narrator has devised a literary structure of impressive artistry" (1986: 75, 77). Unlike Sarna, who nevertheless does not rule out the possibility of a historical core behind the tradition (68–70), Van Seters (1986: 38) explains the plagues as a literary creation of the Yahwist (for him of exilic date), who drew from both biblical (prophetic) and ANE (curse) traditions.

Another issue raised regarding the first plague is the Nile's place in Egyptian religion vis-à-vis the biblical statement that Yahweh's actions on behalf of his people constituted a judgment against "all the gods of Egypt" (Exod 12:12; Num 33:4). One frequently finds the statement that the first plague was directed against the Egyptian "Nile god" Hapi (e.g., Finegan 1963:49; Aling 1981: 106; Sarna 1986: 79; but compare Greenberg 1969:201). But as Egyptologists have long known, the Eg word *ḥʿpi* refers not to the Nile, but to the inundation. This important distinction between Eg *itrw (ʿ€)* as the river and *ḥʿpi* as the inundation was demonstrated by de Buck (1948), who collected numerous examples in support of his thesis (see also Hornung 1982: 77–79; Janssen 1987: 131, note 22; Baines 1985: 112). The term "Nile god," coined with reference to the many offering bearers in Egyptian reliefs associated, but not exclusively so, with the abundance of the inundation, is misleading at best and should be abandoned (see esp. the extensive treatment of Baines 1985, particularly pp. 112–16, who prefers the term "fecundity figures"). However, leaving aside their overt theological biases, one need not assume that the biblical writers' own perception of the Nile in Egyptian thought—however they may have acquired this knowledge—must tally in all respects with that presented in Egyptian texts. It is not impossible that the biblical authors drew from a more "popular" view of Egyptian religion current in the Palestine of their day (the importance of later Egyptian traditions, i.e., from the 7th–6th centuries, in the composition of the Exodus narratives should not be overlooked). Be that as it may, it is clear from the text that the biblical authors/redactors were aware of the extreme importance of the Nile to the welfare of Egypt, and that any serious disruption of its normal agricultural cycle (which revolved around the river), as the first plague was certainly intended to be, would deal a severe blow to the very heart of the Egyptian way of life (compare Isa 19:5–8).

Outside the Pentateuch, the Nile figures most prominently within the prophetic corpus, particularly in the major prophets' oracles against Egypt. In Amos 8:8 and 9:5, the earth trembles (Heb *rgz*) and melts (Heb *mwg*) like the rising and falling of the Nile; at first reading, an apparent reference to the inundation, but there are serious textual problems in these two (not quite parallel) verses. The Heb (*Nipʿal*) verb *grś,* "be tossed/thrown about" (v 8b) is better suited to a violent sea (Isa 57:20), unlike the inundation (see discussion in Andersen and Freedman, *Amos* AB, 811–13). A somewhat similar description of the rising Nile occurs in Jer 46:7–8, where, in his attempt to reassert Egyptian dominance in the N, Pharaoh Neco (Necho II, 610–595 B.C.E.) likens his march into a devastating inundation, the "gushing" or "surging" (Heb *gʿś*) waters of the many Delta rivers (*nĕhārôt*).

In the book of Isaiah (7:18), the predicted invasion of the Egyptian (or rather Kushite) army, summoned by Yahweh as judgment against Judah (cf. 5:26; discussion in Hayes and Irvine 1987:137–38), is compared to a swarm or plague of flies from the streams/rivers of Egypt (Heb *yĕʾōrê miṣrāyim,* i.e., the Delta of Lower Egypt). Many regard the reference to Egypt here as a later interpolation (e.g., Wildberger

Jesaja 1–12 BKAT, 301–5; brief discussion in Clements *Isaiah 1–39* NCBC, 89–90). Elsewhere (Isa 19:5–8), the downfall of Egypt is symbolized in part by the drying up of the Nile with its streams and canals (here Heb *yām, nāhār,* and *yĕʾōr* are all used interchangably; compare Ezek 30:12).

The RSV's "Nile" in Isa 18:2 represents the traditional interpretation of Heb *yām* here; but, as the commentaries reveal, the first two verses of this chapter are fraught with textual and historical difficulties. Others (e.g., Clements *Isaiah 1–39* NCBC, 164; Hayes and Irvine 1987:254; note also NJPS) prefer "sea" (i.e., the Mediterranean), a reading partially dependent upon one's view of the origin (Kush or Jerusalem?) and destination (Assyria, Jerusalem, or even Kush?) of the messengers of v 2 (discussion in Wildberger *Jesaja 13–27* BKAT, 678–89; Kaiser *Isaiah 13–39* OTL, 89–94; Hayes and Irvine 1987:252–55; note the interpretation of Ezek 30:9). In his oracle against Tyre, the First Isaiah (23:1–3) comments upon the productive trade relations between the N Levantine coast and Egypt: "her [Tyre's] revenue came from the grain [lit. "seed"] of Shihor, and from the harvest of the Nile" (Heb *yĕʾôr,* omitted in LXX; on Shihor, see Bietak in *LÄ* 5: 623–26). The RSV rendering of Isa 23:10, "Overflow [Heb *ʿibrî*] your land like the Nile," is generally emended, with support from Qumran and the LXX, to "Till [Heb *ʿibdî*] your land like the Nile" (although the meaning of the verse as a whole is still unclear; see NJPS and the suggestions of Wildberger *Jesaja 13–27* BKAT, 857; Hayes and Irvine 1987:292).

In 2 Kgs 19:23–24 (= Isa 37:24–25), the Neo-Assyrian monarch, Sennacherib, boasts of his exploits in Lebanon and, following the traditional interpretation, Egypt. Evidence for the latter derives from the phrase *yĕʾōrê māṣôr,* "the streams/rivers of Masor," rendered by RSV and others (NJPS, NEB) as "streams of Egypt." Here *māṣôr* is taken as a variant for *miṣrāyim,* the common term for Egypt. This view, however, has not gone unchallenged (e.g., Calderone 1961). Tawil (1982: 199–202) suggests that Heb *māṣôr* should be identified with the Mesopotamian geographical site *šadê Muṣri,* Mount *Muṣur,* and that the biblical account (19:24 = 37:25) is actually a reference to Sennacherib's construction of irrigation works in this area (modern Jebel Bashiqah, E of Khorsabad) for the city of Nineveh. Although, as he admits (201, note 34), the presence of *yĕʾōrê māṣôr* in Isa 19:6, a clear reference to Egypt, remains unexplained.

The prophet Nahum (3:8–10) compares the fall of Nineveh (612 B.C.E.) to the earlier Assyrian sack of Thebes "that sat by the Nile" in Upper (southern) Egypt (663 B.C.E.). The references to rivers/streams (*yĕʾorîm*), water(s) (*mayim*), and sea (*yām*) in Nahum's portrayal of this S Egyptian city have caused difficulties (although *yām* could refer to the Nile, as in Isaiah 19 above, and Nahum's description may reflect a knowledge of this chapter). As earlier scholars have noted, this description of Thebes is more suited to a typical city of the Delta (see Spiegelberg 1904:33; Müller 1903; Simons *GTTOT,* 474; on Delta cities, Bietak 1979:100–1), and later tradition (e.g., Jerome) identified Heb *Nōʾ-ʾāmôn* (Thebes) with Alexandria (see Doorslaer 1949). However, Nahum's description of Thebes as insular and aquatically fortified may draw from his own limited knowledge of Egyptian cities, which included only those of the Delta, as opposed to the lesser-known cities (at least to the inhabitants of Palestine) of Upper (southern) Egypt (but see Schneider 1988, who defends the prophet's description as accurate and possibly reflecting a personal knowledge of the city).

In Ezekiel's oracles against Egypt (Ezekiel 29–32), the pharaoh is like the "great sea creature [Heb *hattannîm haggādôl*] lying [in the sense of "at ease"?] in the midst of his rivers [*yĕʾorāyw*], who says 'My Nile [MT sg. *yĕʾōri*] is my own, I made it [for?] myself' " (29:3; see Freedy and Redford 1970:471; Boadt 1980: 26–30; see also v 9 and 32:2–3). Through this statement, the pharaoh proudly asserts his sole ownership of and sovereignty over Egypt, and such hubris, of course, does not go unpunished. To continue the metaphor, Yahweh will hook the animal and leave him to rot out of water, with his carcass as food for the "beasts of the earth and birds of the air" (v 5; note the cosmic dimensions of this event in 32:3–8). While Heb *yĕʾōr* is used exclusively in 29:3–5 and 9, other related passages (32:2, 14) vary with *yām, nāhār,* and *mayim.* There is disagreement over the interpretation of Heb *tannîm* in 29:2 and 32:2 (generally read *tannîn;* see Zimmerli *Ezekiel 2* Hermeneia, 106; Boadt 1980: 26–27). Since the seminal work of Gunkel (*Schöpfung und Chaos in Urzeit und Endzeit,* 1895), a number of scholars have advocated a mythological context for this passage, identifying Ezekiel's *tannîm* with the well-known sea

creature or dragon subdued (or requiring subjugation) by Yahweh (e.g., Isa 27:1; 51:9; Ps 74:13; for Gunkel, see translation of selected passages in Anderson 1984:25–52; discussion in Boadt 1980:26–27; Day 1985: 94–95). Others (e.g., Cooke *Ezekiel* ICC, 325–26) reject this view, rendering *tannéÆm* as "crocodile," a creature familiar in Egyptian literature (e.g., Westcar Pap., see Simpson 1973:17–18, 30; *Admonitions of Ipuwer*, see Lichtheim *AEL* 1: 151; Book of the Dead, see Allen 1974:29, 41–43, 65, etc.; see Stead 1986:69 for illustration; in general, Brunner-Traut in *LÄ* 3: 791–801). According to Zimmerli *Ezekiel 2*, 111, this mythological monster has already been demythologized in Ezekiel, and "what should be thought of in the first instance is the crocodile." He then draws attention to the often quoted phrase from the Poetical Stela of Thutmose III, where Amun-Re says of the king, "I let them [the king's enemies] see your majesty as a crocodile [*dpi*], master of terror in the water, unapproached" (*Urk. IV*, 616, line 9; translation from Lichtheim *AEL* 2: 37). However, the relevance of this text for Ezekiel is greatly diminished when one notes that in the same poem, Amun also caused the king's foes to see him as (among other things) a youthful bull, a fearsome lion, a falcon (?) (Eg *nb dmt*, lit "lord of wing") pouncing on its prey, and a jackal. A more fruitful, although highly speculative, approach to the question of Egyptian parallels might be found in those inscriptions or reliefs assigning royal attributes (e.g., through assimilation with Re, Horus, or Osiris) to the Egyptian deity Sobek (Gk *Suchos*), represented in the form of a crocodile, a human body with a crocodile head, or fetish; not unnaturally, Sobek is also closely associated with the Nile (e.g., "Lord of the Nile") and is protected by its fish (see Brovarski in *LÄ* 5: 995–1031, esp. 999–1000; compare Ezek 29:4–5). But even the existence of suitable Egyptian parallels need not imply conscious borrowing by the biblical writer.

In a handful of passages, *yĕʾōr* is unrelated to the Nile or Egypt: Isa 33:21 (the broad rivers of the restored Zion); Job 28:10 (man-made channels cut through rock); and Dan 12:5–7 (the shore of the Tigris [?], compare 10:4).

JOHN R. HUDDLESTUN

GEOGRAPHY

The most remarkable of the ancient world's river systems (Hurst 1925; 1957; Hurst and Phillips 1931), the Nile formed an indispensable resource for Egypt and a series of cultures in Nubia and Sudan in Ancient times.

———

A. Course and Hydrology

1. White Nile. The sources of the Nile lie 6,671 km from the river's mouths, in the Kagera river system in Central Africa which empties into Lake Victoria, the largest freshwater lake in the Eastern Hemisphere. The Victoria Nile leaves the lake, flowing over the Owen and Ripon falls, and enters shallow and swampy Lake Kioga. The river then flows through more rapids to the edge of the Central African rift at Murchison Falls, entering Lake Albert with a volume of 10.7 G ^{3}/year (billions of cubic meters). The Albert Nile descends from the lake 153 m in its 156 km course to the Uganda-Sudan border. The river, here known as the Bahr el Gebel (River of the Mountain), flows to the great swampy Sudd (Block) with a volume of 26.5 G m^3/year, where despite the addition of the Bahr el Ghazal (Gazelle River), evaporation and percolation

reduce the volume of water that leaves the Sudd as the White Nile (Bahr el-Abyad) to only 14.24 G m^3/year. The Sobat, which rises in the Ethiopian highlands, the last significant tributary to the White Nile, brings the flow to 25.2 G m^3/year, its volume at Khartoum (Kleinschroth 1977: 158–59).

2. Blue Nile. From Lake Tana in the N Ethiopian highland, the Blue Nile (Bahr el-Azraq) flows 900 km to Rosieres Dam in Sudan, descending 1,300 m, partly through a spectacular gorge (Williams and Williams 1980:212), and receiving numerous tributaries. The rivers Dinder and Rahad join the Blue Nile below Rosieres to make a total flow of some 51.4 G m^3/year (Kleinschroth 1977: 159).

3. Main Nile. The Blue and the White Niles join at Khartoum, and the river receives the addition of the seasonal Atbara north of the Sixth Cataract to make up the annual volume at Aswan of 84 G m^3/year, the last addition to the Nile for 2,700 km when it empties into the Mediterranean (Kleinschroth 1977: 159).

B. Inundation

For nine months, the river's water comes primarily from the White Nile. Most of the Nile's flow occurs in a three-month inundation season from August to October, when monsoon rains in Ethiopia swell the Sobat, the Blue Nile, and the Atbara to make up 95 percent of the Nile's volume for the season, the inundation being more than 80 percent for the entire year. The inundation is quite irregular, and the total volume has varied from a low of 41 G m^3/year in 1913/14 to 151 G m^3/year in 1878–79 (Kleinschroth 1977: 159).

C. Nile North of Khartoum

Six cataracts divide the Nile into moderately sloped navigable reaches and regulate the speed of the inundation. From Aswan, the Nile descends somewhat less than 1 m for every 10 km The river follows a valley at the edge of the Eastern Desert plateau that varies from the Nile's own width to about 15 km which often encloses the valley between high cliffs (Kleinschroth 1977: 159; Rushdi Said 1975:12–13 and 31–32). Below the First Cataract, the valley becomes wider, especially north of the great bend at Nag Hammadi. North of Cairo, the cliffs disappear and the Nile divides, now into two branches (Rosetta and Damietta), in ancient times into seven (Bietak 1975: 75–98), forming the great fertile Egyptian Delta, some × km

1. Development. The Nile Valley, a graben, and the Delta were filled with hundreds of meters of sediment, beginning in mid-Tertiary times (Williams and Williams 1980:218–20), but the gray-black alluvium that forms the agricultural plain is a thin surface that has been deposited in the last 30,000 years (Rushdi Said 1975:30–32). The Nile berms are above the plain, which slopes downward toward the edges (Bietak 1975: 53–54; Butzer 1976: 15–17). The banks of different courses generally paralleled the river as natural dikes.

2. Inundation and Occupation. The broad valley and the annual silt-laden inundation make possible a lush vegetation on the floodplain and an almost miraculous agricultural productivity. The inundation (6–8 m above low water) covers the land about 1.5–2 m deep for about 45 days. Its timing is right to allow grain plants to mature in the winter without further watering. The inundation's soaking removes soil-damaging salts and leaves a thin (ca. 1 mm) layer of fresh silt with new nitrogen to renew the land. The silt increased the height of the land about one meter per millennium, broadening the valley floor and filling lower, swampy areas more rapidly than higher ones, an important long-term change (Rushdi Said 1975:33).

D. Land and Water

Based on the distribution of water, different modes of occupying the Egyptian valley can be characterized as "natural irrigation," basin irrigation, perennial irrigation, and artificial irrigation (Willcocks and Craig 1913:299–426; Schenkel 1978: 21–23).

1. Natural Irrigation. The simplest agriculture in the valley involved no modification of the flood. As the river receded, a cultivator would follow its progressive fall with rows of plantings. Probably derived from seasonal playa agriculture, this technique appears elsewhere in Africa where shallow seasonal bodies of water occur (McIntosh and McIntosh 1984:159; Butzer 1976: 19). It was recently used in parts of Nubia and where irrigation is not practicable, and it is sometimes enhanced by terracing or by the erection

of small dam-traps which create mud flats in the braided channels of the Second Cataract (Vercoutter 1966: 161–63, pls. XVI–XVII).

The condition of the land could be unpredictable even when floods were normal. The river's eroding meanders and changing bed continuously altered the landscape, and the location of "good" floods would change (Russell 1966: 78–79; see Rushdi Said 1975:37–38; Butzer 1976: fig. 1), so in a thirty-year period, only a few Niles were ideal, and many were too high or too low. Land usable one year might not be adequately watered, silted, or drained the next. The silt provided sufficient fertility for planting grain only every second year or two years out of five (Girard 1824: 137–48; Baer 1971), and with the variable inundation, a field's fallow cycle could not be anticipated and land ownership would be difficult. Even with irrigation, villages could be difficult to site (Russell 1966: 79).

2. Nile and Egyptian Agriculture. Egypt developed complementary agricultural practices, engineering works, economic arrangements, and administrative measures that formed the basis of its monumental civilization.

a. Agricultural Cycle. Egyptians raised many garden crops and other specialized products, but the agricultural cycle was dominated by the cultivation of grains, generally barley and millet, and raising livestock, goats, sheep, and cattle. These two activities were mutually dependent. Grain was alternated with fallow, but alternation with nitrogen-enriching crops, as done more recently, was apparently not practiced. Animals were fed on straw from the fields and they foraged in the fallow fields, where their droppings helped enrich the soil (Willcocks and Craig 1913:762; Baer 1971; *LÄ* 2: 934–35).

The population, about 2.5–4.5 million, about ¹/₅ urban, was supported by cultivation of somewhat less than half the arable land in any one year (for estimates, see Baer 1962:42–44; 1971; for the fallow cycle, see Girard 1824:141). Much land was privately owned, but large areas were controlled by the ruler and cults (Baer 1962: 32–33; Hughes 1952: 74). Most cultivators sought favorably inundated land to lease in a single year for about ¹/₃–¹/fs18 2 of the crop or other rent, in addition to any land they might possess (Baer 1962: 33–39; 1963:9–16). Farmers often operated with associates and hired hands in teams (Hughes 1952: 45, 49 note m, 68–69 note f; Baer 1963: 7; note household rations 18–22).

b. Hydraulic Engineering: The Basin System. The most important element of Egyptian agriculture made the inundation perform more reliably, regulating the natural regime. At its simplest, the banks of the river were reinforced, and transverse dikes were constructed between natural levees enclosing basins, which were carefully leveled to ensure even watering and deposition of silt (Butzer 1976: 20; Baer 1971; Hurst 1957: 38–41; Girard 1824: 10–13). In the 19th century, these generally varied in size from 2,000 to 40,000 acres, averaging about 7,000, but they could be made much smaller (Willcocks and Craig 1913:301; Baer 1971). An inlet canal, sometimes an abandoned channel, was dug to about halfway between the high and low Nile to lead water onto the fields, and a drain was dug to lead it off again. In Upper Egypt, the same canal could serve for both watering and drainage. At the appropriate time, the high Nile was let into the canal by cutting a closing bank, and 40–45 days later, the drain would be opened to clear the fields for planting. The simplest basin systems would be established by a village or a town (Hurst 1957: 39), but a considerable amount of yearly maintenance was necessary, backed by regular labor obligations (*LÄ* 2: 333–34; Goyon 1982: 64 n. 23). The effectiveness of basin irrigation could be greatly enhanced by large projects and its flexibility improved by complex refinements (Wilcocks and Craig 1913:299–341). Nevertheless, irrigation, like many mundane but very important functions, is not detailed in Egyptian sources (Baer 1971; Schenkel 1978: 25). Before the end of the New Kingdom, there are few unequivocal references to irrigation apart from some important texts in the First Intermediate Period (Schenkel 1978: 29–36) and the titles of some low-echelon officials in the New Kingdom (Endesfelder 1979: 47–49). Irrigation was largely a local or mundane matter that rarely appears in representations and only occasionally in texts before the Ptolemaic period. Because it is first mentioned in inscriptions during the First Intermediate Period, an irrigation revolution has been postulated (Schenkel 1978; *LÄ* 1: 776–82).

There is substantial evidence for hydraulic works much earlier (Schenkel 1978: 26–27). Before the First Dynasty, the monumental decorated mace-head of Scorpion (third predessor of Narmer) shows a

hydraulic event no matter what ceremony was actually depicted. The pharaoh appears with a hoe in his hand attended by a man with a basket and a second man with a sheaf. Below is what seems to be a canal with men, also holding hoes, partly in the water, and a palm revetted against the flood (Smith 1946: 113–14, fig. 30; but see Schenkel 1978:29; Helck 1987: 97; *LÄ* 1: 1261–63). From Dynasty I, inundation levels were recorded in the annals, a systematic recording later intimately connected with the basin system (Jaritz 1986: 1–2). In the Old Kingdom, canals were built for shipping. Quays at royal mortuary complexes were located on the Memphite canal (*LÄ* 3: 10–12). A large (110 × 98 × 14 m) masonry-faced dam across an Eastern Desert wadi, the Sadd el Kafara, was constructed in the Old Kingdom (Fahlbusch 1986; Garbrecht et al. 1983: Appendix B). Abundant evidence of early hydraulic engineering and careful measurement indicates indirectly that the basin complex was already in existence.

c. Hydraulic Engineering: True Irrigation. As the land rose in ancient times, the canals gradually gained on the higher land and were extended to increase the area that could be irrigated using devices that would lift the water into a garden plot, devices such as the shadoof, lifting up to 3 m (Girard 1824: 17–18; *LÄ* 5: 520–21). In Ptolemaic times, the Archimedes' screw was added, and later a simple ox-turned waterwheel with buckets or chambers (*tambusha*) which could lift water about a meter (Hurst 1957: 44–45). A wheel with a rope chain of pots or buckets (*saqia*) imported by Roman times from Persia was capable of lifting water up to even 10 m, making it possible to water large gardens and palm groves (Girard 1824: 20–22).

Large projects such as the Old Kingdom Sadd el-Kafara were sponsored by the state. The most famous of these was the Lake Moeris (not to be confused with Birket Qarun) probably created in the southern Fayum in the Middle Kingdom (Herodotus 2: 148–50; Garbrecht 1986b: 8–11). In the Ptolemaic period, this region was made much more productive with elaborate works (Bonneau 1981; see also Eck 1986:5–6).

d. Government, Agriculture and Irrigation. Although not well represented in the texts, irrigation was an essential economic support of the Egyptian state, and the state at least indirectly became necessary for successful irrigation through its concern with agricultural output. Important measures complemented basin complexes and agricultural practices to make Egypt's large population and continuity possible. Security against marauding invaders, animals, and social disorder, the fundamental obligation of the pharaonic state, was needed to keep enough of an active agricultural population (young males) on the land to maintain the dikes and canals or even to prevent deliberate acts of destruction (Schenkel 1978: 27, also 29–31 and 55–87). Measurement of the inundation (Jaritz 1986: 2) together with taxes and rents paid in kind to institutions not only supported their own activities, but provided grain to be stored and available to alleviate famine (Schenkel 1978: 37–49; see Genesis 41; *LÄ* 3: 84). In addition, governments and even officials undertook the resettlement of people on reclaimed land, an "internal colonization" (Goyon 1982: 64; Schenkel 1978: 55–57, 65–67).

e. Nile and Egyptian History. In four millennia, failures were bound to occur (Butzer 1976: 26–38; 1984: 106), and they could lead to famine, starvation, cannibalism, banditry, social disruption, and displacement. It is difficult to attribute specific periods of social disorder to Nile failure because disruption of normal agricultural routines or grain supplies by war or mismanagement would have the same effect, but even some unusual Niles did not cause insuperable difficulties, as indicated by much more complete medieval records (Russell 1966). Relatively low Niles recorded in the Second Dynasty occur in a period of some conflict, but increasing prosperity is also shown in the development of royal complexes and the great private cemetery at Helwan (Butzer 1984: 106, 108; but see Stadelmann 1985). Major disruptions at the end of the Old Kingdom are not accompanied by explicit documentation of poor Niles, but formulistic references to events that occur regularly in Egypt, such as dust storms that appear in the *khamsin* season and shallow water (1 m), occur commonly (Willcocks 1889: 19); a famine at the end of the 11th Dynasty may also have its origin in social or administrative disruption (Bell 1971; Butzer 1984: 106–7, 108–9; see von Beckerath 1965, esp. p. 9). In late Dynasty XII and early Dynasty XIII, records of extremely high water in Nubia under the powerful Amenemhat III are not accompanied by evidence of chaos, despite a change of dynasty (Bell 1975; Butzer 1984: 107, 109; see Bietak 1975:63 n.

198; Vercoutter 1966). At the end of the New Kingdom, drastic rises in prices are accompanied by official corruption in the grain supply and by invasion and infiltration from Libya and Nubia that repeatedly disrupted work routines as far S as Thebes (*CAH* 2/2: 616–34; Butzer 1984: 107–8, 109–10; Baer 1962: 27–29). Shortage and disruption are correlated in late Ptolemaic and Roman times, attributed to rapacious administration and neglect. In medieval times, long periods of low Niles were accompanied by reduced population and a generalized social weakening, sometimes even plagues, without sudden disruption (Russell 1966: 75, 77–82).

Fragmentary and disputed evidence indicates that quite early, Egyptians developed agricultural practices, some irrigation technology, and institutions for storing and distributing produce that were capable of dealing with almost any variation in the Nile. When these habits and institutions broke down, as when people avoided exactions or pestilence wiped out part of the population, the irrigation works deteriorated rapidly from neglect and Egypt was impoverished (Russell 1966: 71; Bonneau 1971: 189–98; Garbrecht 1986a: 10–11; Eck 1986: 20–22). If fluctuation in the inundation probably had limited effect on the course of Egyptian history, long-term changes may have been more influential. The deposition of silt, concentrated especially in the Delta (Rushdi Said 1975:33–34; van den Brink et al. 1987), increased the area available there for cultivation so much that it became Egypt's predominant region by the end of the New Kingdom, a position it has occupied to the present day.

E. Nile in Egyptian Religion

Despite its importance to Egypt, the Nile's deity, Hapy, was not numbered among the great gods of the pantheon (Bonneau 1964: 229; *LÄ* 4: 485–88). God of the inundation, Hapy had his own cults (see *LÄ* 4: 498–500), festival, and hymn (*LÄ* 4: 490–96), but was most often seen as the bringer of produce offerings. He is often shown covered with zigzag lines as though under water, a male figure with pendulous breasts, a large stomach, and a beard, wearing a papyrus bundle on his head. He typically appears as a pair of gods who tie the plants of Lower and Upper Egypt together on the side of a throne. Rows of Nile gods, one for each district or nome, alternately red and blue, bring offerings to the chief god of a temple (Bonneau 1964: 223–29). Hapy was identified or clearly associated with many gods in their aspect of fruitfulness, but he was especially close to Nun, the primeval water which was connected to the inundation, as Hapy-Nun (Bonneau 1964: 238–39), and to Osiris, joined with him as Hapy-Osiris (*LÄ* 4: 485–88; see also Bonneau 1964:243–74). The first rising of the Nile at the Cataract was brought about by Khnum, with his associates Satis and Anukis (Bonneau 1964: 232–33), and the pharaoh was a guarantor of its fruitfulness (Bonneau 1982: 62–63, *LÄ* 6: 831–33).

BRUCE B. WILLIAMS

NIMRIM, THE WATERS OF (PLACE) [Heb *mê-nimrîm* (מֵי־נִמְרִים)]. Waters located in Moab

and mentioned in oracles against Moab (Isa 15:6; Jer 48:34). The once fertile and well-watered region had become desolate and denuded. Eusebius and Jerome equated the Waters of Nimrim with *Bennamerium* N of Zoar (Lagarde 1887: 284, lines 32–34; 143, lines 11–13). Modern scholarship has traced the name Nimrim to locations both NE and SE of the Dead Sea. Most scholars identify the Waters of Nimrim with the homonymic *Wâdī en-Numeirah*, a small stream flowing W just above the *Wâdī el-Ḥesā* into the Dead Sea about 8–10 miles above its S end (e.g., Rudolph *Jeremia*, HAT, ^{2} 265; Wildberger *Jesaja* BKAT, 616). The ruined site called *Numeirah* (M.R. 201059) which lies at the source of the *Wâdī en-Numeirah* may have been the location of the ancient Moabite town.

Other scholars hold that the ancient biblical name Beth-nimrah (Num 32:36; Josh 13:27), identified by many with *Tell el-Bleibil* (M.R. 2010146), survives in the name of the Roman-Byzantine site called *Tell Nimrîn* (about 1 mile SW of *Tell el-Bleibil*), and suggest that the waters of the *Wâdī Nimrîn* may be a reference to the biblical Waters of Nimrim (e.g., Glueck 1943:11).

Given the association of the Waters of Nimrim with towns such as Zoar and Horonaim and the apparently southern escape route of the fugitives (cf. Isa 15:1–5), a southerly location of the Waters of Nimrim, while not proven, seems preferable.

ARTHUR J. FERCH

NIMROD (PERSON) [Heb *nimrōd* (נִמְרֹד)]. A pre-Israelite hero mentioned in Gen 10:8 (= 1 Chr 1:10), 9–12, and Mic 5:5—Eng 5:6 The Genesis passage, part of the Table of Nations of chap. 10, but marked out from the rest by its narrative, not simply genealogical, character, is regularly assigned to J. It describes Nimrod, the first of the (post-Flood) heroes, as the son of Cush. As a hero he achieves proverbial renown as a hunter, and rules the land of Shinar/Babylonia, with its chief cities, Babylon, Erech/Uruk, and Akkad/Agade. From there he extends his kingdom to Assyria, building Nineveh, Rehoboth-Ir, Calah, and Resen. In Micah the land of Nimrod is put in parallel and thus presumably equated with the land of Assyria.

The identity of Nimrod has been much debated. Three different approaches have been pursued. The first identifies Nimrod as a god, usually the Mesopotamian Ninurta or Marduk. The second would find in Nimrod a legendary Mesopotamian hero, either Gilgamesh or Lugalbanda, or a legendary eponym of Mesopotamia, parallel to the Ninos of Greek tradition. In the third approach, Nimrod has been equated with an historical personage, especially the Mesopotamian kings Sargon of Agade or Tukulti-Ninurta I of Assyria; less often, Nazimaruttash, a Kassite king of Babylonia, the Egyptian pharaoh Amenophis III, or the Aramaean ruler Ben-Hadad.

Deciding among this bewildering variety of identifications is not easy. Since the Genesis text, especially, describes human achievements in a Mesopotamian setting, one would expect a legendary hero, an eponym, or an historical personage of Mesopotamia, not a god, even if the form "Nimrod" fits best as a Hebrew corruption and denigrative reinterpretation ("we will rebel" [*mārad*]) of the divine names Ninurta or Marduk. A way to reconcile these alternatives is to suppose (so Speiser 1958) that Nimrod is a legendary hero, eponym, or historical personage whose name is an abbreviation of one formed with "Ninurta" or "Marduk," like Tukulti-Ninurta I.

In trying to narrow the options further, we may observe that the biblical representation of Nimrod seems to have drawn upon a multiplicity of Mesopotamian traditions. The mention of Babylon, Erech/Uruk, and Akkad/Agade points, on the one hand, to Babylonia. More specifically, the fact that Nimrod is based in Babylonia, from which he then extends his rule over Assyria (construing *ʾaššûr* in Gen 10:11 as the land, in the directional case, viz., "he went out to Assyria"), reflects, at the least, the long-standing cultural superiority of Babylonia over Assyria. But there seems to be an implication of Babylonian political domination as well, for which the best background would be either before 2000 B.C., under the Agade or Ur III dynasties, or ca. 610–539 B.C., under Neo-Babylonian (Chaldean) rule. On the other hand, the likelihood that "Cush," Nimrod's father, stands for the Kassites (Akkadian *Kaššû/Kuššû*) and that "Shinar" reflects "Shanhara," a designation of Kassite Babylonia, points to the use of Babylonian traditions originating in Kassite times, i.e., from the later 2d millennium B.C.

Assyria also forms a part of the imagery of the biblical Nimrod, particularly the Assyria of the Neo-Assyrian period (9th–7th centuries B.C.), when it dominated Babylonia. This is clear from the identification of the land of Nimrod with Assyria by the 8th–7th-century prophet Micah. It also fits the picture of Nimrod as hunter in Genesis 10, for this is a well-known royal motif in Mesopotamian literature and art which became especially prominent with the Neo-Assyrian kings. Finally, a Neo-

Assyrian setting explains the Genesis 10 reference to Nineveh, Calah, Rehoboth-Ir, and Resen. Calah (= modern Nimrud), founded apparently in the early 13th century B.C., only became a major capital with its grandiose revival by the Neo-Assyrian king Assurnasirpal II in the early 9th century. "Rehoboth-Ir" seems best explained as Assyrian *rebīt āli*, "the public square of a city"; more specifically, given its position in v 11 next to Nineveh, it should be *rebīt Ninua*, the large square complex of Nineveh which the 8th–7th-century Assyrian king, Sennacherib, boasted of enlarging as part of his great rebuilding of the city and establishment of it as the principal imperial capital. "Resen," in turn, makes good sense as Assyrian *risnu*, an aqueduct or canal, of which we know two major examples in Assyrian history, both Neo-Assyrian: the Patti-hegalli, dug by Assurnasirpal II in the early 9th century in the area of Calah and restored by Esarhaddon in the early 7th; and the huge canal system around Nineveh, dug by Sennacherib in the late 8th–early 7th century. The Resen in Gen 10:12 which is said to be between Nineveh and Calah, could well be an echo, albeit a bit confused, of one or both of these enterprises.

The diverse traditions just sketched make it difficult to look only for one personage whom Nimrod is supposed to represent. Speiser's proposal, for example, that Nimrod is the Middle Assyrian king Tukulti-Ninurta I may account for the connection with Cush, since it was a Kassite ruler whom Tukulti-Ninurta defeated in his conquest of Babylon. But it does not readily explain the hunting motif, as Speiser himself admits, since hunting is not found as a literary or artistic topos in the sources for Tukulti-Ninurta's reign. Nor, obviously, can it fit the identifications of Rehoboth-Ir and Resen discussed above.

It appears, thus, that Nimrod functions for the biblical writers as a legendary—and composite—eponym of Mesopotamia, and as such we should not expect to find any precision of historical reference. The parallel would be with the Ninos of Greek tradition, likewise the eponymous hero-founder of Assyria and its empire and likewise of composite background. Indeed, already in antiquity, Ninos was identified with Nimrod.

Still, the Nimrod portrait does represent a reaction to certain Mesopotamian historical realities, and since the latest of these takes us into the 1st millennium B.C., specifically, the 9th–6th centuries, then perhaps it is this period when at least the present form of our portrait was fashioned. One can speculate that it was the great achievements of the Neo-Assyrian kings of the 9th–7th centuries that served as a particular impetus for the portrait. The reversal of perspective, however, whereby Nimrod moves from Babylonia to dominate Assyria, rather than vice versa, would not be expected if the portrait had been completely fixed in the Neo-Assyrian period. Hence, one may conjecture that the final form of the portrait, with this reversal, reflects the Neo-Babylonian exile. In this regard one may add that all three Babylonian cities in Gen 10:10, although founded much earlier, continued and flourished in Neo-Babylonian times; indeed, Akkad/Agade became the particular focus of efforts to seek out and restore its ancient history.

In postbiblical sources, Jewish, Christian, and Muslim, Nimrod was not forgotten. The attachment of his name to various ancient Mesopotamian ruins in Iraq, especially Calah, was only one aspect of the interest in remembering and elaborating on his hunting and military might. This power, however, was seen mostly negatively: Nimrod being singled out as the greatest sinner since the Flood, whose crowning evils were his claim to be divine and his willingness to sponsor the Tower of Babel. A few sources, however, managed a more positive view, describing his opposition to the building of the Tower. For further discussion see *EncMiqr* 5: 872–73; *RGG* 4: 1496–97; Westermann *Genesis 1–11* BKAT, 686–92.

PETER MACHINIST

NIMSHI (PERSON) [Heb *nimšî* (נִמְשִׁי)]. The father or grandfather of Jehu, king of Israel. Jehu is called "son of Nimshi" in 1 Kgs 19:16; 2 Kgs 9:20; and 2 Chr 22:7 He is called "son of Jehoshaphat, son of Nimshi" in 2 Kgs 9:2, 14 See JEHU. The identification of Nimshi as Jehu's grandfather is generally preferred, since the Heb *ben* is broader than the Eng "son," and can be construed as "grandson," "descendant," or the like. It is often inferred that Nimshi was a more prominent figure than Jehoshaphat, though he is otherwise unknown today. Šanda (*2 Kings* EHAT, 93) conjectured that Nimshi might be a clan name, but its appearance as a personal name on a Samarian ostracon makes this hypothesis unnecessary. The etymology of the name is unsure. Šanda (*1 Kings* EHAT, 450) relates it to the same root as "Moses," but this is unlikely; Noth (*IPN*, 230) cites an Arabic cognate for "mongoose."
JEROME T. WALSH

NINEVEH (PLACE) [Heb *nînĕwēh* (נִינְוֵה)]. The capital of Assyria in the last few decades of the Assyrian empire. The majority of the biblical references to Nineveh are to this period. Apart from these references there is the narrative in the Bible, Gen 10:11–12, regarding Nimrod, who was "a mighty hunter"; he began his kingdom at Babel (Babylonia) and then went into Assyria where he built four cities, two of which were Nineveh and Calah.

In the Bible, Nineveh was regarded as the seat of the greatest enemy of the kingdoms of Israel and Judah and most biblical references are to its fall. Thus Jonah was commanded by the Lord to go to Nineveh to cry out against it because of its wickedness. See JONAH, BOOK OF. In the book of Jonah we read the prophet's attempts to avoid this divine commission, which included the flight by sea and being swallowed by a whale, before finally accepting his fate. The story of Jonah and Nineveh is referred to in the NT in Matt 12:40–41 and Luke 11:30–32 The tradition has continued at the site of Nineveh to the present time, for on one of the two mounds, Nebi Yunus, there is a mosque dedicated to the prophet Jonah ("Nebi Yunus" in Arabic) and inside this structure there hangs the bone of a whale. With regard to the fall of Nineveh, the entire book of Nahum ("an oracle concerning Nineveh") gloats over this event, calling the Assyrian capital "the bloody city, all full of lies and booty." A brief description of Nineveh's fall is found in Zeph 2:13

A. Location and Excavation

The ancient site of Nineveh is still part of a major city, now called Mosul, which is the second largest city in the republic of Iraq. The site of Nineveh is on the east bank of the Tigris just a few kilometers downstream from the foothills of the Kurdish mountains. The modern city of Mosul has spread over onto the west bank of the Tigris. This region is an obvious location for a major settlement. The surrounding countryside was and still is a rich agricultural area. From the point of view of trade, Nineveh was on both the N-S trade route going up and down the Tigris and also straddled a major E-W route following along the S foothills of the Kurdish mountains. In its heyday the site of the city Nineveh covered an area with a circumference of approximately 7.75 miles (12.5 km). Within this circumference were two citadels or tells called respectively Kuyunjik and Nebi Yunus, with the river Hosr flowing between them. Only the Kuyunjik mound has been extensively explored since on the other mound, Nebi Yunus, is located the major shrine dedicated to the prophet Jonah (Yunus). Because of the sacred nature of the latter mound it has remained virtually untouched by modern archaeologists.

Although the location of the ancient city of Nineveh was never forgotten in native tradition, being preserved in medieval and modern Arabic sources, European explorers who were ignorant of this tradition remained confused about the location until the mid–19th century. In fact, even Sir Austin Henry Layard, one of the pioneer archaeologists in Assyria, was misled to think that the site of Nimrud farther

downstream was the location of ancient Nineveh and it was realized only later that it was actually the site of ancient Calah. Serious digging began at Nineveh in the mid–19th century by French and British explorers and excavation has continued at the site by various nationalities, including Iraqis. Unlike the archaeological work at Asshur and Calah, however, excavations at Nineveh have usually been very sporadic and unsystematic. Nevertheless in the late 19th century the libraries of Ashurbanipal, our most important source for the history and culture of Assyria, were discovered here and taken to the British Museum.

B. History

The history of the city Nineveh is an integral part of the history of Assyria. Nineveh was one of the four great cities of Assyria, the others being ASSHUR, CALAH, and ARBELA. The patron deity of Nineveh was Ishtar, goddess of love and war, who was also the patron deity of Arbela. The site of Nineveh was settled in prehistoric times but nothing is known of its history until the mid–3d millennium B.C. (ca. 2400 B.C.). At this time it was under the political control of the Old Akkadian kings in the south and there is a record that one of these kings, Manishtushu (ca. 2269–2255) rebuilt the temple of Ishtar. Nineveh does not appear prominently in the historical record again until the time of Shamshi-Adad I (ca. 1813–1781 B.C.), who also restored the temple of Ishtar and mentioned the work of his predecessor, Manishtushu. Apart from these periods when Nineveh was ruled by foreign powers it generally was an autonomous city-state with no political links to the other cities in the Assyrian heartland.

In the middle of the 2d millennium B.C. Nineveh came under the control of the kingdom of Mitanni but then was wrested from Mitanni by the rulers of the city-state of Asshur. This was the beginning of the creation of the country Assyria and from the reign of Assur-uballit I (1363–1328 B.C.) Nineveh, together with the other cities of the Assyrian heartland, was regarded as an intregal part of the land of Assyria. During the period of the Middle Assyrian Empire the great Assyrian kings built extensively at Nineveh, concentrating on the temple of Ishtar. The early kings of the Neo-Assyrian Empire continued this policy of building at Nineveh.

In the 7th century B.C. the city of Nineveh was transformed from being a major metropolis in Assyria to being the capital of the entire country and empire. This was the result of a decision by Sennacherib (704–681 B.C.) (cf. 1 Kings 19; Isaiah 37). See SENNACHERIB. In choosing Nineveh as his capital, Sennacherib launched a massive rebuilding program there. He built a magnificent palace and cut a professional way right through the center of the city from the palace to the bridge crossing the Tigris. His workers constructed an intricate system of aqueducts and canals to bring water into the city to irrigate an extensive garden which he created. The transformed city was surrounded by an enormous wall with several fortified gates, the remains of which are still standing. Thereafter Nineveh remained the capital of Assyria until the fall of the empire and the capture of the city itself in 612 B.C. by a coalition of Medes and Babylonians.

A. KIRK GRAYSON

NINLIL (DEITY). In Sumerian and subsequent Akkadian mythology, a goddess of grain and the wife of the god ENLIL. Her temple was called the Kiˀur, located in Nippur. Although she is the consort of the leading Sumerian god, Enlil, Ninlil does not appear widely in the mythological texts. The two major works in which she figures are *Enlil and Ninlil* (Cooper 1980) and *Enlil and Ninlil: The Marriage of Sud* (Civil 1983). In the former text, Ninlil's mother, Nunbarshegunu, prepares her for marriage with Enlil, but cautions her against meandering about alone. Ninlil disobeys, and Enlil, spotting her alone near a stream, ignores her pleas that she is not adequately prepared and rapes her. The gods brand Enlil a sex offender and banish him from Nippur. He opts to descend to the netherworld in exile.

Ninlil, now pregnant with his child, the moon god Nanna-Suˀen, attempts to follow Enlil. He, disguised as various netherworld functionaries, mates again with Ninlil, apparently wishing to produce chthonic offspring to take the place of Nanna Suˀen in the Underworld. Ninlil does bear three such sons. Jacobsen (1976: 104) suggests that this tale is part of the cult of dying and reviving gods associated with fertility and the agricultural seasons.

In the latter text, Enlil offends Sud and her mother by assuming Sud was a prostitute. However, he becomes infatuated with her and asks her to marry him, but she mocks him and refuses. Enlil sends his messenger to Nanibgal, her mother, and placates them both with many gifts. Nanibgal concedes and allows Enlil to marry Sud, at which point her name is changed to Ninlil.

WILLIAM J. FULCO

NINURTA (DEITY). A Sumero-Akkadian god of the south wind and agriculture, but also of hunting and, especially during the militaristic Assyrian regimes of the early 1st millennium B.C., of warfare (*EncRel* 10: 447–48). Early in the Sumerian period he was identified with Ningirsu, the tutelary god of Lagash at the Eninnu temple and the special patron of King Gudea. The myths concerning Ningirsu and those about Ninurta seem eventually to have become interchangeable.

Ninurta figures in a whole cycle of mythological texts, a corpus which has not yet been adequately studied. However, the myths consistently associate Ninurta with one or another aspect of water and its management: life-giving storms, floods, dams, irrigation. The still enigmatic myth of the bird god Zu or Anzu (*ANET*, 11–13, 514–17) deals with Ninurta and hydrology on a more cosmic level (see Jacobsen 1976:131–34).

Ninurta's mate is either Gula or Baba, the latter more originally Ningirsu's wife. Neither Gula nor Baba is prominent in the extant literature. Albright (*YGC*, 138) and others associated Ninurta with the West Semitic god Ḥoron.

WILLIAM J. FULCO

NIPPUR (32°08´N; 45°03´E). The mounds of Nippur, located in the desert about 150 kms SE of Baghdad, stand today to a height of 18 meters above the alluvial plain. From the time of its establishment as a village along the Euphrates in the 6th millennium B.C. to its abandonment in the 9th century A.D., the site was almost continuously occupied, providing an archaeological record spanning 7,000 years. The Sumerians considered Nippur one of their oldest and most sacred cities, and it was apparently one of the few Mesopotamian cities which had a special legal status involving certain tax-shelter privileges. It is also one of the few great cities of Mesopotamia which retained its ancient name in the memory of man for a thousand years after its abandonment.

As the home of the temple of Enlil, the chief god of the Sumerian pantheon, Nippur was a sacred city of ancient Mesopotamia for thousands of years, but it was never a political capital. Throughout much of its history, control of the city and the sanction of its chief god, Enlil, were necessary to legitimize a ruler's sovereignty over Mesopotamia. Nippur also served as a major scribal center. The approximately 50,000 cuneiform tablets excavated at the site constitute about 80 percent of the Sumerian literary texts known today; also found were administrative, legal, medical, and economic documents of major importance. The location of the city on the linguistic and ethnic frontier between Sumer and Akkad gives the contents of these texts increased significance.

From 1889–1990 Nippur was the focus of the first American excavation in the Near East, sponsored by the University of Pennsylvania. The excavators made rough plans of several major buildings, uncovered some important artifacts, and found many thousands of clay tablets. From 1948–52, three seasons of joint excavations were conducted by the University of Pennsylvania and the Oriental Institute of the University of Chicago at the Ekur (the Enlil Temple), and on Tablet Hill. From 1953–62, the American Schools of Oriental Research joined with the Chicago team for five seasons of work on the North Temple and the

Inanna Temple. Finally, the Oriental Institute conducted ten seasons of work at the site between 1964 and 1989, including excavation of the Parthian fortress at the Ekur, a temple and palace along with other structures on the West Mound, and outlying parts of the site to the SW and NE

Throughout much of its history, the walled city was an irregular rectangle measuring 1.0 by 1.6 km The city covered approximately 150 hectares and had about nine gates. Branches of the Euphrates River ran W of the city and through the center of the city during some periods. The three major mounds which make up the site are traditionally called Temple Hill, Tablet Hill, and the West Mound.

The Ekur, or temple precinct of Enlil, was sacred to this deity from at least the late 4th millennium to the mid–1st millennium B.C. The great ziggurat, or temple tower, was built by Ur-Nammu about 2000 B.C. The last major use of the area was as a Parthian fortification in the 1st century A.D. The Inanna Temple, nearby on Temple Hill, was sacred to this goddess from the 3d millennium to Parthian times. The North Temple was built in about 2300 B.C.

Excavations at Tablet Hill have encountered dwellings and administrative buildings. On the West Mound excavators have found dwellings, a temple dating to the 3d to 1st millennium B.C., a Kassite palace (ca. 1300 B.C.), and a Parthian villa. The Islamic settlement was principally on the West Mound.

Throughout its long occupation, the fortunes of the city of Nippur were often reflected by the size and quality of public construction by those in power in Mesopotamia. Strong rulers sponsored major building projects which coincided with times of prosperity. When the country was in a state of conflict or chaos, the economy of the city often suffered, the power of surrounding nomadic groups increased at the expense of urban dwellers, and major building projects ceased.

Although excavations at Nippur have not discovered the prehistoric settlement, the presence of thousands of sherds of the distinctive Hajji Mohammed phase of prehistoric Ubaid pottery attests to settlement by the mid–6th millennium B.C. Similarly, hundreds of ceramic cones of a type used as architectural decoration in Protoliterate temples found at the Enlil temple site attest to temple building here in the 4th millennium. Sumerian texts record a tradition at Nippur of the building of a temple to Enlil called the “Tummel.” It was built by Enmebaragesi, a king who is attested in fragmentary inscriptions dating to the ED II period.

With the rise to power of the Semitic Akkadian dynasty under Sargon I (late 3d millennium), the Enlil temple became the focus of major royal building activity, and this central shrine became a repository of objects dedicated by the king. The North Temple was built at this time, and an archive of the Akkadian governor of Nippur has been excavated on the West Mound.

It was not until the Sumerian revival marked by the rise of the Third Dynasty of Ur, however, that royal building projects made a major impact on the site which remains to the present day. Ur-Nammu, the first king of that dynasty, built a three-staged temple tower (ziggurat) for Enlil, as well as a series of courtyards and auxiliary temples which would be repaired and rebuilt on the same plan for the next 1,500 years. The Inanna Temple was also rebuilt during this dynasty, while the building or rebuilding of portions of the city wall set the boundaries for the city that would be maintained throughout the centuries.

With the shift of control of S Mesopotamia to the Amorite Old Babylonian dynasty with its capital at Babylon, building continued at Nippur under kings such as Hammurabi, but there was a shift of religious hegemony from Enlil of Nippur to the god Marduk of Babylon. Over the years, however, a cosmogony evolved in which some of the aspects of Enlil were combined with those of Marduk. Beginning about 1720 B.C. there is also evidence of a major economic crisis at Nippur, probably related to a lack of water, which may have resulted in a temporary abandonment of the city.

The 14th century B.C., when control of S Mesopotamia had passed to a dynasty of Kassite kings which originated outside the country, marked a time of major building and rebuilding of temples at Nippur, as well as the city wall. An unusually vivid record of the city at this time is preserved in a captioned plan drawn on a clay tablet. See Fig. NIP.01. Also attested at Nippur during the Kassite dynasty is a palace on the West Mound. This palace fell into ruin and was abandoned, along with most of the rest of the city, by the mid 13th century, perhaps as a result of an Elamite raid on the city about 1224 B.C. In the ensuing centuries, there is little archaeological or textual evidence for activity at Nippur except at the Ekur.

Occupation is attested again by the mid–8th century, however, by an archive of several hundred tablets which portray Nippur as a thriving town surrounded by Chaldaean and Aramaean tribes.

The last major restoration of the precinct of Enlil was in the late 7th century B.C., during the rule of Assurbanipal, king of the N Assyrian dynasty which controlled all of Mesopotamia along with much of the Near East. Assyria's strength at Nippur, which included troops stationed there, enabled it to hold out to the end in the struggle between Assyria and the Chaldean tribes for control of Babylonia, even though it suffered a devastating siege. Nippur supported Assyria until its final defeat by the Chaldeans in 612 B.C.

After the defeat of the Chaldean Babylonians by Cyrus in 539 B.C., Nippur continued to prosper under Achaemenid rule. An archive of tablets of the Murashû family (see MURASHU, ARCHIVE OF) reflects their financial power at Nippur, where they owned mortgages on much of the land. They rented out canals, cattle, and fisheries, and loaned money at high interest rates to local landowners so that they might pay their taxes.

The city continued to be occupied in the Seleucid period, and in the first centuries before and after the time of Christ it was the focus of massive building operations by the Parthians, who constructed an enormous fortress over and around the remains of the ziggurat and temple complex of Enlil. We know little about the character of occupation of the site during the rule of the Sassanian dynasty in the 3d to 7th centuries A.D., but the presence of potsherds attests occupation, and the Babylonian Talmud notes that important colonies of Jews lived at Nippur as well as at Babylon. A distinctive archaeological feature of this period are hundreds of incantation bowls, more than are known from any other site. While most are found today on the surface of the site, they have been found buried upside down beneath the floors in the corners of houses dating to the Sassanian period. The inner surface of each bowl is covered with an incantation in Syriac, Mandaic, or the "Jewish" dialect of Aramaic, written in a spiral from the center outward. Some of the incantations contain biblical quotations. There is often a crude drawing of a chained demon or spirit in the center of the bowl. These bowls were apparently designed to protect houses and their inhabitants from the demons and evil spirits which are named in the inscriptions.

After several hundred years of Islamic occupation, principally on the West Mound, Nippur's long history as an urban center came to an end. Throughout the 7,000 years in which Nippur was a major settlement, the Euphrates and its branches shifted gradually from the E to the W, and the structure of the city shifted as well. Through time, it became increasingly difficult to divert water to the area; it was abandoned, and eventually became desert.

JUDITH A. FRANKE

NISAN [Heb *nîsān* (נִיסָן)]. The first month of the Hebrew calendar, roughly corresponding to March–April. See CALENDARS (ANCIENT ISRAELITE AND EARLY JEWISH).

NISROCH (DEITY) [Heb *nisrōk* (נִסְרֹךְ)]. According to 2 Kgs 19:37 (Isa 37:38), the god in whose temple Sennacherib was assassinated. The identity of Nisroch is problematic, since Assyrian sources do not attest to any god with such a name. One possible candidate is the god Enlil, whose name was sometimes used as an epithet of the god Ashur, the chief god of Assyria. Another is Ninurta, the Assyrian god of war. But in both cases there are serious difficulties in reconciling the biblical form of the name with the forms preserved in Assyrian sources.

A. KIRK GRAYSON

NOADIAH (PERSON) [Heb *nôʿadyâ* (נוֹעַדְיָה)]. Var. MOETH. A personal name utilizing the verb *yʿd,* which as *Nipʿal* can mean "meet by appointment," "appear," or "gather," and the theophoric element *yh.* Translation possibilities include "Yahweh has revealed himself, has become manifest"—particularly through the birth of a child (*IPN*, 184), "Yahweh has met by appointment," "Yahweh has gathered together" (Myers 1987: 766). Brockington (*Ezra, Nehemiah and Esther* Century Bible, 104) suggests "Yahweh has kept his appointment," envisioning a connection with *mõʿēd* ("appointed meeting") in the designation of the tabernacle as "tent of meeting." Some, such as Odelain and Séguineau (1981: 284), BDB (418), and White (*HDB*, 555), render it "encounter, meeting with Yah." This name is born by two individuals in the Hebrew Bible.

1. The son of Binnui and one of two Levites who were "with them," i.e., Meremoth and Eleazar, when Ezra and those with him brought into "the house of our God" the silver, gold, and vessels and weighed them into Meremoth's hands (Ezra 8:33). Gunneweg (*Esra* KAT, 157) believes these personal names are secondary additions to a tradition in which the personalities were all anonymous. In the 1 Esdr 8:62—Eng 8:63 account of this event, the second of the two Levites is *Mōeth Sabannou,* which Bewer (1922: 78) believes is a corruption of *Nōadeia Banaiou.*

2. The prophetess (MT *hannĕbîʾāh*) or prophet (LXX *tę̄ prophētę̄*) who, along with other unnamed prophets (MT hannĕbîʾîm; Codex Alexandrinus *tōn prophētōn*) or priests (Codices Vaticanus and Sinaiticus *hiereōn*) contributed to "making me (i.e., Nehemiah) afraid" (Neh 6:14). Elsewhere this charge is levied against (v 13) the one spoken of in v 12 who "spoke the prophecy against me." Where this speaker is understood to be Shemaiah (v 10) some (Brockington *Ezra, Nehemiah, and Esther* Century Bible, 156; Williamson *Ezra, Nehemiah* WBC, 260) find it strange that rather than Shemaiah, elsewhere unknown Noadiah (Codex Alexandrinus *Nōadia;* Codices Vaticanus and Sinaiticus *Noadia*) is mentioned in this imprecation in which God is called upon to "remember" (Heb *zakrāh* + *lĕ*) the threateners. Clines (*Ezra, Nehemiah, Esther* NCBC, 176) even wonders if Noadiah was Shemaiah's wife! Drawing upon the Lucianic recension of the LXX, which reads "warned" (Gk *enouthetoun*, reflecting Heb *mbynym*) instead of "fearing" (LXX *phoberizontes* = MT *myrʾym*) and thus changes the imprecation of v 14a to a supplication in v 14b, Batten (*Ezra and Nehemiah* ICC, 258) suggests that Noadiah was working for Nehemiah. However, the miniscule manuscripts representing this Lucianic recension omit the personal name Noadiah and read instead *ge tę̄ ǫ̣dę̄/hodę̄ tę̄ prophētidi*, "the song/way the prophetess." Ehrlich (1914: 198–99) argues that the one being spoken of in vv 10–12 is not Shemaiah, who is only referred to as the owner of the house mentioned in v 10 He believes Noadiah, possibly in a position of high authority, functions as the false prophet (not prophetess!) who speaks the words in v 10 (he believes the verb form *nwʿd* is a corruption of *nwʿdyh*) and is referred to in v 12

RODNEY H. SHEARER

NOAH (PERSON) [Heb *nōaḥ* (נֹחַ), *nōʿâ* (נֹעָה)]. **1.** The son of Lamech who, along with his family, survived the Flood (Gen 5:28–9:29; Heb *nōaḥ*). See NOAH AND THE ARK.

2. One of the five daughters of Zelophehad son of Hepher of the tribe of Manasseh (Num 26:33; 27:1–11; 36:1–12; Josh 17:3–6; Heb *nōʿâ;*.cf. 1 Chr 7:15). Noah and her sisters petitioned to receive legal status as heirs because their father had no sons (Num 27:1–4). Their request was granted provided that they marry within their father's tribe (Num 27:5–7; 36:1–9). Noah and her sisters followed the divine ruling on their case and married cousins on their father's side (Num 36:12). Hence their inheritance remained in their father's tribe. Scholarly interest in the daughters of Zelophehad has focused on

questions related to the prehistory of the story of the daughters (e.g., the relationship of the daughters to places—here the mention of the name Noah as a district in the Samaria Ostracon 50 is relevant [Lemaire 1972]); its sources, development, form, purpose, and historicity; its significance for the study of Israelite case law (Weingreen 1966); the relationship of Manasseh and its subclans of traditions about settlement to the east and west of the Jordan (Snaith 1966); the rights of women (Sakenfeld 1982); and more recently its positioning in terms of the literary and theological shaping of the book of Numbers (Olson 1985).

5. Pseudepigrapha

A. Introduction

In the genealogical reckoning of Gen 5:28–29, Noah is introduced as a son of the 182-year-old Lamech. Noah stands at the end of the era that is now to be destroyed, the era that has lasted more than 1,500 years since the beginning of the world when the first human couple was created.

According to the genealogies of Genesis 4 and 5, there have been 7–10, depending on how we count them, generations starting with that of Adam and Eve up to Noah's generation. However, the narrative tradition hurries through the same 1,656 years in just three generations, beginning with that of Adam and Eve, followed by that of Cain and Abel, and now of Noah and his family. Then the Flood sweeps over—only Noah's family is saved, because "Noah was a righteous man; he was blameless in his time; with God Noah walked" (Gen 6:9). Thus, Noah is the one who is saved, guarded by the covenant of the rainbow, and in turn is destined to save humanity. He is the father of the new era; he is the father of Shem, Ham, and Japheth, whose offspring are going to repopulate the entire world after the Flood (Gen 10:1–32). Noah is an epoch divider figure as well as a bridge between the quasi-mythological history and a more humanly accountable history.

In these early chapters of Genesis a complex image of Noah emerges. The later chapters and books variously refer to Noah specifically by name or obliquely by alluding to many aspects of Noah and the Flood Story. In the following sections the major significance of Noah and his ancient counterparts and some of the more obvious references and allusions to him are examined.

1. Name. No firm etymology for the name Noah (Heb *Nōaḥ,* Gk *Nōe*) has been established, but it is generally derived from the verb root *nwḥ,* to rest, settle down, repose, etc.; thus "Noah" may mean "to rest." Whatever "Noah," spelled consonantally as *nḥ,* may have meant originally, the genealogy (Gen

5:29) gives us a folk etymology that Noah *(nḥ)* is to bring us comfort (*nḥm,* Pi‘el, to comfort, console: *Nip‘al,* to be sorry, console oneself); thus *nḥ* is associated aurally to *nḥm,* making Noah the bringer of comfort *(nḥm)* from labor (derived from *‘śh*) and toil (derived from *‘ṣb*).

It is not fortuitous that when the Flood Story introduces Noah, these very same roots, *nḥm, ‘śh,* and *‘ṣb,* are repeated in the same order: “And the Lord was sorry [*nḥm*] that he had made [*‘śh*] man on the earth and it grieved [*‘ṣb*] him to his heart”—(Gen 6:6).

The wordplay involving *nḥm* continues; “And the Lord said, ‘I will blot out [*mḥh*] man whom I have created’ ” (Gen 6:7). Here the two key consonants *ḥ* and *m* are reversed. The wordplay still goes on as “Noah [*nḥ*] found favor [*ḥn*] in the eyes of the Lord” (Gen 6:8); note here the two consonants of the name are also reversed. Furthermore, Noah begets a son named Ham (*ḥm,* Gen 6:10), relating assonantally to *nḥm,* “comfort,” but substantially to *ḥms,* “violence”; “and the earth was corrupt in the eyes of God and the earth was filled with violence [*ḥms*]” (Gen 6:11). “Noah” *(nḥ)* and “violence” *(ḥms)* are picked up again in Gen 6:13 and the wordplay extends to the word *mḥwṣ,* “outside,” in Gen 6:14, as Noah is to “pitch it (the ark) with pitch inside and outside [*mḥwṣ*].”

Moreover, observe that Ham is introduced soon after the initial episode of the story, namely, the sexual involvement of the sons of gods with the daughters of men (Gen 6:1–4), and then he finds himself in a sexual offense against Noah at the final episode of the story (Gen 9:18–29). These two episodes of sexual intrigue frame the story, and Ham is closely associated with both of them.

The notion of *mḥh,* “blotting out,” as a result of the Lord’s “regret” *(nḥm)* terminates in the central episode of the devastating flood destruction (Gen 7:17–24), where that verb is used both actively and passively: “and he blotted out [*ymḥ*] every living thing that was upon the face of the ground … and they were blotted out [*ymḥw*] from the earth” (Gen 7:23). The idea of the name Noah, “rest,” is fittingly echoed where the ark securely rests *(tnḥ)* after 150 days of water ordeal, yet the dove *(ywnh)* could not find the place to rest *(mnwḥ)* its foot (Gen 8:9).

Many words that are loosely associated with the name Noah are used in a cluster at the beginning of the story. These same words are then distributed in strategic positions throughout the story, helping to unify the story and to make it unmistakably Noah’s Flood Story.

2. Flood Heroes in Other Ancient Literature. a. Mesopotamian. Noah as the Flood hero has many counterparts in ancient literature. To begin with, the Sumerian and Akkadian genealogical material as well as the epic tradition preserved various names of the righteous Flood hero, who stands exactly at the same relative position in world history as Noah, that is, at the end of the mythological, primeval historical era, ushering in a new, more concretely historical era. The Flood, thus, serves as an epoch divider. The main difference between Noah and his Mesopotamian counterparts is that Noah dies, while the other Flood heroes seem to gain immortality (Cohen 1974). See FLOOD.

(1) The Sumerian Deluge Story. The Sumerian counterpart of Noah is Ziusudra (meaning “life of prolonged day(s)”), the son of Ubartutu of Shuruppak. He is the Flood hero and epoch divider who becomes immortal. This is known from both the genealogical tradition found in the Sumerian king list (Jacobsen 1939) and from the narrative tradition as preserved in the Sumerian Deluge Story (*ANET,* 42–44; Civil 1969).

The 6-column text of the Sumerian Deluge Story is badly broken; the major portion of each column is gone. Only about one fourth (approximately 70 out of 300 lines) of the story remains, and even that is preserved imperfectly. But the text includes more than the Flood Story. In column 1, there appears to be one or two episodes of earlier destructions of humankind long before the Flood. The text also recalls the creation by Anu, Enlil, Enki, and Ninhursag of the black-headed people, i.e., the Mesopotamians. The kingship and civilization are established, and the name of five antediluvian cities, which we know from the Sumerian King List and to which different gods are assigned, are listed in column 2. The pious king Ziusudra is praying in column 3 and the impending flood is announced in column 4. The Flood rages, Ziusudra is saved, and he offers a sacrifice in column 5. The earth is repopulated and Ziusudra becomes immortal and lives in Dilmun in column 6. The rest of the tablet is broken off.

(2) Gilgamesh XI The best preserved Mesopotamian Flood narrative, however, is found in Tablet 11 of the Akkadian Gilgamesh epic. It provides so far the clearest parallel to Noah's flood story. The creator and magician god Enki/Ea cleverly communicates to Utnapishtim (for the meaning of the name, see below), whose nickname is Atrahasis (meaning "exceedingly wise"), about the impending disaster and instructs him to build a cubical ship with six stories and nine sections and to save himself and his family. The Flood rages for seven days; everyone dies except the Utnapishtim family, the seed of all living creatures, and all the craftsmen. The ship rests on the top of the Mount Nasir, a bird is let out to check the water level, and Utnapishtim offers a sacrifice over which the hungry gods gather like flies. Utnapishtim is granted immortality by the gods. According to Anne D. Kilmer (1987b) we perhaps can even recover a rainbow covenant motif from the enigmatic passage describing Ishtar's colorful necklace of lapis lazuli and her promise:

Then she [Nintu] approached the big flies
Which Anu had made and was carrying …
Let these flies be the lapis around my neck
That I may remember it [every (?)] day [and forever (?)]

(Atrahasis, 3.5.46–6.4)

The parallel passage in Gilgamesh is:

When at last the Great Goddess arrived,
She lifted up the great flies [jewels] which Anu had made light-heartedly[?]
"These gods—verily [by] the lapis round my neck and I shall not forget
These days—surely I will remember forever and not forget."

(Gilgamesh XI 162–169)

Enki then chastises Enlil for sending the most destructive flood instead of a less severe disaster, such as a lion or a famine, to "diminish mankind." In response Enlil makes Utnapishtim immortal.

The Flood hero himself, reluctantly at first, narrates this Flood Story to Gilgamesh, who is questing immortality and thinks that he too may obtain it by consulting Utnapishtim. Thus the rest of the Gilgamesh Epic offers no contextual parallel to Genesis, except for some isolated verbal and motif similarities.

(3) The Atrahasis Epic. However, the Atrahasis Epic, though the Flood portion of the text (Tablet III) is quite damaged, presents a narrative account of the Mesopotamian primeval history that parallels Genesis 1–11 inclusively. The Flood Story in Atrahasis (approximately 405 lines) is more than twice the size of the Gilgamesh flood story (approximately 190 lines). Although they seem to tell the same story (cf. Utnapishtim is identified as Atrahasis, "Exceedingly Wise," in Gilgamesh XI.187), the function of the Flood in these two epics is quite different; in Atrahasis it is a population control measure and an epoch divider, whereas in Gilgamesh it explains how immortality was once granted to a mortal. A synoptic outline of the Atrahasis Epic and Genesis 1–11 is as follows:

Atrahasis	Genesis 1–11
A. Creation of Mankind	
(Tablet I.1–248)	(Gen 1:1–2:25)
Summary of Work of Gods	Summary of Work of God
Creation of Mankind	Creation of Mankind
B. People's Numerical Increase	
(I.249–415)	(2:4–3:24)
Attempt to Decrease Numbers	Adam and Eve
Threat of Death by Plague	Near Death
C. Second Attempt to Decrease	
Double Story (II i.1–vi.55)	(4:1–5:32)
1. Threat of Death: Drought	1. Cain and Abel
2. Severer Means	2. Lamech's Taunt

D. Final Solution	
(II vii–II vi.40)	(6:1–9:29)
Atrahasis's Flood	Noah's Flood
Salvation in Boat	Salvation in *Tēbâ*—Ark
E. Resolution	
(III vi.41–viii.18)	(10:1–11:32)
Compromise between Enlil and Enki	Dispersion—Abram Leaves Ur
"Birth Control"	Exodus Motif

The Atrahasis Epic begins with the creation of humankind because the labor-class gods are fed up with the heavy tasks imposed on them by the management-class gods, and they make much "noise," especially against the chief god, Enlil. As a result, the mother goddess Mami and magician god Enki create procreating people as a substitute for the laboring gods. The people multiplied so much in 1,200 years that they made a great "noise," to the annoyance of Enlil. Enlil tries to exterminate them first by a famine, then 1,200 years later by a drought, and finally, yet another 1,200 years later, by the flood. Three times Enlil's plans are foiled by Enki and his faithful worshipper Atrahasis. Now the thrice failing and furious Enlil convenes a divine assembly where a post-Flood compromise is reached among gods to limit the expanding population. At least three such population control measures (Kilmer 1972) are suggested, presumably by Enki and Mami:

> Moreover, a third category let there be among people;
> Let there be among people bearing women and barren women!
> Let there be among people the *pāšittu-demon;*
> Let him snatch the baby
> from the lap of the woman who bore it!
> Place *Ugbabtu*-priestess, *Entu*-priestess,
> and *Igiṣītu*-priestess;
> Let them be taboo and
> Thus cut off child-bearing!

(Atrahasis III vi.52?–vii.9)

Note Genesis 1–11 topically parallels the Atrahasis Epic but reaches exactly an opposite conclusion. Whereas the Atrahasis Epic suggests "birth control" as means to curb human population, Genesis offers "dispersion" as means to accommodate the expanding population in response to the initial blessing of Gen 1:28, "Be fruitful and multiply and fill the earth." Out of the dispersion of Gen 11:1–9, who but Adam, the first Hebrew, emerges.

Atrahasis may have received immortality in the end. We cannot be sure because of the broken text, but his longevity, known from the unbroken part of the epic and spanning over three generations of 1,200 years each, is extraordinary. This gave rise to the following speculation.

(4) The Enki and Ninmah Story. The longevity of Atrahasis has led to the thought that Atrahasis may be the first man, or at least the first baby. This speculation is based on a Sumerian story called "Enki and Ninmah" (Benito 1969), which deals with the creation of people in two stages (Kikawada 1983). Note in the following story of Enki and Ninmah, the same topics and motifs as in Genesis 1–2 and Atrahasis I.1–351 are found, i.e. in the first stage humanity is invented for the purpose of work, to have dominion over the other living beings (Gen 1:26), and to bear the toil of the gods (Atrahasis I.191), and in the second stage specific persons, Adam and Eve (Gen 2:7, 22) and seven pairs of people (Atrahasis K 3399+3934, Obverse iii 9–13), are created and destined to be self-propagating by establishing marriage (Gen 2:24, Atrahasis I.300–1).

The Enki and Ninmah story begins after the goddess Nammu gives birth to gods who work in different regions of the world. When the work becomes too severe for the worker gods, they complain to the manager gods. The creator god Enki first tries to ignore the complaint by sleeping, but mother Nammu persuades Enki to create "substitutes," namely humanity, for worker gods. Nammu decrees the fate of the

new creature; goddess Ninmah imposes work on humankind. Gods become very happy; and have a big feast where Enki and Ninmah get drunk. That is the first stage of creation.

In the second stage, Ninmah proposes a people-making contest to Enki, one to create and the other to decree fate. Ninmah begins and she creates from clay six (could be seven, see Lambert and Millard 1969) creatures with some physical weaknesses. Enki decrees fates for them:

Ninmah's Creature	Enki's Decree
1. One with weak arm	Court officer
2. One with blinking eyes	Singer
3. One with weak feet	?
4. One with uncontrollable semen emission	Made safe
5. One barren	Appointed to harem
6. One sexless person	court officer

All these creatures of Ninmah are appointed to appropriate stations in the society—hence they gain independence and livelihood. The apex of the second stage is the creation of the procreating woman and her first baby, Umul, who was miraculously sired by Enki, the magician god himself. An irony of this story seems to lie in the fact that Ninmah the mother goddess does not recognize a baby:

> She [Ninmah] approached Umul and asked him questions
> [but] he did not know how to speak,
> She offered him bread for his nourishment
> [but] he did not reach out for it,
> On the … [his] heart could not rest,
> he could not sleep,
> Standing up he could not sit down,
> could not lie down,
> a house he could not build[?]
> food he could not eat,
> Ninmah said with a stammer to Enki,
> "The man you have fashioned is neither alive nor dead, he cannot carry anything."

(Enki and Ninmah 96–101)

Then Enki advises her to hold him on her lap and assures her that Umul, having Enki's "form," will be a pious man. By the bringing forth of the first baby the model for human procreation is established by Enki, who instructs Ninmah, saying, "pouring the semen of an erected phallus in a woman's womb, that woman will conceive in her womb."

If the Enki and Ninmah story and the Sumerian deluge story are viewed in succession, they together seem to offer a tantalizing parallel to the whole of the Atrahasis Epic (Kilmer 1976). For this reason, Atrahasis is suspected of being the first baby. The other link between Atrahasis and the first baby lies in the meaning of the names. The first Sumerian baby's name, given at birth, is Umul, "my day [of death] is far"—suspiciously a longevity name! Note that Atrahasis' other name is Utnapishtim, reading here as *ūta-napištim,* "I have found life"—a longevity name given at the "end" of life when he is made immortal (Gilgamesh XI.193–95). Perhaps it is even better to read his full name, Utnapishtim the Distant, as *um-napištim-rūqi,* meaning "day of my life is long," which would give us a still closer parallel to the Sumerian hero. Note that the name of the hero in the Sumerian deluge is Ziusudra, which means "life of prolonged day(s)"—a longevity name as well. Mesopotamian Noahs all have longevity names. In sharp contrast (Cohen 1974) to these names, Noah *(nḥ)* may signify eternal "Rest" or "Repose" in Sheol (cf. Isa 57:2 and Job 3:17).

b. Indo-European. (1) Iranian. The *Avesta,* in *Vendidad* Book 2 of the Iranian tradition, preserves a Zoroastrian counterpart to Noah, called Yima/Yama, the first man and first king (Christensen 1943), entrusted with government as well as religion. Yima helps expand the overburdened earth in three stages

to accommodate the increasing population. He lives through 1,200 years until he is directed by Ahuramazda to prepare for an impending flood resulting from the melting snow. Ahuramazda gives Yima detailed instructions on how to make an enclosure in the mountain to save himself and "the seed of small and large cattle and the mortals and dogs and birds and the red burning fire" (*Vendidad* 2.25). The end of the story takes on an eschatological tone and it appears as though Yima is still in the enclosure even at the present time. From this story, too, we can recover the overall outline of the primeval history. Yima, like Noah, stands at the demarcation point between the primeval era and the new age to come.

(2) Indian. From India we can observe the Flood hero in both the genealogical and narrative traditions. He is either the seventh (or fourteenth) Manu, the last sage of the primeval era. In genealogical material Manu Vaivasvata stands at the end of the primeval epoch that is terminated by the Flood. The succeeding epoch has a different form of social structure which is reflected in a different type of genealogy (Thapar 1976). The antediluvian genealogy is a linear type wherein only one leader in a given period is accounted for, as in Genesis 4 and 5 After the Flood, the style of genealogy changes to the branched type wherein all the contemporary leaders and their relatives are recorded, i.e., to describe a family tree as in Genesis 10 The same Manu, in a narrative tradition, is saved from the Flood by a giant horned fish, which he found when it was little and helped by giving it successively bigger containers in which to grow. Thus, Manu Vaivasvata, like Noah, is the hero of the epoch-dividing Flood.

(3) Classical. Another Indo-European flood tradition is found in Greco-Roman literature, featuring righteous Deucalion and his pious wife Pyrrha, the best example of which is preserved in Ovid's *Metamorphoses.* This Flood Story is placed in the same relative position in the early history of humankind as in the Mesopotamian tradition and Genesis.

The *Metamorphoses.*begins with creation, followed by deterioration of the world in four stages from the Golden Age of the righteous to the Iron Age of evil. Jove then intends to get rid of the evil; he tries this in three stages. First, the household of evil, Lycaon, is blasted by a thunderbolt. Next, Jove wants to do the same thing to the whole earth but he is dissuaded because of the fear that heaven would be burnt up as well. In the third and final stage Jove sends the Flood from which the righteous couple, Deucalion and Pyrrha, are saved; after the Flood the earth is repopulated for the new epoch.

A scholiastic commentary on Homer's *Iliad.*(*Il.* 1.5, on *Dios boulēn*) preserves a progression of topics similar to that found in *Metamorphoses.* The commentary also alludes to and summarizes the lost composition by Stasinos, entitled *Cypria,* whose emphasis is on the unburdening of the overpopulated earth in three stages. The motif of overpopulation brings this tradition close to the Mesopotamian and the biblical traditions.

B. Noah in Judeo-Christian Tradition

Both in the Old and New Testaments as well as in the intertestamental literature there are references to Noah. The following are some obvious examples and some speculative specimens.

1. Hebrew Bible. a. Exodus 1–2, 15 Moses is an obvious Noah figure, perhaps even a double Noah figure, in the book of Exodus, although Abraham emerges as an even earlier reflection of the Noah figure in the Sodom and Gomorrah story (cf. 2 Peter 2:5–6 section of this article).

The Hebrew people, now located in Egypt, must go through the threefold trial and tribulation of Pharaoh's effort to diminish their number; note the very close parallel to the outline of the Atrahasis Epic as well as that of Genesis 1–11 First, taskmasters are set up to impose hard work on the Israelites, but the harder they oppress the Israelites, the more the Israelites "multiply" (Exod 1:12, cf. 1:7 where "Be fruitful and multiply and fill the earth" of Gen 1:28 is already echoed and amplified). Then, Pharaoh orders that the infant sons are to be killed by the two midwives Shiprah and Puah. When this plan too fails, the third trial is commanded by Pharaoh, "Every son that is born to the Hebrews you shall cast into the Nile!" (Exod 1:22). This is the Flood in miniature: Moses is saved in the ark *(tēbâ),* the Hebrew word used exclusively for Noah's ark.

The connection is underscored by the language (cf. Exod 2:3 and Gen 6:14), for this is the only time the word *tēbâ* is used outside of Genesis 6–9 The way in which the ark is built is the same in both instances: the one for whom the ark is made, the material of which it is built, and the number of times it is to be

"pitched with pitch" are all designated in the same order. Out of this water ordeal there emerges an adult Moses, a hero for the new age, another Noah.

Moses along with the children of Israel, however, goes through another epoch-dividing Flood as depicted in Exodus 15 Here the war imagery of the Lord as a Man of War dominates, but the Flood as the means of salvation for Israel and that of epoch divider is also present. While the pharaoh's army is drowned in the upsurging waters, Moses and Israel emerge as a new entity to be feared among the neighbors such as Philistia, Edom, Moab, and Canaan. A new era for Israel thus begins. Note the change in the form of genealogical reckoning (cf. Thapar 1976) as well. After Noah's Flood up to this point the genealogy has been of the branched type accounting for the lines of brothers and sisters, but now it reverts to the linear type of reckoning, accounting again only for the main line of leadership.

The war image associated with the Noachian Flood is recoverable from the rainbow. Remembering that the biblical Hebrew does not have a special word for "rainbow," what we have in Gen 9:12, 14, 16 is the expression "a bow [the weapon] in the cloud," suggesting, perhaps, that the Lord is declaring a truce after a war by resting his bow in the cloud.

In the following section only a few prophetic reflections of Noah material are brought out, although there may be many other allusions that are hidden in unsuspected places.

b. Isaiah 54 The important verses here are 9 and 10, which read:

For this is like the days of Noah to me,
As I swore that the waters of Noah
Should no more over the earth,
So I have sworn
that I will not be angry with you
and will not rebuke you.
For the mountain may depart
and the hills be removed,
but my steadfast love
shall not depart from you,
and my covenant of peace
shall not be removed,
says the Lord,
who has compassion on you.

Along with Noah the Flood and covenant are recalled by Isaiah for the people who are afflicted and not comforted (*nḥm,* Isa 54:11), reminding them of the everlasting kindness and great compassion of God (*rḥmh,* Isa 57:7, 8). Isaiah plays on the folk etymology of the name Noah, i.e., *nḥm* of Gen 5:29, and adds *rḥmh,* "compassion," to the continuing wordplay.

Isaiah renames the covenant, changing it from the "everlasting covenant" (Gen 9:16), to the "covenant of peace" in Isa 54:10 This may be seen as a commentary on the rainbow. It is based on a further play on the name Noah *(nḥ),* especially in reference to Isa 54:15–17 in which the Lord has caused the smith to blow *(npḥ)* the fire of coals *(pḥm)* to create weapons. But these weapons will not be used against God's people. Realizing that Hebrew has no special word for rainbow, we understand that the Lord hangs the bow on the cloud, as a sign of the covenant and as a gesture of peace after a battle.

c. Jeremiah 31 In the context of the everlasting covenant, Jeremiah 31 may be appreciated in a new light. While Jeremiah's new covenant (Jer 41:31–34) is explicitly based on the Mosaic covenant, the Noachian covenant may be implicitly referred to in the passage immediately following (Jer 31:35, 36). In it Jeremiah recalls both the creation of sun and moon and the perpetuity of seasons as promised by the rainbow covenant:

Thus says the Lord,
who gives the sun for light by day,
and who the fixed order of the moon,
and the stars for light by night,

who stirs up the sea and its waves roar—
the Lord of hosts is his name,
"If this fixed order departs from before me,
then shall the descendants of Israel
cease from being a nation
from before me all the days."

Note that both Isaiah's reinstatement of the Noachian covenant of perpetual compassion and Jeremiah's updating of the Mosaic covenant of the Law are described in the cosmic setting of mountains and hills (Isa 54:10) and heaven and earth (Jer 31:37). Both prophets seem to invoke the primeval history, the earliest part of cosmic and human history, for the establishment of a new covenant. Perhaps they are recalling the very beginning of the world when and only when the entire creation is described as "good" and "very good," insisting upon making the new covenant firmly based on the primeval goodness of the creation (Cf. Hesse and Kikawada 1984).

d. Ezekiel. The Lord's speech to the Son of Man (Ezek 14:12–20) demands righteousness for salvation, recognizing no act of supererogation. Noah, Daniel, and Job are singled out as exemplary men of righteousness in sinful ages. Ezekiel sees the three men as having survived extraordinary ordeals by their own righteousness.

Noah, as the hero of the epoch-dividing Flood, may be hidden at the end of Ezekiel's first vision (Ezek 1:1–18). The vision moves from "I saw and behold …" (Ezek 1:4) and "I saw … and behold …" (Ezek 1:15) to the audition, "I heard …" (Ezek 1:24). Ezekiel hears seven voices *(qwl).* One of the seven voices is that of many waters (Ezek 1:14), perhaps of the Flood. The six voices are clustered in two verses (Ezek 1:24, 25). As the seventh voice is about to be heard, Ezekiel makes a flashing allusion to Noah's Flood by "the bow in the cloud on the day of rain" (Ezek 1:28). The seventh voice, climactically introduced, is none other than the voice of the Lord; and it is heard throughout the rest of the book.

Here, Ezekiel is apparently invoking primeval authority for contemporary speech, as did the poet of Psalm 29 In the Psalm we find the lone reference to the Flood, *mabbûl* (Ps 29:10), outside of the Noah story (Genesis 6–9).

e. Jonah. Within the ironic reversal of the whole narrative structure of primeval history, we find Jonah as another Noah in the episode of the tempest and the great fish. The overall topical outline of the book of Jonah that chiastically parallel Genesis 1–11 (Hesse and Kikawada 1984) is given in the table below.

	Jonah			Genesis	
A.	Fleeing to Tarshish		A.	Dispersion	
	Not going to Mesopotamia despite God's will	1:1–3		Coming out of Mesopotamia according to God's will	
	Nineveh	1:2		Babel/Shin‹ar	11:1–32
	Hebrew	1:9		Abram, the Hebrew	14:13
B.	Flood, *nāhār*	1:4–15	B.	Flood *mabbûl*	6–9
	Ship of tribulation	1:5		Ship of salvation	
	Jonah = Dove			Dove	8:10–12
	Fish, vessel of salvation	2:1		(Cf. Manu and Fish, Indian myth)	
	Waves passed over Jonah	2:4		Wind passed over earth	8:1
	Tĕhôm surrounds	2:6		*Tĕhôm* bursts forth	7:11
	Bottoms of the mountains	2:7		Tops of the mountains	8:5
	Jonah remembered the Lord	2:8		God remembered Noah	8:1
	In 40 days …	3:4		End of 40 days …	8:6
C.	Jonah's anger and		C.	Cain's anger and	
	Tôb in causative stem	4:4		*Tôb* in causative stem	4:7, 9
	Driven out before God	2:5		Driven out of God's face	4:14
	Hebel = Abel	2:9		Abel = *hebel*	4:2
	Jonah wants to die	4:4		Cain wants to live	4:13–14
	Jonah *yšb* east of city	4:5		Cain *yšb* east of Eden	4:16
D.	Gourd and Worm	4:6–7	D.	Tree and Snake	2:5–3:24
	Protection from evil	4:6		Cause for evil	3:22

	Glad because of gourd	4:6		Tree is delightful	3:6
	Worm causes gourd to wither	4:7		Snake entices to eat of tree	3:4–5
	Gourd taken away = test	4:7		Tree given = test	2:17
	Jonah wants to die because of gourd	4:9		Eat of tree and surely die	2:17
E.	God who care for both		E.	God the Creator of	
	Men and beasts	4:11		Beasts and men	1:1–2:3
	Seven narrative days			seven days of creation	
	Cf. "God of heaven, who made the sea and the dry land"	1:9			

Jonah is not only Noah (Jonah 1:4–3:4) but also he is Adam (Jonah 4:6–9), and Abel (Jonah 2:5–4:5). Moreover, we may even visualize Moses when Exod 34:6–7 is restated in Jonah 4:9, "… for I know that thou art a gracious God and merciful, slow to anger, and abounding in steadfast love, and repentest of evil," or recall Abram when Gen 14:13, 19–22 is echoed in Jonah 1:9, "I am a Hebrew, and I fear the Lord, the God of heaven who made the sea and the dry land," as an answer to his shipmates.

2. Apocrypha. In the Apocrypha of the OT, references to Noah appear in such books as Tobit, Sirah, and the Wisdom of Solomon. In these books Noah takes a minor part in the list of people who are to be commended.

Tobit's advice to his son Tobias (Tob 4:3–21) includes an admonition to marry his own kind as did Noah, Abraham, Isaac, and Jacob (Tob 4:12). Neither the Flood nor the covenant is recalled.

In Sir 44:17–18, Noah appears in the long list of praises to the fathers of old, a list that begins with Enoch and ends with Moses. Noah is regarded as a substitute/continuator in the new age and in the remnant left from the Flood which ended because of the covenant.

Wis 4:10 refers to Noah without using his name, for the main interest of the passage lies in the enumeration of the accomplishments of Wisdom. Adam, Abel, Noah, Abraham, et al. are all alluded to without names. Wisdom saves the earth by "guiding the righteous man's course by a poor piece of wood."

3. *Genesis Apocryphon.* Column II of the *Genesis Apocryphon* preserves fragments of an episode recounting Noah's extraordinary birth. Noah is so extraordinary that his father, Lamech, is frightened and doubts the paternity of the child, suspecting one of the Watchers, the holy ones, or the fallen angels (for an Assyriological view on the Nephilim, cf. Kilmer 1987a). Lamech first goes to his wife, *bt›nws,* who assures him that the child is his, reminding him of her pleasure when the child was conceived. Still discontent, Lamech goes to his father, Methuselah, who in turn proceeds to Enoch, his own father, for explanation. Here the text breaks, but what happens next may be supplied from the pseudepigraphic fragment of the book of Noah (= *1 Enoch* 106, see above).

4. New Testament. a. Matthew 24:38 and 1:1–3:17 Matthew uses the Flood as an illustration for the eschatological coming of the Son of Man, who will come stealthily without the knowledge of incorrigible sinners. The Flood is seen here as the epoch divider and the Son of Man event will be analogous to it; the Son of Man is another Noah.

For Matthew, Jesus like Moses is another Noah from the outset (Kikawada 1974). In fact, the outline and themes of Genesis 1–11 and Exodus 1–2 as well as the ancient parallel to them can be seen in the first three chapters of Matthew's gospel. See Fig. NOA.01 All four are relating the primeval history. Atrahasis and Genesis 1–11 are on a macrocosmic scale whereas Exodus 1–2 and Matthew 1–3 are on a microcosmic scale. All four symbolically tell their stories from the very beginning of the world through the epoch-dividing event, and then introduce the new era. In all the biblical examples the dispersion or Exodus motif emerges as a means of salvation in contrast to the Mesopotamian method of salvation, i.e., birth control. The motifs of mass killing of undesirable population and of the "Flood" as an epoch divider are present in all.

Jesus the Savior comes out of the water of salvation. Thereupon, he is met by the dove, linking him to the Flood tradition and making him another Noah.

b. 1 Peter 3:20 In a very enigmatic passage of 1 Peter 3:13–22 in which Peter may be claiming that Christ has preached the gospel to the dead (cf. 1 Pet 4:6), especially to the dead of the time of Noah, the Flood is made analogous to baptism as a means of salvation through water. Quite independently of this

passage, however, the baptism of Jesus in Matthew's gospel can be construed as a miniature Flood bearing the significance of an epoch divider within a miniature primeval history in Matthew 1–3

c. 2 Peter 2:5–6 Peter makes a reference to two Genesis figures, Noah and Lot, both of whom are righteous persons saved from disasters. It is difficult to know how much Peter wished to parallel these figures, but the stories of these two men are astonishingly similar. Consider the following (the present writer owes this observation to his student Hugo Garcia).

The whole area of Sodom and Gomorrah was said to be "like the garden of the Lord" (Gen 13:10); but the people of Sodom were very wicked (Gen 13:13). Despite Abraham's plea on behalf of the people, they were to be destroyed (Gen 18:16–33). From this point on the parallel with Noah becomes closer. In both the Noah and Lot stories the sex offense episodes, including incest and homosexuality, frame the story and the sequence of events concerning the great disaster and salvation from it provides point-by-point contacts between the two:

Sodom and Gomorrah Story	Noah's Flood Story
Sex offensive involving "angels" and "daughters"	
Angels—homosexual (19:1–11)	Sons of God (6:1–4)
Announcement of disaster because of wickedness	
To Lot (19:12–14)	To Noah (6:11–13)
"come in [*boʾ*]" and "shut [*sgr*]"	
Angels brought Lot (19:10)	All flesh (7:16)
Instructions for salvation of a family	
Lot and daughters 19:15–23	Noah family 6:14–18
"Rain"—*himṭîr* 19:24, *mamṭîr* 7:4	
Brimstone/fire 19:24	40-day rain 7:4
All die but one family	
Lot's family 19:25–29	Noah's family 7:21–23
"God remembered"	
Abraham instead of Lot 19:29	Noah and animals 8:1
Living outside of city	
Cave in hills 19:30	In tent 9:20–21
Drunkenness	
Of Lot 19:32–35	Of Noah 9:21
Sex offense—Incest	
Father/daughters 19:31–38	Father/son, homosexual 9:22–23

Thematically, note that Lot, like Noah, is the epoch-divider figure who, having experienced the end of Sodom and Gomorrah, ushers in the new generation of Moabites and Ammonites. The major difference, however, lies in the fact that Lot is not a covenant figure as is Noah. The reason for this may be that Noah obeys all that God commands (Gen 6:22; 7:5, 9, 16), whereas Lot twice modifies the angel's instruction to flee to the hills—initially Lot wants to go to the little city of Zoar because it is closer than the hills, but eventually he settles *(nwḥ)* in a cave in the hills outside *(mḥwṣ)* of Zoar because he is afraid of the city! On the other hand, Lot's cousin Abraham, the intercessor for Sodom and Gomorrah, is a covenant figure whom "God remembers" (Gen 19:29, cf. 8:1, "God remembers Noah"). Abraham vicariously participates in the "rain" of fire that sweeps over Lot's cities, thus making both Lot and Abraham Noah-like.

d. Hebrews 11:7 In the list of righteous people of faith, Noah is used to illustrate the definition of faith as "the assurance of things hoped for, the conviction of things not seen." Noah's obedience of the divine

instruction to construct an ark saves his household and preserves the seed of righteousness for the new generation. Noah is seen as a bridge between the condemned world and the new age.

5. Pseudepigrapha. a. *1 Enoch* 106. Enoch tells the story of Lamech being frightened at the birth of Noah. At birth Noah's "body was as white as snow and red as a rose; the hair of his head as white as wool and his *demdema* [an Ethiopic word describing his hair] beautiful; and as for his eyes, when he opened them the whole house glowed like the sun—[rather] the whole house glowed even more exceedingly" (*1 En.* 106:2). Lamech goes to Methuselah and Methuselah to Enoch; but note that Lamech does not go to his wife for explanation first as he did in the *Genesis Apocryphon.*

Enoch assures Methuselah that Lamech indeed is the child's father, revealing the secret that there will be a Flood to destroy wicked humanity. Enoch advises Methuselah to name the child Noah. He will be saved from the disaster along with his three children (*1 En.* 106:18) and "he will comfort the earth after all the destruction" (*1 En.* 107:3; cf. 106:18). The folk etymology of the name in Gen 5:29 is reflected here also. Apart from the name and its folk etymology, this pseudepigraphic story, like that in the *Genesis Apocryphon*, has nothing to do with the Genesis story, although some connections with the Sumerian and possibly with the Babylonian stories may be adduced in terms of the miraculous birth of the Flood hero (see above).

1 Enoch. includes a few more references to Noah. The Most High sends the archangel Uriel to Noah to inform him of the impending Flood, so that Noah may escape the destruction and preserve his seed for the future generations (*1 En.* 10:2). In *1 Enoch* 65, Enoch foretells the destruction of the world and the salvation of Noah in response to Noah's outcry for help because the earth had "sunk down" or "became deformed" (*1 En.* 65:1). One is tempted to speculate here that a tradition of preflood overpopulation as in the Atrahasis Flood Story and of overburdened earth as in Yima's Flood Story may be reflected in this passage.

The word of God comes in *1 Enoch* 67 and tells Noah that he has been "blameless" and "righteous" (cf. Gen 6:9) and that "the angels are working with wood [making an ark]" (*1 En.* 67:2). The divine speech also includes an echo of the blessings of Gen 1:28 and 9:1, "Be fruitful and multiply and fill the earth." In contrast to this passage, *1 En.* 89:1 reports that Noah himself makes the ark, which floats on water to save him.

b. *Book of Jubilees.* From its own peculiar viewpoint of chronology and law, the *Book of Jubilees* recounts the history of the world from creation to Moses, with whom the new age of the Law begins. The Flood Story is retold in much greater detail in *Jub.* 4:28–10:17. Noah also appears in scattered references down to *Jub.* 22:13 in the context of blessing (*Jub.* 9:24, 27; 22:13) and covenant (*Jub.* 14:20). Moses, however, replaces Noah as the epoch divider as in the book of Exodus.

NOAH'S ARK

Noah's ark (Heb *tēbâ*) was the great boxlike vessel by means of which Noah and his family escaped the waters of the Flood. According to the story, God was dissatisfied with the violence of human creatures and decided to destroy them and cleanse the earth by means of a universal deluge. Because he was a righteous man, Noah was to be the exception. Consequently, God instructed him to construct a huge floatable "box" wherein he and his family could ride out the destructive waters. It was to be made of "gopher wood," the identification of which is a matter of dispute among modern interpreters [Heb *gōper,* possibly the same as Gk *kyparissos,* Eng "cypress"]. The vessel was then to be caulked with pitch (bitumen), divided into three partitioned decks, and provisioned for Noah's family and for pairs of land and flying animals. When it was completed, rain and subterranean waters devastated the earth for 40 days, covering the tops of the highest mountains. Approximately one year later, when the waters had subsided and the earth had become dry, Noah's family disembarked atop one of the mountains of Ararat and repopulation of the earth began.

A. Dimensions of the Ark

The size of the vessel is given in "cubits," the modern estimate for which is approximately 18 inches each. Thus, 300 cubits long, 50 cubits wide, and 30 cubits high converts into 450 feet, 75 feet, and 45 feet, and this yields a rectangular box which was more suitable for floating than for sailing. Its size is astonishing in comparison with some modern vessels (e.g., the English ship *Mayflower* was only ninety feet long).

There is reason to suspect that the dimensions reflect a preoccupation with the number 60, as was commonly the case in Mesopotamian mathematics and occasionally that of the Bible. (For example, the ages of the Mesopotamian antediluvians in the Sumerian King List are given in multiples of 60^2 years and those of the Bible in Genesis 5 are given in multiples of 60 months with the occasional supplement of 7 years.) Thus, the vessel of Utnapishtim, the Mesopotamian flood hero of the Akkadian version, is 120 cubits per side. (Allowing 19.7 inches for a Babylonian cubit, this yields 197 feet per side, for a volume about 5 times that of Noah's boat.) The sides are thus (60 × 2) cubits, a reflection that Mesopotamian mathematics reckons in a place notation of base 60 (in contrast to the English system of base 10). This means that Utnapishtim's vessel is two ideal (or base) units per side and has an ideal volume of $(60 \times 2)^3$. Good fortune, one may suppose, must thereby smile upon it.

The dimensions of Noah's vessel, likewise, rather than being random or corresponding to actual measurement of Israelite boats, reflects the same idealization. It is 300 (60 × 5) cubits long and 30 (60/2) cubits high. The third dimension, the width, is a curious 50 cubits, but nonetheless the resultant volume is $(60^3 \times 2) + (60^2 \times 5)$ cubic cubits.

B. Claims that the Ark has Survived

Prior to the beginning of the Common Era, the claim was being made that parts of the Flood Hero's boat yet survived and had been seen: "It is said there is still some parts of this ship in Armenia, at the mountain of the Gordyaeans; and that some people carry off pieces of the bitumen … [for] use chiefly as amulets" (Josephus, *Ant* 1.3.6 [1st century, C.E.], quoting the Babylonian priest Berossos [3d century, B.C.E.]). Berossos here speaks of the Sumerian hero, Ziusudra, whom Josephus happily identified with Noah. Thereafter (in Christian, Jewish, and Muslim literature), a number of sites were proposed as the landing place of Noah's ark, most of which were alleged to have produced wooden remnants: in Arabia (Jabal Judi in the ʿAjaʿ Range), on the headwaters of the Tigris in SE Turkey (Cudi Dağ/Jabal Judi in the Gordian Mountains), in the Caucasus Range (Mt. Baris), in W Turkey (near the city of Apamea), in N Iran (Alwand Kuh and Mount Demavand), and in NE Turkey (Masis/Ağri Dağ).

It is the last of these sites, a majestic mountain (39° 42′ N; 44° 18′ E) which rises dramatically to a height of 16,900 feet above the plain, that modern ark searchers have designated as "Mount Ararat" (a

term which the Bible itself, at Gen 8:4, does not use; rather, it speaks of "the mountains of [the kingdom of] Ararat"). See Fig. NOA.02 for map of proposed sites. Although the literature of the native Armenian population knows this peak as the landing place only since the 11th–12th centuries C.E., the claim has recently been made (in newspapers, magazines, books, movies, and television programs) that this is undeniably the biblical site. Such claim has been supported by eyewitness testimony to a boat protruding from a glacier, by photographs, and by pieces of hand-hewn timber which reportedly date to high antiquity (up to 5,000 years of age, which might accord with Archbishop Ussher's literal biblical chronology which puts the Flood around 2450 B.C.E.; Montgomery 1972; Navarra 1974).

None of this alleged evidence for the survival of Noah's vessel has withstood rigid scrutiny (Bailey 1978; 1989). The eyewitnesses fundamentally contradict each other and some accounts have been shown to be fabrications. The photographs are either now missing or have been denounced as fake. The beams, based upon the best scientific evidence, are to be dated to the 7th century C.E. (Bailey 1977). There is no reason, then, to believe that remnants of Noah's ark are to be found anywhere in the world (regardless of one's decision about the historicity of the biblical account of the Flood).

LLOYD R. BAILEY

NOAH, APOCALYPSE OF A pseudepigraphal book mentioned by name only in *Jub.* 10:13 and 21:10. Some scholars identify portions of this work in *Jub.* 7:20–39 and 10:1–7, as well as *1 En.* 6–11; 54:7–55:2; 60; 65:1–69:25; 106; 107 (Charles, *APOT* 2: 168; Rist, *IDB* 3: 556). Further evidence for its existence is provided by fragments discovered in Cave 1 at Qumran (Dupont-Summer 1962:299; Rist, *IDB* 3: 556). Its exact date, author, and place of composition are unknown. However, it is clearly earlier than *Jubilees,* which is usually dated between 161 and 140 B.C.E. (Wintermute, *OTP* 2: 44; Rist, *IDB* 3: 556). It was probably composed in Hebrew or Aramaic somewhere in Palestine. While some fragments are apocalyptic, many contain ideas and language that cannot be so classified.

Since all we possess of the *Apocalypse of Noah* are fragments embodied within other works, it is impossible to present a complete and coherent picture of the content or structure of the book. From the extant fragments, it seems that the book focused primarily on the fallen angels (mentioned in Genesis 6). These angels taught magic, medicine, astrology, alchemy, the art of making weapons, and all kinds of evil and injustice that corrupted the earth and brought about the Flood. The names of the angels and a description of their evil deeds are also provided.

One fragment relates information about the primeval monsters Leviathan and Behemoth (cf. Job 40 and 41). Others contain descriptions of the many "hidden things," such as the contents of the first and last heaven, and what is beneath the earth and in the depths. They tell of the mysteries of the winds, lightning, and thunder; God's promise to Noah; and of the punishment of the evil angels. The story of Noah's birth and how he and his family were spared from the Flood is also told in one of the frag- ments.

DANA ANDREW THOMASON

NOB (PLACE) [Heb *nōb* (נֹב)]. Town N of Jerusalem where David met Abimelech the priest (1 Sam 21:1—Eng 21:2). It was here that David and his companions ate the Bread of the Presence (an episode mentioned in Jesus' dispute with the Pharisees concerning the Sabbath; cf. Matt 12:1–4, Mark 2:23–28, and Luke 6:1–5) and where David received the weapons of Goliath. During this time Nob apparently held

the position of the chief sanctuary of YHWH after the fall of Shiloh, Ahimelech being the great-grandson of Eli, the priest at Shiloh (cf. 1 Sam 14:3; see McCarter *Joshua* AB, 349).

Saul hears of this through the information of Doeg the Edomite (1 Sam 22:9). Saul summons Ahimelech and all the priests of Nob (1 Sam 22:11) and eventually razes the city when the priests refuse to disclose David's whereabouts (1 Sam 22:19).

Isaiah lists Nob among the cities overrun by an army advancing on Jerusalem from the north (Isa 10:32). On the difficulties in understanding this passage, see GALLIM and the bibliography listed there. Nob is later listed among the cities to which the Judahites returned after the Exile (Neh 11:32).

The proximity of Nob to Jerusalem is plain in Isa 10:32 where the invader shakes its fist at Jerusalem from Nob. Albright (1925: 139; so also Donner 1968:50; *NHT,* 172) places Nob on Râs el-Mešârif, a slope of Mount Scopus within sight of Mount Zion. Another slope north of Mount Scopus, Quʿmeh, has also been named as a possible site (*IDB* 3: 557), though Râs el-Mesûârif has the advantage of being more clearly within eyesight of Jerusalem. The exact location of the town, however, remains unidentified.

JEFFRIES M. HAMILTON

NOBAH (PERSON) [Heb *nōbaḥ* (נֹבַח)]. A male descendant of Manasseh who conquered a league of cities, known as KENATH, at the same time that his relative Jair presumably was campaigning against Og of Bashan (Num 32:47). Other traditions (1 Kgs 4:13 and Deut 3:4) report more generally that all Israel took the land of Og from Bashan and divided it for the half-tribe of Manasseh.

PAUL NIMRAH FRANKLYN

NOBAH (PLACE) [Heb *nōbaḥ* (נֹבַח)]. 1. An area of Gilead named after its Manassite conqueror, Nobah (Num 32:40–42). The context of the Numbers passage is a description of Moses' division of the territories of Sihon and Og to the tribes of Reuben, Gad, and Manasseh. Nobah, a leader of Manasseh, subsequently overthrew Kenath and its environs and renamed the area after his own name. In 1 Chr 2:23 the old name Kenath is used. See KENATH. Gray (*Numbers* ICC, 441) suggested that the name Kenath was retained by later generations because the new name failed to establish itself. The site has been identified as modern Qanawat in Hauran at the extreme NE corner of Manasseh's territory.

2. A town near Jogbehah in E Gilead (Judg 8:10–11). Using Nobah and Jogbehah as a surprise travel route, the judge, Gideon, made an attack against the Midianites at Karkor. The exact site is unknown, and this possibly might be the same as Nobah #1 above.

JOEL C. SLAYTON

NOBLES See PALESTINE, ADMINISTRATION OF (POSTEXILIC JUDEAN OFFICIALS).

NOD (PLACE) [Heb *nôd* (נוֹד)]. The name of the land where Cain went after he had killed his brother Abel and Yahweh had put a mark on him to prevent him from being killed in revenge (Gen 4:16). This verse locates it "east of Eden." The land of Nod is not mentioned elsewhere in the Bible. It is unlikely that an actual geographical location is meant. The name seems to be derived from the Hebrew root *nwd,* "to wander." The word *nōd* also appears as a noun in Ps 56:9 (—Eng 56:8) with the meaning "wandering(s)" (RSV "tossings"). Thus, rather than denoting a specific place, the land of Nod symbolizes Cain's fate as "a fugitive and a wanderer (*nād*) on the earth" (Gen 4:12, 14). The same appears to be true for the phrase "east of Eden." Gen 3:24 reports that Yahweh God drove the man out of the Garden of Eden and placed the cherubim and a flaming sword at the E of the garden to prevent access to the tree of life. "East of Eden" simply means outside of the Garden of Eden, and thus banishment from God.

The LXX reads "the land of *Naid*" in Gen 4:16 Unlike "Nod," which fits the context beautifully, "Naid" has no perceptible meaning. It seems to be a corruption of *nôd* due to a confusion of the letter *waw*

(representing *ô* in the MT reading) and the letter *yod* (representing the *ai* diphthong of the LXX reading). *Waw* and *yod* were almost identical in appearance for much of the history of the Hebrew language, and confusion of the two letters is common in the Hebrew Bible.
JAMES R. DAVILA

NODAB (PERSON) [Heb *nôdāb* (נוֹדָב)]. A tribe in N Transjordan, 1 Chr 5:19 In 1 Chr 5:18–22, Reuben, Gad, and half of Manasseh conduct war against "the Hagrites, Jetur, Naphis and Nodab" (5:19). 1 Chr 5:10 dates this war to the reign of Saul. See HAGAR; HAGRITES; NAPHISH. As, according to its orthography, the name Jetur cannot have entered the biblical tradition before the 7th century B.C., the date provided by 1 Chr 5:10 must be aberrant. See JETUR. Most probably, the Chronicler (Eph'al 1982: 100 n. 337, 239), or one of his redactors (Knauf 1989: 49–52) had contemporary Arab tribes from N Transjordan (and a conflict between them and Jewish settlers?) in mind when he wrote his account, which then dates to the 4th–3d centuries B.C.

It can be argued that Nodab is identical with Adbeel, an Ishmaelite tribe (Gen 25:13; see ISHMAELITES) attested in 734/733 B.C., when Tiglath-pileser III entrusted this tribe with the control of the Egyptian border. The Assyrian king may have encountered Adbeel in southern Syria or northern Transjordan (Knauf 1989: 67). The names Nodab and Adbeel were linked to the same tribe by W. F. Albright (1956: 13). Knauf (1989: 67) derives both names linguistically from **Nadab'il,* "God has called up, incited." The LXXrenders "Adbeel" by *Nabdeêl,* and "Nodab" by *Nabadaioi.* As the sequence *db* is impossible in Greek, and had to be changed to *bd,* the occurrence of the same metathesis in *Nabadaioi* (where *d* and *b* are separated by a vowel) indicates that the two names were regarded as identical by the.

Personal names from *NDB*, "to call up, to incite," occur in biblical Hebrew (Nadab, Nedabjah), Ammonite ('Amminadab), Safaitic, Thamudic, classical Arabic, and Sabaic (Nadab).

ERNST AXEL KNAUF

NOGAH (PERSON) [Heb *nōgah* (נֹגַהּ)]. One of thirteen sons of David listed as having been born to David's wives in Jerusalem (1 Chr 3:7; 14:6), in addition to his six sons born at Hebron. His mother's name is unknown: four of the thirteen were Bathsheba's sons; the remainder were born to unnamed wives. Besides these thirteen, David had numerous (unnamed) sons born to his concubines, according to 1 Chr 3:9

Nogah's name is missing (along with the first occurrence of "Eliphelet") from the list of David's sons born in Jerusalem in 2 Sam 5:13–16 A corrupt dittography with the following name, Nepheg, has been postulated, and the list in 2 Samuel has been seen as the more reliable (e.g., Williamson *1 and 2 Chronicles* NCBC, 56). However, there is evidence that the 2 Samuel list originally carried both names missing in the MT See ELIPHELET #1. Also, the number of David's sons given in 1 Chr 3:8—nine—requires the presence of Nogah's name, as well as both occurrences of "Eliphelet." Thus, it is most reasonable to accept Nogah as a separate name and person. (See Myers *1 Chronicles* AB, 19.) See also DAVID, SONS OF.
DAVID M. HOWARD, JR.

NOHAH (PERSON) [Heb *nôḥâ* (נוֹחָה)]. The fourth son of Benjamin according to 1 Chr 8:2 Besides 1 Chronicles 8, the sons of Benjamin are listed in three other places: Gen 46:21 (= *Jub.*); Num 26:38–41; and 1 Chronicles 7 In none of these other lists does Nohah appear. The following table clearly shows the many divergences between these lines.

Gen 46:21	Num 26:38–41	1 Chr 7:6	1 Chr 8:1–2

Bela	Bela	Bela	Bela
Becher		Becher	
Ashbel	Ashbel	*Jediael	Ashbel
Gera	*Ahiram		*Aharah
Naaman	*Shephupham		*Nohah
*Ehi			
*Rosh			*Rapha
*Muppim			
*Huppim	*Huppam		
*Ard			

*Indicates names not appearing in the other lists

The name most closely resembling Nohah is Naaman in Gen 46:21 The presence of the name Naaman later on in the list (1 Chr 8:4, 7), however, argues against simply substituting "Naaman" for "Nohah." Curtis and Madsen (*Chronicles* ICC, 157–58) suggested that "Nohah" is a transcriber's variation of "Ahoah" (v 4), but there is no support for this suggestion. Of these lists, the list reflecting the oldest traditions is the one in Numbers 26, but even that list probably does not list the actual sons of Benjamin, instead giving clan names (Noth *Numbers* OTL, 203–8). Von Rad (*Genesis* OTL, 403) suggested that the list in Genesis 46 is artificial and the product of "very late and theoretical erudition." The great differences among the lists as well as their differing purposes make it difficult, if not impossible, to assert the priority of one list over the others and thereby identify a name like Nohah which occurs only in one.

TOM WAYNE WILLETT

NOPHAH (PLACE) [Heb *nopaḥ* (נֹפַח)]. "Nophah" appears as the name of a town in the MT of Num 21:30 However, this text has suffered in transmission and was interpreted differently by the versions. In the Masoretic punctuation the last consonant of the word *ʾăšĕr* ("which") is marked with a *punctum extraordinarium* indicating that the *reš* was questioned by the scribes at an early date. The Sam. Pent. and LXX considered the consonants underlying the word "Nophah" to be a verbal form meaning "to breathe," "to set aflame" (a reading followed by Noth 1940–41: 169; Althann 1985: 568–71). Taking the consonants *npḥ* as a verb and replacing the word *ʾēš* ("fire") for *ʾăšĕr* by omitting the last consonant, the Sam. Pent. and LXX understood the MT reading "unto Nophah which" to mean "further kindled a fire." The latter reading is followed by the RSV whereas the former is retained by the KJV If "Nophah" is a place-name as in the MT (e.g., Hanson 1968:306), it refers to an unidentified site in Moab probably S of Heshbon.

ARTHUR J. FERCH

NOREA, THOUGHT OF (NHC IX, *2*). The second of three gnostic tractates contained in Nag Hammadi Codex IX (27,11–29,5), inscribed in Sahidic Coptic. It is one of the shortest tractates in the Nag Hammadi corpus, and is found in a relatively undamaged portion of the MS. The title has been assigned to it by modern editors from a phrase occurring in the text at its conclusion (29,3). Another title is in use in German scholarship: *Ode on Norea,* a title which is based on a judgment concerning the literary genre of this tractate. While its strophic structure and diction are reflective of the characteristics of Semitic or "biblical" poetry, the putative Greek text of *Norea* seems to lack the meter that would qualify it as Greek poetry (e.g., the Naassene Psalm preserved by Hippolytus, *Ref.* 5.10.2).

A clear fourfold structure is reflected in this tractate: (1) Norea's invocation of the Father and his divine companions, 27,11–20; (2) Norea's deliverance, 27,21–28,12; (3) Norea's role as savior, 28,12–23; (4) the future salvation of Norea's spiritual progeny, 28,24–29,5.

Norea is a "saved savior" in this and related texts. In the Sethian gnostic system Norea appears as the daughter of Eve and the sister-consort of Seth. She is thus the spiritual mother of the gnostic race. In the *Hypostasis of the Archons.*(NHC II, *4*) she is portrayed as the intended victim of rape by the wicked archons, and as "crying out" for help (II 92,33–93,2). The help comes in the form of a heavenly revelation mediated by Eleleth, one of the four "luminaries" in the Sethian system. The tractate *Norea* dovetails with *Hyp. Arch.*, for the invocation comprising its first part is followed by the sentence, "It is Norea who cries out to them" (27,21–22). Norea's deliverance and reintegration into the Pleroma are then treated; this constitutes the second section of the tractate.

Norea's role as savior, highlighted in the third and fourth sections of the text, is a particularly interesting feature of *Norea* and the closely related *Hyp. Arch.* Both documents are included among those gnostic tractates that are associated in modern scholarship with Sethian Gnosticism. But, whereas in most of those texts it is Seth who is the gnostic savior par excellence, in *Norea*, as in *Hyp. Arch.*, the major salvific role is played by Seth's consort, Norea. She thus functions as the feminine counterpart to Seth, as the mother of the gnostic elect. She is a saved savior, and her salvation is paradigmatic of that of her spiritual progeny. This feature of *Norea* would, no doubt, have appealed to female members of a gnostic group; indeed, it is possible that *Norea* was composed by a gnostic woman (Stroumsa 1984: 35–70).

There are no clear indications of Christian influence in *Norea*, unless such technical terms as "Pleroma" and "deficiency" are traceable to Valentinian influence. (Valentinian Gnosticism is, of course, a Christian form of the gnostic religion.) In any case, the figure of Norea itself originates as a gnostic reinterpretation of a Cainite antiheroine in Jewish Haggadah, Naamah (cf. Gen 4:22). The original spelling of "Norea" is "Horaia," a form of the name that occurs in other gnostic sources. *Hōraia* is the semantic equivalent in Greek of Hebrew *naʿămâ* ("pleasing, lovely"). Gnostic traditions revolving around Horaia-Norea probably developed in Jewish gnostic circles, independently of Christianity.

The technical terminology in *Norea*, as well as its allusions to developed gnostic traditions (e.g. "the four holy helpers," 28,27–28), suggest that this tractate represents a comparatively late development of an earlier Jewish Gnosticism. Its original Greek version can be dated to the late 2d or early 3d century. It could well have been composed in Egypt, or in another E Mediterranean region.

BIRGER A. PEARSON

NORTH [Heb *ṣāpôn* (צָפוֹן)*, śĕmōʾl* (שְׂמֹאל)]. One of the cardinal compass points in the ANE. But unlike modern Western culture, "north" was not the primary direction for orientation. "East" was the primary direction for orientation, probably from the rising sun. See DIRECTION AND ORIENTATION. Hebrew had two major words for "north," *ṣāpôn,* from a root which meant hidden or dark, and *śĕmōʾl,* literally the left hand. This latter term shows clearly the Hebraic use of the body to gain directions when one faces east.

In addition to the expected use in reference to the direction, "north" comes to have several specific connotations in the OT. "North" is especially the direction from which invaders come (Jer 1:14–15; Isa 14:31). Certainly Israel's position influenced this understanding. Protected by the sea on the W and the Syrian desert on the E, her only major concerns for massive invasion came from the S (Egypt) and the N (Assyria, Babylon, the Hittites, etc.). Especially in the latter period of the monarchy and exilic/postexilic periods, those empires to the N and E were by far the strongest. Perhaps as much symbolically as

geographically, "north" is also the direction invaders will come upon Babylon (Jer 50:9; Zech 2:10—Eng2:6) and the direction from which Gog of Magog will come (Ezek 38:6, 15).

Since the invaders have come out of the N and have carried off exiles, it is only natural that the returning exiles will come from the N (Jer 3:18).

In Ugaritic mythology, *ṣpn* is the name of the holy mountain, used especially as Baal's abode, and was the place of the assembly of the gods. Mt. Ṣapon is usually identified with Mt. Casius, N of Ras Shamra. In other texts Baal calls himself the god of *Ṣpn* and the title-epithet "Baal Ṣpn^{w} appears in several texts. Closely related to this Ugaritic and Canaanite mythology must be the reference to God's abode in the far N (Isa 14:13). Also God appeared to Job out of the N (Job 37:22) and Ezekiel's cherub chariot theophany appeared from the N (Ezek 1:4).

NORTH AFRICAN CHRISTIANITY See CHRISTIANITY (NORTH AFRICAN).

NORTH AFRICAN JUDAISM See JUDAISM (NORTH AFRICAN).

NORTH COUNTRY, THE (PLACE) [Heb *ʾereṣ* (אֶרֶץ).*ṣāpôn* (צָפוֹן)]. Ominous appellation for the N regions of Mesopotamia and Syria. This designation is used mostly by Jeremiah, but is also found four times in Zechariah.

Jeremiah is told in one of his opening visions that evil is about to break forth from the N against Judah (Jer 1:13–16). In Jeremiah 4–6, Yahweh states that he is about to bring "evil" and "great destruction" from the N Specifically, he refers to a nation skilled with "bow and spear," a cruel nation who will show no mercy to Zion (Jer 6:22–23, see also 10:22 and 25:9). At the end of his book, Jeremiah sees a great and mighty nation arising again from the North Country, but this time against Babylon. In nearly the same language as Jer 6:22–23, the prophet predicts a nation skilled at warfare will show no mercy to Babylon (Jer 50:41–42, see also 50:3, 9 and 51:48).

The North Country is also the land of the Exile, from which Yahweh will redeem his people. Jeremiah uses the designation in this way, and similar expressions freely (Jer 3:12, 18; 16:15; 23:8; 31:8, etc. and see also Zech 2:6).

Israel's unique geographical features contributed to these perceptions regarding the North Country. With the Mediterranean on her W and desert protecting her E and SE, enemies normally approached from the SW or N Although the Egyptians and Philistines were to the S and SW, most of Israel's attackers came from the N Even Assyrian and Babylonian armies were considered northern enemies. The North Country was a designation broad enough to include the NW extremities of Mesopotamia (since it was the site of Egypt's defeat at Carchemish on the Euphrates in 605 B.C., Jer 46:2, 10).

The specific identity of Jeremiah's northern foe (Jeremiah 4–6) is a much disputed question. Herodotus reports that the Scythians invaded Syria-Palestine around 625 B.C., near the beginning of Jeremiah's ministry (1.104–6). Proponents of an older "Scythian hypothesis" hold that Jeremiah's descriptions of invaders best fit these Indo-European nomads from the Russian steppes (for recent reviews, see Holladay *Jeremiah* Hermeneia 1: 42–43 and Perdue 1984:6–10). Recent commentators have tended to deny this position (Bright *Jeremiah* AB, lxxxi–lxxxii; Holladay, 42–43; and Thompson *Jeremiah* NICOT, 86–87). Others have argued that Jeremiah's "foe from the north" carries a definite mythological flavor (Childs 1959: 197–98). Thus, no specific historical group can be identified with the northern army. Recently, it has been suggested, on the basis of cuneiform texts and archaeological evidence, that Scythian mercenaries served as the vanguard of the Chaldean attack against Jerusalem, so that the Scythian theory is not to be entirely dismissed (Yamauchi 1982: 87–99).

NOT MY PEOPLE (PERSON) [Heb *lō‹* (לֹא).*‹ammî* (עַמִּי)]. The third child, a son, born to the prophet Hosea and his wife Gomer (Hos 1:9). At God's command, Hosea gave each of his three children names symbolizing divine judgment against Israel. This last of Hosea's children bears the most drastic of the three sign names. The formula "I will be your God and you shall be my people" lies at the heart of God's covenant with Israel, and thereby at the center of Israel's self-identity (Exod 6:7; Lev 26:12; 2 Sam 7:24; Jer 7:23; etc. s reversed in). The name of Hosea's first child, JEZREEL, anticipated the impending military defeat of the reigning dynasty. His second child's name, NOT PITIED, indicated God's withholding of love and protection from the house of Israel. "Not My People" signifies that God has repudiated the covenant and utterly rejected the people of Israel. The judgment of Hos 1:9 is reversed in 2:25 (—Eng 2:23). "Not My People" will be renamed "My People" (cf 2:1, 2—Eng1:10; 2:1). The verse promises that divine judgment of Israel will be followed by the restoration of covenant. See HOSEA, BOOK OF.
CAROLYN J. PRESSLER

NOT PITIED (PERSON) [Heb *lō‹* (לֹא).*ruḥāmâ* (רֻחָמָה)]. The second child, a daughter, born to the prophet HOSEA and his wife Gomer (Hos 1:6, 8). Her name is explained (v 6) as a sign that God will "no more have pity on the house of Israel." The Hebrew word translated "pitied" *(rḥm)* also has the broader meaning "love." Denial of pity elsewhere in the prophets is associated with judgment, entailing both withdrawal of protection and active destruction. The child's name (like the names of her brothers) thus symbolizes God's refutation of love for and wrathful judgment against Israel. The child later becomes a symbol of renewal and eschatological hope. Hosea 2:25 (—Eng 2:23) promises that God will "have pity on Not Pitied" (cf. 2:3—Eng2:1). See also HOSEA, BOOK OF; JEZREEL (PERSON); NOT MY PEOPLE (PERSON).
CAROLYN J. PRESSLER

NOVELS, GREEK AND LATIN The novel, as understood by the modern reader, was not a genre recognized by ancient literary criticism. Traditionally, the depiction of fictional characters and their adventures and emotions was the province of the poets (epic, tragic, comic). Prose fiction emerges relatively late in Greek and Latin literature and, even when it does so, is virtually unnoticed by the arbiters of literary taste. It does not even have a name of its own: *drama* (Photius), *mythoi eroticoi* (Ach. Tat. 1.2.3), and *historia* (Longus 1.1.1) are all used. Its neglect by contemporary intellectuals has tended to lead to a corresponding neglect by scholars, but the recent flowering of critical interest in this branch of literature has opened up many avenues of interest to biblical studies.

A. The Novels

The texts may be divided into two groups, the sentimental or "ideal" romance of love and adventure, and the picaresque or comic. Of the former, five complete texts and numerous fragments survive, all Greek: Achilles Tatius, *Adventures of Leucippe and Cleitophon,* in 8 books (2d century A.D.); Chariton, *Chaereas and Callirhoe,* in 8 books (before A.D. 150: possibly as early as 1st century B.C.); Heliodorus, *Aethiopica,* in 10 books (2d–4th century A.D.); Longus, *Daphnis and Chloe,* in 4 books (end of 2d century A.D.); Xenophon of Ephesus, *Ephesiaca* or *Anthia and Habrocomes,* in 5 books, possibly abridged from 10 (A.D. 150–250) Fragments include those of the *Ninus Romance.*(ca. 100 B.C.), *Parthenope and Metiochus,* Iamblichus' *Babyloniaca,* and Lollianus' *Phoenicica.*

Broadly speaking, the 2d century A.D. may be regarded as the heyday of the ideal novel, but the papyrus fragments show that similar tales were circulating in written form at least in the 1st century B.C., almost certainly earlier. Of the complete texts, Chariton and Xenophon (whatever their actual dates) represent the earlier, less sophisticated approach to the genre, while Heliodorus, Longus, and Achilles Tatius reflect a more consciously literary approach influenced by the Second Sophistic. All five texts concern the

adventures of a pair of young lovers (hence the name "erotic": but the treatment is on the whole sentimental-romantic rather than pornographic). All but Longus involve a separation at the beginning of the story and a "happy ending" in which the couple are reunited after an impossibly complicated series of adventures including voyages, shipwrecks, capture by pirates, attempted rape, mistaken identity, imprisonment, sacrifice, suicide, and entombment. Longus' story stands alone as a Theocritean pastoral idyll describing the gradual sexual awakening of the young shepherd and shepherdess; there is no voyaging here, but, as in the other novels, the couple are separated by capture (pirates, and an invading army) and finally reunited with the aid of divine intervention.

Of the picaresque type we have only Latin examples. Petronius' *Satyricon* (probably 1st century A.D.) was originally at least 16 books in length: most of books 15 and 16 survive, including the famous scene of Trimalchio's dinner party *(Cena Trimalchionis).* The work is a highly individual and sophisticated composition, drawing on a Roman tradition of satire and probably deliberately parodying the Greek ideal novel (Hägg 1983: 171). Here a travel narrative is used as a framework for a series of comic and scandalous episodes: the antihero, a Greek student accompanied by two rogues, is "a kind of comic reversal of Odysseus or Aeneas in his wanderings" (Hägg 1983: 170). Apuleius' *Metamorphoses* or *The Golden Ass,* in 11 books, dates from the mid or late 2d century A.D. The story relates the adventures of Lucius who, overcurious about magic, is turned into an ass and endures many vicissitudes until his final intiation into the mysteries of Isis and restoration to his own shape. Lucius' wanderings as an ass again provide the framework for a variety of tales, many of the "Milesian" (pornographic) type, but some of the "ideal" type, notably the myth of Cupid and Psyche (4.28–6.24). There is a Greek version of the simple *Story of the Ass* (wrongly attributed to Lucian), to which Apuleius has added a variety of ingredients.

B. Origins

Against a prevailing preoccupation with the "development" of the novel out of earlier Greek literary genres (Alexandrian love elegy, hero tales, degenerate historiography, and mystery texts were all suggested), B. E. Perry, in his classic study *The Ancient Romances* (1967), asserted that "the first romance was deliberately planned and written by an individual author, its inventor. He conceived it on a Tuesday afternoon in July … It did not come into being by a process of development on the literary plane" (p. 175). More recent studies, however, have stressed once again that the extant novels cannot be considered in isolation, but must be placed in a context embracing all the varied types of narrative activity taking place in the Hellenistic world and in the Near East. Thus, for example, Scobie (1969) looks at the role of the *aretalogus* and other tellers of "wonder tales" in Roman society. Hägg (1983) examines the Greek novels against a broad background of epic, drama, historiography, popular biography, and fantastic travel tales, but also stresses their continuity with the "historical" romances (Alexander, Apollonius of Tyre) and with the new Christian popular literature of apostles, martyrs, and saints. Anderson (1984) spreads the net wider: like Braun (1938), who had earlier suggested the need to look further east, Anderson points out parallels to the Greek novels in Sumerian tales like *Dumuzi's Dream* and *Enlil and Ninlil,* and finds in Petronius' *Satyricon* "a substantial portion of an Ancient Near Eastern tale-complex about an everyman and his fortunes at the hands of an at least ambiguous companion" (p. 193). Even Apuleius, in this perspective, becomes part of a continuum of oriental storytelling reaching right through from *Gilgamesh* to the *Arabian Nights.*

C. Style

As Perry (followed especially by Reardon) stressed, none of this "background" research should detract from the appreciation of the extant texts as individual works in their own right. Once we have assimilated the fact that much of their plot content is a "given" to these authors, not original invention as might be assumed with a modern novelist, it remains true that the ancient novelists (like Shakespeare) all exercised their individual talent and judgment in the *presentation* of their stories (Hägg 1983: 108, "the goal was originality, not in content but in execution"). Characterization, idealized and often wooden, tends to come second to complicated plot construction, which is often handled in a masterly fashion: Rattenbury (1949) made an apt comparison with film scenarios. The setting of the ideal novels tends to be timeless or archaic; their language leans toward the classicistic even in Chariton, while Achilles Tatius, Heliodorus,

and Longus write in the full-blown Atticizing manner associated with the Second Sophistic. All the Greek novelists use the basic narrative as a thread on which to hang learned excurses, geographical or pictorial descriptions, and rhetorical displays. Xenophon is the least artistic of the five: Dalmeyda (1926) believes his infelicities of style and construction are his own, not the result of an incompetent epitomator's work. Petronius and Apuleius, following the centuries-old convention for comedy, depict something more like the real world of their day, and include much racy and idiomatic contemporary diction; but they remain "highly sophisticated authors addressing themselves ostensibly to the learned world of fashion for purposes of their own" (Perry 1967: vi).

D. Audience

If we accept Northrop Frye's definition of popular literature as "what people read without being told to," then the Greek novels must certainly be regarded as popular literature, despite their apparently frigid and mannered styles. The number of papyrus fragments of novels testifies to their wide distribution in an age when the school classics, from Homer downward, must have been losing their appeal. As Reardon (1969) observes, Perry's objective was to stress not only the individual achievement of the novelists but their cultural context, the "broad conditions of society" in which and for which they wrote. Earlier historians had already pointed out that the rise in the novel's popularity in the 2d century A.D. coincided with an era of mass literacy and relative prosperity for the middle classes (Giangrande 1970). Within the broader category there must be distinctions between one end of the spectrum and the other: Perry's "poor in spirit" (1967) perhaps applies more obviously to the audiences of Xenophon or Chariton than to those of Longus or Achilles Tatius who, as Giangrande observes, must have possessed "a notable degree of culture." Nevertheless the very fact that the novels remained outside the canon of accepted literary taste makes them a potentially valuable introduction to the tastes and interests of that widely distributed subculture of the Eastern Empire, scarcely represented in our predominantly aristocratic literary remains, which (while aware of the inadequacies of the term) we can only call "middle class." As Hägg observes (1983: 90), "the people who needed and welcomed the novel are the same as those who were attracted by the mystery religions and Christianity," an observation which seems to be confirmed by the fact that the decline of the novel after the 3d century A.D. apparently coincides with the rise in popularity of the Christian stories of martyrs and saints (p. 161).

E. Religion

One theory sees the novels as originating in the mystery religions: Kerenyi (1927), Merkelbach (1962; 1965). Thus Merkelbach sees Achilles Tatius' novel as a retelling of the myth of Isis and Osiris, with concealed references to the mystery rituals of baptism and mock-mummification: "the narrative symbolizes the fall of the human soul into matter, its wandering through life and its arrival at the safe haven of the Isis religion, or the homecoming of the soul into the kingdom on the other side after death" (1965: 11). Even if this view is not accepted (it has not convinced the majority of scholars, cf. Turcan 1963), it is still true that the ideal novels are both highly moral (chastity and fidelity invariably triumph over all conceivable obstacles) and deeply imbued with religious sentiment. Priests, temples, and processions figure largely, the gods play an active role in the narrative, and the hero and heroine often have a deeply personal relationship with their own private deities. Even the picaresque adventures of Apuleius' *Golden Ass* end in a dramatic conversion to Isis in Bk.11 (for the significance of this scene for our understanding of ancient attitudes to religious conversion, see Nock 1933: chap. 9). Interestingly, the atmosphere of the narrative itself tends to give an archaic or timeless picture of the religious scene, with the new personal deity manifesting himself or herself to the individual against a backdrop of traditional cult and ceremonial: the Isis novels never mention Christianity or Judaism, just as Acts never mentions Isis or Serapis.

F. The Bible

The relevance of all this to the Bible may be described under four heads: motif and incident; embellishment; style and presentation; audience.

1. Motif and Incident. If the Greek and Latin novels are part of a continuum of ancient oriental storytelling, then it should not surprise us if many Bible stories also form part of the same continuum.

Extrabiblical parallels to the Daniel story *(Ahiqar, Prayer of Nabonidus)* are already well known; similarly, Joseph, Esther, Tobit, Susannah, even Ecclesiastes and the gospel parables contain motifs which can be paralleled in other Near Eastern tales (Anderson 1984: 103 n. 20, 105 n. 76, 187; *OTP* 2: 487). It is not here a question of direct influence: merely that some biblical stories may be regarded as ladlefuls out of the same "pot of story" (to use Tolkein's phrase) from which the Greek and Latin novelists drew.

2. Embellishment. More direct influence (though not of any of the extant novels) may be seen in those cases where the biblical story has been embellished in extrabiblical tradition in novelistic fashion, most obviously by supplying a romantic interest absent in the original story. The Joseph story has been enhanced in this way in *Joseph and Aseneth* (Burchard 1985: 183–84); Josephus' account of Moses' Ethiopian expedition (*Ant* 2§ 238–53) has also gained an embryonic love interest (252). We may also note here Christian postbiblical stories such as *Paul and Thecla,* which supply the romantic interest (in a sublimated form) which is lacking in the canonical stories (Hägg 1983: 159–60).

3. Style and Presentation. Novelistic influence on the style and presentation of some biblical material has long been suspected, notably in Acts (Norden, Dibelius). Acts is a sober narrative compared with its apocryphal successors, but the detailed account of the shipwreck as well as the inclusion of apparently gratuitous geographical information in the second half of the book seems to point to a wish to gratify an audience whose tastes were, at least in part, molded by the novels (Pervo 1987). Whether these tastes influenced the *content* of Acts—i.e., whether the author actually invented incidents—is another matter: on the analogy of the extant novels, we can now see that the authors were for the most part working on "given" plot material rather than inventing freely, and this may provide a better model for the biblical writers' approach to their work.

4. Audience. Perhaps the most fruitful line to be pursued in the study of the Greek and Latin novels is for the light they throw on their audiences and their tastes and interests (including religious interests): see D and E above. It is clear that there was in the late Hellenistic and early imperial periods a reading public of armchair travelers who liked "a good yarn" well laced with exotic adventure: the ingredients of love, death, and religion could be combined in many different ways, but the desire to edify while entertaining, and the need to entertain while edifying, were never too far apart. It is surely not too fanciful to suggest that similar needs and desires may have motivated many biblical storytellers as well.

NU The thirteenth letter of the Greek alphabet.

NUMBERS AND COUNTING Numbers are often mentioned in the Bible, where they are always expressed in terms of number words. Nevertheless, inscriptions on archaeological objects such as weights, ostraca, and monuments demonstrate that the use of number symbols was common in ancient Israel. The forms of these number symbols reveal foreign influences, in no way unexpected under the given circumstances. Also the literary use of numbers in the Bible demonstrates a fair amount of foreign influence. High numbers are often of a form which is characteristic for numbers originally expressed in the Mesopotamian number system with the base 60. Stylistic comparisons can be made in many cases between passages in the Bible and parallels in Ugaritic or Sumero-Akkadian legends. The religious-literary-historical nature of the Bible explains why computations in the Scripture are very few and unsophisticated. For a proper understanding of the role played by numbers and counting in the cultural environment where the biblical literature arose, it is necessary to look for extraneous sources and influences. How important that role was, and how deep and widely branched its roots, will be demonstrated below. Comparatively little emphasis will be put on numbers occurring in the Bible itself, since detailed discussions exist elsewhere (*IDB* 3: 561–67; *EncJud* 12: 1254–61). A. Number Representations and Arithmetic

1. The Preliterate Middle East. For five millennia before the invention of writing, a uniform method for the recording of numbers was spread over the entire Middle East (Schmandt-Besserat 1977). The method consisted of the use of small "tokens" of clay as representations of numbers and measures. Such tokens have been discovered at practically all excavated sites from Anatolia in the north to Iran in the east and Egypt in the west. Some tokens found in Israel, for instance, can be dated to the 7th millennium B.C. (Jericho), while others are as late as the 2nd millennium B.C. (Megiddo). These tokens come in many shapes, such as cylinders, spheres, disks, cones, ovoids, etc., and in various sizes. It is probable that they were used in trading and commerce, in and between many autonomous regions. The meaning of the various shapes and sizes of the tokens can be inferred, on a tentative basis, from a comparison with the corresponding shapes and sizes of the written number notations which eventually replaced them (see below).

The number representation system based on tokens was used without any apparent modification well into the 4th millennium B.C. Thereafter the beginning of urban civilization on an unprecedented scale forced the system to undergo a series of profound changes (Schmandt-Besserat 1980; 1981; Le Brun and

Vallat 1978; Ifrah 1981. As a first step, perforations allowed tokens to be tied together in groups, forming permanent records. At the same time, many new types of tokens appeared, and the increased use of incised or attached markings on the tokens made possible the recording of ever more complex economic transactions. A second step was to surround groups of tokens by balls of clay, so-called "spherical envelopes," often with imprints of cylinder seals for the further protection and verification of records. Such balls with tokens have been found at sites ranging from Shah Dad in southern Iran to Dumah, near Hebron, in Israel. The next step in this increasingly rapid development was when the use of the tokens was discontinued in favor of a new invention, "impressed" clay tablets with punch marks as number symbols. Reed styli of different diameters were used to punch circular and semioval marks into the clay, in an obvious attempt to imitate the shapes of small and big cylindrical, spherical, and conical tokens. The invention of writing was the logical last step in this chain of innovations. It took place, probably in southern Mesopotamia, some time toward the end of the 4th millennium B.C.

2. Ancient Mesopotamia. The earliest written records unearthed so far are "proto-Sumerian" clay tablets from Uruk in southern Mesopotamia (ca. 3000 B.C.). This archaic Uruk script consists of both word and number signs. Some word signs are pictographic, while others are abstract and can be interpreted only when they are precursors to Sumerian word signs of known meaning. The number signs, punched into the clay with a set of round styli, are easy to distinguish from the word signs. They consist of combinations of small and big, round and semioval marks. Sexagesimal numbers are written by repetition of the signs "small oval, small round, big oval, small round in big oval, big round" with the values 1, 10, 60, 600, 3,600. Number signs can also denote values of measures for grain, length, area, etc., so that one and the same sign can have, for instance, the values 10, 6 grain units, and 1,800 area units, depending on the context (Friberg 1984). Measures of time (days, months, years) are indicated through diverse combinations of number signs with the pictogram for "sun, day." The "administrative" year is, in the early Uruk texts as in later cuneiform texts, a fictive year of 12 months with 30 days each (Englund 1987).

With the evolution of the cuneiform script, the number signs changed form but were still used for both sexagesimal numbers and measures. The end result of the development was the sexagesimal place-value system (ca. 2000 B.C.), which allowed all numbers to be written by repetition of only two number signs, "upright wedge" for "1" and "oblique wedge" *(Winkelhaken)* for "10." A sexagesimal zero was used sparingly, most often in Late Babylonian mathematical and astronomical texts (ca. 300 B.C.).

The oldest known mathematical texts are from the Sumerian city of Shuruppak (Fara), ca. 2650 B.C. They consist of a table of squares, a multiplication exercise, and two division exercises, all with high numbers involved. The later OB period, ca. 1700 B.C., was a time when the teaching of mathematics was intense in the Mesopotamian scribal schools. At the elementary level, this teaching was based on the use of elaborate multiplication tablets, division tables, and tables of measures. At a more advanced level, the curriculum comprised algorithms for the computation of square roots, reciprocals, etc., as well as methods for solving quadratic equations and indeterminate problems, and practical rules for computations having to do with bricks, irrigation, work division, and so forth (Neugebauer and Sachs 1945). During the LB period, ca. 300 B.C., there was a renewed interest in mathematics, coupled with the production of astonishingly sophisticated mathematical division tables or astronomical tables with predictions for the movements of the sun, the moon, and the planets.

3. Ancient Iran. Toward the end of the 4th millennium B.C. the influence from the Late Uruk culture in Mesopotamia reached far into ancient Iran. This was the time of the spherical envelopes and the impressed tablets. Thereafter followed a break in the relations between the two regions, at about the time when the Archaic Uruk script was invented in Mesopotamia. Not much later, an independent "proto-Elamite" script was invented and established in Iran. It was based on a repertory of abstract signs, probably a mixture of word signs and syllable signs, written on clay tablets in lines from right to left. The script turned out to be relatively ephemeral, and is still undeciphered, with one important exception, the sign for "barley, grain." The number signs which are present in practically all proto-Elamite texts are formed in the same way as the number signs on the early Uruk tablets (Friberg 1984). It is possible to

show that the notational systems for sexagesimal numbers and grain numbers are nearly identical in the two scripts. There is also, unexpectedly, a third proto-Elamite system of number notations which is decimal, with special signs for "100" and for "1,000." Decimal number signs were probably used to count animals, while sexagesimal numbers were used to count people and inanimate objects. In the Sumerian scripts there were never any special signs for decimal numbers. The words for "hundred" and "thousand" in Sumerian were loanwords from the Semitic language of the Akkadian (Semitic) part of the population of southern Mesopotamia. Special signs for "100" and "1,000" did not exist until a relatively late date, around the end of the 3d millennium B.C. Cuneiform signs for "10,000" appear only in a few texts from peripheral sites (Nuzi, Hattusha, Ugarit). The explanation of the meaning of the proto-Elamite number signs entails an important partial decipherment of many proto-Elamite clay tablets. A majority of the texts can be shown to be simple economic or administrative documents with additions, multiplications, and conversions between various systems of numbers. In this respect there is no great difference between protoliterate texts from ancient Iran and from neighboring Mesopotamia.

4. Ancient Egypt. Available facts suggest that writing was invented in Mesopotamia toward the end of the 4th millennium B.C. Information about the new technique must have spread rapidly, for within a very brief time span two other independent scripts were invented, the proto-Elamite script in Iran and the hieroglyphic script in Egypt. The latter seems to have been fully developed from the beginning, complete with notations for large numbers up to a million (the image of a seated god stretching up both arms). The role of "a million" as a conventional notation for a "vast number" is clear from its frequent appearance in Egyptian myths (*ANET*, 3–36): In *The God and His Unknown Name of Power* it is said about Isis, "Her heart was craftier than a million men; she was choicer than a million gods; she was more discerning than a million of the noble dead." In the *Spell for Not Dying a Second Time,* Atum answers the deceased, "Thou art (destined) for millions of millions (of years), a lifetime of millions." The only whole numbers appearing in the hieroglyphic script are decimal numbers: a single stroke for "1," an arc for "10," a lotus for "100," a finger for "1,000," and a tadpole for "10,000" (Gillings 1972). Hieroglyphic numbers in monumental inscriptions were formed by the additive principle, so that writing a number like 89 required 17 symbols, 8 nines and 9 ones. For everyday practical purposes, the cursive hieratic script was developed, with individual signs for the units 1–9, for the tens 10–90, for the hundreds 100–900, and for the thousands 1,000–9,000 (See *LA*, s.v. Symbolische Zahlen). Place-value notation for decimal numbers and fractions was never introduced.

Three kinds of notations for fractions appear in the hieratic and hieroglyphic scripts, namely "unit fractions" $1/n$, individual signs for the "special fractions" $^1/_2$, $^1/_3$, $^1/_4$, $^2/_3$, and $^3/_4$, and signs denoting binary fractions (from $^1/_2$ to $^1/_{64}$) of the basic units of capacity and area measure. In their hieroglyphic forms, the capacity fractions were fashioned as parts of the eye of the falcon god Horus: the inner part ($^1/_2$), the iris ($^1/_4$), the eyebrow ($^1/_8$), etc. The unit fractions *1/n* were written with the sign *r'*, "mouth," as *r'-5*, *r'-6*, etc. Mathematical papyri from the first half of the 2d millennium B.C. show that the concept of common fractions a/b was unknown. This led to great practical difficulties in the course of even the simplest computations involving fractions. The best-known example is constituted by the *Rhind Mathematical Papyrus* (Robins and Shute 1987). A disproportionally large part of this document is occupied by a table with rules for the doubling of unit fractions, from $2 \times {}^1/_3 = {}^2/_3$ to $2 \times {}^1/_{101} = {}^1/_{101} + {}^1/_{202} + {}^1/_{303} + {}^1/_{606}$. Doubling was an important arithmetical operation for the reason that multiplication by any whole number could be replaced by a series of doublings, followed by an addition. So, for instance, since $13 = 1\times8 + 1\times4 + 0\times2 + 1 \times 1$, the product 13×7 can be computed as $(1\times8 + 1\times4 + 0\times2 + 1\times1) \times 7 = 1 \times 7 + 0 \times 14 + 1 \times 28 + 1 \times 56 = 105$. The method had the advantage that it could be used equally well for solving division problems. It is possible that Egyptian scribes carried out additions on some kind of primitive abacus. Multiplications, divisions, and operations with fractions were carried out explicitly on the papyrus, sometimes with the use of both black and red ink for the reader's convenience.

Some important late Egyptian mathematical texts (3d century B.C.–2d century A.D.), written in the demotic script, were published by Parker (1972). At this time, the Persian and Greek conquests of Egypt had opened the way for increased cultural contacts between Egypt and Mesopotamia. This fact is obvious

in Parker's demotic mathematical texts, which demonstrate a typically Babylonian choice of topics. On the other hand, the conservativeness of Egyptian mathematical traditions manifests itself through the continued use of the unwieldy unit fractions as the sole means of expressing fractions.

A few late Greek mathematical papyri from the middle of the 1st millennium A.D., recovered from sites in Egypt, are other examples of how amazingly tenacious mathematical traditions can be (Knorr 1982). *Papyrus Akhmim,* the most complete of these texts, shows clear similarities with the more-than-2,000-years-older *Rhind Mathematical Papyrus.* It begins with an extensive multiplication table for unit fractions, and continues with 50 arithmetical problems, many solved with techniques related to those used in the construction of the table. The main part of the table lists the products of $^{2}/_{3}$ and the unit fractions from $^{1}/_{3}$ to $^{1}/_{10}$ with the units, tens, hundreds, and thousands. The products are expressed as sums of unit fractions, as in the example $^{1}/_{7} \times 1{,}000 = 142\ ^{1}/_{2}\ ^{1}/_{3}\ ^{1}/_{42}$.

The number notations used in the mentioned Greek-Egyptian papyri are Greek alphabetic numerals (Ifrah 1981), using the letters *alpha–theta* for the units, *iota–koppa* for the tens, and *rho–san* for the hundreds. The classical Greek alphabet with its 24 letters is, for this purpose, augmented with three obsolete letters, the *digamma* (6), the *koppa* (90), and the *san* (900). The thousands and the myriads (ten thousands) are denoted by the letters *alpha–theta* with special distinguishing marks. It is difficult to assess the age of this system, but it is documented in a marriage contract on a papyrus from Elephantine 310 B.C., on coins dating from the reign of Ptolemy Philadelphus (286–246 B.C.), and in papyri with multiplication tables and tables of squares from the last part of the 3d century B.C. From this time until the end of the Middle Ages, the Greek alphabetic numerals played nearly the same role in the Near East and around the eastern Mediterranean as the Roman numerals did in western Europe. However, the alphabetic numerals were not the only type of numerals used by the ancient Greeks. In Greek monumental inscriptions from the second half of the 1st millennium B.C. (and also on a famous Greek counting board) one encounters Attic (or Athenian) numbers, with special acrophonic signs for 1, 5, 10, 5 × 10 … 5 × 10,000. The Attic number system was of the same structure as the more well known Roman system.

5. Ancient Syro-Palestine. Around the middle of the 3d millennium B.C., Ebla was a flourishing Semitic city-state in Syria. The remains of its rich library were found to contain mostly administrative and economic accounts written in Eblaic on clay tablets using the Old Sumerian cuneiform script. The numbers used in these accounts are decimal. One of the texts is a mathematical exercise, the solution of a division problem involving high numbers (Friberg 1986). It is the oldest known mathematical text with decimal numbers. The problem solved in the text can be formulated as follows: if a month's rations for a man is $^{10}/_{11}$ *gu-bar* of barley, then how many *gu-bar* are needed for the daily rations of 260,000 (2 *ma-i-ḫu* 6 *ri-ba*$_x$) men? A clever and efficient algorithm yields the correct answer: 7,879 *gu-bar.* The number in the answer is written in a decimal-sexagesimal hybrid notation which is typical for Semitic cuneiform texts as 7 *li* 8 *mi* 60 + 20 – 1. Another text from Ebla, in Sumerian, contains a brief list of notations for high sexagesimal numbers. It ends with an admission of defeat: the number 60 × 60 × 60 × 60 (= 12,960,000) "cannot be counted," since the scribe cannot think of an appropriate notation for it. In an OB metrological list, the same number is referred to as "the great ŠR the hand does not reach."

Mari, a Mesopotamian outpost at the upper Euphrates, has yielded a few OB mathematical texts (Soubeyran 1984). The texts comprise the usual assortment of combined multiplication tables and tables of reciprocals or square roots. There is also a mathematical exercise which contains an early parallel to the famous Indian legend about the reward demanded by the inventor of the game of chess: if one starts with 1 grain of barley, and if the amount of barley is doubled every day, how much barley will there be after 30 days? The answer, correctly computed and expressed in the Mari grain measure system, has one unexpected feature: the words *līmum* and *mētum,* which normally stand for "thousand" and "hundred," have here the sexagesimal values 600 and 60. There exist roughly contemporaneous examples of a similar nature from Mesopotamia, which clearly demonstrate the difficulties caused by the clash between the sexagesimal arithmetics associated with the Sumero-Akkadian cuneiform script and the indigenous decimal number words of the Semitic populations.

The coastal city Ugarit, which flourished between the 15th and 13th centuries B.C., was influenced by the Mesopotamian civilization. This is clearly demonstrated, for instance, by some clay tablets found in Ugarit, on which Sumero-Akkadian metrological lists (lists of notations for measures of capacity, weight, and area) are inscribed in the cuneiform script. In one of these lists, capacity measures are enumerated from 1/3 SÌLA (= 1/3 liter) to 60 SIG^7GUR (= 60 × 60 × 60 × 5 × 60 SÌLAS). In another list, weight measures proceed from 1/2 grain to 60 talents (=60 × 60 × 60 shekels = 60 × 60 × 60 × 3 × 60 grains). Texts written in Ugaritic using the Ugaritic cuneiform alphabet often express numbers in terms of Ugaritic number words, and use the local system of weight measures. A good example is offered by a brief text (Liverani 1972), which mentions *šbʿ.kkr.šʿrt?b.kkr.aḏdd|wbkkr.ugrt ḫmš.kkrm alp.ṯmn mat kbd d mnḥt* "seven talents of wool in the talent of Ashdod, but in the talent of Ugarit five talents one thousand eight hundred [shekels] as tribute." The text seems to imply that the talent of Ashdod was worth only 4/5 of the talent of Ugarit. Indeed, 4/5 × 7 talents= 53/5 talents=5 talents 1800 shekels, if 1 Ugarit talent=3000 shekels. The number word of highest rank in Ugaritic is *rbt*, "myriad," "10,000." For the "special fractions" 1/2 and 1/3 the usual cuneiform signs are used, but 2/3 was referred to by the Sumerian/Akkadian loanword *sûnpt* (Gordon 1965).

The order of the 30 letters in the Ugaritic cuneiform alphabet is known from several alphabetic lists, so-called "spelling books," from about the 14th century B.C. (Ifrah 1981: pl. 95). The oldest known examples of the Phoenician "linear" alphabet, on the other hand, go back no further than the 12th century B.C. The 22 letters of the Phoenician alphabet are arranged in the same familiar ways as the letters in the many alphabets derived from it: Aramaic, Hebrew, early Arabic (see below), Greek, Etruscan, Roman, etc. Moreover, if those 8 letters are removed from the Ugaritic alphabet which have no equivalents in the Phoenician alphabet, then the remaining letters in this alphabet are also arranged in the same order. It is therefore probable that the Ugaritic alphabet was just an expanded variant (in cuneiform) of a primordial Northwest Semitic alphabet dating back at least to the 15th century B.C. This conclusion is important because the ancient Greeks were not the only, and probably not the first, people using alphabetic numerals. Other examples are the Hebrews and the Arabs. (The often repeated attribution of the first use of alphabetic numerals to the Phoenicians has, however, never been confirmed.) In the case of the Hebrew alphabet with its 22 letters, *ʾalep–ṭet* are used for the values 1–9, *yod–ṣade* for 10–90, and *qop–taw* for 100–400 (Ifrah 1981: chap. 17). Higher number units are expressed by combinations of letters. In the case of the Arabic alphabet, the situation is complicated by the fact that the order of the letters in this alphabet is no longer the same as it was when the letters were given their numerical values (Ifrah 1981: chap. 21). The Early Hebrew script is used in inscriptions dating from the time of the kings of Judah and Israel (about the 11th to 6th centuries B.C.). Many such documents in the form of ostraca inscribed with simple receipts or messages reveal that not only number words but also genuine number signs were used to write numbers. Ostraca have been found at Samaria, Lachish, Arad, Kadesh-barnea, and Ophel Hill. In all cases the Early Hebrew number signs are identical with Egyptian hieratic numerals in the form they had during the New Kingdom (Ifrah 1981: chap. 15). This picture is confirmed by hieratic inscriptions on many Israelite inscribed weights (Aharoni 1966). Since 4 Israelite shekels weighed the same as 5 Egyptian *qedets*, weightstones of 4, 8, 16, and 24 shekels are inscribed with the hieratic numerals for 5, 10, 20, and 30. The best examples of inscribed ostraca with numbers are those from Kadesh-barnea (Lemaire and Vernus 1980; 1983). On one of these ostraca, a simple writing exercise, the number 2,382 is repeated many times. A particularly big ostracon contains on the obverse a list of capacity measures, from 1 to 10 *ʾlpm* (10,000) *kor*, a list of weight measures, from 1 to 10 *ʾlpm* shekels; and a partly unintelligible list of fractions (?).

As a trading and traveling people, the Arameans gradually imposed their culture on the entire Middle East. The Hebrews, who adopted the language and writing of the Arameans, also borrowed their way of denoting numbers, as did the Phoenicians and other Semitic peoples. Aramaic number notations were based on the use of separate signs for 1, 10, 100, 1,000, and 10,000. For the ones and the tens the additive principle was used, so that for instance 70 was written as 7 tens, grouped two by two so that the result looked like 20 + 20 + 20 + 10. For the units of higher rank the multiplicative principle was used, so that

18,000 was written as 1 × 10,000 + 8 × 1,000 (Ifrah 1981: chaps. 19, 25). Examples of Aramaic number notations can be found in many preserved papyri from the Jewish military colony established in the 5th century B.C. on the island of Elephantine, in the Nile. A bilingual ostracon found at Khirbet-el-Kom, a site in Israel between Lachish and Hebron, dates to the 3d century B.C. It mentions twice, once in Greek and once in Aramaic, a sum of 32 drachmas. In the Greek part of the text, 32 is written as *lambda beta,* in the Aramaic part as 20 + 10 + 2.

The oldest examples of the use of Hebrew alphabetic numerals may go as far back as the late 2d and the 1st centuries B.C., namely a single letter *mem* for a year date on a clay seal, and the letter *gimel* as a sheet number on a parchment scroll found at Khirbet Qumran (Ifrah 1981: chap. 18). Other examples are offered by coins with inscriptions such as "Shekel of Israel year 5*(he)*" (struck during the first Jewish rebellion, A.D. 70), and "Year 2 *(bet)* of the liberation of Israel" (from the time of the second Jewish rebellion, A.D. 132–34), etc. The relatively late dates of these first examples suggest that the Hebrew alphabetic numeration was introduced as a result of Greek influence. As a matter of fact, between the 1st century B.C. and the 7th century A.D., when the Hebrew alphabetic numeration became increasingly common in the Jewish world, many Jewish scribes in the Diaspora preferred to use the Greek alphabetic numerals.

B. Numbers in Poetic and Religious Literature

1. Sumero-Akkadian. In the Sumerian myth *Inanna's Descent to the Netherworld.*(*ANET*, 55), Inanna has to give up, one by one, her 7 ME-symbols, her crown, her wig, her measuring rod and line, etc., as she enters through the 7 gates to the netherworld. Her corpse is hung from a stake for 3 days and 3 nights, but it comes to life again when "sixty times the food of life, sixty times the water of life, they sprinkled upon it."

Three sources (two OB texts and Berossos' Babylonian history) contain lists of the Sumerian kings who reigned before the Flood, all characterized by an amazing longevity (Langdon 1923). In W.-B. 444, 8 antediluvial kings from five cities are said to have reigned for 8, 10, 12, 8, 10, 8, 8, $^{55}/_{6}$, and $^{51}/_{6}$ ŠR (meaning 3,600) years, or for a total of 1 ŠR-GAL 7 ŠR (=67 × 3,600) years. In W.-B. 62, 10 kings reign for 2 *šár-gal* 7 *šár* years, and Berossos mentions 10 kings reigning for an even 432,000 (2 ŠR-GAL) years.

The *Epic of Gilgamesh* enjoyed an unparalleled popularity in the cuneiform literature; its known editions, in four different languages, range in time from the 21st to the 6th centuries B.C., and in provenance from S Mesopotamia to Anatolia (Thompson 1928; Schott and von Soden 1969). One of its distinguishing features is the tendency to use numbers as a literary tool. This tendency is partly a consequence of the important role played by the teaching of mathematics and metrology in the Late Sumerian/Old Babylonian school, the *eduba.* To mention some examples: Gilgamesh, the godlike hero, is "two-thirds divine, one-third human," he is 11 cubits tall. Enkidu, his companion, "dallies six days, seven nights with the courtesan-girl in his mating." The two are each laden with axes and swords weighing 10 talents (600 minas). The gate of Uruk, Gilgamesh's city, has 7 bolts. On their way to the Cedar Forest, the heroes "break their fast after twenty 'double-hours,' rest after thirty"; after 3 days they have covered the distance from Uruk to Lebanon. Humbaba raises 8 winds against them. Ishtar's invitations are refused by Gilgamesh, who accuses the goddess of digging "seven and seven" pits to trap the lion she loves. Ishtar summons the Heavenly Bull, threatening 7 years of famine. The breath of the bull kills 100 men of Uruk, 200, 300. Enkidu lies on his deathbed "for a day, a second day … an eleventh and a twelfth." Gilgamesh follows the course of the sun, through the mountain of darkness, for 12 "double-hours." To cross the Waters of Death, he fashions punting poles 5 NINDAN (60 cubits) long and uses one, a second, …, a twelfth; after 2 times 60 they are all spent. Utnapishtim tells him how he made his ship 10 NINDAN high, 10 NINDAN square above, divided its innards, and smeared it with 6 times 3,600 measures of bitumen; on the seventh day the work was done. Gilgamesh fails the test for immortality, to avoid sleep for 6 days and 7 nights. The time he is asleep, 7 days in all, is noted on the house wall and marked by the 7 pieces of bread baked for him but not eaten.

The Babylonian *Story of the Flood* (Lambert and Millard 1969) is another example of a cuneiform literary work with interesting numbers. It begins with a description of the misery of the gods, summarized

in a difficult passage with the doubtful translation, "The seven great Anunnakū were making the Igigū suffer the work" (see below). Later, it is mentioned how Bēlet-kāla-ilī, Mistress-of-All-the-Gods, "nipped off 14 pieces of clay, 7 she put on the right, 7 on the left … 7 and 7 birth-goddesses, 7 produced males, 7 produced females." An oft-repeated motif is the lamentation "2 times 600 years had not yet passed, when the land extended and the peoples multiplied."

The prominence of the number 7 in the quoted examples is evident. Many more examples are quoted by Hehn (1907) from Mesopotamian and other sources. The etymology of the Semitic word for "7" is unclear, and cannot be used to explain the popularity of this particular number. The correct explanation may be simply that 7 is a conveniently sized odd number. It is also the first "nonregular" number in the sense of OB mathematics (it is not divisible exclusively by 2, 3, and 5). Hehn proposes that "7" may have, in many instances, the symbolic meaning "innumerable." The ziggurat of Uruk, for example, had 7 stories. Some lexical or bilingual texts translate "7" (but also "40" and "50") with *kisûsûatu,* a word meaning "totality." The clearest example is probably the Babylonian-Assyrian ^{d}7-*bi* or ^{il}*si-bit-te,* the "Seven Gods," often mentioned together with, or instead of, the "Great Gods" and all "Known and Unknown Gods." The Seven Gods are associated with the enigmatic Anunnakū and Igigū (see *RLA* s.v. Igigu), which are sometimes responsible for all kinds of unfavorable events, sometimes representative of all gods in the heavens or on the earth. Interesting cryptograms for Anunnakū and Igigū are 1 10 and 5 1 1. The first of these cryptograms may have the value 1 (60) × 10=600, the other both 5 (60) × 2=600 and 5 + 1 + 1=7.

A NB metrological table text from Uruk (von Weiher and Friberg, unpubl.) begins with a table of "mystic numbers" of the gods. After some damaged lines follow the equations ^{d}7 - *bi*=[7], ^{d}I - gi^{4} - gi^{4} = 8, ^{d}*A - nun - na - ki* = 9. The table goes on, assigning the numbers 10, 20, 30, 40, 50 to the great gods Bēl, Shamash, Sîn, Ea, and Enlil. This second group of mystic numbers appears also, with a few others, in a NA mystic text (Livingstone 1986: 30) listing "names of Sîn," the moon god. That text assigns to Anu, "father of the gods," the number 1 (or 60). A related text (ibid., 22) starts by mentioning the days of the month associated with Sîn: the 7th day, the 14th day, the day of the full moon *(sûapattu),* etc. It continues with a series of "metamathematical" equations. One example will suffice: it is stated that the 22d day is associated with the 14th day, because 14 × 10 = 140 = 2 20 (base 60), and if the order of the digits is reversed, then 2 20 becomes 20 (+) 2 = 22. The numbers 40 and 50 appear as ideograms for gods already in texts from the 3d millennium.

Metamathematical reasoning may also lie behind the fact that 3 20 appears as a cryptogram for "king" in cuneiform omen texts. Indeed, 20 (the number of the sun god) is a common ideogram for *šarru,* "king," and 20 × 10 = 200 = 3 20 (base 60). Other common cryptograms in omen texts are 15 for *imittu,* "right," and 2 30 (= 15 × 10) for *šumēlu,* "left." According to a famous passage in an inscription of the NA king Sargon II, the wall around his city Dur Sharrukin (Khorsabad) measured 4 (3,600) 3 (600) 1 (60) 3 (6) 2 cubits. This is also, says Sargon in the inscription, "the number of my name." In an effort to explain this cryptic statement, one may resolve the king's name into its constituent parts *šarru-kīnu.* The first part of the name can be replaced by the cryptogram 3 20, the second part by the sumerogram GUB (the picture of a foot). A sign with the same pronunciation is GUB^{3} (the picture of a left arm), which is a sumerogram for *šumēlu,* "left" and can be equated with 2 30. In this way, the king's name can be expressed by the cryptogram 3 22 30, a sexagesimal number with 5 "ones" and 5 "tens." The length of the city wall transformed to sexagesimal place-value notation is 4 31 20, another number with 5 "ones" and 5 "tens," and therefore also another cryptogram for "Sharrukin" or "Sargon."

2. Ugaritic. Just like the Mesopotamian *Epic of Gilgamesh,* the Ugaritic poetic texts (Gordon 1949) exhibit a pronounced tendency to use numbers as a literary tool. In the *Baal and Anat Cycle,* for instance, "graded numbers" is a recurring theme: for the decoration of Baal's house, Ḫasis "pours silver by thousands, gold he pours by myriads." Baal declares that "a thousand *šd* the house shall comprise, a myriad *kmn* the palace" (*šiddu* and *kumani* are, respectively, Akkadian and Hurrian loanwords for a certain Ugaritic unit of area and length measure). A variant of this theme involves tens and ones together: Baal's conquests are immense, "He took sixty-six towns, seventy-seven cities, eighty, Baal … ninety,

Baal." Before descending into the underworld, he impregnates a heifer: "He lies with her seventy-seven times … eighty-eight times, so that she conceives." Another recurring theme is the "climactic series of numbers," as when Baal's house is turned into gold and silver by the application of divine fire: "Behold a day and a second … a third and a fourth … a fifth and a sixth, the fire eats into the house … on the seventh day the fire departs from the house." A similar climactic series appears in a passage in the Hittite *Song of Ullikummis.*(*ANET*, 122): "They drank once, they drank twice … they drank seven times; and Kumarbis began to speak."

The stylistic devices mentioned above are applied also in the *Epic of Keret.* In a dream, El advises king Keret, "For a day and a second, a third day, a fourth day, a fifth day, a sixth day, do not send thine arrows toward the city … behold at sunrise on the seventh, king Pbl will not be sleeping." Keret makes a vow: "If I may take Ḥurrai to my house … I'll give twice her price in silver, thrice her price in gold." "Vast numbers," starting with 3,000,000, are used in the description "Thine army, a great host: three hundred myriads (*ṯlṯ mat.rbt*), troops without number, soldiers without reckoning … arrayed in twos, look all of them arrayed in threes." The opening lines of the epic are hard to translate. It is usually assumed, perhaps in error, that they mention a sequence of unit fractions that sum up (almost) exactly to 1. The plight of King Keret is described as follows: "Destroyed is the house of the king, who had seven brothers, (there were) eight sons of one mother … a third died at birth, a fourth of disease, a fifth the pestilence gathered up, a sixth the sea engulfed, a seventh of them fell by the sword … a family is perished." In the *Epic of Aqhat,* a cycle of lean years is described in the words "Seven years may Baal fail, eight the Rider of Clouds, without dew, without rain …"

3. The Bible. "Graded numbers" is an often-used stylistic device in the OT In Deut 32:30, there are two linked pairs of graded numbers: "How should one chase a thousand, and two put ten thousand to flight, except … the Lord had shut them up?" In Isa 17:6, the ruining of Damascus is described in the parable "gleaning grapes shall be left in it … two or three berries in the top … four or five in the outmost fruitful branches." A more elaborate gradation can be found in Gen 4:24, "If Cain shall be avenged sevenfold, truly Lamech seventy-and-seven-fold." In Amos 1:3–2:15, the Lord says, "For three transgressions of Damascus, and for four, I will not turn away the punishment thereof," after which follows a list of 8 transgressions and punishments. A "climactic series of numbers" appears in Genesis 1: "And the evening and the morning were the first day … the sixth day … and on the seventh day God ended his work which he had made."

Vast numbers occur frequently in the OT Sometimes they are precise, as in Num 3:43, where the firstborn males of Israel number "twenty and two thousand two hundred and threescore and thirteen," with an excess of 273 over the number of the Levites, an excess which had to be redeemed by 5 × 273 = 1,365 shekels of the sanctuary. Sometimes they are symbolic or hyperbolic, as in Daniel's dream in Dan 7:10: "thousand thousands ministered unto him, and ten thousand times ten thousand stood before him" (cf. Rev 5:11). According to Dahood (1981), the difficult passage Ps 4:8 may be translated, "Put joy in my heart; a hundred thousand fold *(mā‹ōt)* be their wheat, and their wine ten thousand fold *(rabbû)* " Similarly in Isa 48:19, "Your offspring would have been like the sand, and the issue of your body like its hundred thousand grains" (cf. Gen 41:49, "And Joseph gathered corn as the sand of the sea, very much, until he left numbering; for it was without number"). Sand as a symbol for the "innumerable" appears also in Gen 23:17, where the Lord promises Abraham, "I will multiply thy seed as the stars of the heaven, and as the sand which is upon the seashore."

Several numbers occur frequently in the Bible and are of symbolic or cultural significance, notably "7" (Gen 41:26, "The seven good kine are seven years; and the seven good ears are seven years; the dream is one"), but also, for instance, "3" (Job was blessed with 7 sons and 3 daughters), "4" (4 rivers issued from the garden of Eden), "10" (the number of righteous men required to save Sodom), "12" (the sons of Jacob were 12), "40" (the number of years the Israelites wandered in the wilderness), "70" (Jer 25:11, "these nations shall serve the king of Babylon seventy years"), "1,000" (see above), and many numbers derived from these. The examples can be multiplied. Besides, many biblical (as well as Talmudic or Midrashic) numbers have a sexagesimal structure (2 Chronicles 2: "And Solomon told out threescore and ten

thousand men to bear burdens, and fourscore thousand to hew in the mountain, and three thousand and six hundred to oversee them"; Gen 8:6, "And Noah was six hundred years old when the flood of waters was upon the earth").

Many attempts have been made to find correlations between the antediluvian section of the Sumerian King List and the genealogy in Genesis 5 The futility of such attempts is obvious in view of the fact that there are three bids for the total length of the reigns of the Sumerian kings before the Flood (67, 127, and 120 times 3,600 years), while in the Hebrew Bible the years between the creation and the Flood are 1,656, in the Septuagint 2,262, and in the Samaritan recension 1,307. There is no discernible regularity in the listed ages of the patriarchs at the time when they begat their first son, or at the time of their death. On the other hand, Noah was an even 500 years old when he fathered Shem, Ham, and Japheth, and 600 at the time of the Flood. Lamech lived for 777 years, until 5 years before the Flood, and Methuselah lived for 969 years, only to die in the Flood. Enoch lived for 365 years, or for as many years as there are days in a year.

Many interesting numbers are mentioned in Revelation 7–9. To mention a few examples: "four angels standing on the four corners of the earth, holding the four winds of the earth," "and there were sealed an hundred and forty and four thousand of all the tribes of the children of Israel," "and when he had opened the seventh seal there was silence in heaven about the space of half an hour; and I saw the seven angels which stood before God; and to them were given seven trumpets," "and the fourth angel sounded, and the third part of the sun was smitten," "and the number of the army of the horsemen were two hundred thousand thousand." Even more interesting is the well-known passage in Rev 13:18, "Let him that has the understanding count the number of the beast; for it is the number of a man; and his number is Six hundred threescore and six." It is reasonable to assume that this "number of the beast" should be explained by interpreting the letters of some detested name as alphabetic numerals (Ifrah 1981: 332). The problem has tried the ingenuity of interpreters for centuries, and many different solutions have been proposed. If, for instance, the name of Nero is written as *nrw (n) ḳsr*, then the sum of the values of its letters is equal either to 100 + 60 + 200 + 50 + 200 + 6 = 616, or to 616 + 50 = 666. In order to find the proposed hidden sense of many words or passages in the Scriptures, a kind of numerology called gematria (from Gk *geometria*) was developed in the Talmudic, Midrashic, and Kabbalistic literatures (Ifrah 1981: 321–36). The basic idea was to interpret words, or groups of words, by computing the sums of their constituent letters as alphabetic numerals, and relating words to each other if they added up to the same letter sums. To quote just one example: the difference between letter sums of the Hebrew names of Adam and Eve *(ḥawah)* is (1 + 4 + 40) – (8 + 6 + 5) = 45 – 19 = 26, and 26 is the letter sum of YHWH.

A. The Title

The Hebrew title of the fourth book of the Torah is called *bĕmidbar,* "In the Wilderness." The English title, *Numbers,* goes back to the Latin *Numeri* and the earlier Greek (LXX) *arithmoi.* However, the LXX title is probably derived from the oldest Hebrew title, *ḥōmeš happĕqqûdîm,* "the Fifth (of the Torah concerning) the Mustered" (*m. Yoma.* 7:1; *m. Menaḥ* 4:3), referring to the several censuses recorded in the book (chaps. 1–4, 26). It was also entitled *wayyĕdabbēr* after the first word (see Rashi on Exod 38:26), as is the case with the other books of the Torah. The present Hebrew title, *bĕmidbar* (the fifth word of the opening verse), seems more apt since it actually encompasses all the events described in the book, which took place "in the wilderness."

B. The Subdivisions

The book of Numbers describes the journey of the Israelites from Mt. Sinai to the borders of Canaan. Their 40-year trek comprises 40 stations (see chap. 33) which can be subsumed under three main stages: the wilderness of Sinai (1:1–10:10), where the preparations for the journey are made; the vicinity of Kadesh (10:11–20:13), where the bulk of the 40 years is spent; and from Kadesh to the steppes of Moab (20:14–36:13), where they prepare for the conquest and settlement of the promised land.

Numbers also subdivides according to temporal as well as spatial criteria. The 40 years embrace two generations, both of whose accounts begin with the census (chaps. 1 and 26). The generation of the Exodus, doomed to die in the wilderness (14:32–34), is finally extinguished by a plague at Baal-peor

(25:9, 18–19). Thus, the second census, which follows immediately upon the plague (25:19), states unambiguously: "Among these there was not one of those enrolled by Moses and Aaron the priest when they recorded the Israelites in the wilderness of Sinai. For the Lord has said of them, 'They shall die in the wilderness.' Not one of them survived, except Caleb the son of Jephunneh and Joshua the son of Nun" (26:64–65). The chapters that follow the second census (27–36) differ sharply from the preceding ones, which are informed by murmuring and rebellion (chaps. 11–14; 16–17; 20:1–13; 21:4–9); later ones, however, describe the fidelity and stoutheartedness of the new generation (chap. 32), which, as a reward, does not lose a single life, even in battle (31:49). That these chapters constitute an organic literary block is indicated by the accounts concerning the daughters of Zelophehad which flank them at both ends (27:1–11; 36.

C. The Cohesion

Regardless of how one conceives the overarching organizational structure of the book, it is more important to note the thematic and verbal links that bind the material together. Chaps. 1–10 deal with the preparations for the march through the wilderness: chaps. 1 and 2 constitute the census and camp arrangement predicated upon military criteria. Chaps. 3–4, 7–8 deal with the Levites: they undergo a census for guarding and transporting the tabernacle (chaps 3–4); they receive carts from the tribal chieftains for the tabernacle transport (7:1–9); they are purified prior to their entry into tabernacle service (8:1–22); and they are informed of the retirement regulations (8:23–26).

The laws comprising chaps. 5–6 are inserted into these preparations for the march since they have as their common denominator the prevention and elimination of defilement in Israel's camp. Thus 5:1–4 banish the bearers of severe impurity; 5:5–8 prescribe reparation for the desecration of God's name in a false oath; 5:11–31 ordain a test for the suspected (defiled) adulteress; 6:1–21 highlight the law of the defiled Nazirite. However, the most likely basis for the joining of these pericopes is that in each the priest plays a prominent role: it is the priest who determines and terminates ritual impurity (5:1–4; see Leviticus 13–15), officiates at the reparation sacrifice (5:5–8), is the recipient of all sanctuary donations (5:8–10), executes the ordeal for the suspected adulteress (5:11–31), officiates at the ritual for the Nazirite (6:1–21), and offers the priestly blessing (6:22–27). If so, then chaps. 5–6—perhaps originally an independent scroll—was inserted here because of its opening law, the impurity of the wilderness camp. Certain words bind the inner chapters: *maʿal,* "trespass" (5:6, 12); *ʾiššâ,* "woman" (5:31; 6:2); *ṭāmēʾ,* "impure" (5:2; 5:13, 14, 19, 20, 28, 29; 6:9) and, of course, *kōhēn,* "priest" (5:8, 9, 10; 5:15–26; 6:10, 11, 16, 19, 20; 6:23 [equivalent]).

Chaps. 11–14, 16–17 detail Israel's rebellions in the wilderness. Ostensibly, chap. 15, a legal miscellany, jarringly interrupts this sequence. However, its thematic and literary links with the previous unit prove otherwise. Chap. 15 begins with two laws that are operative in Canaan (vv 2, 18). They are a reassurance to the Israelites condemned to die in the wilderness that their children will indeed inherit the promised land (14:31). A third law (vv 22–31), bearing no heading, may originally have referred to the two preceding laws. The case of the Sabbath violator follows (vv 32–36) since his punishment is not certain: will he be subject to *kārēt* mentioned in the previous law (vv 30–31; see Exod 31:14) or is he to be put to death, as demanded by Exod 31:15? A fifth and final law, tassels, has no apparent connection with the immediately preceding material but was probably placed here to provide a verbal inclusion to the episode of the scouts (chaps. 13–14): by wearing tassels, Israel will henceforth be warned about "scouting" and "whoring" with sight and thought (14:33–34; 15:39).

Demoralized by the majority report of the scouts and condemned to die in the wilderness, the people are psychologically receptive to demagogic appeals to overthrow their leadership and return to Egypt. Four discrete rebellions have been fused in chap. 16, all attributed to the machinations of Korah. The aftermath vindicates Aaron when his fire pan of incense brings not death (16:35–17:5) but life (17:6–15) and when his rod blossoms miraculously (17:16–26). As a result of their hazardous responsibility in guarding the tabernacle against encroachment, the priests and Levites are granted specific endowments (17:27–18:32).

The position of chap. 19, purification rites for corpse contamination, is an enigma. By dint of its theme, corpse contamination, one would have expected it to have been placed with the other impurity sources

described in Leviticus 11–15, or at least with Num 5:1–4, which presumes a knowledge of the laws of corpse contamination (5:2). Why was it placed here? Perhaps the twice-mentioned warning that corpse contamination may pollute the sanctuary (vv 13, 20) made this chapter a natural sequel to the episode of Korah (chaps. 16–18), which deals especially with the issue of the desecration of the sanctuary by encroachment.

The traditions concerning the final stage of the wilderness march from Kadesh to the steppes of Moab are collected in chaps. 20–21 They are grouped in two parallel panels, the first detailing the failure and punishment of Moses and Aaron and the second describing the failure and deliverance of the people. The unifying theme is that God provides water (and all of Israel's needs) even when the leaders fail to do so. The emphasis on God's providence is perhaps what accounts for the insertion of the episode of the bronze serpent (21:4–9) and a new itinerary list (21:12–20), the latter containing two ancient poems (21:14–15, 17–18). A third poem, the Song of Heshbon (21:17–20) has been inserted to justify Israel's conquest of Transjordan (21:17–20).

The "Document of Balaam," as chaps. 22–24 are called in rabbinic tradition, is the largest independent section in Numbers. It has absolutely no verbal or thematic link with the contiguous chapters. The only connecting link is its setting: the steppes of Moab. Perhaps it performs the same function as chap. 15: it reassures Israel that despite her defection she is blessed and she will live through her posterity in the promised land. With the exception of the ass episode (22:22–35), itself an interpolation, these chapters, comprising both prose and poetry, are an integrated, interlocking, artfully structured unity.

The apostasy at Baal-peor (chap. 25) resembles the apostasy of the golden calf (Exodus 32) in context and placement. Both involve illicit worship, the slaughter of the guilty, and the choice of the line of the Levites/Phineas. Both describe the fall of Israel after having previously attained the sublime heights of the Lord's promise of Israel's future greatness (the Sinaitic covenant, Exodus 19–20, 24; Balaam's blessings, Numbers 23–24). According to one tradition (31:16), it was Balaam who plotted the Baal-peor apostasy. If so, it would account for its placement here.

The final 11 chapters of Numbers (26–36) are motivated by a single theme, the immediate occupation of the promised land: a (second) census of able-bodied men for war in the land and for the apportionment of the land (chap. 26); inheritance rights of women in the land (27:1–11; chap. 36); the succession to Moses in the land (27:2–13); the cultic calendar of the land (chaps. 28–29) and the fulfillment of vows (chap. 30); the war against Midian (chap. 31); the allotment of Transjordan (chap. 32); a summary of the wilderness stations (33:1–49); evicting the inhabitants of the land and extirpating their cult (33:50–56); the boundaries of the land (34:1–15); supervisors for the division of the land (34:16–29); the levitical holdings in the land (35:1–8); and preventing the pollution of the land by homicide (35:9–34). The final chapter, further instructions on women's inheritance rights (chap. 36), is an appendix; however, it forms an inclusion with the earlier material on the daughters of Zelophehad (27:11), thereby framing the chapters on the new generation (chaps. 27–36).

D. Alternation of Law and Narrative

A striking feature of Numbers is that law (L) and narrative (N) alternate regularly, as follows: 1:1–10:10 (L); 10:11–14:45 (N); 15 (L); 16–17 (N); 18–19 (L); 20–25 (N); 26:1–27:11 (L); 27:12–23 (N); 28–30 (L); 31:1–33:49 (N); 33:50–36:13 (L).

In the main, the narrative is confined to the wilderness march; the law, to the three main structures of the march: Sinai (1:1–10:10); Kadesh (chaps 15, 18–19); and the steppes of Moab (chaps 28–30, 34–36). However, there are exceptions. Certain events are associated with stations, e.g., the scouts (13–14), the Korahite rebellions (16–17), and the Midianite war and Transjordan settlement (31–32), and some laws arise from test cases, composed in narrative style, e.g. the *pesaḥ* (9:1–14), the wood gatherer (15:32–36), and Zelophehad's daughters (27:1–11). Thus, this alternation is not a matter of whether Israel was stationary or in motion.

The admixture of these two genres is of no surprise for anyone conversant with the ANE vassal treaties which open with a recounting of the suzerain's beneficial actions to his vassal (narrative), followed by the stipulations imposed upon the vassal (law). The book of Deuteronomy is a parade example of this literary

type where the law code (chaps. 12–26) is preceded by a recital of God's salvific acts for Israel (chaps. 1–11). Numbers, too, operates in the shadow of Sinai; Israel had accepted the suzerainity of its God and is bound to his law while the narratives continue to manifest divine providence (and Israel's backsliding).

E. Structures

The individual pericopes of Numbers manifest design. Their main structural device is chiasm and introversion. Also evidenced are such artifices as parallel panels, inclusions, subscripts and repetitive resumptions, prolepses, and septenary enumerations. The pericopes are linked not only to each other by associative terms and themes but also to similar narratives in Exodus by the same itinerary formula. The revelation to Moses at Sinai (Exodus 33) is the pivotal center not only for the Exodus and Numbers narratives but also the entire Hexateuch, which takes the shape of a grand introversion in which the events after Sinai repeat the failures and fulfill the promises of the pre-Sinaitic period.

F. Redaction

Despite this unmistakable evidence of recensional activity, one cannot with confidence speak of the redaction of Numbers. Redaction implies a single mind or, if several persons are involved, a single mind-set or school. To be sure, marks left by two editors from the Priestly school have been detected in the account of the scouts (chaps. 13–14), the Korahite rebellions (chap. 16), the war against Midian (chap. 31), and in other pericopes (e.g., chap. 36). However, there is as yet no way to ascertain if these strands were deposited by the same person. And even if they betray the same style and ideology, other pericopes reveal that another (Deuteronomic) school was at work. There are only two places where a Deuteronomic hand can be detected (21:33–35 and 32:7–15), and there is a strong possibility that it represents the last editorial activity in Numbers, even after the Priestly recension had been completed. This possibility will be augmented by the evidence, presented here below, that the Priestly material is of great antiquity. Yet, until new evidence is adduced, it would be more prudent to speak of Numbers' composition rather than its redaction.

One conclusion, however, can be asserted with relative certainty. The interpolations bearing the Priestly trademark show that the Priestly material does not comprise an independent source but is the product of at least two recensions. In other words, two writers of the Priestly school—possibly redactors—added their interpolations to combined Priestly and epic material, thereby composing the book of Numbers.

G. The Antiquity of Priestly Materials

There is scholarly consensus on the antiquity of the poetry and narratives that comprise the non-Priestly stratum in Numbers. The same verdict must be passed on those texts assigned to the priestly stratum as well. The sheer weight of the demonstrably old terms and institutions contained in the Priestly material renders such a conclusion ineluctable. The evidence of technical terms will be marshaled first.

1. Technical Terms. The sociopolitical divisions of ancient Israel are described by (1) *ʿēdâ,* "congregation"; (2) *môʿēd,* " (national) assembly"; (3) *maṭṭeh,* "tribe"; (4) *ʾelep,* "clan"; (5) *nāśîʾ,* "chieftain"; terms which cease being used after the 9th century. Even more compelling is the term (6) *ʿăbōdâ* which in the Tetrateuch (Genesis-Numbers) only means "physical work" and is the occupation not of the priests but of the Levites, whereas in the postexilic literature (e.g. Ezra, Nehemiah, Chronicles) it means "cultic service," the occupation of the priests. However, these two meanings are mutually exclusive: Levites perform cultic service on pain of death. Thus the fact the *ʿăbōdâ* is ascribed only to Levites in Numbers whereas in the Second Temple period priests alone are permitted to do *ʿăbōdâ* ineluctably leads to the conclusion that Levitic *ʿăbōdâ* is a preexilic phenomenon, and since this term proliferates throughout Numbers (chaps. 1, 3, 4, 7, 8, 16, 18), the cultic contexts in which this term is found must all be adjudged old. Similarly the term (7) *mišmeret,* meaning "guard duty" in Numbers, changes to "course of duty" in postexilic texts, a meaning, however, it does not have in Numbers, another indication that its cultic contexts in Numbers must be old. Evidence of another sort is provided by (8) *ʾāšam,* "feel guilt," the Priestly forerunner of prophetic *šāb,* "repent." Since the latter word is totally absent from the Priestly texts, and indeed from the Tetrateuch, it stands to reason that *ʾāšam* is a preexilic term—indeed, one that most likely was current before the 7th and possibly the 8th century when prophetic *šāb* became the prominent term for repentance. Further evidence has been adduced by (9) *mi* ...

wāmaʿălâ, "from … and upward" (1:3) and (10) *yityalĕdû,* "registered," which were replaced in postexilic texts by *mi … lĕmaʿălâ* and *hityaḥēs,* respectively. Also (11) *ḥallâ,* "loaf" (6:15, 19; 15:20), which appears only in the Priestly texts and in 2 Sam 6:19, is changed to the frequently attested *kikkār* when the latter passage is cited in 2 Chr 16:3, and (12) *leḥem tāmîd,* "regular bread" (4:7), *leḥem pānîm,* "display bread," in the Priestly texts (e.g., Exod 25:30; 35:13) and in the early narratives (1 Sam 21:5; 1 Kgs 7:48 [= 2 Chr 4:19]) is always referred to in postexilic books by the term *maʿăreket* (e.g., Neh 10:34; 2 Chr 2:3). Finally (13) *ʾummâ,* a rare word for "tribe" (25:15) attested in the Akkadian of ancient Mari, is usually replaced by *lĕʾōm.*

In addition to the 13 terms above which can be shown to have fallen out of usage by the time of the Babylonian Exile, there remains a host of other technical terms which are attested in literature—especially Mesopotamian—antecedent to the Bible. The term used at ancient Mari for (14) "muster the troops" is the exact cognate of *pāqad ṣābāʾ* (1:13). (15) None of the 24 names found in the list of chieftains (1:5–15) is compounded of the divine element YH (YHWH), a fact which corresponds with the tradition that the Tetragrammaton was first revealed to Moses. (16) Old Aramaic *ʿdn* and Akkadian *adê* correspond to biblical *ʿēdût,* "pact" (1:53). (17) The word *qārab,* "encroach" (3:10) has an exact cognate in Nuzi (15th century) Akkadian. (18) The word *millēʾyad,* "ordain," also has an older Akkadian equivalent (see 3:3). (19) The word *ṣābāʾ,* "service" (4:3) in Akkadian as well as Hebrew has a military and nonmilitary meaning. Other ancient Akkadian terms surfacing in the priestly texts of Numbers are (20) *ṣāb,* "draught animal" (7:3); (21) *ʿămûd,* "pillar" (14:14), i.e., the "standard" of the deity; (22) *pērēš,* "specify (by oracle)" (15:34); (23) *mišḥâ,* "perquisite, allotted measure" (18:8); (24) *ṣāmad,* "couple (sexually)" (25:2); (25) *mekes,* "tax" (31:27); and (26) *sikkîm,* "pointed object" (33:55). To be sure, this latter group of thirteen terms, though attested in antecedent Mesopotamian literature, could have survived even in late biblical Hebrew. But in their aggregate, and coupled with the preceding thirteen terms which demonstrably did not survive in postexilic Hebrew, they make a strong case for the preexilic provenience of their contexts.

2. Institutions. The antiquity of the terminology is matched by the antiquity of the institutions represented in the Priestly texts:

(1) Israel's camp in the wilderness is square-shaped; in later Israel the war camp was round. The wilderness camp most resembles the war camp of Rameses II, the probable Pharaoh of the Exodus. Not only is the latter square in shape but Pharaoh's tent sanctuary is in its center and is surrounded by thick walls as protection against defilement, a function supplied in Israel's camp by the levitical cordon.

(2) The custody of the tabernacle is shared by the priests who guarded inside the sacred precincts and the Levites who guarded without, a tradition that is found solely in the anterior Hittite cult. In the texts dealing with Solomon's Temple, however, the Levites do not appear at all and only surface in Ezekiel's visionary temple and in the postexilic writings which were influenced by the Torah literature. Moreover, the Levite guards of the tabernacle were armed, ready to strike down any encroacher, a fact which explains the action of Phineas at Baal-peor, who slew the encroaching couple in his capacity as chief of the levitical guards. Armed levitical guards are not, however, attested for the two Jerusalem Temples.

(3) The firstborn originally held a sacred status, possibly as officiants at the worship of the family's ancestors. Their replacement by the nonsacred Levites may reflect an ancient polemic and struggle against ancestral cults in Israel.

(4) The purification offering required of the Nazirite who successfully completed his vow conflicts with the Torah's definition of the *ḥaṭṭāʾt.* Following Rambam, the *ḥaṭṭāʾt* here serves directly to desanctify the Nazirite, a function that is more characteristic of the reparation offering. Like the boiled shoulder eaten by the Nazirite in the sanctuary court (see below), it probably reflects a more ancient usage of the purification offering prior to its differentiation from the reparation offering.

(5) The boiled shoulder of the Nazirite ram (6:19) is at odds with Israel's sacrificial system, which never requires the shoulder, nor that the lay offerer cook his sacrificial portion inside the sacred precincts. However, both practices are attested in pre-Israelite Lachish and pre-Temple Shilo.

(6) The details of form and manufacture of the tabernacle menorah do not correspond with those of Solomon's Temple or of later periods but most closely resemble the design of lampstands of the LB Age.

(7) The use of trumpets for assembling the people to worship as well as to war (10:1–10) is characteristic of the New Kingdom in Egypt.

(8) Ecstatic prophecy as a group phenomenon (11:25) is last attested at the time of Saul (1 Sam 19:20–24).

(9) The rebellions which are conflated in the Korah pericope (chap. 16) are redolent of high antiquity: that of the Reubenites, Dathan, and Abiram against Moses before their tribe lost its firstborn leadership status, and that of the Levites against Aaron before the struggle over which priestly family would control the Temple had been settled.

(10) The account of the war against the Midianites (chap. 31) bears many hallmarks of antiquity, chief of which is the absence of camels from the spoils whereas they predominate in the inventory of booty taken from the Midianites in Gideon's war (Judges 6–8). Thus the Mosaic account must have originated before the 11th century when the Midianites developed a camel cavalry.

(11) Moses permits his soldiers to marry their Midianite captive women (31:18), a precedent which Moses himself had set (Exod 2:16–21) but which was anathema to the postexilic age (for example, Ezra 9).

(12) The boundaries of the promised land (chap. 34) do not conform to any historical situation in Israel's national existence but are congruent with Egypt's Asiatic province during the period of the New Empire (15th–13th centuries). Transjordan, in particular, lies outside the promised land (and the Egyptian province) though it is occupied by Reuben and Gad during the period of conquest and settlement. The book of Deuteronomy, on the other hand, adjusts to historical reality by making the conquest of all of Transjordan a divine command.

(13) Deuteronomy, the product of the 8th and 7th centuries, is familiar with the following Priestly materials in Numbers: (a) details of the scouting expedition attributed to the Priestly strand (for example, 14:31–33; Deut 1:39); (b) the priestly dues (18:20; Deut 18:2); (c) the death of Moses (27:12–14; Deut 32:48–52); (d) the succession of Joshua (27:18; Deut 34:9); (e) the asylum cities (35:13–14; Deut 19:8–9). In addition, Deuteronomy exhibits knowledge of Priestly laws from other Torah books, for example, (f) priests are in charge of leprosy cases (Deut 24:8; Lev 13:2, 9, etc.); (g) blemished sacrifices (Deut 17:1; Lev 22:20); and (h) the reciprocal covenant (Deut 29:12; Exod 6:7; Lev 26:12). To be sure, it can be (and has been) maintained that in all these Deuteronomic passages a later editor interpolated these Priestly elements. However, it can be shown, in many instances, that the so-called additions are too integrated into their contexts to allow for their excision, and furthermore, it is more logical to posit a borrowing of Deuteronomy from the Priestly material than to assume that a later hand reworked so many Deuteronomic passages.

(14) The big bulge in the story of Gad and Reuben (32:7–15) is replete with Deuteronomic phrases. Thus it seems probable that the final redaction of this piece was done by a Deuteronomist. Of course, it can be maintained that this latter-day Deuteronomist lived in the postexilic period. This, however, is unlikely since it presupposes that the Deuteronomic school extended over several centuries. In any event, the existence of this Deuteronomic bulge proves that the last editorial hand in Numbers is not of the Priestly school.

(15) As Y. Kaufmann has already argued (1960), the absence of priestly sanctums such as the ark, the Urim and Thummim (27:21), and the anointing of oil (4:16) in the postexilic age speaks eloquently for their antiquity. Similarly, the 12:1 ratio of priests to Levites in postexilic times (Ezra 2:36–42; 8:15) cannot be squared with the 1:10 ratio presupposed by the tithe laws (18:26) unless the latter stem from a much earlier period.

In addition, there are many other institutions reflected in the Priestly texts of Numbers which are demonstrably old, as follows: (16) the census (1:2, 3, 49), whose closest model is that of ancient Mari; (17) the golden libation bowls inside the tent (4:8; 28:7), which may reflect a pre-Mosaic usage; (18) the priestly doctrine of repentance, which precedes the prophetic doctrine; (19) the antiquity of the temple

tithe, in general, and the tithe of the levitical tithe (18:25–32), in particular (ibid); (20) the letter to Edom (20:14–17), which resembles 2d-millennium diplomatic notes; (21) the copper serpent worshipped by Israel in the wilderness (21:4–9) and that found in a shrine in Timna, approximately the same place and time attributed to the Numbers passage. (22) It is possible that it is the priestly tradition that Balaam seduced Israel to engage in the idolatrous rites at Baal-peor, which is reflected in the 8th-century Deir ʿAlla inscription; (23) the second census (chap. 26) of Israel's clans (and not its tribes) belongs to the premonarchic age; (24) the Manassite clans (26:29–34) are shown by the Samaria ostraca (8th century) to be the names of districts, indicating that the Manassites settled there in a much earlier period; (25) the master itinerary of the wilderness march (chap. 33) most closely resembles, in form, 9th-century Assyrian itineraries; (26) the probability that the original plan for the levitical and asylum towns is to be found in the Priestly (rather than Deuteronomic) texts.

Thus, 11 Priestly terms and 15 Priestly institutions mentioned in Numbers disappear from usage in the postexilic age. In addition, 13 Priestly terms and 10 Priestly institutions, though they may have continued in use in later times, originate in the earliest period of or prior to Israel's national existence. In sum, we have 26 strong reasons and 23 supportive ones for affirming the antiquity of the Priestly material in the book of Numbers.

H. Polemics

Israel's ideological war with its pagan surroundings is reflected in the book of Numbers. Its first encounter with the Baal fertility cult in the steppes of Moab is calamitous, resulting in a devastating plague (25:1–9) and an avenging attack against the Midianites (25:16–19; 31:1–54). Balaam, the foreign diviner who is the instigator of the Baal apostasy—according to one tradition (31:16)—must unlearn his heathen arts before he can qualify for direct revelation from God. First, as he consistently insists to Balak, he is a diviner, not a sorcerer. Second—and here he enters the realm of Israelite prophecy—he discards the divinatory technique and seeks a direct communication from the Lord.

The transformation of Balaam is matched by the transformation of two rituals that were clearly pagan in origin. The ritual of the suspected adulteress (5:11–31), minus the interpolated verse 21, originally called for an incantation ordeal employing magical water but not invoking the name of any deity. The Priestly legislators, however, found the formula unacceptable since it ostensibly attributed the effect of the incantation to the water itself. They therefore inserted a statement affirming that the efficacy of the ritual was due to the God of Israel (v 21b).

An even more striking transformation of a widespread, long-enduring pagan belief is evident in the purification ritual for those contaminated by contact with a corpse (chap. 19). The preparation of the exorcistic medium, the ashes of the heifer, was totally overhauled so as to incorporate it into Israel's monotheistic sacrificial system. Moreover, the hitherto demonic impurity attributed to corpses was devitalized by denying it the automatic power to contaminate the sanctuary.

A polemic against paganism may also lie behind the replacement of the firstborn by the Levites (3:11–14; 8:16–19). That the human firstborn originally held a sacred status is indicated by their being "dedicated, sanctified, transferred, to the Lord" (Exod 13:1, 12; 22:28) and the need to "ransom" them from the Lord (18:15). This terminology may be a reflex of an attested custom in the ANE whereby the firstborn was expected to nurture and worship the spirits of his departed parents and grandparents. Thus the substitution of the firstborn by the Levite may reflect Israel's ancient struggle against the deeply rooted ancestor worship in its environment.

Priestly concerns play a major role in the book of Numbers. It is therefore not surprising that a number of issues addressed in this book express Priestly points of view and thus are brushed with polemical colorations. For example, Num 5:9–10 declares the right of each worshipper to choose the priestly recipient of his donations. The inflated language of this passage betrays its polemical character. The controversy within Priestly circles over the issue of egalitarian division versus worshipper's choice may be reflected here. The law of the temporary Nazirite (6:1–21) may also be a polemic. The priests may have frowned on lifelong Nazirites (e.g. Samuel and Samson) and their asceticism. Instead, they proposed a limited period which could be brought under priestly control (6:1–21). Finally, the possibility should be

entertained that the Priestly texts deny that Moses could communicate with God "face to face." Rather, he could only hear God's voice while standing in the outer room of the tent of meeting where the veil blocked his vision of the ark and cherubim onto which the divine fire cloud had descended. Thus the priests may have taught that the privilege Moses received to penetrate the fire cloud at Sinai's summit in order to receive the Decalog was unique: Moses was not vouchsafed the experience again.

I. Realism

It has been frequently averred that the Priestly laws predicate a utopia and do not reflect the existential conditions of Israel's life. Even those who posit that the Priestly laws were written in the Babylonian Exile affirm they are future-oriented—preparing the way for Israel's restoration and reoccupation of its land. To be sure, there can be no doubt that idealism permeates the Priestly legislation (indeed, every code sets forth ideals; otherwise why promulgate it?). Yet it is also true that these laws are permeated by a realism that reflects the social, economic, and political conditions that obtained in ancient Israel, and they thus provide a window on the life of ancient Israel. Evidence will be adduced from several laws in Numbers.

a. The census and organization of Israel's camp (chaps. 1–2) are grounded on military principles that reflect the actual dangers that persons on a trek through the wilderness would encounter.

b. The law of the suspected adulteress (5:11–31) is geared toward curbing the lynch mentality that prevailed in society and was thus meant to protect the hapless woman from the uncontrollable rage of her husband and/or community.

c. As discussed above, the Nazirite law (6:1–21) may be the Priestly countermeasure to the prevailing institution of the lifelong Nazirite.

d. Though the purification procedure for corpse contamination (chap. 19) uses wilderness terminology, it nonetheless reflects settled conditions. The impurity bearer, for example, need not leave his community, as is mandated by the older law of Israel's wilderness camp (5:1–4). This change, therefore, reflects the changed conditions of Israel's national existence—again an instance of law as a mirror of society.

e. The fact that the *šābûʿôt* festival is not called a *ḥag* (28:26) despite its designation as such in the other calendars of the Torah (Exod 23:16; 34:22; Deut 16:10, 16) implies that realism prevailed over idealism: the middle of the harvest season was no time to make a pilgrimage to the sanctuary. Furthermore, that this festival's designation as *ḥag* is missing in the one other Priestly calendar (Lev 23:16–21) proves that the omission of this term is no accident but a clear example of how the Priestly legislator accommodated the law to changing socioeconomic conditions.

f. The levitical settlements are a model of town planning. They allow not only for variations in size at the moment of their settlement but also for their future growth. This is realism at its finest.

g. The appendix to the case of Zelophehad's daughters (chap. 36) reflects the changeover from clan to tribal dominance. Thus the two stages of adjustment to reality are manifested here: the fear that daughters who inherit may marry first outside their clan and then outside the tribe. Once again, the Priestly legislation is shown to have undergone amendment in order to address changing needs.

J. Theology and Anthropology

1. The Presence of God. The principal actor in the book of Numbers, of course, is God. Even under extreme provocation, he keeps his covenant with the Israelites; guides them through the wilderness; and provides for their needs.

Of all of God's attributes, it is on his *ḥesed* that Moses bases his plea that God not destroy Israel (14:18–20). The word *ḥesed* stands for God's constancy, his fidelity to his covenant with Israel. It is this unimpeachable reliability of God's word that Balaam, the heathen prophet, lauds: "God is not man to be capricious / a mortal to change his mind / would he speak and not act / promise and not fulfill?" (23:19).

The high point in Balaam's praise of Israel is reached when he exclaims: "Lo, there is no augury in Jacob / No divination in Israel / Jacob is told at once / Yea Israel, what God has planned" (23:27). Israel, then, is unique among the nations. It needs neither diviners nor divination to learn the deity's will; it has direct access to God. Indeed, the Balaam story is nothing but the education of a prophet. At the outset, having associated himself with the God of Israel, Balaam rejects Balak's request that he curse Israel, an

act which would make him a sorcerer who could coerce the deity to accede to his desires. Balaam, however, will only admit to divinatory powers, which, by virtue of God's grace, enable him to discern his will. As Balaam proceeds—blessing Israel—he learns something else: the Lord need not be approached by complex techniques. Balaam then casts aside his divinatory apparatus and becomes a true prophet "who hears God's speech / who beholds visions from the Almighty / Prostrate, but with eyes unveiled" (24:4).

To be sure, there is a qualitative difference between Moses and any other prophet. To the latter, "I make myself known to him in a vision / I speak with him in a dream" (12:6). Not so with Moses: "With him I speak mouth to mouth / Plainly and not in riddles" (12:8). This distinction is also apparent in the degree of approachability to God: when Moses is in the company of Aaron or his people, God's presence—*kābôd* (see below)—is beheld in the tabernacle courtyard (14:10; 17:8, 15; 20:6) to which all of Israel has access. However, when Moses meets with God alone, he is permitted to stand inside the tent, before the veil (7:89; 17:19). Nonetheless, it must be remembered that this distinction is not in kind but in degree. Divination presumes that the deity leaves traces of his plans imprinted upon natural phenomena which the skilled diviner can discern. Not so, proclaims Israel: God will disclose his will to a prophet only when he so desires and he does so directly, eschewing mediation.

The *kābôd* on Sinai's summit has transferred itself to the tabernacle, visible as a cloud by day and as fire by night (9:15–16). Its starts and stops determine Israel's stages and stations. Its constant visibility is a sign to Israel and the nations "that you, O Lord, are in the midst of this people; that you, O Lord, appear in plain sight when your cloud rests over them and when you go before them in a pillar of cloud by day and in a pillar of fire by night" (14:14b). Thus the divine presence will enter with Israel into the promised land. Just as God's presence mandates the purity of his camp (5:1–4; 31:19, 24) so his presence in the land mandates Israel not to pollute in his land (35:34).

Since God's fire cloud descends upon the ark whenever he wishes to address Moses (7:89), the ark also serves as a tangible witness to the divine presence. The sight of the ark in battle holds promise that Israel will be victorious over its enemies (10:35–36; 31:6), while its absence is a sure sign that Israel will be defeated (14:43–44). That the ark is flanked by winged cherubim indicates that it represents a flying chariot, a symbol that God is not confined to his tabernacle-ark except when he descends upon it to communicate with Israel. During the march, the ark, distinguished by its blue cover (4:6), occupies the very center of the camp (10:21), but according to another tradition, it is placed at the head of the camp to lead the march (10:33).

God supplies Israel with all of its nutritional needs: manna and quail (11:14–34) and water, even when rejected by the people at large, or its leadership (20:12–13; 21:5). God also assures Israel's victory over its enemies (21:21–35; 24:8–9, 17–18).

2. Sacrifice. The doctrine of collective responsibility is nowhere better illustrated than in the *ḥaṭṭāʾt,* the purification offering. This sacrifice, brought for severe physical impurity on inadvertent violations, presumes that these offenses give off a miasma that is attracted magnetlike to the sanctuary and accumulates there until God abandons it and his people to their doom. Thus this sacrifice preserves a vivid image of how the individual can affect the commonweal.

The other sacrifice with a totally expiatory function is the *ʾāšām,* the reparation offering (5:5–8). It is brought for the desecration of the sanctums, be they cult objects or God's holy name. The latter offense, even if committed deliberately, may be expiated by this offering provided that remorse and confession have taken place. Thus only unrepented sins are ineligible for sacrificial expiation. Repentance alone, however, cannot absolve sin (in contrast to the later teaching of the prophets). According to priestly theology, repentance must be augmented by sacrifice; otherwise divine forgiveness is unavailable.

3. Intercession. a. Prophetic. The prophet's job is to defend his people before the divine judge. The intercessory role of the prophet is underscored by the Lord's statement to Moses after the scout heresy: "I would fain strike them with pestilence and disown them; let me make of you a nation …" (14:12), a statement which is semantically equivalent to the Lord's request of Moses following the apostasy of the golden calf: "now let me be, that my anger may blaze forth against them and that I may destroy them and

make of you a great nation" (Exod 32:10). First, by asking Moses not to intercede, God as much as admits that prophetic intercession is effective. Moreover, God seems to be hinting to Moses—perhaps even testing him—that he should intercede if he wants to save Israel. The psalmist, citing a striking image from Ezek 22:30, pays this tribute to Moses' intercessory achievement: "He would have destroyed them, had not Moses, his chosen one, stood in the breach in front of them, to keep his wrath from destroying them" (Ps 106:23). So, indeed, Numbers confirms that Moses interceded for his people at every turn and thereby assuaged the divine wrath (see 11:2; 12:13; 14:13–20; 16:22; 21:7).

b. Priestly. And yet a prophet, even a Moses, can only avert punishment; he cannot expunge the sin. Sin remains suspended over the heads of the sinners, capable of exacting retribution at a future date. Thus Moses' intercession mitigates or postpones the punishment but it does not abolish it: God's anger will take its toll and the sinners will die, be they Korah and his cohort (chap. 16) or the entire generation of the Exodus (chap. 14).

A priest, however, can not only intercede but win absolution as well. Aaron stems the plague by offering incense (17:6–14), and his grandson, Phineas, does the same by force (25:7–8). More typically, however, the priest obtains forgiveness by means of sacrifice (15:22–29). To be sure, sacrifice is not inherently efficacious; it must be accompanied by contrition and confession (for deliberate sins) and, even then, forgiveness is not assumed but is dependent on the grace of God. Still, the impact of the tandem repentance and sacrifice is total: the sin is erased from the divine record. This Priestly teaching predates the subsequent prophetic doctrine that repentance alone can eradicate sin, but it demonstrates that the older Priestly circles fully appreciated the power of repentance, even if they hitched it to the sacrificial system.

That repentance by itself in Numbers (and in the preceding Torah books) is incapable of shriving sin is evident from the fact that Moses never asks his people to repent. He also takes for granted that punishment is the ineluctable consequence of sin. Once only does he ask God for forgiveness, but his request is rejected out of hand (Exod 32:32–33). True, he also asks for reconciliation (*sālaḥ*.14:19), and this time his request is approved (14:20); however, this means only that God will not abandon Israel but will continue to maintain his covenant with it.

4. Levites. The book of Leviticus is the domain of the priests; the Levites do not appear there at all. But they proliferate in Numbers and, indeed, dominate the book. They are expressly excluded from the national census (1:47–53; 2:33) to be mustered separately (chaps. 3–4). They are assigned wagons for their transport duties (7:6–9), undergo purificatory rites when they join the work force (8:5–22), and are assigned guard duty in their retirement years (8:23–28). They march between the tribal units laden with the disassembled tabernacle (10:17, 21). Having joined Korah's rebellion against Aaron (16:7–10) they, henceforth, are represented by Aaron (17:18, 23). They are assigned lethally dangerous guard duties in the tabernacle precincts, for which they are rewarded with the tithe (18:1–6, 21–24). In the second census, they once again are counted apart from the people (26:57–62). They receive a 1/50 share of the spoils (31:30, 47) as well as 48 cities in the settled land, six of which are designated as asylums for unintentional homicides (35:6, 9–15).

The most important function of the Levites, one that invests their entire adult life, is to guard the sanctuary against encroachers. In fact, they are identified by this function—"guardians of the tabernacle of the Lord" (31:30, 47). In the ancient world, the entrances to temples were adorned with images of protector gods to ward off supernal demons. In Israel, where the world of demons has been abolished, the sanctuary remains in danger of defilement by the one creature capable of the demonic—man. His sin can pollute the sacred precincts and his physical encroachment upon the sanctums can bring down the wrath of the deity upon the entire community. The levitical cordon is therefore empowered to strike down the encroacher; moreover, it is made fully responsible if any encroachment occurs. Just as in the human sphere the guard pays with his life if anyone manages to slip through his watch (e.g., 2 Kgs 10:24), so in the divine sphere the levitical guards are guilty of a capital crime before God for failing to prevent encroachment upon the sanctuary. Henceforth, the Israelites need not be concerned that God will punish the entire community; only the encroacher and the negligent levitical cordon will pay the penalty. For

Israel's sake, God will compromise his doctrine of collective responsibility. The Levites will be the lightning rod to absorb the divine anger so that Israel may worship at the sanctuary without fear.

5. Priests. The centrality of the priesthood in assuring divine favor for Israel by means of sacrifice has already been discussed. The story of the Korahite rebellions (chaps. 16–17) vindicates the Aaronids as the sole priestly line and declares that any encroacher on their prerogatives is to be put to death (18:3, 7).

In Numbers, the priests are assigned the following roles: (1) to serve as guards at the entrance and in the courtyard of the tabernacle (3:38; 18:5); (2) to dismantle and cover the tabernacle sanctums before the Kohathite Levites carry them (4:1–20); (3) to officiate at the ordeal of the suspected adulteress (5:11–31), the rite terminating the aborted and successfully completed Nazirite period (6:1–21), the priestly blessing (6:22–26), the purification of the levitical work force (8:5–26), blowing the trumpets (10:8), and preparing the ashes of the red heifer (19:1–10).

The high priest is assigned even loftier responsibilities: (1) to intercede for Israel with sacrificial means (17:6–15); (2) to consult the Urim and Thummim oracle (27:21); and (3) to serve by his death as vicarious atonement for the unintentional homicide (35:28).

For their service, the priests are granted the following emoluments: they are assigned sacrificial portions, *ḥērem,* of the firstlings of pure animals, and the redemption price of impure firstlings and human firstborn (18:8–20), a tithe of the levitical tithe (18:25–32); and ¹/fs18 500th of the spoil (31:30, 41–46). The worshiper is permitted to designate his priestly officiant and recipient of his edible donations (5:9–10).

6. Israelites. All Israelites, men and women alike, are to attach tassels, each containing one violet cord, to the edges of their outer garments (15:37–41). The tassels render their garments *ša*ʿ*ăṭnēz,* a mixture permitted only to priests. The tassels must contain a violet cord, the emblem of royalty. Thus the tassels remind Israelites that they belong to a royal priesthood (Exod 19:6). Though only priests are holy from birth, all of Israel can aspire to a life of holiness (Lev 19:2). Belonging to royalty, they serve no mortal king; they are servants of God.

Yet Israelites who crave the austere life of the priesthood can do so by retaking the Nazirite vow (6:1–21); but this practice, it seems, is transitory and discouraged. Indeed, even Levites (see above), are not inherently holy. Though they are bound to the sanctuary as much as the priests, in ritual requirements they differ not at all from the laity. The priesthood, then, is the prerogative of the descendants of Aaron. Attempts on the part of the laity to break into this circle lead to disaster (chap. 16). It is enough that Israel's special relationship to God sets it on a path that leads to a life of holiness.

Another tradition in Numbers, however, sets not the priest but the prophet as the ideal and Moses as the paragon (12:6–8). Just as one cannot choose to be a priest, so one cannot be a prophet except by divine election (11:16–17, 23–25). Still, though Eldad and Medad's prophesying is regarded by Joshua as a threat to Moses' leadership, Moses rises to the summit of altruism when he proclaims: "Would that all the Lord's people were prophets, that the Lord put his spirit upon them" (11:29). This teaching is echoed by a later prophet: "After that, I will pour out my spirit on all flesh, your sons and daughters shall prophesy; your old men shall dream dreams, and your young men shall see visions" (Joel 3:1).

7. Moses. One would expect the traditions about a founder of a nation to be embossed with legend and hyperbole. Yet what surprises about Moses, particularly his appearances in Numbers, is his all-too-human, flesh-and-blood character. Betraying a streak of self-doubt (11:14; see Exod 4:10–14), he indulges in self-pity (11:11, 15), and even begins to doubt God (11:21–22); he becomes more intemperate (20:10–11) and—in the plain hearing of his assembled people—he allows his anger to overrun his words and commits the ultimate heresy: he attributes the miracle to himself (20:10). This man Moses we know; we recognize him in ourselves. He is burnt out, worn down by his grueling task, and chaps. 11–20 record his steady decline. Though it is years since his people have been liberated from Egypt, by their hankering after their past material security (11:5) and their panicky fears that the promised land promises only disaster (14:3), they reveal that they still are slaves. Moses cannot handle them. His leadership falters and he cannot be trusted to bring them into the land.

Yet despite these lapses, Moses remains a giant. Indeed, it is in this book that he attains unprecedented moral stature. Though he selflessly intercedes with God for his people whenever the occasion demands it (11:2; 12:13; 14:13–20; 16:22; 21:7), he refuses to utter one word in his own defense when his own family pillories his reputation, producing the editorial comment: "Moses was a humble man, more so than any other man on earth" (12:3). He bears no grudge against his sister Miriam when she defames him (12:1–2); to the contrary, he prays that her punishment be remitted (12:13). Moses brushes aside Joshua's warning that the prophesying of Eldad and Medad is a threat to his leadership: "Are you wrought up on my account? Would that all the Lord's people were prophets" (11:29). The Numbers traditions about Moses thus prove him capable of reaching new spiritual heights. True, he plummets to his nadir, but it is matched by his zenith.

Moses' lapses, though fatal, are few and momentary. Otherwise he is the unfailing leader. He has prepared his people militarily for the Conquest. Organizing them into an effective army (chap. 1), he succeeds in establishing a secure bridgehead on the Jordan by conquering much of the east bank (21:12–22:1) and by crushing the Midianites (chap. 31). His administrative acumen is in evidence when he provides for the succession to Aaron and to himself (20:22–29; 27:12–23) and when he successfully negotiates with the tribes of Reuben and Gad to lead their brethren in the campaign of conquest for the privilege of settling in the conquered Transjordan territory (chap. 32). To the end of his days he functions as covenantal mediator when he renders oracular decisions: the second Passover for impurity bearers (9:1–14), the punishment for the Sabbath violation (15:32–36), inheritance rights for women (27:1–11; 36:1–10). His continued success as prophet-intercessor has already been discussed above. Having consecrated the tabernacle and its clergy (Leviticus 8), Moses no longer officiates as priest (contrast Exod 24:8; and see Ps 99:6). However, he is still credited as the author of Israel's cultic institutions: purificatory rites (5:1–4; 31:19–20, 24), sacrificial accompaniments (15:1–16), priestly gifts (15:17–21; 18:25–32), and the cultic calendar (chaps. 28–29). To be sure, the Priestly tradition refutes the legendary superhuman status accorded to the figure of Moses: it allows Moses an aural but not visual audience with God (7:8a, and despite Exod 33:11) by barring him from the Holy of Holies, but it never denies that he was the greatest of men.

JACOB MILGROM

NUMENIUS (PERSON) [Gk *Noumēnios* (Νουμηνιος)]. In 1 Macc 12:16, Numenius, son of Antiochus, is mentioned along with Antipater, the son of Jason, in a letter from the high priest Jonathan the Hasmonean to the Spartans. Numenius and Antipater were to convey greetings to the Spartans, who were en route to Rome on a mission from Jonathan to restore cordial relations between Judea and Rome (ca. 143 B.C.E.). The presence of Greek names in this list should not be surprising given the Hellenistic atmosphere of the Hasmonean court (Tcherikover 1959: 252–53). Numenius is once again mentioned in 1 Macc 14:24 and 15:15 as the envoy of the Hasmonean high priest Simon to Rome. Numenius carried a large gold shield to Rome as a gift to confirm the peace between Judea and Rome (ca. 142 B.C.E.). Numenius' efforts were part of an Hasmonean foreign policy designed to court a growing Roman influence as a hedge against the threat of the Syrian Seleucids. Josephus expands the account in 1 Maccabees 12 by noting that Numenius was a member of the Judean ruling council (*Ant* 13.5.8 §169). Josephus also cites a decree from the Roman senate during the time of Julius Caesar noting the history of diplomatic relations between Rome and Judea (*Ant* 14.8.5 §§145–48). In this decree, reference is made to a Jewish mission to Rome by Alexander, son of Jason, Numenius, son of Antiochus, and Alexander, son

of Dorotheus, who present a golden shield to the senate. As both *Ant* 14 and 1 Macc 15:16 agree that the Lucius was Roman consul and as Josephus describes the purpose of the Jewish mission to Rome as the restoration of relations and mention is made of the gift of a golden shield, one cannot escape the conclusion that the subject is the mission described in 1 Maccabees 14 and 15 However, significant differences between the accounts exist. 1 Macc 14:22 names Numenius' colleague as Antipater, son of Jason, while Josephus names him Alexander. Further, in *Ant* 14 the mission takes place during the time of the high priest Hyrcanus (ca. 106 B.C.E.). Josephus' account may reflect a witness independent of 1 Maccabees but which nevertheless confirms Numenius' mission to Rome.

MICHAEL E. HARDWICK

NUN The fourteenth letter of the Hebrew alphabet.

NUN (PERSON) [Heb *nûn* (נוּן)]. Father of Joshua (Exod 33:11; Num 11:28; 14:6; etc.). He is named the father of Hoshea (Num 13:8, 16; Deut 32:44), and the father of Jeshua (Neh 8:17), but these names are variant forms of "Joshua." He is said to be the son of Elishama from the tribe of Ephraim (*nôn* of 1 Chr 7:27 being an alternate form of *nûn*). It may be that the LXX *naué* preserves a more original form of the Hebrew term *nāweh;* the *nûn* of the MT is a contraction of *nāweh* with the *n* enclitic. The word *nāweh* means "the herds and men comprising a nomad tribe," in contrast to "fish," the meaning of *nûn.* This suggests the possibility that the name is a tribal designation rather than a patronymic. For further discussion see Soggin *Joshua* OTL; and Boling and Wright *Joshua* AB.

PAULINE A. VIVIANO

NUNC DIMITTIS This is the Latin for "Now you are permitting me to depart," and has become the title of the poem of praise recited by Simeon in Luke 2:29–32 (See Fitzmyer *Luke I–IX* AB, 418–33; Farris 1985: 127–42.)

This poem, together with Simeon's remarks in vv 34–35, plays an important literary role in Luke's total work. The initial word *nyn* (now) echoes the word *sēmeron* (today) in v 11 At the same time it suggests a contrasting period of anxious waiting that finally is resolved in the present assurance of peace. Simeon sees what others have desired to see (Luke 10:24) and his patience is therefore a model for Christians who are to live in expectation of Christ's return (21:19). Unlike many self-styled benefactors (22:25) who do not fulfill promises, God is reliable and keeps faith. What Zachariah prophesied (1:76–79) is now fulfilled. In an echo of Luke 2:11, salvation is here again identified specifically with the person of Jesus. Especially significant is the pandemic perspective. In contrast to "all the people" in the singular (v 10), Simeon speaks of salvation that has been prepared for "all the peoples." This perspective is explored further in v 32 In contrast to the more limited view expressed in the Benedictus (1:78), Jesus is to be "a light for revelation to the Gentiles." This expression apparently means that because of Jesus, gentiles are to be viewed as proper candidates for salvation.

Simeon's statement is replete with allusions to Isaiah's presentation of the Servant of the Lord, whose identity fluctuates from corporate Israel (Isa 43:10; 44:1) to an individual Israelite (42:1; 49:1–6). On the one hand, it is Israel's obligation and high privilege to be a "light to the nations" (42:6). On the other hand, the anticipated extraordinary Israelite appears on the scene in the person of Jesus, whose mission is identical with that of Israel, to be a "light to the nations" (Isa 49:6). The implicit presence of these protagonists gives Simeon's words an intensely dramatic character. Will the two work together in carrying out the assignment? Will corporate Israel recognize that in Jesus, their "glory," they possess their greatest claim to fame? Luke's auditors know the answer, and it is confirmed with pathos in Luke 2:34–35 Nevertheless, as Luke 15 affirms, Jesus endeavors to secure the participation of Israel's caretakers in what ought to be a joint enterprise. In the face of rejection of the Lord's Servant, God is determined that Israel's mission shall be achieved. Among the chief representatives of Israel in the new community of believers are Paul and Barnabas, who declare at Acts 13:47 that they are committed to the assignment

given to the Servant (Isa 49:6). Similarly, at Acts 26:17–18 Paul assumes the obligations cited in Isaiah 49, and at Acts 28:28 solemnly confirms that the mission has been discharged. Thus Simeon's prophecy finds it dramatic fulfillment.

The Nunc Dimittis appears as an evening prayer in the *Apostolic Constitutions* 7.48.

FREDERICK W. DANKER

NUTS See FLORA.

NUZI One of the provincial administrative centers of the land of Arraphe, the capital of which was located at present-day Kirkuk in the second half of the 2d millennium B.C. This predominantly Hurrian city belonged at least for part of its history to Mitanni, one of the great nations of the Near East at that time. See HURRIANS; MITANNI. Nuzi's fame derives from the over 3,500 cuneiform tablets found there. These texts document the administrative activities of the palace and private estates for the latter part of the community's existence and the social and economic transactions of the city of Nuzi and the neighboring cities over a six-generation period. Especially significant is the information concerning administrative, social, economic, and legal structures and practices at Nuzi and neighboring cities and towns. These materials illustrate vividly the history and daily life of a mid-2d-millennium-B.C. community in the ANE. The customs so amply documented at Nuzi find parallels at other ANE sites and have helped to illuminate materials that otherwise would be poorly understood. Among the Near Eastern cultures compared with that of Nuzi, the world of the OT has received extraordinary attention.

A. Archaeology

Ancient Nuzi was located at modern Yorgan Tepe, 13 km SW of Kirkuk in N Iraq. Excavations of the site from 1929–31 exposed a large portion of the main mound of Yorgan Tepe and two small mounds to the N (Starr 1937–39). The site was occupied during the prehistoric, Akkadian, Hurrian, and Partho-Sassanian periods. During the Akkadian period it was named Gasur. Limited excavation to the Akkadian level produced a number of Sargonic texts apparently belonging to a royal estate (Foster *SCCNH* 2: 89–107; Meek 1932; 1935). The site is best known, however, during the Hurrian period of the mid–2d millennium B.C., when it was called Nuzi. For this phase at the site, the main mound yielded the architectural remains of a palace, a temple, administrative buildings, and numerous private residences. On the suburban mounds the homes of more affluent members of the community, including Prince Šilwa-Tešup and the families of Teḫip-tilla, son of Puḫi-šenni and Katiri, were located. Large quantities of ceramics ranging from fine palace ware to crude utilitarian vessels and an array of stone, bone, glass, and metal artifacts were found. Among the more distinctive finds are the ceramic animal figures associated with the temple and fragments of wall painting (Starr 1937–39). Cylinder seals were found at the site, but

the corpus of seal impressions on the tablets from Nuzi provides an unparalleled wealth of information for the history of glyptic art and the site of Nuzi itself (Porada 1947).

Archaeological evidence for Nuzi's (and incidentally, Mitanni's) international connections during the second half of the 2d millennium B.C. include the fragmentary "International Style" wall paintings that show Egyptian Hathor head designs, a bull's head, and a Syrian palmette design alternating in a frieze. In addition, Nuzi ware pottery with its characteristic light-on-dark painted designs is found throughout the Mitannian sphere of influence. The inspiration for this style has been traced to the Aegean. Furthermore, the Saustatar seal on *HSS* 9 1 is a superlative example of the Mitanni style in glyptic art, which draws on Syrian and Mesopotamian predecessors but contributes its own unique character (Smith 1965; Porada 1948).

B. Nuzi Archives

Some 3,500 cuneiform tablets were retrieved from buildings throughout the excavated areas of Nuzi. These tablets originate in family and administrative archives found in both the suburban and main mounds. Tablets were kept in family archives to the extent that they continued to have meaning to their owners. Tablets involving real estate passed with the property either through inheritance or sale and were kept as the legal deeds to the property over a number of generations. Non–real estate tablets, those involving personnel, livestock, and consumable goods, probably were transmitted in a similar fashion, but were kept for only as long as the ownership of the property might be questioned. In these cases, the time involved would be far shorter than that for real estate. Because of these practices, Nuzi archives contain many types of texts. In any given archive, however, real estate documents tend to represent the activities of many generations while other types of documents cluster near the end of Nuzi's existence. Similarly, in administrative archives in which the texts are largely ration lists and other documents relating to the daily activities of the palace or an estate the texts relate primarily to the later period of Nuzi. These archive-keeping practices generated materials within families over a number of generations and a vast amount of information concerning activities at Nuzi in its later period. (Morrison *SCCNH* 2: 167–213; 1979; Wilhelm 1980; 1986; Maidman 1976; 1979; Mayer 1978; Dosch 1976).

Scribal "families" (especially the family of Apil-Sin) who worked at Nuzi throughout its history have been identified in many archives. These scribal "families" serve as the skeleton for the reconstruction of the internal chronology of Nuzi. Because of the coherence of the individual archives and the numerous cross-references among them, an internal chronology of at least six generations can be established for the Nuzi tablets (Friedman *SCCNH* 2: 109–30; Stein *SCCNH* 2: 225–320; Wilhelm 1970).

C. History and Chronology

An absolute chronology for Nuzi is difficult to establish because there are few references in the texts to events and figures outside the land of Arraphe. The names of at least two kings of Arraphe, Kip-Tesûup and his son Itḫi-Tešup (also Ithiya), are known from royal letters, some bearing seal impressions, found in the Nuzi archives of Prince SÛilwa-Tesûup (Wilhelm 1970). The latter king was a vassal of Saustatar, king of Mitanni, as the famous Saustatar letter (*HSS* 9 1) indicates. A text mentioning Parsatatar (father of Saustatar) (*HSS* 13 165) suggests that Arraphe belonged to Mitanni during the reign of that king as well. Texts from the later period in the Nuzi archives mentioning Assyrian and Kassite activities in the region coincide with evidence from Assyria and Babylonia to suggest that the site was sacked by the Assyrians, perhaps during the reign of Aššur-uballiṭ I (1365–1330 B.C.).

Saustatar's dates remain problematic and the circumstances surrounding Nuzi's demise are not entirely clear, so Nuzi's exact place in ANE history has not been established. It is apparent, however, that the Nuzi archives span the period from Mitanni's dominance of northern Mesopotamia and Syria to the rise of the Middle Assyrian Empire. On the other hand, evidence from the Mari letters suggests that the site was settled by Hurrians and known as Nuzi as early as the reign of SÛamsûi-Adad, when his son Isûme-Dagan was embroiled in conflicts with the Hurrians to the north and east of Assyria (Wilhelm 1970).

D. Ethnic Identity

The Nuzi tablets are written in a dialect of Akkadian heavily influenced by Hurrian (Wilhelm 1970; Gordon 1938). The population of Nuzi was predominately Hurrian, but there are references to Assyrians,

Babylonians, and others living and working at Nuzi and elsewhere in the land of Arraphe. Furthermore, personal names, though largely Hurrian in origin, include Akkadian, Mitannian, Kassite, and other elements, attesting to the influence of these ethnic groups on the region (Cassin and Glassner 1977; Gelb, Purves, and MacRae 1943).

One group documented in the Nuzi texts that has received special attention is the *ḫab/piru.* These individuals of varied ethnic backgrounds entered the community to work in return for food, clothing, and protection. Typically, they placed themselves and their families in servitude (Akk *wardūtu*) in wealthy households. In some instances, they reserved the right to replace themselves and thereby regain their freedom. Initially, these Nuzi *ḫab/piru* were equated with the Hebrews because of apparent parallels in their behavior. They were foreigners who migrated into settled areas to make lives for themselves just as the Hebrews were doing in Egypt and Canaan. However, the linguistic and historical evidence from Ugarit, Alalakh, and Amarna demonstrates that the *ḫab/piru* cannot be categorized either as an ethnic group or generally as "foreigners" (Greenberg 1955). Instead, they appear to have been individuals who belonged to neither the settled nor the nomadic social orders of the ANE and in different locations were found assimilating to one or the other way of life (Rowton 1976). Indeed, at Nuzi they would appear to be homeless refugees who were trying simply to survive.

E. Social Structure

As would be expected at any urban center of the time, the socioeconomic structure of Nuzi was complex. The king of Arraphe and the royal family, including the queen, numerous *esrītu* women (concubines), and *mārē šarri* and *mārāti šarri* (sons and daughters of the king), stood at the peak of the social ladder. The king of Arraphe was a vassal of Mitanni, at least during the reigns of Parsatatar and Saustatar, but managed the internal affairs of his kingdom. In essence, the king was the head of the military, the economy, the law, and the cult.

At Nuzi the term SAL.LUGAL has been translated as "queen," but whether this term refers only to the chief wife of the king or to highly placed "secondary" wives remains an open question. Women so designated, however, include property owners and entrepreneurs who owned their own estates. A related issue is the existence of *esrītu* women or "concubines" as they are often called. The term is found only during this period in Assyria, the Hittite lands, and Mitanni, and so may have had a Hurrian connection. *Esrītu* women in Mitanni and the Hittite lands were attached to royal households (in Assyria they are found in private households), often owned property and engaged in business, and held high status in the community.

The *mārē šarri,* "sons of the king," were landowners and businessmen who also served in the military, and the *mārāti šarri,* "daughters of the king," appear in the records as landowners with households. Children of the king would inherit according to their rank, but even sons and daughters of "secondary wives" or *esrīti* women could rise to important economic positions in the state (Morrison 1979; Wilhelm 1980; 1986).

Below the royal family, well-to-do private citizens and officials, including judges, mayors, irrigation officers, and the like, formed the *rākib narkabti* ("charioteers," though they may not all have served in that capacity in the military), the equivalent of the *mariyannu* class elsewhere. These individuals had their own estates and business activities that included banking, real estate acquisitions, manufacturing, and trade. Records belonging to a number of such prominent individuals were found at Nuzi, even though their principal estates were located elsewhere in the land of Arraphe. This discovery reinforces our understanding of Nuzi's significance as a provincial administrative center.

The Nuzi archives also attest to a large group of middle-class property owners, professional workers, and small landholders. Such individuals participated to the extent of their means in the social and economic life of the community, buying and selling real estate, trading in various commodities, and making marriage and adoption contracts and wills.

Typically, the *wardu*s, "slaves," are considered the lowest social and economic class in the community. Indeed, slaves might have been prisoners of war or personnel traded into Arraphe from the land of Lullu. A great many slaves, however, were people who were forced by economic necessity to join the

households of those who could support them. In return for food, clothes, and shelter, these people committed their families and their labor to someone who would take them in, typically the wealthy landlords. They could be sold or given away, but they retained rights to property ownership and could engage in a wide variety of contracts, including land acquisition, adoption, and the like, if they had the means. Indeed, some slaves prospered at Nuzi and had estates far greater than those of the average citizen. Pai-Tesûup, the slave of Prince SÛilwa-Tesûup, was one such individual (Morrison 1983–84; Wilhelm 1980).

Women at Nuzi and Arraphe had more freedom than those in many other ANE nations. Enjoying the right to own property and make most contracts on their own, women engaged actively in real estate and commercial transactions and occupied important social and economic positions in the community. Amminnaya, wife of the king; Winnirke, the wife of Puḫi-šenni and mother of Teḫip-Tilla; and Tulpunaya are perhaps the most famous of Nuzi's real estate baronesses. Others include *esrītu* women and princesses whose royal positions augmented their power and wealth. Often women were protected in marriage documents and wills. For instance, some marriage contracts prohibit the groom from taking a second wife, and some wills appoint the deceased wife or even daughter as executor of the estate with powers of disinheritance over male members of the family. In addition, a son might be entrusted with the care of his mother and sisters after the death of his father. In such instances, stipulations concerning the mother's future behavior and inheritance rights might be made. On the other hand, fathers and brothers, either real or contractual, of women arranged for the marriages of their daughters or sisters and appear in guardian-like roles. There is evidence, however, that the woman involved could refuse the marital choice made for her. In general, then, it appears women at Nuzi had broad freedoms, but certain limitations did exist with respect to women's activities in the larger community. (Grosz *SCCNH* 1: 161–82 and *SCCNH* 2: 131–52; Gordon 1935; 1936).

F. Military

Landowners of all economic levels were responsible for paying taxes and performing or having a substitute perform the *ilku*—military and corvée service—for the state. Those who did so were called the *ālik ilki* In the military context, they were the infantry. Above them were the *rākib narkabti,* the charioteers, who came from the royal and landed families of Nuzi and other cities of Arraphe. While on duty, these forces were armed and fed by the king. Nuzi produced voluminous inventories and ration lists recording equipment and food distributed to the troops, lists of chariots and horses, and who did and did not report for military service. Further, the palace archives record the manufacture of weapons, armor, and chariots for use by the army both at Nuzi and abroad (Kendall 1975).

G. Religion

Information about the cult is sparse at Nuzi, but palace records do reflect the distribution of rations to cult personnel. Nuzi had at least one major temple, and perhaps smaller ones, but the center of the cult in Arraphe would, of course, have been in the capital city (Jankowska *SCCNH* 1: 195–209). Presumably, the Nuzi records reflect only royal support for the local religious institution(s).

On the common level there are references to "family gods" in the Nuzi texts, and archaeological evidence indicates that residences might have shrines. It is assumed that the "family gods" passed from father to eldest son in the normal course of inheritance. However, the "gods" often appear in wills in which an individual designates either the heir to the gods or the distribution of his gods among his sons or daughters. Disinherited family members are prohibited from approaching the family's gods. There is even a court case concerning a family's gods of whom an outsider had gained possession (*HSS* 14 8). Clearly, the family gods were of great significance to individuals at Nuzi. Indeed, they appear to have represented the identity of the family itself. On the other hand, the father of a family had the power to shape the future identity of his family through various kinds of contracts and his will. Seemingly the allocation of the "family gods" was one of many demonstrations of this authority (Cassin *SCCNH* 1: 37–46; Deller *SCCNH* 1: 47–76; Draffkorn 1957; Greenberg 1962).

H. Law

All citizens in Arraphe, including slaves, were able to seek redress in court, so litigation concerning property ownership and other civil and criminal matters was common. Judges, who were among the *rākib narkabti* class, presided over the courts in the cities of Arraphe and were assisted by various court officials. The parties involved in the cases presented their testimonies, which were recorded on tablets. The judges' decisions appear to have been based on common law that was fairly standard throughout the ANE Therefore, there are numerous parallels between the law as illustrated by the Nuzi texts and such legal documents as the Code of Hammurabi and the laws of the OT If the evidence was not sufficient for the judges to render a verdict, they could send the parties to either the "oath of the gods" or river ordeals. In some instances, usually when the local judges could not adjudicate because of conflicting testimony or some other reason, the case was referred to the king for final judgment. The most famous of the Nuzi legal cases is the impeachment trial of the mayor Kušši-ḫarbe for numerous counts of malfeasance and abuse of authority. The testimony of numerous witnesses is preserved on ten tablets and some fragments. In that Kušši-ḫarbe disappears from his office, it appears that he was convicted of the crimes with which he was charged.

I. Economic Structure

The city of Nuzi, like all of the cities in Arraphe, was surrounded by agricultural land divided into districts. Outside of Nuzi proper, there were many towns and villages of varying sizes. These were linked by roads that led from Nuzi to other cities and byways connecting the smaller settlements, each with its own population and urban affiliation. The fields were irrigated by canals, some of which could support traffic, and, of course, natural waterways (Zaccagnini 1979).

Nuzi's economy was agriculturally based with wealth deriving ultimately from the land and what it produced. The "palace" and wealthy landowners held substantial real estate throughout the land of Arraphe and employed large numbers of dependents and slaves in agricultural pursuits. Barley, wheat, and various fruits and vegetables were produced: sheep and goats were used for their wool, meat, and milk; and pigs, large cattle, asses, and horses, used primarily in the chariotry, were raised (Cross 1937; Morrison *SCCNH* 1: 257–96). The produce of these large operations was used to support their personnel and provide a surplus for use in many activities.

Industry at the palace and the large estates included the manufacture of many goods, most notably textiles (both fabric and garments), leather goods, furniture, wooden and metal tools and weapons, stonework, chariots, and the like (Cross 1937; Zaccagnini *SCCNH* 1: 349–61). Professionals in these crafts are found among the dependents of the palace and large estates. Especially prominent among the workers in ration lists are the textile workers, most of whom were women. Many of these manufactured items were luxury goods, trade goods, or equipment used by the state, so references to them do not often appear outside of the archives of the wealthy.

The palace and some large estates (especially those of Prince Šilwa-Tešup and Puḫi-šenni son of Muš-apu) were also banking centers engaged in lending silver, gold, other metals, grain, wood, bricks, livestock, and wool to private individuals and dependents of the estates. Normally, grain loans were necessary to carry the borrowers over until the harvest, after which the loan plus interest was to be repaid. Both the loan documents and the accounting texts recording grain loans have been found (Owen 1969).

Loans involving silver, gold, or other metals as well as horses sometimes were related to the overland trade. Both the palace and private individuals sponsored trade in raw materials and finished products outside Nuzi, including the land of Lullu. All parties involved in this trade expected substantial returns on their investments (Zaccagnini 1977).

Smaller property owners also worked the land and had livestock, but the produce of their holdings was consumed largely by their families with little left over for other activities. Some had the means to make small loans; more often they were borrowers. It is assumed that everyday goods for the use of the family or for sale were produced at home or by craftsmen working in the city and towns. The Nuzi tablets trace the gradual impoverishment and dissolution of these small landowning families and the growth of the large estates (Zaccagnini 1979; Wilhelm 1980; Morrison *SCCNH* 2: 167–213) over the six-generation period they record. There were certainly many and varied reasons for this pattern. In general, many of the

freeholds operated on the margin of subsistence, and it did not take much to push a family over the edge into bankruptcy. Poor crops, debt, division of an estate into increasingly smaller and insufficient units, and lack of labor in the family might all have been causes.

The state and private sectors of Nuzi's society and economy coexisted in close interconnection. Repeatedly, it can be shown that high officials responsible for irrigation, land management, and the judiciary first were property owners in their own rights. In mercantile activities there was much interaction among merchants working for the palace and for private individuals. The palace depended on the productivity of the private sector for taxes and personnel for the military and corvée. Further, as a "bank" the palace had a vested interest in the fortunes of its clients. On the other hand, the private sector relied on the state for protection and maintaining order.

J. Types of Texts

While land was inalienable, land acquisition was possible by a number of means. In the *ṭuppi mārūti* ("tablet of sonship") type of contract, a landowner (the seller) adopted an individual who did not belong to his family (the buyer) in order to sell a piece of property. The property purchased was called an "inheritance share" and the price "a gift" (usually movable property such as silver, grain, livestock, clothing, or a combination of such items). Often the texts note who will perform the *ilku* service on the land. The inalienability of land at Nuzi might be attributed to political, religious, or social reasons or to a combination of them. (1) Political: Land was owned by the king and granted in exchange for "feudal service." The land and the responsibility for the service could pass only from father to son as in the OB system. (2) Religious: A family, its land, and its family gods were inextricably bound together. The king granted the land on behalf of his gods who were the ultimate owners of the land and superior to the family gods. Again, only family membership qualified an individual to possess the property in question. (3) Social: Land was granted to a family in common (an "extended family commune") in return for service, and all the individuals within a family were responsible ultimately to the family. Only through adoption into the family could a person acquire land that was part of the family's holdings. Certainly, nobody was fooled by the fiction of this type of adoption. At the very least, the *ṭuppi mārūti* texts demonstrate how close the tie between the family and its land at Nuzi was at one point in time and may be an extension of earlier practices that were indeed legitimate. The motivation for these "real estate adoptions" usually appears to have been financial distress on the part of the seller (Chiera and Speiser 1924–25; Cassin 1938; Lewy 1942; Koschaker 1928; Purves 1945; 1947).

A method of transferring real estate for a limited period of time was the *ṭuppi titennūti* ("tablet of lease") contract. Land was leased for varying periods of time in return for a fee of movable property. The land could be redeemed by its owner at the end of the time indicated or on demand, depending on the terms of the contract, by returning the fee. In the meantime, the lessor reaped the produce of the land. The *titennūtu* type of land transaction may have developed because the transfers effected by the *ṭuppi mārūti* contracts deprived families of their land, and so their source of wealth, permanently. Again, the motivation for this sort of arrangement appears to have been financial difficulty (Speiser 1932).

Ṭuppi aḫḫūti ("tablet of brothership") contracts also exist and serve as another means of passing an "inheritance share" to an individual outside the family (Lewy 1940; Cassin 1962; Skaist 1969; Paradise 1972). All of these real estate arrangements reflect the sale of a birthright, either between a "father" and a "son" or between two "brothers."

The *ṭuppi mārūti* and *ṭuppi titennūti* types of contracts were used for personnel acquisitions as well. In a "real adoption" an individual adopted a son who would inherit his adopted father's property after caring for him (and often his wife) in his old age and "weeping over him and burying him" when he died (Cassin 1938). In personnel leases, a man could place himself, his children, or his slaves into servitude for a predetermined period of time in return for a fee the return of which would redeem the leased person (Eichler 1973).

Other forms of personnel contracts include the *ṭuppi mārtūti* ("tablet of daughtership") whereby an individual adopted a woman as a daughter and agreed to provide for her marriage. A fee was paid to a relative of the woman, and varying arrangements made as to the division of the bride-price. In the *ṭuppi*

aḫātūti ("tablet of sistership") a woman was adopted as a sister and the terms were similar to those of the *ṭuppi mārtūti.* The nuances of "daughtership" versus "sistership" are not entirely understood in that the ends of these contracts appear to be essentially the same, i.e., a "guardian" who will arrange for the woman's marriage is appointed. In the first the guardian has the rights of a father and in the second of a brother (Grosz *SCCNH* 1: 161–82 and *SCCNH* 2: 131–52; Eichler 1977).

The marriage contracts *(ṭuppi riksi)* show that fathers or brothers arranged for the marriages of their daughters or sisters. Daughters received dowries from the family's property, usually in the form of silver or movable property. In certain exceptional cases, real estate was included in a dowry. In return the father or brother received a payment normally equivalent to 40 shekels of silver. These marriage contracts might also include clauses prohibiting the groom from taking a second wife or establishing the status of the bride's children as primary heirs to the groom's estate (Gordon 1936; Koschaker 1928).

Wills *(ṭuppi šimti)* describe the distribution of an individual's estate after his death. There are relatively few wills from Nuzi, considering the number of families and amount of property attested at the site. Most likely, wills were drawn up if the testator wished to depart from normal inheritance practices (Paradise 1972).

Among other types of texts that exist, some warrant mention. The *ṭuppi šupeʾulti* ("tablet of exchange") records exchanges of property. The *ṭuppi tamgurtu* ("tablet of agreement") attests to agreements made between parties before witnesses concerning a transaction. The *lišānšu* ("declaration of PN") usually records a statement made by an individual before judges and/or witnesses concerning real estate and other transactions already completed by the parties involved. The relationship of this sort of text to the other types of texts mentioned above is still not clear (Maidman 1976).

K. Family Structure and Inheritance

The kinship terminology of both land and personnel documents at Nuzi stresses how important the family was as the basic unit of the community and provides some insight into the nature of the family at Nuzi. The family structure was patriarchal. The father had complete authority over his wife/wives and children and could disinherit an offending child, sell or lease his children, and arrange for his children's marriages in the sorts of transactions discussed above. Moreover, he could direct the disposition of his estate through a duly witnessed and sealed will.

The family property, especially real estate, passed through the male line with a larger share being given to the chief heir *(māru rābu),* normally the eldest son, and smaller shares to other sons. Typically, it appears, the eldest son also became head of the family with responsibility for his mother and unmarried sisters and kept the family gods. Many wills from Nuzi, however, show that the father could designate his chief heir and head of the family (not always the same individual), divide his property as he chose, and make various stipulations about the use of his property, the ownership of the family gods, and the responsibilities of his wife and children (Paradise 1972).

The institution of "brothership" is not entirely clear at Nuzi. Essentially, "brothership" in the texts appears to indicate guardianship rights over sisters, but these are not identical to a father's rights. It has been suggested that "brothership" at Nuzi indicates that the Hurrians began as a matriarchal society in which the brother of the matriarch was the authority of the family and, hence, was a fratriarch. Through marriage to his sister, the fratriarch became a patriarch and the entire system shifted from the female to the male line. According to this analysis, the marriage and adoption texts in which "brothership" figures are simply vestiges of this form of societal organization. The problem with this explanation is that there is no evidence that the Hurrians ever married their sisters (Koschaker 1928; Skaist 1969).

L. Nuzi and the Old Testament

When the Nuzi tablets were discovered, many scholars found striking parallels between the social, economic, and legal practices at the site and those described in the OT. It is not possible to itemize all of the parallels discussed in the literature, but some of the more famous and enduring ones must be noted. For a thorough treatment of this subject see Gordon 1964; Speiser 1930; 1963a; *Genesis* AB.

A number of episodes in the patriarchal narratives reflect a background of family law that is similar to that demonstrated at Nuzi. In the story of Abraham in Genesis, Abraham adopted Eliezer of Damasacus as

his heir because he had no children (Gen 15:2–3). At Nuzi, slaves were adopted by childless couples. Sarah, the chief wife, unable to conceive, provides her handmaid Hagar as a substitute through whom her husband can have children. Subsequently, when a child is born to Sarah, he becomes the principal heir, even though he is younger than Hagar's son (Gen 16; 21:1–21). The Nuzi tablets record similar situations, including inheritance provisions for children born to the chief wife after the handmaiden's. On two occasions Abraham called Sarah his sister to conceal the fact that she was his wife (Gen 12:11–20; chap. 20). Though not entirely clear on the subject themselves, Nuzi materials have been used to explain this "wife-sister motif" (Speiser 1963a).

In the marriage of Isaac, Laban, Rebekah's brother, handled the negotiations (Genesis 28–31), and Rebekah was asked if she consented. Later, Laban arranged his own daughters' marriages to Jacob (Gen 29:15–30), but it appears that the women were not consulted. Typically at Nuzi, a clause concerning the woman's consent is included in marriage contracts drawn up by brothers, but this clause is absent in contracts drawn up by fathers. Furthermore, the gifts proffered in the marriage of Rebekah are reminiscent of marriage prestations at Nuzi. Jacob's arrangements with Laban in return for marriage to Rachel and Leah also find parallels in the Nuzi texts. (Moses' marriage to Zipporah resembles Jacob's situation.) In the treaty reached between Jacob and Laban there are clauses containing terms similar to those of marriage contracts at Nuzi.

Nuzi parallels exist for the institution of levirate marriage, illustrated by the Judah and Tamar story (Genesis 38) and codified in Deut 25:5–10 (Burrows 1940).

In the Joseph story, Joseph's brothers worry that their father, Jacob, favors Joseph, a younger son, possibly because they fear he will be chosen as primary heir. The Nuzi tablets show that a father could name his heir regardless of his rank of birth. (It is worth noting that Joseph's acquisition of land and "slaves" for the pharaoh in return for food recalls the way the small landowning families of Nuzi gave themselves and their lands up to the large estates.)

Related to matters of family and inheritance is the "deathbed blessing." In biblical material, instances such as Isaac's blessings on Jacob and Esau (Genesis 27), Jacob's on his and Joseph's sons (Genesis 48–49), Moses' on Israel (Deuteronomy 33), and Joshua's (Joshua 23–24) illustrate the importance of the deathbed blessing in shaping the identity and "share" of Israel and its component parts. Though at Nuzi the deathbed blessing is confined to property litigation, it apparently was recognized as valid evidence in courts of law (Speiser 1955).

Rachel's theft of the *tĕrāpîm* is subject to many interpretations ranging from psychological to legal, all attempting to explain her apparent rash behavior. The Nuzi texts demonstrate that the household gods were the very heart of the family and appear to have been passed down through either traditional or willed lines of inheritance. Thus, in nearly all interpretations of this incident, the Nuzi evidence has been cited (Cassin *SCCNH* 1: 37–46; Gordon 1937; Greenberg 1962; Morrison 1983; Speiser *Genesis* AB).

The similarities between the socioeconomic milieus of Nuzi and the patriarchal narratives suggest that the two cultures shared a common background in the ANE in the 2d millennium B.C. While most scholars agree that the patriarchal age predated the Nuzi materials (e.g., *BHI*), others made them contemporaneous (Gordon 1964). Moreover, the widespread distribution of Hurrians was credited with the dissemination of Near Eastern and specifically Hurrian customs throughout the area including Nuzi and the patriarchal setting (Speiser 1967).

More recent studies have demonstrated that the customs described in the Nuzi texts and the Bible are found throughout the Near East in the 2d and 1st millennia B.C. (Indeed, some survive to this day in more rural areas of the Near East.) Moreover, 1st millennium materials may offer better parallels in some cases (Van Seters 1969; 1975). Yet others look to folklore and literary forms to elucidate the biblical text (Thompson 1974; 1978). As a result, Nuzi has receded as an important tool for analyzing the Bible and dating its materials.

While the Nuzi materials are no longer considered important for the chronology of the OT, there is no question that they provide some of the best available evidence for common social, economic, and legal practices in the ANE These practices were widespread and deeply entrenched throughout the Syro-

Mesopotamian sphere of influence. Thus, Nuzi's continued value in biblical studies derives from its illustration of the background against which the OT was written.

NYMPHA (PERSON) [Gk *Nympha* (Νυμφα)]. Nympha and "the church in her house" are greeted by Paul at the end of Colossians (4:15). It can be inferred from the text that she lived in Laodicea, although there is an ambiguity in the reference which leads some commentators to think her home was in Colossae or Hierapolis. One theory is that by analogy with the sending of greetings to the Laodiceans just previously in 4:15, Nympha's must be the church of Hierapolis since that group is not greeted otherwise in the letter (Gielen 1986: 123–24). By extension of this analogy, it has also been reasoned that just as the Laodicean church is evidently referred to by Paul as the local, thus not partial, church, so must Nympha's house-church be the entire church at Hierapolis (Gielen 1986: 123–24). Assumably Nympha was not only hostess but also leader of that local church.

As a household head, Nympha was likely a widow or single, but it cannot be excluded that she was a rather independently acting married woman. How she came to know Paul is not clear. Since he is not known to have visited Colossae, Laodicea, or Hierapolis, perhaps she met him in Ephesus.

Nympha's place in the NT as a female Christian has been retained only at the cost of some debate. While her gender is assumed to be feminine by the RSV, since her name in Greek is cited only in the accusative case, *Nymphan*, which could refer to a woman named Nympha or a man named Nymphas, other translations have variously interpreted this person. The issue has been complicated by variations in manuscripts for the possessive pronoun modifying "house" in Col 4:15 Some texts read *autēs,* "her," others *autou,* "his," still others, *autōn,* "their." Since the feminine reading is the hardest to explain, it is most likely to be the original. The masculine form was probably a correction of the feminine by copyists who could not envision a woman in such a leadership role. The reading "their" could have been substituted when scribes included in the pronoun the earlier mention of "brethren" in Col 4:15

OAK TREE. See FLORA.

OAK, DIVINER'S. See DIVINER'S OAK.

OBADIAH (PERSON) [Heb *ʿōbadyāhû* (עֹבַדְיָהוּ)]. A common Hebrew name meaning "Yahweh's servant."

1. One of the twelve Minor Prophets. See OBADIAH, BOOK OF.

2. The manager of Ahab's household and a devoted follower of Yahweh during the reign of Ahab, king of Israel (1 Kgs 18:1–16). Obadiah is described as "over the house" (Heb *ʾăšer ʿal-habbāyit*) of Ahab. The phrase occurs elsewhere in 1 Kgs 4:6; 16:9; 18:3; 2 Kgs 10:5; 15:5; 18:18 (= Isa 36:3); 18:37 (= Isa 36:22); 19:2 (= Isa 37:2); Isa 22:15; and on a 7th-century B.C. seal. According to Mettinger (1971: 88, 110), it designates the one who supervises the royal estate and who was also probably responsible for royal trade and mining.

Obadiah is noted in 1 Kgs 18:4 as protecting a group of Yahwist prophets during a period of persecution. The Omride dynasty, of which Ahab was the second ruler, arranged diplomatic relations with Ethbaal, king of Sidon (1 Kgs 16:31). This move brought Ethbaal's daughter, Jezebel, into the Omride dynasty and facilitated in Israel the worship of Baal, the Canaanite god of fertility. Conservative forces represented by Yahwist prophets found themselves subjected to persecution by Jezebel. Yet in Obadiah they found a friend who provided secret sanctuary and food for them.

While assisting the king in a search for water during a drought, Obadiah happened upon the prophet Elijah, who commanded him to appear before Ahab with a message concerning the prophet's whereabouts. Fearing for his life, Obadiah balked at the task. He reminded Elijah of how far and wide Ahab had sought him as well as the danger in which he had already placed himself by spiriting Yahweh's prophets into a safe hiding place. He then claimed that when he related Elijah's message to Ahab, the prophet would vanish and thereby place Obadiah's life in even greater danger. Nevertheless, the prophet assured Obadiah of his safety by promising to appear that very day before Ahab. Obadiah delivered the message and was rewarded by Elijah keeping his word.

3. A postexilic descendant of David (1 Chr 3:21). After the name Jeshaiah in v 21, a textual difficulty arises which obscures the verse's sense. Following "Jeshaiah," the MT reads, "the sons of Rephaiah, the sons of Arnan, the sons of Obadiah, the sons of Shecaniah." The MT, therefore, specifies no direct connection between the persons listed. Another possibility is to read *bĕnô* "his son," instead of the MT *bĕnê,* "sons of." According to this emendation, which is supported by the LXX (and accepted by the RSV), Obadiah would be the son of Arnan and the father of Shecaniah. According to the text-critical principle that the more difficult reading is to be preferred, the MT should probably be retained. Nothing can thus be known about Obadiah except that he is from David's family.

4. A descendant of Issachar and son of Izrahiah (1 Chr 7:3). According to the Chronicler, Obadiah would have been roughly contemporary with Moses. This list of Issachar's descendants emphasizes the family's warrior traditions, which correspond with the description of Issachar in Judg 5:15. Obadiah is one of five "chief men" (Heb *roʾšîm*). This title indicates a place of leadership in his family.

5. A son of Azel and a member of the family of Saul (1 Chr 8:38; 9:44). The list in which his name is fixed occurs twice in 1 Chronicles. The first list, in chap. 8, delineates the descendants of Benjamin in relation to the Chronicler's unified Israel theme. The second list, in chap. 9, serves to introduce the story of Saul's death in chap. 10.

6. One of the first exiles to return to Judah (1 Chr 9:16). The list in which his name occurs appears again in Nehemiah 11 but in the latter Obadiah's name does not occur. (For the chronological problem suggested by the two lists, see MESHULLAM.) 1 Chr 9:16 lists Obadiah as a Levite.

7. A member of the tribe of Gad who joined David during his stay in Ziklag (1 Chr 12:9). Obadiah is one of a group of warriors whose skill and prowess underscore the quality of the people who gathered around David. According to v 14, Obadiah was an officer in the army. Verse 15 amplifies the description of Gadite ability already provided in v 8 by stating that these Gadites had crossed the Jordan in its flood stage. The inclusion of the list of Gadites contributes to the Chronicler's theme of Israel united.

8. A member of the tribe of Zebulun and father of Ishmaiah (1 Chr 27:19). Obadiah is here the patronymic for one of the leaders of the tribes during David's reign. The exact bureaucratic task of tribal leaders is not clear, but vv 23 and 24 suggest that they had something to do with census taking.

9. A prince of Judah who was among a group commissioned by Jehoshaphat to teach "the book of the law of Yahweh" to the people of Judah (2 Chr 17:7). That members of the laity are commissioned to perform religious instruction is notable. Myers suggests that the position of members of the laity as teachers is possibly quite old and that the reference to the Levites in 2 Chr 17:8 might be the Chronicler's own addition to an older tradition. According to Myers (*2 Chronicles* 99–100), the "book of the law of Yahweh" could hardly be the Pentateuch as it now exists and might refer instead to a royal law code such as the Code of Hammurabi. Historically, he is certainly correct but from the perspective of the Chronicler, the "book of the law of Yahweh" would most surely have been understood as the Mosaic Torah.

10. A Levite who served as an overseer in the repairing of the temple during the reform of Josiah (2 Chr 34:12). He is noted as a Levite of the lineage of Merari.

11. A priest who accompanied Ezra to Jerusalem (Ezra 8:9 = 1 Esdr 8:35). He bears the patronym "son of Jehiel." In Neh 10:5 Obadiah was among those who set their seal to the covenant renewal under Ezra. If Ezra's journey to Jerusalem took place in 458 B.C., then it is possible that the Obadiah mentioned in Neh 10:5 is the same as in Ezra 8:9 (= 1 Esdr 8:35). However, because of the chronological uncertainty concerning the date of Ezra's mission (see EZRA), an identification of Obadiah in Ezra 8:9 with Obadiah in Neh 10:5 is not certain.

12. A gatekeeper during the priesthood of Joiakim (Neh 12:25). His task was to guard the storehouses of the gates.

OBADIAH, BOOK OF.

This prophetic book—only 21 verses, almost entirely in poetic form—stands in the collection of the Twelve after Amos and before Jonah (so MT, EVV): LXX arranges the first six differently.

———

A. Place in the Canon
B. The Prophet
C. Contents and Plan of the Book
D. Text
    1. Obadiah and Jeremiah 49
    2. Unity and Disunity: Dislocation
    3. Text and Language
E. Historical Context and Interpretation

———

A. Place in the Canon

The position of Obadiah within the Hebrew canonical order probably implies a belief that the first six books all belonged to one general period. The precise order could be related to possible relationships between the individual books: Obadiah 16–21 could be in some measure based on Amos 9:12, and this could explain why Obadiah follows Amos. Less probably, Obadiah 1–14 could be linked back to Joel

4:19—Eng 3:19. In the Greek order the first five are of decreasing length, but that tradition perhaps associates Obadiah and Jonah more closely with Nahum, Habakkuk, and Zephaniah, which follow, in order to relate these books to the later Assyrian/Babylonian period. Since Obadiah is so very brief, it may be asked whether its inclusion as a separate unit is linked with the desirability that the last "book" of the Latter Prophets should be made up of twelve prophetic collections.

B. The Prophet

This point may be taken a little further when the name Obadiah is considered. No information is available about the prophet except what may be deduced from the book. No serious question arises of identification with any other biblical character of this name. Later Jewish tradition (*b. Sanh.* 39b: cf. Jerome, *In Abdiam*) associated him with the Obadiah of 1 Kings 18, the controller of the royal household who protected prophets of Yahweh from Jezebel: this is a legend attached to a devout character, showing also the common tendency to identify those who bear the same name. More seriously it may be asked whether here the name Obadiah ("servant" or "worshipper of Yahweh," cf. "Abdiel"), while frequently attested in both biblical and archaeological sources, could, like "Malachi," be a pious invention to identify a prophetic fragment making up the Twelve.

C. Contents and Plan of the Book

The first heading of the book is "vision of Obadiah," an expression used in Isa 1:1 and Nah 1:1 (and elsewhere) in the sense of "prophetic message" rather than narrowly denoting visionary experience. The second heading: "thus says the Lord Yahweh to (concerning) Edom," in effect covers much of what follows, though the content of the book is not so restricted as this phrase may seem to suggest.

The content may be set out briefly:

a. 1b–7: judgment on Edom brought by the nations—divisible into 1b–4 and 5–7;

b. 8–14 (15): the day of doom—within which 10–14 concern Edom and the fate of Jerusalem;

c. (15) 16–21: the day of Yahweh, bringing both judgment and salvation.

These divisions are open to some question. There are markers ("oracle of Yahweh") at the end of 4 and the beginning of 8; there is also a punctuating conclusion ("so Yahweh has spoken") at the end of 18. There are close links of theme between 1–7 and 8–14, but style and content differ. In particular 12–14 show closely structured form: each line begins with a prohibition, and each line (except 14a) ends with an expression descriptive of the day of Yahweh.

Verse 15 is problematic. Most often it is supposed that 15b—a markedly proverbial-style expression—is the true continuation of 14, summing up the warnings or accusations of 12–14 by emphasizing that retribution on Edom will be in exact relation to its own actions. Verse 15a is then seen as the beginning of the salvation oracle or oracles of 16–21. The similarity between the openings of 15b and 16a could have attracted the former away from its correct position. But while this is possible, 15b could be an addition underlining the retributive thought present in the context. 15a broadens the idea of the day of Yahweh to concern all nations, and this could form a fitting conclusion to the Edom oracles, stressing that these oracles, whatever their original reference, are now typical, expressive of a doom which is to come upon the whole world. This is then explained in 16 in terms of a reversal by which Judah, forced to drink the cup of Yahweh's wrath, will now see all nations brought to a comparable judgment (cf. Jeremiah 25, especially 15f).

The emphasis on Edom is clear throughout the book. The major part is an oracle (or oracles) on Edom as a foreign nation, such as may be found in a number of other prophetic books, in most instances as part of a collection of such oracles. The appearance alongside foreign-nation oracles of a message of general judgment ushering in salvation for Israel is also familiar (cf. Zephaniah 3; Isaiah 24–27 as a sequel to 13–23; Jeremiah 25).

The poetry of Obadiah is marked by vivid imagery of a kind frequently to be found in the prophetic books. The contrast between pride and humiliation in 2–4 uses ideas found also in Isaiah 2 and in the poem on the overthrow of Tyre in Ezekiel 28. Being "set among the stars" in 4 (excised as a gloss by some commentators) may echo the mythological theme of the fallen daystar (Isa 14:12–14, AV "Lucifer"; cf. Luke 10:18). The inescapability of divine judgment in 3–4 suggests comparison with Ps 139:7–12.

Judgment compared to thieves in 5 (cf. Joel 2:9) was to be developed in the NT (cf. 1 Thess 5:2). The "day of Yahweh" theme, much used here, is especially clear in Amos 5:18–20; Isa 2:12–22; Zephaniah 1. Betrayal of friends or by allies (7, 10, 12–14) is a theme used of Edom in Amos 1:11 (cf. 1:9. Cf. also Ps 41:9; Job 6:14f). The fire motif of 18 may be compared with Isa 10:17f. Inheritance/dispossession (17, 19f) may be seen also in Num 24:18f and often in Deuteronomy (cf 2:12). Direct relationship between such uses is hardly to be posited: the poets draw on a rich heritage of poetic language and image.

D. Text

The text of Obadiah presents some problems.

1. Obadiah and Jeremiah 49. Jer 49:7–22 offers a more substantial oracle against Edom, set in the long series of foreign-nation oracles in Jeremiah 46–51. There are numerous points of similarity between the two texts, most closely in 49:14–16 (cf. Obadiah 1–4) but also in 49:9f (cf. Obadiah 5f). The nature of the relationship between the two texts has been widely discussed but without full agreement being reached. Recent discussions of relationships between such pairs of texts have tended to be cautious of claiming direct dependence of one on the other. The closeness at some points in this particular case suggests a relationship due more probably to the common use of source material or the use of traditional or liturgical material. Close parallels may provide a basis for considering the quality of each text, with consequent proposals for textual emendation where one or the other appears doubtful. More properly, each text needs to be considered in its own right. In such cases, one text may subsequently have influenced the other in the course of transmission, and the versions may similarly have been influenced by the alternative text.

More important is the recognition that Jer 49:7–22 offers a larger and distinctive collection of oracles against Edom and that this collection functions within the whole complex of Jeremiah 46–51, just as the Edom oracle in Amos 1:11f does in Amos 1–2. The Obadiah oracle (or oracles) in 1–14 (15) functions differently, being set in the context of the salvation message of (15)16–21; in this respect it comes nearer to the Edom material of Isaiah 34 followed by salvation in Isaiah 35, and of Ezekiel 35 in relation to its sequel in Ezekiel 36–37.

2. Unity and Disunity: Dislocation. The question of the unity of the book has already been raised by the notes on content and the comments on the relation to Jeremiah 49. If, as seems probable, Obadiah 1–4 makes use of an already existing oracle, and possibly some other elements in 1–14 build on earlier material, then the unity of this part of the book is to be seen in the integrating of originally separate elements into a new whole. Such a unity has as much validity as the alternative, still maintained by some, that the whole section is of one piece. Unity is in terms of the total impact of a now-impressive grouping of various types of oracles (noting especially the very different style of 12–14, all gathered around the one theme of doom.

A different type of question is posed by joining (15)16–21 to this material. A division into two units, 16–18 and 19–21, appears proper, though there are verbal links between them which make their association intelligible: to some degree 19–21 provide an exegesis of 16–18. But the extension and reinterpretation of the Edom theme here, precisely picked up by the Esau references of 18, 19, and 21, point to the whole book having a new unity in which the Edom oracles are lifted out of whatever historical context may be postulated for them so as to give them a broader meaning, an application to a situation different from that previous one. The evidence in prophetic books of links with liturgical usage (for example the psalms in Isaiah 12 and Habakkuk 3) invites the possibility that "Obadiah" as the author of the book as we now have it could be understood as a cult prophet, or as one who interpreted existing prophetic material in a cultic context. Attempts at giving greater precision to such a view (for example, Watts, Wolff *Obadja* BKAT) cannot be sufficiently demonstrated.

3. Text and Language. Some of the problems here relate to possible historical references (see below). In addition to proposals for emendation based on the Jeremiah parallels, there are difficulties not easily resolved. Thus the last word of 9 ("by slaughter") should perhaps, with some support from the versions, belong to 10 ("for the slaughter and violence …"). In 12 the first "the day of" is probably due to reduplication. The text in 20 is evidently in some disorder: various alternative proposals, all conjectural,

may be found in commentaries and modern translation. The curious "there is no understanding of it" or "in it" at the end of 7 could be a marginal note to the last clause of 8 making the comment that Edom's supposed wisdom (from which 1 Kgs 4:30 has sometimes been cited) is in reality nonexistent. Another suggestion, which may be paralleled in ANE scribal practice, is that it is the despairing comment of a copyist who could not understand the text in front of him: certainly the *hapax legomenon* rendered "trap" (RSV) is unclear (cf. the various proposals in commentaries and translations).

E. Historical Context and Interpretation

While it would be proper to determine the historical context of the book or of the prophet before considering interpretation, the two questions interlock. In part, the answer to these questions turns on deciding how far the oracles allude to events already past. Does the doom oracle of 1b–4 refer to a disaster which has already overtaken Edom, or to the future? Or, if it is taken over from an earlier context, does it in effect provide the justification for what has now happened (Jerome, *In Abdiam*)? Do the prohibitions in 12–14 carry their normal sense of "do not …" (so NEB, JB), or should they be rendered "you should not have …" (so RSV)? Such a difference of interpretation reflects a different understanding of the relation of 12–14 to historical events. Much, indeed, turns on this last point, and has its context in the wider questions of the relationships during the biblical period between Edom and Judah. Since there is evident allusion to a disaster to Judah and Jerusalem here (explicitly in 11), and since Psalm 137 places Babylon and Edom in parallel, it has seemed clear to many that in one way or another Edom was involved in the Judean disaster. Lam 4:21f, often assumed to belong shortly after 587 B.C., has been thought to give added support. Evidence that during the period of Babylonian rule Edomites may have taken over some parts of southern Judean territory would support this. When read as reference to the actualities of the period, 12–14 seem to provide a basis on which more can be said about Edom and its involvement than appears in narrative sources. Some justification must exist for the extreme hostility that is to be found both in the numerous prophetic oracles against Edom and in the Jacob-Esau traditions. At a later period, Judean-Idumaean hostility, particularly in the 2d and 1st centuries B.C., provides indications of the continuing relevance of such older stories and oracles.

The difficulty with this kind of interpretation is that it runs the risk of constructing history largely out of prophetic oracles or poetry. The relationship here, as elsewhere, between historical events, allusions to them in poetic form, and the poetic use of motifs in a nonhistorical manner is very difficult to determine. In respect to Obadiah 12–14 there are possibilities of various kinds. It is entirely intelligible, and may be correct, to see precise allusion; it is also proper to observe that there is no statement here which necessitates a merely historical construction. Underlying the material of these and other Edom oracles there is no doubt the reality of hostile relationships at various periods between the two peoples; but fixing this more precisely always remains open to some question. It is clearly improper to give too definite an answer. It should be noted that 1 Esdr 4:45 adds the gratuitously developed legend that it was Edomites who burnt the temple: such an item cannot be used as if it were historical evidence.

Interpretation is affected by these historical questions. Read with a close linking of the words to historical events, the main part of Obadiah can seem all too much a piece of relentless hostility to one particular people, now rounded off with the hope of a total reversal in which Jerusalem contains a holy refuge, Edom is destroyed, not even a remnant left, and more broadly all the surrounding territories are recovered by Jews returned from exile. The text of 20 may conceal the corrupted name Halah, a place of exile named in 2 Kgs 17:6; "Sepharad" has been variously identified, for example with Sardis in Lydia or Sapardu in Media, possibly to be equated with Sepharvaim (2 Kgs 17:24).

If it is right to see precise references to a particular period for the judgment oracles, then the two favored alternatives are (1) a date shortly after 587 B.C. (cf. Lam 4:21f), the detail of 12–14 being seen as immediate recollection; (2) a 5th-century date, as also for Malachi, on the assumption that the pressures of the Nabataeans represent the experienced or future disaster to Edom. Neither proposal is really adequately based on clear historical or archaeological evidence.

In the light of other Edom oracles, as also of Lam 4:21f and Psalm 137, it is possible to read the Edom references, whatever historical attachment may underlie them, as symbolic of the alien outside world upon

which divine judgment ultimately falls and over which in the end-time divine rule is absolutely established. The same themes are to be found in many prophetic passages (for example, Isaiah 11; Zachariah 9, 14) and in psalms which see the eventual subjection of all nations to Yahweh and his anointed king (so Psalms 2; 89; 110). The two styles of interpretation are not mutually exclusive, for the hostilities of centuries, still a factor at the end of the biblical period, can underlie the recognition of a more than historical sense to the book. If the antagonism of Judah and Edom has become of largely antiquarian interest, the confidence in the overthrow of the powers of evil and the establishment of royal rule belonging entirely to God is one that has lasting significance. (For other discussions of various issues see Allen *Obadiah* NICOT; Bewer *Obadiah* ICC; Coggins *Obadiah* ITC; Keller *Abdias* CAT; Rudolph *Obadja* KAT; Watts *Obadiah* CBC; and Wolff *Obadja* BKAT.)

PETER R. ACKROYD

OBAL (PERSON) [Heb *ʿôbāl* (עוֹבָל)]. Var. EBAL. A son of Joktan and hence the name of a South Arabian tribe (Gen 10:28; 1 Chr 1:22), which, however, hitherto could neither be identified nor localized in a satisfactory way. The forms of the name with an initial *e-* vocalization (e.g., 1 Chr 1:22, RSV Ebal; Samaritan *Ībal;* LXX *Geibal, Gabal*) might have resulted from an assimilation to *ʿêbāl,* which is attested as the name of an Edomite (Gen 36:23; 1 Chr 1:40) and as the name of a mountain near Shechem (Deut 11:29, etc.). The Greek forms with *g* at the beginning of the word could point to a South Arabic *ġbl;* there is, however, no evidence of such a root.

Glaser (1890: 427) considered whether *ʿôbāl* is to be identified with Yemenite *ʿubāl,* a locality on the Wâdī Sihām between Bāğil and Ḥağailah at the border of the Tihāmah toward the highland; if this is correct, one would have to look for *ôbāl* in the middle of the Yemenite coastal plain. At the same time, however, Glaser drew attention to the fact that a form like *ʿĀbil* or *ʿAibal* would better correspond to the biblical name. A clan or tribal group *(bnw) ʿblm* is attested several times in the Sabaean inscriptions, especially in votive texts from Mārib. Most of the inscriptions in which the *(bnw) ʿblm* are mentioned, however, do not give a hint at the provenance of their donors; some, however, indicate that we obviously have to deal with two different groups. The dedicators of the inscription Ja 558 belong to the tribe of Faišān which settled around Mārib, and RES 4387 is the epitaph on a tombstone from Mārib mentioning names of members of the clan *ʿblm.* On the other hand, the *bnw ʿblm* of Ja 621 are designated as *ʾʾḏnn,* i.e., as belonging to the tribe of Maʾḏin, the territory of which extended in the area NW of Ṣanʿāʾ. The *bny ʿblm* of Ja 585, which are counted among the tribe of Ghaimān, were most probably resident in the same region. The donor of the inscription RES 4143, who is identical with the donor of the text Ja 635 and who also belongs to the *ʿblm,* is supposed to have come from the same district, not far from Ṣanʿāʾ (cf. Ryckmans 1981: 286). This distinction into two different groups is also supported by the South Arabian tradition. Al-Hamdānī (1966: 106–8, 109) clearly distinguishes between the *Ḏū ʿIbl* as a clan of Mārib and the tribe *Ḏū ʿĀbil bin Ḏī Aqyān bin Saba*ʾ, which is itself divided into four branches. Wâdī Ḍahr and the places Kaukabān and Ṯulā are mentioned as the settlement area of the Āl Ḏī Aqyān, and the town of Šibām below the mountain-fortress of Kaukabān is distinguished from the other Yemenite localities of the same name as Šibām Aqyān (Al-Hamdānī 1884: 72). Since an equation of Hebrew *ʿôbāl* with S Arabic *ʿĀbil* is worth being advocated, it is quite possible that the biblical name refers to that Sabaean tribal group of the *(bnw) ʿblm* whose ancient settlement area was likely located in the Yemenite highland approximately between Ṣanʿāʾ and Šibām Aqyān or Šibām respectively (ca. 45 km NW of Ṣanʿāʾ). Inscriptions which have been found there enable us to retrace the history of this region to the early time of the Sabaean realm.

OBED (PERSON) [Heb *ʿôbēd* (עוֹבֵד)]. Var. EBED. **1.** The son of Ruth and Boaz, the grandfather of King David, ancestor of Jesus Christ (Ruth 4:13, 17, 22; 1 Chr 2:12; Matt 1:5; Luke 3:32). Obed was the son of the Moabite Ruth who had returned with her mother-in-law Naomi to Bethlehem where she married Boaz, a relative of Ruth's deceased husband, Mahlon. See RUTH, BOOK OF; NAOMI. By extension of the Israelite custom of kinship marriage (Deut 25:5–10), Boaz fathered Obed, but he did so in the name of Mahlon. While the narrative indicates that Obed is the son of Mahlon, the genealogy gives the actual lineage of Obed by Boaz. Since the child is Ruth's (4:15) and Naomi's (4:17), the story depicts Obed as heir to Boaz, Mahlon, and Elimelech (Ruth 4:9–10).

The historicity of Obed's kinship to the royal house, however, is often debated. Related to this problem is the legitimacy of the name Obed. The naming of Obed by the women of the city differs from the expected formula for naming a child (4:17). Where the name "Obed" should occur in the formula, only the word *šēm* ("name") appears and there is no connection between the meaning of "Obed" ("worshipper") and the women's explanation: "A son has been born to Naomi." The reconstructed name *ben nōʿam* ("son of pleasantness") therefore has been suggested for the original name; the lost name has been supplanted by "Obed" in order to tie the narrative to David's genealogy (Eissfeldt 1965: 479). This opinion no longer dominates, however (Sasson 1979: 175). The name Obed is a vocalized participle and derived from *ʿbd,* meaning "worshipper." It may be a shortened form of "Obadiah" *(ʿōbadyâ).*

2. Son of Ephlal, descended from Jerahmeel who was the firstborn of Hezron (1 Chr 2:37–38).

3. One of David's "mighty men" (1 Chr 11:47). Obed is among those names added by the Chronicler which are absent in the parallel account of 2 Samuel (*Chronicles* NCBC, 103–4).

4. Son of Shemaiah, a member of the Korahite division of gatekeepers. The four sons of Shemaiah are reported to be leaders as a result of their exceptional ability (1 Chr 26:6–7).

5. Father of the military commander Azariah, who assisted the priest Jehoiada in executing Queen Athaliah and establishing the legitimate rule of King Joash (2 Chr 23:1, 14–15).

6. One of the men who returned with Ezra from Babylon, the son of Jonathan and descendant of Addin (1 Esdr 8:32). In the parallel account of Ezra, the variant name "Ebed" is given (Ezra 8:6).

KENNETH A. MATHEWS

OBED-EDOM (PERSON) [Heb *ʿōbēd-ʾĕdôm* (עֹבֵד־אֱדֹם)]. Four individuals in the OT bear this non-Yahwistic name meaning "Servant of (the god) Edom" (cf. the Phoen personal name *ʿbdʾdm*). According to Albright (*YGC,* 140 and n. 76), the theophoric element (*ʾĕdōm/ʾādōm?)* names the consort of Resheph, an Underworld deity known from Egypt and Canaan.

1. The "Gittite" (i.e., one from Gath) at whose house David stored the ark of God when the sudden death of Uzzah halted the procession to bring it from Baale-judah (2 Sam 6:2 = Kiriath-jearim, 1 Chr 13:6) to the City of David (2 Sam 6:1–11 = 1 Chr 13:1–14). His name and origins in Gath may well place him among Philistine expatriates loyal to David (2 Sam 15:18–22; 18:2), thus explaining the king's willingness to leave the ark with a foreigner, apparently now a convert to Yahweh (McCarter *2 Samuel* AB, 170). Yahweh blessed Obed-edom and his household because of the ark, prompting David to bring the ark on into the city (2 Sam 6:11–12 = 1 Chr 13:14; cf. 15:25).

2. Son of Jeduthun, named primarily as a gatekeeper (1 Chr 15:18, 24; 16:38) and perhaps performing special service related to the ark (15:24). In the celebration accompanying the ark into the city, he

functioned as a musician, appointed by David to lead as one of the lyre players (15:21) and after that to minister with harp and lyre before the ark, along with his 68 brothers (16:5, 38).

3. Son of Korah through Kore (1 Chr 26:1, 19). Obed-edom and his sixty-two descendants, including eight sons, served at the S gate of the temple precinct and the storehouses related to it (26:4–8, 15). The size (26:8; cf. 16:38) and fitness (26:6, 8) of the family for temple service are stressed by the Chronicler.

4. Levitical custodian of temple treasures at the time Joash, king of Israel, sacked Jerusalem following his defeat of Amaziah of Judah (2 Chr 25:24). He presumably served in the gatekeeper tradition of his clan (cf. 1 Chr 26:4–8, 15; and #3 above). Whether Obed-edom was taken captive (LXX, Vg) or (more likely) is simply named keeper of the vessels and precious metals lost to Joash is not clear from the MT. The 2 Kgs 14:14 parallel does not mention him.

The precise relationship between these four remains unclear due to the nature of the Chronicler's work where one or more families of temple servants claiming ties to the Philistine caretaker of the ark are given levitical ancestry.

DAVID L. THOMPSON

OBELISK. See MASSEBAH.

OBIL (PERSON) [Heb *ʿôbîl* (אוֹבִיל)]. A state official; an Ishmaelite. One of twelve stewards of royal property appointed by David, his specific charge was to oversee the camels (1 Chr 27:30). Of the twelve, he is one of seven identified with a gentilic rather than by paternity, a feature which may underscore his non-Israelite background. Some have argued for the antiquity of the list because of the inclusion of an Ishmaelite; others that it is artificial (and perhaps late) because "Obil" means "camel driver" (see Braun *1 Chronicles* WBC, 263).

RICHARD W. NYSSE

OBLATION [Heb *minḥâ* (מִנְחָה)]. "Oblation" is the word the RSV uses to translate *minḥâ* in 1 Kgs 18:29 and 18:36. *Minḥâ* can refer either to sacrifices in general or to grain offerings specifically. In 1 Kings, it indicates the evening offering, which was one of two daily sacrifices performed in the tabernacle and in the temple. According to Exod 29:39, this offering takes place "between the evenings" *(bên hāʿarĕbāyim)*, that is, after sundown but before all the sun's light has left the sky. Josephus, by contrast, states that the evening offering occurs at the ninth hour, which is about three o'clock in the afternoon (*Ant* 14.4.3). This regular evening sacrifice, as well as the morning one, is described in Exod 29:38–46 and Num 28:1–8 (where the two sacrifices are referred to as *qorbān*). In both offerings, the priests slaughter an unblemished lamb as a burnt offering accompanied by a cereal offering of flour and oil and a drink offering.

PAUL V. M. FLESHER

OBODA (M.R. 128022). A town in the Negeb which was named after a Nabatean king who reigned 30–9 B.C.E.

A. History of Research

U. J. Seetzen passed by Abdeh in 1807 and recognized the preservation of the ancient name of the site. H. Palmer in 1870 drew the first schematic plan of the site, and A. Musil drew a more detailed plan in 1902, recognizing and noting a number of significant features. These investigations were followed by those of A. Jaussen, R. Savignac, and H. L. Vincent in 1904; C. L. Woolley and T. E. Lawrence in 1914; and the German work of T. Wiegand in the same period. The Colt Expedition of 1937 located a building which apparently was a caravansary on the SW end of the plateau. Full-scale excavations at Oboda were conducted by M. Avi-Yonah (1958), A. Negev (1959–61), and A. Negev in collaboration with R. Cohen (1975–77). These investigations have clarified the occupation of the site into the following periods: Early Nabatean (4th–early 1st centuries B.C.E.); Middle Nabatean (30/25 B.C.E.–50/70 C.E.); Late Nabatean (ca.

70–150 C.E.), and Post-Nabatean, including the Late Roman and Byzantine periods. See also NABATEANS.

B. History

Oboda, whose name is preserved in the Arabic form, Abda, is named after the Nabatean king Obodas (apparently the second king by this name), who, according to Stephanus Byzantinus (482.15–16), was buried at the site after his deification. A recently discovered Nabatean inscription and numerous Greek inscriptions in the ruins of the temple at Oboda testify to the persistence of the cult into the 2d and 3d centuries C.E. Ptolemy (Geog. 5.17.4) lists Eboda (= Oboda) among the cities of Arabia Petraea. It is known as Oboda on the Peutinger map along the main road from Aila to Jerusalem. Although the city prospered in the Late Roman and Byzantine periods, it is never mentioned again in historic sources.

The earliest traces of settlement, coins and Hellenistic pottery, are from the late 4th century B.C.E. The wide distribution of the mints from which these coins originate hint of the role of Oboda, with Nessana and Elusa, as a major caravan stop on the network of the international spice trade. No building remains of this period have been found, and it seems that the nomadic Nabateans conducted their trade from tent encampments. The conquest of Gaza by Alexander Jannaeus (ca. 100 B.C.E.) apparently precipitated a brief decline of Oboda. At the beginning of the reign of Obodas II, however, the Nabateans resumed control of the Negeb, establishing at Oboda a major caravan stop. A magnificent temple was built on the W part of the plateau, rising 619 m above sea level. At the N end of the plateau was a military camp, accommodating up to 2,000 soldiers and their camels. The S part of the site was allotted to breeding stock. No private buildings have been discovered for this period and it seems that the civilian population still lived in tents. This period of prosperity encompasses the entire reign of Aretas IV (9 B.C.E.–40 C.E.). By the middle of the 1st century C.E., at the beginning of the reign of Malichus II (40–70 C.E.), Oboda was sacked by Arab tribes who wreaked havoc in all of the Nabatean kingdom, which resulted in the cessation of Nabatean rule at Oboda until ca. 70 C.E., when Rabel II ("He Who Brought Life and Deliverance to His People") ascended the throne. The Nabateans lost their supremacy in commercial trade and turned to agriculture. This transition is attested at Oboda by dedicatory inscriptions on agricultural installations. Rabel's death and the annexation of the Nabatean kingdom to Provincia Arabia had little adverse effect on Oboda, but the building activities that had begun in the 80s of the 1st century continued until ca. 125 C.E. Activities for the remainder of the 2d and 3d centuries can be traced by numismatic evidence. The town extended along part of the W slope of the hill, and in the beginning of the 3d century a new residential quarter was established on the S part of the plateau, with a contemporary cemetery on the W slope. The old Nabatean temple was renovated on the acropolis and dedicated to Aphrodite and to Zeus Oboda, thus perpetuating Oboda's cult. Although the ones dedicating the temple were all of Nabatean descent, the old Aramaic-Nabatean language yielded to Greek, which was the language of the numerous dedications.

With the advent of Diocletian and Constantine, major changes occurred in the E. Some Late Nabatean houses and the old military camp, which had been abandoned since ca. 50 C.E., were plundered for stone to construct a smaller citadel on the E half of the acropolis. During the early Byzantine period, Oboda spread along the entire W slope, with isolated farmhouses along the plateau.

From the 4th century C.E., olive oil and wine production were the basis of the economy. On the plateau and along the slopes, five winepresses, an olive oil press, and several wine cellars were built. Working and storage space was found in the excavation of caves in the back of each of the houses. Numerous cisterns were excavated in and around the city and a bath was supplied with water from a 64-m-deep well. Apparently in the second half of the 4th century, the old Nabatean temple was destroyed and its stones used to build the North Church on the acropolis. A century later the South Church and monastery were built bridging both the North Church and the citadel, making a huge complex.

The latest-dated inscription at Oboda is from 612 C.E. Both churches were discovered full of ash and charred beams from the wooden frame of the roof. This destruction is attributed to 636 C.E., when Oboda was stormed by the Islamic raids, which precipitated the desertion of the site.

AVRAHAM NEGEV

OBOTH (PLACE) [Heb *ʾōbōt* (אֹבֹת)]. An unidentified stage of the Exodus between Mount Hor and the plains of Moab (Num 21:10, 11; 33:43, 44). The encampment at Oboth immediately preceded the people's rest at Iye-abarim.

Oboth has been identified by some with ʿAin el-Weiba on the W edge of the Wâdī ʿArabah, almost 18 miles due W of Feinân (e.g., *GP*, 400–1). Feinân is generally identified with Punon, the encampment preceding Oboth (Num 33:43). See PUNON. However, though ʿAin el-Weiba would be a suitable camping ground, its location produces an inexplicable detour to the W given the general NE direction the Israelites were traveling toward the Transjordanian mountains. Hence other suggestions for Oboth have been offered, including an unspecified location N of Feinân (e.g. Davies 1979: 90) and a position N of Bozrah (*MBA*, 42). The location of Oboth depends largely upon one's reconstruction of the route of the Exodus.

OBSCENE LANGUAGE. See BIBLE, EUPHEMISM AND DYSPHEMISM IN THE.

OCHIEL (PERSON) [Gk *Ochiēlos* (Ὀχιηλος)]. See JEIEL.

OCHRAN (PERSON) [Heb *ʿokrān* (עָכְרָן).]The father of the chief (*nāśîʾ*, Num 2:27) Pagiel of the tribe of Asher. Each of the five times that Ochran is mentioned in the OT occurs in a tribal list where his mark of distinction is his status as the father of Pagiel. Under the leadership of Ochran's son Pagiel, the tribe of Asher participated in the census of Israelite fighting men carried out by Moses (Num 1:13, 40–41), presented its offerings on the eleventh day of the twelve-day celebration of the dedication of the altar (Num 7:72, 77), took its proper place on the N side of the tabernacle in the Israelite camp (Num 2:27), and assumed its position in the order of march at the Israelites' departure from Mount Sinai (Num 10:26). The name Ochran seems to mean "the perplexed or afflicted one" (*IPN*, 253).
DALRVILLE

OCINA (PLACE) [Gk *Okina* (Ὀκινα)]. A site which is part of a list of towns occurring in the book of Judith (Jdt 2:28). The name Ocina occurs only here in the Bible, where it is part of a list of towns on the seacoast stretching from N to S. It is possible that "Ocina" is a corruption of "Acco," an ancient harbor city N of Mount Carmel. See ACCO (PLACE); PTOLEMAIS (PLACE). This would be the correct geographical location. However, given the genre of the book of Judith, it is also possible that the name is fictitious. See JUDITH, BOOK OF.
SIDNIE ANN WHITE

OCTOPUS. See ZOOLOGY.

ODED (PERSON) [Heb *ʿōdēd* (עֹדֵד), *ʿôdēd* (עוֹדֵד)]. This name is of uncertain etymology, with BDB (pp. 728–29) deriving it from *ʿûd*, "prob. return, go about, repeat, do again," and KB translating it as *"Orakeldeuter"* (752; cf. also the discussion in Willi 1972: 221–22). There is probably some connection with the name Iddo (*ʿiddô, ʿiddō, ʿiddô*).

1. The first person in the Bible mentioned as having this "name" was an individual in the early 9th or very late 10th century said to be *ʿăzaryāhû ben-ʿōdēd,* a prophet in Judah who preached a word of encouragement to King Asa (2 Chr 15:1). Strangely enough, in 15:8 the prophecy is said to have been given by "Oded the Prophet" (*ʿōdēd hannābîʾ*). The RSV restores "Azariah the son of Oded," a reading at least as old as the Syr Peshitta and some manuscripts of the LXX (specifically the Lucianic recension). Perhaps a clue can be found in the Old Aram inscription of Zakkur, beginning with line 11 (obverse), where we are told by Zakkur, "I lifted up my hands to Baalshamayin and Baalshamayin answered me and Baalshamayin spoke to me through (lit. "by the hand of") seers and prophets (*ʿddn*)" (my translation). Since (*ʿddn*) clearly has the sense of "prophet" in this passage (*DISO*, 204; Degen 1969: 47, 52; Segert 1986: 545; cf. also *ʿdd*—"herald" in Ugaritic, II AB vii, 46 [Gibson 1965: 65]), it is quite likely that *ben-ʿōdēd* referred to a prophetic class in 15:1 (or even a prophetic disciple—cf. the discussion with regard to Amos 7:14 in Wolff *Joel and Amos* Hermeneia, 312–14). Since the term was a rare one for a prophet, *hannābîʾ* was then appended to *ʿōdēd* in 15:8 as an attempt to clarify for the reader the meaning of the term. The term *ʿōdēd* was then later misread as a personal name, resulting in the confusion witnessed by the versions (for a similar explanation, cf. the discussion in Montgomery 1909: 68–69).

2. This individual was also a prophet (!), this time from late-8th-century Samaria, who rebuked Israel for taking 200,000 Judeans captive (2 Chr 28:9). Several Ephraimite tribal leaders joined him and succeeded in dissuading the Israelites to let the Judeans go free, which they did after feeding and clothing them (2 Chr 28:10–15).

H. ELDON CLEM

ODOMERA (PERSON) [Gk *Odomēra* (Ὀδομηρα)]. According to 1 Macc 9:66, Jewish forces under Jonathan the Hasmonean killed Odomera and his brothers along with the sons of Pharison near Bethbasi south of Jerusalem (ca. 160 B.C.E.). Odomera and his brothers were probably a bedouin tribe allied with the Syrian forces under Bacchides. A variant reading, however, would indicate that Jonathan did not slay (Gk *epataxen*) Odomera and his brothers but, rather, commanded or summoned them (Gk *epetaxen* in Codex Venetus and 340). Goldstein (*1 Maccabees* AB, 395) prefers the variant reading, noting its common use in 1 Maccabees. For Goldstein, Jonathan would hardly have slipped out of Bethbasi under Seleucid siege to attack a group of bedouin but would have done so to enlist aid in defeating the Syrian army. Josephus indicates that Jonathan did seek aid to defeat Bacchides, in an account which parallels 1 Maccabees 9 (*Ant* 13.1.5 §28). However, the Josephan account appears to be based on a different tradition in that Jonathan slips out of Bethalaga and not Bethbasi (*Ant* 13.1.5 §26). Zeitlin (1950: 166, n. 66) demurs from using Josephus to argue that these bedouin were allied with the Jews by noting that according to Josippon, who made use of the Hebrew text (unlike Josephus, who probably read the Greek), Jonathan does indeed kill these bedouin allies of Bacchides.

MICHAEL E. HARDWICK

ODOR [Heb *rêaḥ* (רֵיחַ); Gk *osmē* (ὀσμη)]. In the OT odor is not directly related to texts dealing with perfume, except for Cant. 1:3 and Jer 25:10 (LXX), "myrrh," or for Cant. 1:12, "nard." Odor can be that left by the smell of garments (Gen 27:27) or of fire (Dan 3:27). Most often found is the reference to "a pleasing odor," found 40 times between Gen 8:21 and Num 29:26. Lev 1:3–17 gives the following definition: "it is a burnt offering, an offering by fire upon the altar, a pleasing odor to the Lord." Such a rite is found in the Babylonian narratives that relate to thanksgiving for being rescued from the Flood.

God is favorably inclined by the pleasing odor offered by the worshipper; he "acknowledges with his nose," wherewith the breath of life is to be found (Gen 7:22), that odor which restores life. In the biblical Flood Narrative, it is Noah who first presented such an offering: the Lord smelled the pleasing odor and blessed Noah after the Flood (Gen 8:20–22). The Noachian tradition is often referred to during the rite of the burnt offering to the Lord. The only exception is Lev 4:31, which refers to the offering for sin, since in that rite only certain parts are burned, which are never elsewhere termed as producing "a pleasing odor." Another exception is to be found in Ezek 6:13; 16:19; 20:28, which concern idols instead of the Lord.

Odors that conform to divine prescription are efficacious, as in Tob 8:3 where the demon Asmodeus flees from the smell of fish. When angered by his unworthy people, the Lord will not smell the pleasing odors (Lev 26:31). Thus, odors can apparently be tokens of both approval and disapproval.

When quoting LXX, *osmē euôdias* is the translation of *rēaḥ nîḥōaḥ,* and a metaphoric sense of "a pleasing odor" can be discerned (Sir 39:14). The same was asserted about prayer in the Qumran community (1QS 8:9) and later, in the apostolic period, about the praise of the creator (*Ep Barn* 2:10).

The NT usage is exclusively metaphoric. Paul calls the Philippians' offering a pleasing odor, a sacrifice acceptable and pleasing to God (Phil 4:18); the author of Ephesians exhorts his readers to "walk in love, as Christ loved us and gave himself up for us, a pleasing odor and sacrifice to God" (Eph 5:2).

Paul discusses the apostolic ministry of the new covenant in which Christ through the apostle "spreads the fragrance of the knowledge of him everywhere" (2 Cor 2:14–16). This passage expresses a universal apostolate where Paul, Timothy, and Silvanus are a pleasing odor of Christ to God, among those who are being saved and among those who are perishing. This "pleasing odor of Christ" (2 Cor 2:15) is among all people but in a somewhat different fashion. In the Greek text both participles are present tense, "those who *are proceeding* toward perdition and those who *are* by now *proceeding* toward salvation" (2 Cor 2:15). Thus Christ's life is actually the living, present "life of Christ" inspired and conveyed by faith. The "pleasing odor of Christ" is believed to draw to life those who are perishing. Thus God makes use of Paul's apostolic ministry and the work of all Christians in order that Christ may be known by all.

MAURICE CARREZ

OFFERINGS. See SACRIFICE AND SACRIFICIAL OFFERINGS.

OFFSET [Heb *migrāʿâ* (מִגְרָעָה)]. Rebatements in the construction of the wall of the temple so that the side chambers could be constructed without actually being attached to the temple (1 Kgs 6:6; cf. Ezek 41:6–7). The distinction of the temple as a separate sacred space is thus preserved. "Offset" is from a root *(grʿ)* meaning "to diminish," and it probably refers to a ledge in the wall created by a reduction in its width at a given point. The second tier of side chambers was thus wider (6 cubits) than the bottom tier (5 cubits); and the uppermost wall was wider still (7 cubits). See also TEMPLE, JERUSALEM.

CAROL MEYERS

OG (PERSON) [Heb *ʿôg* (עוֹג)]. King of the land of Bashan in Transjordan (Num 21:33–35). He was defeated and killed by the Israelites as they passed through his territory on the way to the promised land. Og's kingdom is portrayed as a settled region; sixty cities are mentioned in the narrative of the conquest of the area (Deut 3:1–10). Og is also connected with two major cities in the region which are assumed to have been his capitals: Edrei and Ashtaroth (Josh 12:4). After the region had been conquered, the territory of Og was given to the half tribe of Manasseh, which chose to remain east of the Jordan (Josh 13:29–30).

An additional note about Og is found in Deut 3:11, where he is said to be the last survivor of the REPHAIM, a putative race of giants mentioned occasionally in the Hebrew Bible and presumed to have inhabited Canaan in pre-Israelite times (Deut 2:20). The great size of Og was confirmed by a reference to

his “iron bedstead” still on display at Rabbah (Deut 3:11). This bedstead was some 6 feet (4 cubits) wide and 131/2 feet (9 cubits) long. The Hebrew words translated “bedstead” and “iron” have been much discussed in the secondary literature. The translation “bedstead” is from the Hebrew ʿ*ereś,* which is usually understood as “couch” or “bed.” In Deut 3:11, some take it as a last resting place and so a tomb or sarcophagus (Mayes 1979: 144). In connection with this reference to a sarcophagus, the term *barzel* is understood as “basalt,” a dense black stone commonly used in the region (Driver *Deuteronomy* ICC, 54).

The importance of the defeat of Og in Israel’s memory is demonstrated by the continued references to the event in various parts of the Hebrew Bible. The Pentateuch refers to the victory over Og in both Numbers and Deuteronomy (Num 21:33; 32:33; Deut 1:4; 3:1–13; 4:47; 29:6—Eng29:7; 31:4). The Deuteronomistic History picks up this event in Joshua and in 1 Kings (Josh 2:10; 9:10; 12:4; 13:12, 30–31; 1 Kgs 4:19). The summary of Israel’s history in Nehemiah 9 includes this event in 9:22. There are also references to Og in Psalms 135:11 and 136:20.

PHILLIP E. MCMILLION

OHAD (PERSON) [Heb ʾ*ohad* (אָהַד)]. He was the third of the six sons of Simeon (Gen 46:10; Exod 6:15). Ohad was the grandson of Jacob and Leah, and his name is mentioned in the genealogical list of the people who descended with Jacob to Egypt at the invitation of Joseph at the time of a severe famine in the land of Canaan (Gen 46:8–27). Ohad’s name does not appear in the parallel genealogical lists of the descendants of Simeon in Num 26:12 and 1 Chr 4:24. Cheyne (*EncBib,* 3460) explained this omission by saying that the name Ohad comes from a dittography of “Zohar,” Simeon’s fifth son. Keil (1951: 372) explained the omission of Ohad’s name in the parallel genealogical lists by saying that Ohad either died without fathering children or did not leave a sufficient number of children to form an independent clan.

OHEL (PERSON) [Heb ʾ*ōhel* (אֹהֶל)]. The fifth child of Zerubbabel. Ohel is listed second in 1 Chr 3:20, which records a second distinct list of Zerubbabel’s children. It has been suggested that these names were grouped separately because they were born after the return to Palestine. It seems unlikely that these names represent the offspring of Meshallum as was previously suggested (Albright 1921: 10; Williamson *Chronicles* NCBC, 57).

RUSSELL FULLER

OHOLIAB (PERSON) [Heb ʾ*ohŏlîʾāb* (אָהֳלִיאָב)]. Ahisamach’s son, from the tribe of Dan, and Bezalel’s cocraftsman in the tabernacle construction (Exod 38:23—LXX 37:21). Oholiab possessed the necessary skills—traceable to divine inspiration—for fashioning several individual items in accordance with the instructions he received from Moses (31:6). He and Bezalel also taught their special skills to a great host of manual laborers engaged in the work on the tabernacle (35:30–36:7). Yet the two were not architects. When it came to assembling the parts into an integrated whole, not they but Moses personally performed the task (40:1–33). The name Oholiab is unusual but not necessarily an artificial construction since there is evidence of its elements in W Semitic nomenclature. Noth (*IPN,* 158–59), who compares the form with Phoenician ʾ*hlbʿl* and ʾ*hlmlk* and with Sabaean ʾ*hlʾl,* considers it a nominal sentence name, and translates it as “father is a tent (i.e., shelter)” rather than either “family of father” or “tent of father.” The name is archaic, not containing the new title YHWH in the function of a formative element. Cole (*Exodus* TOTC, 209) sees no reason to consider it an ungenuine insertion. He adds that it is datable at the latest to the time of the Davidic tent (1 Chr 15:1), since Solomon’s artificer had a different name (1 Kgs

7:13). One may therefore accept the possibility that behind the names of both Oholiab and Bezalel, and even behind their assignment to certain Israelite tribes, there stand the historical figures of craftsmen who were at one time involved in the furnishing of the sanctuary (Noth, *Exodus* OTL, 240). Clements (*Exodus* CBC, 199), however, denies an extraordinary instance of survival of tradition and thinks they simply represented famous family guilds of craftsmen well known in ancient Israel—families who were expert in woodcraft and metalcraft and who were employed in making and furnishing the temple.
EDWIN C. HOSTETTER

OHOLIBAMAH (PERSON) [Heb *ʾoholîbāmâ* (אָהֳלִיבָמָה)]. The daughter of Anah, son of Zibon the Horite, and the second wife of Esau (Gen 36:2, 14, 18, 25). Oholibamah was also the mother of Jeush, Jalam, and Korah (vv 5, 14, 18). As such, she (along with Adah and Basemath) was considered one of the Edomite tribal mothers. Originally she probably belonged to the Horitic-Seiritic tribal system. Later (as Esau's wife) she and her three sons were genealogically integrated into the Esauite-Edomite tribal system. Furthermore, she was regarded as her own tribe on the basis of the addendum in Gen 36:40–43, a list of Edomite "tribal leaders" (Heb *ʾallūpîm*) that probably ought to be attributed to the Priestly source (cf. also 1 Chr 1:51b–54, which is a shortened version of that addendum). The meaning of the name is unclear. Perhaps it can be understood as "my (god's) tent (protection, refuge) is with them (*ʾōhel* plus preposition *bĕ-* and 3d person plural suffix?)" or as "my tent (protection) is (divine name)." Another possible meaning could be derived from Arabic *ʾhl,* "people, clan," and mean "people/clan of (a certain) god."
ULRICH HÜBNER

OLD AGE. Aging in the Bible represents a welcomed pilgrimage through the transitions of life. Old age enjoys its own vocabulary and high regard (Lev 19:32). Nevertheless, like other stages of life, it brings mixed blessings.

A. Old Age as Physical Traits

Languages throughout the ANE use "white hair" (wool) to refer to one of optimum age and wisdom. White hair is the primary trait of old age. Akkadian *ši-pa-tu* (wool, gray hair) and *ši-bu* describe those who are old, older, or very old (*AHW* 3: 1228, 1244). Hebrew uses *sêbâ,* "gray head," as a synonym for old age (*BDB*, 966; Gen 15:15; 25:8; Judg 8:32; 1 Chr 29:28). A similar image appears in biblical Aramaic describing the "ancient of days" who sits enthroned with hair like "lamb's wool," *ʿămar nĕqēʾ* (Dan 7:9; Sokoloff 1976).

A second word, "elder," *zāqēn* (Hebrew), and its equivalents *šibtum* (Akkadian), *senator* (Latin), *gerōn* (Greek), and *sheikh* (Arabic), designate both people of advanced age and people of a distinct social grade. Hebrew derives the word from *zaqan,* one who wears a beard, i.e., a fully accredited adult. Though the term defines any person past puberty, it also designates a clan leader, a local official, and an old person. (For discussions of the elders as a distinct social grade or position, see Bornkamm *TDNT* 4:651–83; Harvey 1974). The feminine form also describes older women (*zĕqēnôt,* Zech 8:4) and old age in general (*ziqnâ,* Gen 24:36). Aged, decrepit persons are designated by a parallel term, *yases* (2 Chr 36:17), and its derivative for the venerable aged, *yasis* (Job 15:10; 32:6; 12:12; 29:8).

B. Old Age as Advanced Years

The Bible also indicates aging by referring to a chronological age. Some texts record a life span in years. Others use idioms to describe longevity as "full of days" or "advanced in years": *ʾōrek yāmîm* ("length of days"); *yāmîm rabbîm* ("many days"); *śĕbaʿ yāmîm* ("sated with days"); *mĕlēʾ yāmîm* ("full of days"); *bāʾ bayyāmîm* ("advanced in years"); and *śêbâ ṭôbâ* ("a ripe old age"). Verbal forms include *haʾărēk yāmîm* ("to lengthen days"); *harbôt yāmîm* ("to increase days"); and *hôsēp yāmîm* ("to add days"). The expression *ʾrkymm (ʾōrek yāmîm*) was discovered in a Hebrew inscription at Kuntillet Ajrud dating from the late 9th to the early 8th century B.C.E. Other counterparts of the above phrases have been found in West Semitic languages and in Akkadian (Malamat 1982: 215).

Long life in ancient literatures represents an exceptional achievement. Advanced years indicate importance (Gen 5:1–32) and divine favor. The Bible mentions that Abraham (Gen 25:8), Gideon (Judg

8:33), and David (1 Chr 29:28) lived to a "good (ripe) old age" (*śêbâ ṭôbâ*). They died prosperous, of natural causes, and were buried in their family tomb, obviously blessed by God (Gen 15:15). The Bible notes one exception: it explains how Enoch walked with God and yet lived only a relatively short time: "God took him" (Gen 5:22–24).

The Bible glorifies some of its heroes by describing their longevity. For example, a Deuteronomic summary praises the good health of Moses at his death (Deut 34:7), and Caleb brags on his extra vigor at 85 years of age (Josh 14:10–11).

A study of fourteen kings from the dynasty of David presents a clearer picture of the average life span during the royal eras of Israel, 926–597 B.C.E. (Wolff 1974: 119–23; *PI* 2: 46). Omitting Jehoiakim, Jehoiachin, and Zedekiah, the age at death of the remaining kings varies between 66 (Manasseh) and 21 (Ahaziah), the average being 44. Premature and unnatural causes of death such as assassination may account for some of these deaths. Nevertheless, in spite of superior diet and medical care, monarchs in stable Judah during this period did not live 70 or 80 years (contra Ps 90:10). Outside of stories about the patriarchs in Genesis, only Moses (120 years), Joshua (110), Job (140), and the high priest Jehoiada (130, 2 Chr 24:15) are said to surpass 100. One passage suggests that only in the eschatological kingdom would people regularly attain 100 years (Isa 65:20). Generally, transitions to old age began earlier than age 65 (see Harris 1987: 11–17).

C. Old Age as the Final Transition

1. Stages of Life. The Bible also describes the aging experience as a sequence of the seasons of life. Such seasons indicate common transitions: childhood, youth, maturity, and elderliness. Akkadian uses a number of words to describe the various age groups: 40 years *(la-lu-tu),* "prime of life" (CAD 9: 52); 50 years *(umu-ar-ku-tu),* "short life"; 60 years *(si-pa-tu),* "wool"; 80 years *(si-bu-tu),* "old age"; and 90 years *(lit-tu-tu),* "extreme old age" (CAD 9: 220–21).

Life also is pictured as four seasons (childhood, youth, young marrieds, the elderly; Jer 51:22), or as five stages (small child, youth [maturity begins at age thirteen, Gen 17:25], adult men and women, the elderly *(zāqēn),* and the aged *(mĕlē᾽ yāmîm)*; Jer 6:11). The Bible also defines a maximum life span as the fourth generation of a family, equating it with the life span of 70–80 years mentioned in Ps 90:10 (Malamat 1982: 216–18). Though the fourth-generation position may be an important one, few elderly in fact lived to enjoy it.

2. Adult Responsibilities and Retirement. Life's transitions indicate changes in the work and role patterns of individuals. Twenty-year-old males are considered responsible adults (Num 14:29; 32:11) and liable to enter military service (Num 1:3, 18; 26:2) and to pay taxes (Exod 30:14). According to Num 4:3, the Kohathite branch of Levites were to serve as priests between the ages of 30 and 50. Other texts suggest that (other?) Levites could begin their service as early as age 25 (Num 8:24) or even 20 (1 Chr 23:24). Regardless, Levites would retire at age 50 to assist younger priests (Num 8:24–26). Zechariah, the father of John the Baptist, and also of the priestly division of Abiathar (Luke 1:5; 1 Chronicles 24, esp. v 10) considered his wife and himself "old," yet that did not preclude him from serving in the temple (Luke 1:18–25). Nevertheless, priests at age 50 entered some form of retirement, a common transition of old age.

Life transitions began somewhat earlier in agricultural occupations, The toil was so difficult that parents retired from active farming as soon as children were old enough to work the field. Then they would train their grandchildren and advise the younger generation. A father or mother might also serve as an elder or judge for the clan, the community (wise woman at Abel, 2 Sam 20:14–20), and in some cases a tribe or nation (Deborah, Judg 4:4–5; wise woman of Tekoa, 2 Sam 14:1–7).

A price list associated with payments of vows (Lev 27:1–8) provides values for men and women at different stages of life. Such evaluations apparently estimate the worth of a person's work capacity adjusted to represent the cost of a slave at various times in life (Wenham 1978). These values (calculated in shekels of silver) are as follows:

	Male	Female

1 mo.–5 yrs. old	5	3
5–20 yrs. old	20	10
20–60 yrs. old	50	30
Over 60 yrs. old	15	10

The peak value for a male (20–60 yrs.) may indicate that period when he could be conscripted for military service as given in census instructions (Num 1:3, 20, 22; 26:2, 4; 2 Chr 25:5). After age 60 a female does not decrease in value as much as a male. The comparative worth of an older woman changes from the earlier 3/5 ratio to that of 2/3, perhaps indicating that elderly women lived healthier and more active lives than elderly men. A drop in value of both genders at age 60 suggests that both had retired by then.

D. Old Age as Debilitation and Loss

The Bible also mentions the debilitating losses which accompany old age. A key transition for the woman comes at menopause, when she loses the ability to give birth to children. When a woman can no longer give birth (Gen 18:11; Ruth 1:12; Luke 1:18, 36) or when a man is unable to sire a child for his wife (Gen 18:12), the Bible considers that a sign of advanced age. Failing health (e.g., loss of hearing, sight, or normal vigor) also indicates old age (Gen 27:1–2; 1 Kgs 1:1–4).

To some degree old age brought a loss of income as well as significance. Women especially experienced this dilemma. A widow in the Bible represents the most traumatic example of one who is helpless and yet worthy of support from the community. Without a kinsman-redeemer, or sympathy from a godly leader, or miraculous aid from God, widows possessed little hope (1 Kgs 17:9–24; 2 Kgs 4:1–7). Consequently, the "reproach of widowhood" remained synonymous with suffering and loss (Isa 54:4; Lam 1:1; 5:3–4; Rev 18:7).

An older widow could experience deep bitterness and depression because of her severe losses and inability to recover from them, as in the noteworthy case of Naomi (Ruth 1:20–21). Note also the convincing ruse of the woman of Tekoa (2 Sam 14:1–7). Biblical texts single out older widows as in need of extra help and compassion (1 Tim 5:3–8). Luke–Acts mentions how early Christians organized to care for widows (Acts 6:1–7; 9:39). Jesus praised the widow who gave her remaining money to the temple (Luke 21:1–4), and he showed compassion on a widow whose only son had died (Luke 7:11–16). He angrily denounced those who "devour widows' houses" and then prayed long prayers (Luke 20:47). The epistle of James defines "pure religion" as visiting orphans and widows in their affliction (1:27).

The Bible reveals the God of Israel as the defender of powerless widows (Deut 10:18), commanding the people of the covenant to care for them (Deut 14:29; 24:17, 19–21). Prophets and others condemn violations of these responsibilities (Isa 1:23; 10:2; Mic 2:9; Mal 3:5; Job 22:9; 24:3; 31:16; Ps 94:6).

Aging fathers, likewise, are portrayed as victims in the Bible (often of their children's ambitions). Note how children exploit drunken (old?) fathers in the stories of Noah and Lot. Encouraged by his mother Rebekah, Jacob manipulates his nearly blind father into blessing him instead of his brother Esau (Genesis 27). Absalom temporarily overthrows his aging father David (2 Samuel 15–19). Nathan and Bathsheba exploit David's failing health and memory to establish Solomon as his successor (1 Kings 1).

Prophets condemn disregard for vulnerable parents (Mic 7:6). Intergenerational love remains their ideal (Mal 4:6). The books of Sirach (3:1–16) and Tobit (4:1–4) reinforce these ideals and the benefits of filial support for parents. In the Synoptic Gospels Jesus condemns those who shirk the care of aging parents through a religious vow called "Corban" (Mark 7:5–13). Talmudic rabbis also teach filial reverence and illustrate these laws with examples of obedience (*mora, Qidd.* 31a, 31b, *j.* Pe›a 1:1; 15c).

Aging parents sometimes enter a somewhat dependent and vulnerable stage before death. Qoheleth mentions common debilitating losses of aging in a poem describing death (Eccl 12:1–8). The teacher describes vividly the "coming days of hardship and those years that arrive" as a weakening body which collapses in death. Old age in the Bible signifies more than divine blessing; it also indicates a transition into a weakened social and physical condition which needs respect and protection to compensate for its losses (Prov 19:26; 28:24; Exod 20:12).

OLD GATE (PLACE) [Heb *šaʿar hayšānâ* (שַׁעַר הַיְּשָׁנָה)]. A gate in the outer defensive wall of Jerusalem on the W side of the Temple Mount above the E slope of the Tyropoeon or Central Valley mentioned by Nehemiah (3:6; 12:39) and possibly by Zechariah (14:10).

Because gates are often identified with some geographic location outside a city to which they lead, it would be natural to think of this gate as having received its name from the village of Yešānâ (i.e., "Jeshanah," identified with Khirbet el-Burj or el-Burj Isana [M.R. 174156]), one of a triangle with Ephron [M.R. 178151] and Bethel [M.R. 172148] guarding the Taiyibe ridge and access to the Benjamin plateau (2 Chr 13:19; Neh 11:25–36; 1 Macc 9:15, *Ant* 14.15.12 § 458). Although this strategic control point on the N frontier of Benjamin was militarily and politically more important than many have realized, the definite article before *yĕšānâ* prevents us from considering *šaʿar hayšānâ* a proper name and associating it with the village of Jeshanah. This coupled with the difference in gender between *šaʿar* (masc) and *yešānâ* (fem) leaves two possibilities: (1) the text needs emending to possibly *šaʿar hammišneh* ("the Mishneh Gate"), associating the gate with the Mishneh quarter of Jerusalem that has been located by some in the Tyropoeon or Central Valley to the W of the Temple Mount; or (2) one should supply a feminine noun such as *hāberēkāh* (the pool) or *hāʿîr* (the city) to read *šaʿar hayšānâ hāʿîr*, "the gate of the old city." Additionally, some have wanted to identify this gate with the Gate of Ephraim in order to resolve (unnecessarily) the absence of the Ephraim Gate in Nehemiah's restoration text (3:7, 8) and the deletion of the Old Gate in the LXX procession text (12:39). Many have reviewed the several possibilities (Avi-Yonah 1954: 242–43; Simons 1952: 276–78, 305–6; Vincent and Steve 1954: 240, 243; Williamson 1984: 81–88), yet the enigma of the Old Gate has not been completely resolved. We know from Nehemiah's restoration and procession texts (3:6; 12:39) that this gate was located to the N of the Ephraim Gate and to the S of the Fish Gate along the rather prominent inclined street (1 Chr 26:18) that ran N–S and led from the inner foundation or Sur Gate to the Fish Gate.

———

A. Description

The Mount of Olives belongs to the Central Mountain Range, the main range of mountains which runs through the central and S portions of Palestine from the N to the S. To the W of Olivet lay the Kidron Valley and the city of Jerusalem. Toward the E lay Jericho, the Jordan Valley, and the Dead Sea. There are several undulations along the two-mile ridge separating several high points. The northernmost summit is the highest, which has been reported to be 2,963 feet above Mediterranean Sea level. This summit has been identified with Nob (Isa 10:32) and Mount Scopus (Josephus *JW* 2.19.4, 7; 5.4.1), but there is no certain evidence for these suggestions. This N peak today is called Ras el-Mesharif.

The center of the Mount of Olives is a bit lower (about 2,700 feet) than its N counterpart. It stands opposite the temple area and is about 100 feet higher than Jerusalem itself. To the S and SE one can see the expansive wilderness of Judea; to the E is a spectacular view of the Jordan Valley and the Dead Sea; to the W lies a deeply stirring panorama of the old city of Jerusalem. The S summit, the southernmost part of the ridge, is the smallest of the three. This peak, facing W, overlooks the ancient site of Davidic Jerusalem, just S of the temple area.

The mount itself is composed of cretaceous limestone with a chalklike top layer and was named "Olives" because of its extensive olive groves. The olive tree, one of the hardier trees, was able to thrive in this terrain. Although populous with olive trees, this ancient site was also dotted with pines. The mount, denuded of trees in the time of Titus, contains only a fraction of the tree population it had in ancient times. Today there are major deforested areas and numerous cemeteries. Since Christ often traversed this ridge and spent not a few hours in its groves, there are many commemorative churches honoring this terrain. Some of these sites, however, are questionable.

B. Old Testament and Late Judaism

Surprisingly, in spite of the close proximity of the Mount of Olives to Jerusalem, there are only two explicit references to this mount in the OT. The first reference occurs in 2 Sam 15:30. David, fleeing from Jerusalem after his son Absalom led a successful revolt, took the path which led over the crest of the Mount of Olives as he made his way to his temporary exile in the Transjordan: "David went up the ascent of the Mount of Olives, weeping as he went, barefoot and with his head covered." Interestingly, the text recalls that "David came to the summit where God was worshipped" (2 Sam 15:32). Previously, the OT had not mentioned this "place of worship." However, given the inclination of ancient peoples to worship on mountains, it is not impossible that a sanctuary existed here. It is tempting to identify this place of worship with Nob, but this identification is far from certain (cf. 1 Sam 21:1; 22:9–11). The second explicit reference to the Mount is found in Zechariah's description of the Day of Yahweh: "On that day his feet shall stand on the Mount of Olives and it shall be split in two from east to west by a very wide valley; so that one half of the Mount shall withdraw northward, and the other half southward … then the Lord your God will come, and all the holy ones with him" (14:4–5).

Besides these two explicit references there are several probable implicit references. In 1 Kgs 11:7–8 mention is made of high places built by Solomon for all his foreign wives to worship the Moabite god Chemosh and the Ammonite god Molech. These places of worship, the text says, "were east of Jerusalem, to south of the Mount of Corruption" (2 Kgs 23:13). Today the Mount of Offense (variously called Mount of Corruption, Sandal, or Evil Counsel) may well be the place where these abominations occurred, but this identification is by no means certain. Some scholars see a play on words in 2 Kgs 23:13. The Hebrew word "corruption" *(mašḥît)* is very close to the word "anointing" *(māšaḥ)*. Thus the "mount of anointing"

(Mount of Olives, from which the sacred anointing oil is produced) has become the "mount of corruption." Though this suggestion is very possible it should be noted that the ascription *Mons Offensionis* (Mount of Offense) can be traced only as far back as Quaresmius of the 17th century A.D.

A second implicit reference is found in Ezekiel. The prophet was enabled to view the glory of God depart from the temple, whereupon it "stood upon the mountain which is on the east side of the city" (Ezek 11:23). Later in the book, Ezekiel reported that he saw the process reversed. In his vision of the new Jerusalem, Ezekiel saw this glory return and enter the eschatological temple (43:2–5). The mountain referred to by Ezekiel is commonly understood as Olivet.

The Mount of Olives has also been associated with the rite of the burning of the red heifer so that its ashes could serve as a purification (Num 19:1–10). According to the Talmud, this purification rite was performed on the Mount of Olives opposite the E gate of the temple (*Para* 3.6–7, 11). Moreover, the Mishnah claims that Jews in Jerusalem announced the new moon to their brethren in Babylonia by means of a chain of fire signals, the first of which began on Olivet. Furthermore, according to tradition, the dove sent forth from the ark by Noah retrieved the olive branch from the Mount of Olives (Ge 8:11; *Gen. Rab.* 33:6). Tradition also suggests that those faithful Jews who died abroad would be channeled back to Jerusalem through underground caverns and be resurrected and emerge at the sundered Mount of Olives (*m. Ketub.* 111a). Also, when the glory of God departed from the temple it was to have tarried three and a half years on Olivet while eagerly awaiting Israel's repentance (*Lam. Rab.* Proem 25; cf. Ezek 10:18).

C. New Testament

Almost certainly, Jesus traversed this mountain many times to and from feasts and festivals in Jerusalem. Although this route could have been avoided and a route directly N through Samaria followed, the Jewish custom was to head E and then N to avoid stepping on Samaritan soil. Despite the numerous trips using this circuitous route, apart from Jesus' final week of ministry the Mount of Olives is mentioned only infrequently.

The references to the Mount of Olives outside the passion week occur at John 8:1, the pericope of the woman taken in adultery (many scholars seriously question the authenticity of John 7:53–8:11), and Acts 1:12 (cf. Luke 24:50–53), in which Jesus' ascension is described. There may also be several implicit references outside of Jesus' passion week. These references include the visit to Mary and Martha where Mary is affirmed for seeking to be taught (Luke 10:38–42); the raising of Lazarus (John 11); and the feast "six days before the Passover" (John 12:1; cf. Matt 26:6–12; Mark 14:3–9). Although none of these pericopes explicitly mentions the Mount of Olives, nevertheless they all occurred at or near Bethany, which is on the E side of the mountain.

With regard to the passion week, the references to Olivet are numerous. The triumphal entry, which began at Bethany and terminated in Jerusalem, explicitly mentions the Mount of Olives (Matt 21:1–11; Mark 11:1–10; Luke 19:28–39; John 12:12–15). While proceeding into Jerusalem, Jesus paused on Olivet and wept over the unrepentant Jewish nation (Luke 19:41–44); traditionally this site has been marked by the Dominus Flevit chapel, but this identification is by no means certain. Apparently Jesus did not lodge in Jerusalem during his final week, but rather in Bethany, probably at the home of Mary and Martha or perhaps with Simon the leper (cf. Mark 11:11; 14:3; Luke 21:37). The Gospels' description of Bethany suggests an identification with the Arab village of el-Azariyeh. Bethphage was apparently adjacent to Bethany, but nearer the top of the Mount of Olives. Abu-Dis probably corresponds to this city today, although some identify it with the village et-Tur on the very top.

The cursing of the fig tree, occurring the day after the triumphal entry, took place on Jesus' evening return to Bethany (Matt 21:17–19; Mark 11:11–14; 19–20) and probably occurred on this mountain. It is also likely that the Mount of Olives was in view when Jesus taught that the person of faith could say to the mountain, "Be taken up and cast into the sea," and it would occur (Matt 21:21). Also during his passion week, Jesus gave his disciples an eschatological outline (Matthew 24; Mark 13) from "the Mount of Olives opposite the temple" (Mark 13:3; cf. Matt 24:3). Luke informs us that during the evenings of the passion week, Jesus tarried on Mount Olivet (Luke 21:37). The seclusion of the groves was probably heartily welcomed after the rigor of teaching in the temple all day. It is probably from this mountain that

Jesus sent his disciples into Jerusalem (Matt 26:18; Luke 22:8) to prepare the Passover. After celebrating this feast in the city, they sang a hymn and went to the Mount of Olives (Matt 26:30; Mark 14:26; Luke 22:39; cf. John 18:1). Jesus' destination on the Mount of Olives was the garden of Gethsemane (Matt 26:36). This garden was probably located on the W side of Olivet, and here Jesus agonized before his Father in prayer (Matt 26:30, 36ff.; Mark 14:26, 32ff.; Luke 22:30ff.; John 18:1ff.). It was also in this place that Jesus was betrayed by Judas and seized by the soldiers (John 18:12; cf. Matt 26:47–57; Mark 14:43–50; Luke 22:47–54).

D. Shrines on the Mount

Only the city of Jerusalem would have a greater concentration of shrines than the Mount of Olives. Most of these shrines are related to events named in the NT, but their origin and accuracy are nonetheless problematic. For example, there are three triumphal entry trails, three gardens of Gethsemane, three sites for Jesus' ascension, two Jericho roads, etc. There is even a shrine over the supposed "last footprint of Christ."

A basilica dedicated in the name of Helena, Constantine's mother, was probably the first shrine on Olivet. Located on the S end of the central hill, it was built ca. 325 and is called the Eleona ("Olives"). It was destroyed in the 7th century by the Persians, but became the site upon which the Church of the Pater Noster was built in 1869. Ostensibly the Lord's Prayer was taught on the ground marked by this church and therefore the walls are covered with versions of the Lord's Prayer in no less than sixty different languages. Also on the mount stands a Greek orthodox monastery, *Viri Galilaei,* which reportedly draws its name from Acts 1:11: "Men of Galilee, why do you stand looking into heaven?" Thus the "mountain of Galilee" (Matt 28:15) is dubiously identified with a place on the Mount of Olives. A chapel marking the ascension of Christ is located at the summit of Olivet. Built in 1834, this sanctuary also houses a stone which some have claimed contains the footprints of Jesus.

On the W slope of the Mount of Olives the visitor can choose one of three possible sites for the garden of Gethsemane, commemorated by three different churches. The first one, near the center of the W slope, is the Russian Church of Mary Magdalene. The more celebrated Roman Catholic Church of All Nations, with its Stone of the Agony in front of the altar, lies just below it. The garden, marked by the Church of All Nations, contains olive trees which probably were planted about a millennium ago. Thirdly, the Armenian Gethsemane, with its church built ca. 455, claims to be the site of the burial of Mary. Though not a shrine, the German hospice, Augusta Victoria, built by Kaiser Wilhelm II, located on the N of the Mount of Olives also deserves special mention. In digging its foundation in 1907 an ancient settlement was uncovered. Because of the association of the valley of Jehoshaphat with the Day of the Lord, there is an extensive tradition of religious burials on the Mount of Olives. Included among the burials are James, the Apostle; Mary, the mother of Jesus; Joachim and Anna, Mary's parents; and Joseph, the husband of Mary.

The Mount of Olives is also important in the Moslem tradition. A Muslim shrine, the Inbomom, built around 375, contains what is claimed to be the last footprint of Christ upon earth. Of greater importance is the Islamic belief that the final judgment will occur in the Kidron Valley between the Mount of Olives and the celebrated Jerusalem shrine, Dome of the Rock. Ibn el-Gaqih summarizes this final cataclysm: "The Mount of Olives faces the Mosque, and between them is the Valley of Ben Hinnom, and from it 'Isa [Jesus] ascended to Heaven. And on the Day of Judgment all souls will be gathered to it and they will cross the bridge over the valley of Jehoshaphat, some to Paradise and some to Gehenham." Additionally, Muslim tradition asserts that Olivet is holy because "Saffiya, the wife of the prophet … prayed there."

WARREN J. HEARD, JR.

OLYMPAS (PERSON) [Gk*Olympas* (Ὀλυμπας)]. A Roman Christian who received greetings from Paul in Rom 16:15. He was probably a gentile Christian. See NEREUS. The Greek name Olympas was derived from a longer name beginning with the letters "Olymp-" (e.g., Olympiodorus, Olympianus, Olympicus, Olympheius; cf. Patrobas—Patrobius, Epaphras—Epaphroditus). According to the epigraphical and literary sources from the city of Rome, "Olympas" occurs only two times (Lampe *StadtrChr*, 139–41, 149). As the name was not common there, it probably indicates that Olympas had immigrated to Rome.

PETER LAMPE

OLYMPIAN ZEUS, TEMPLE OF [Gk *neās Dios Olympiou* (νεας Διος Ὀλυμπιου)]. The name proposed by Antiochus IV Epiphanes for the temple in Jerusalem (165–164 B.C.E.) in 2 Macc 6:2, when he prohibited the observance of Jewish religious practices. In the language of 2 Maccabees this is the grievous act of Antiochus which parallels the ABOMINATION OF DESOLATION in 1 Macc 1:54 [Gk *bdelygma erēmōseōs*] and Dan 11:31 and 12:11 [Heb *šiqqûṣ měšômēm*]. Josephus says that the king "compelled them to do reverence to the gods in whom he believed" (*Ant* 12 §253). The strong language reserved for descriptions of this event makes it extremely unlikely that the majority of Jews would have regarded this renaming as somewhat inconsequential or regarded Zeus as almost a common noun for a god in general (cf. Bartlett *Maccabees* CBC, 32; Goldstein *2 Maccabees* AB, 272–73). It is doubtful that Antiochus here was attempting to identify the God of Israel with Zeus in order to transform Judaism into one of the syncretistic religions of the east (cf. Schiffman *HBC*, 905). Nor should Antiochus simply be viewed as an apostle of Hellenism. It is much more likely that he wished to evoke the origins of his dynasty and its first patron, i.e., to establish in Jerusalem a symbol of the Seleucid Empire (Rigsby 1980: 233–38). There is ample evidence of his particular devotion to the Olympian Zeus as patron of the dynasty (Abel *Maccabees* EBib, 360; Habicht *2 Maccabees* JSHRZ, 229). See ANTIOCHUS #4.

JOHN KAMPEN

OMAR (PERSON) [Heb *ʿômār* (אוֹמָר)]. The second son of Eliphaz, and therefore Esau's grandson (Gen 36:11, 15; 1 Chr 1:36). Following Gen 36:15, he belonged to Edom's "tribal leaders" (Heb *ʿallūpîm*) and represented a clan within the Esauite-Edomite tribe of Eliphaz. The meaning of the name is not completely clear. It could either be considered an animal name (cf. Heb *ʿimmēr,* "lamb," "sheep"; Assyrian *emāru (m),* Babylonian *imēru (m),* "donkey") or more likely as a shortened form of the theophoric personal name "God NN has spoken" (cf. Heb *ʿamaryāh (û), ʿimrî* (?), *ʿḥyʿmr, ʿmrʿl;* Sabean *ʿlʿmr;* Safaitic/Thamudic *ʿmr (ʿ)l*).

OMEGA. The twenty-fourth and last letter of the Greek alphabet. See also ALPHA AND OMEGA.

OMENS IN THE ANCIENT NEAR EAST. Belief that in omens lies a divine message, and attempts at interpreting this message, are ancient and universal. In the ANE the oldest sources for divinatory practices come from Mesopotamia, where the need to interpret omens gave rise to the extensive and well-attested art of divination and its practitioner, the diviner. Much of the evidence dates from the first half of the 2d millennium.

In Mesopotamia the ominous was found in any deviation from the ordinary, both in nature and among mankind: from the erratic motions of the planets to freak births among humans and beasts; from the behavior of a sacrificial lamb on its way to slaughter to that of a lizard on the wall of a house; from the ominous import of a chance utterance (Akkadian *egirrû,* corresponding to the Greek *kledon;* cf. 1 Sam 14:8–12) to that of one's dreams. All these phenomena were believed to contain divine messages which could be interpreted by the specialist so that appropriate measures could be taken to avert the portended evil, or a course of action leading to disaster could be avoided.

However, the diviner did not depend on natural phenomena alone for clues to the divine will, but commonly created the means whereby the divine response to specific questions could be obtained. This might be accomplished by presenting to the gods the liver of a sacrificial sheep on which they could "write," as it were, their verdicts, or by pouring oil over water and observing the patterns, or by letting smoke rise from a censer and observing its configurations. These three methods of interpreting omens, hepatoscopy, lecanomancy, libanomancy, respectively, are some of the methods of divination attested in ancient Mesopotamia. Of the three, hepatoscopy, i.e., liver divination, or in its more general application, extispicy (since in practice the entire entrails [exta] of the sheep came under scrutiny), was most prevalent in the royal service. Extispicy is attested, in a fully developed form, from early in the 2d millennium B.C. Its practical aspect is represented by the so-called extispicy reports, which are observations on the appearance of the entrails of a sacrificial sheep. Irregularities and abnormalities in the exta were considered ominous, and predictions were derived from them. Such extispicy reports are attested from the first half of the 2d millennium to the 7th century B.C., when this practice was vigorously pursued by the later Sargonid kings of Assyria, Esarhaddon and his son Ashurbanipal. In fact, the extispicy practiced on behalf of these two gave rise to a distinct genre in Mesopotamian omen literature, that of queries to the sun-god, Shamash, co-patron (with Adad) of Mesopotamian divination. Extispicy is also referred to in the inscriptions of Nabonidus (556–539 B.C.) as a means of eliciting a divine response.

The ability of the diviner to elicit a divine response lies in the nature of divination. Of the two types of divination attested, oblativa and impetrita (also referred to as intuitive and inductive, or natural and artificial, divination) it is the latter which enabled the diviner to present to the gods the means whereby a divine decision could be obtained. Oblativa could not serve this purpose, dependent as the Mesopotamians were on the occurrence of natural phenomena. The three divinatory practices mentioned above, extispicy, lecanomancy, and libanomancy, may serve as examples of impetrated omens. To this type belongs also the Israelite method of consulting God through the *ʾûrîm* and *tummîm.* The response appears to have been binary in nature, i.e., "yes" or "no" answers to specific questions, or "favorable" and "unfavorable," as the case might be (*TDOT* 2: 453–54).

Much of the evidence from Mesopotamian divinatory practices (among which are extispicy, lecanomancy, libanomancy, teratomancy [unnatural births], physiognomy, astrology, oneiromancy [dream omina]) and other aspects of Mesopotamian experience considered to be of ominous import is represented by literary omen series. Some omen series date back to the first half of the 2d millennium B.C.; in them the results of centuries of observations have been recorded and eventually systematized in series arranged as conditional statements (i.e., if such-and-such is the case, then such-and-such is the result).

Much of the early evidence that divinatory practices, notably extispicy, played an important role in the everyday life of the people and not just the royal court comes from the city of Mari (dating at the latest from the 18th century B.C.), where accounts of extispicies performed for sundry purposes and their results (favorable or unfavorable) are commonly described in letters.

Other evidence that not only extispicy but astrological omens were popular in the royal courts comes from 7th-century-B.C. Assyria, where aside from diviners in the service of Esarhaddon (681–669 B.C.), scholars who consulted and interpreted the compendiums of astrological omens gained much influence at the court by advising the king of how best to avoid the pitfalls of evil celestial omens, such as eclipses. One way to avert the evil influences of an eclipse was the appointment of a substitute king who was expected to take upon himself any evil consequences; later, he would be executed when the danger was believed to be over.

Some of these practices, notably hepatoscopy, are attested beyond the boundaries of Mesopotamia. Liver models, i.e., clay models of sheeps' livers used by the apprentice diviner to learn his craft, are attested in Boghazkoi, Ugarit, Megiddo, and Hazor (all from the 2d millennium B.C.), indicating the spread of Mesopotamian divinatory practices elsewhere in the Near East and beyond.

In the Bible, the ominous was not found or sought after in deviation from the ordinary, either in nature or in human affairs. Biblical writers, notably in the Wisdom Literature, found the wonders of God's work

in the harmony of nature. The Bible, in fact, frowns on most forms of divination, which it proscribes as examples of heathen practices (e.g., Deut 18:10–11).

Nevertheless, procedures for eliciting a divine response to the needs of the people in times of crisis were present in ancient Israel too, and legitamate means to this end were available in the form of the *ûrîm* and *tummîm* and the *ʾēpôd* (Exod 28:30–31; *TDOT* 2:453–54). Other ways of seeking omens were also available, e.g., through dreams and prophecy, which were evidently considered acceptable ways of inquiring of God. Interpretation of dreams is closely associated in the Bible with the careers of Joseph and Daniel, and according to 1 Sam 28:6, God did not answer King Saul through dreams, or the *ʾûrîm* or prophets, on the eve of his final confrontation with the Philistines.

Prophecy was regarded until recent times as a uniquely Israelite institution. However, evidence for it elsewhere in the ANE has come to light in recent years (Wilson 1980). In texts from Mari (pre-18th century B.C.) reference is made to several types of prophets, male and female. They deliver messages, demands, and exhortations from the gods for the last king of Mari, Zimri-Lim. Zakur, an 8th-century-B.C. king of Hamath in Syria, informs us in his inscription that Beʾelshamayn spoke to him "through seers and diviners." In 7th-century-B.C. Assyria, prophets and more commonly prophetesses, who were associated with the cult of Ishtar of Arbela, pronounced oracles for Esarhaddon and Ashurbanipal.

It is clear that in the popular mind, prophets were associated with the foretelling of the future, as indicated by the episode of Saul and his father's lost asses, where it is said (1 Sam 9:9) that formerly a prophet had been known as a "seer" (cf. Amos 7:12).

In Ezek 21:26, there is a description of the king of Babylon standing at the crossroads and trying to determine how to proceed by the oracular means of shaking or tossing arrows (belomancy), consulting the *tĕrāphîm*, and inspecting the liver of a sheep. The omens determined his course of action. Of the three, only the third, hepatoscopy, is not attested in ancient Israel. Of the other two, the *tĕrāphîm* are well-attested and are in some instances associated with the ephod (Judges 17–18 passim; Hos 3:4). Belomancy is also known, e.g., 2 Kgs 13:14–19, which relates an incident involving the prophet Elisha and Joash, the king of Israel. See also PROPHECY.

IVAN STARR

OMER [Heb *ʿōmer* (עֹמֶר)]. See WEIGHTS AND MEASURES.

OMICRON. The fifteenth letter of the Greek alphabet.

OMRI (PERSON) [Heb *ʿomrî* (עָמְרִי)]. The origin of the name Omri is disputed, as is its meaning.

Probably it is an abbreviated form of the longer "Omriyahu," following the same pattern as the name Zimri = Zimriyahu = "Yahweh is (my) protection." However, while the first element in the name Zimri [yahu] is known, with the name Omri[yahu] the initial element is questionable; here there is no obvious underlying Hebrew root. A derivation from either Arabic or Amorite is possible. The first hypothesis is somewhat more probable in that the name of the N Israelite king Omri's daughter, Athaliah, can be brought into association with the Arabic language stock. If one goes with the hypothesis of an Arabic verbal root, then the name Omri[yahu] can be rendered: " (The) life (which) Yahweh (has given)" (Gray *I and II Kings* OTL, 365). The chronologically earliest bearer of this name that can be determined with certainty is the Omri who was king of the N kingdom of Israel in the 9th century B.C.E. Those who bear this name in the work of the Chronicler (1 Chr 7:8; 9:4; 27:18), even though they are partly assigned to a historical era somewhat earlier than the time of the N Israelite king Omri, are most likely anachronistic reflections of the linguistic usage of a later time. However, these references in the work of the Chronicler do show that the name Omri came to be incorporated into the onomasticon of Israel and Judah.

1. A king of N Israel and founder of a dynasty. Determinations of the years of his reign differ by several years: 882/878–871 B.C.E. (Begrich; Jepsen); 885/880–874 B.C.E. (Thiele); or 886–875 B.C.E. (Andersen).

1 Kgs 16:15–28 deals with the history of Omri. Here his elevation to the kingship is described in some detail, but very little is said about his actual reign. The name Omri also appears in filiation formulas in 1 Kgs 16:29–30 ("Ahab the son of Omri") and in 2 Kgs 8:26 = 2 Chr 22:2 ("Athaliah the daughter [RSV: granddaughter] of Omri"). "Omri" also appears in a critical retrospect in Mic 6:16. Finally, the name appears in extrabiblical sources, where Omri is the first mentioned king of Israel. He is directly named in lines 4–8 of the inscription of King Mesha of Moab (*ANET*, 320), while he is referred to indirectly in several Assyrian inscriptions.

Omri was the first one in the history of the N Israelite kingdom to succeed in establishing a ruling structure that lasted for any length of time. The Omride dynasty, which encompassed not only the reigns of Omri and his son Ahab but also of his grandsons Ahaziah and Joram, held on to the Israelite throne for a total of 33 years, counting from the beginning of Omri's sole rulership (878–845 B.C.E., following the chronology of A. Jepsen 1979: 204–18). To be sure, the Jehu dynasty, which took over the rulership from the Omrides, considerably outdid its predecessor in length of rule, holding fast to the reins of power for almost a full century (845–747 B.C.E., following the Jepsen chronology). The royal houses of Omri and Jehu were the only two actual dynasties to appear in the history of the N kingdom, a history which otherwise was characterized by constant changes of rulership and usurpations of the throne.

The origins of Omri remain in the dark. The verse which mentions him for the first time (1 Kgs 16:16) neither gives the name of his father nor identifies his tribal or regional affiliation. Only his title is given: "commander of the army." From this one can conclude that the family of Omri was not of Israelite origin and that he himself belonged to that class of foreign mercenaries which, since the time of David, had formed the backbone of the Israelite military. According to whether one associates the name Omri with the Arabic or the Amorite language family, one must correspondingly ascribe to his family an Arabic or a Canaanite line of descent. Since the name Omri is quite likely a shortened form of "Omriyahu" (i.e., a name containing a theophoric element for "Yahweh"), one can further assume that he and his family had adopted the Yahwistic faith and had embraced as their own the traditions of Israel. The name of Omri's daughter, Athaliah (which also contains a theophoric element for "Yahweh"), provides additional evidence for Omri's Yahwistic orientation.

1 Kgs 16:15–22, which rests upon reliable sources, reports the circumstances surrounding Omri's seizing of the Israelite throne. The accession of Omri was preceded by one of the coups d'etat which were so characteristic of the N kingdom. The ruling king, Elah, after a reign of barely two years, had been overthrown in the capital city of Tirzah (Tell el-Far‘ah North) by Zimri, the commander of half of Elah's chariot force. Zimri formed a conspiracy against Elah and seized the opportunity provided by a drinking bout in order to assassinate the king, whose family (the "house of Baasha") Zimri subsequently exterminated when he set himself upon the throne (1 Kgs 16:8–14).

While these events were being played out in Tirzah, the Israelite army, under the command of Omri, was encamped against the Philistine border town of Gibbethon *(‘āqir).* These conflicts at Gibbethon (a similar situation is reported for a mere quarter century earlier, and that one also led to a change in the rulership, with Baasha replacing Nadab, cf. 1 Kgs 15:27) had as their chief goal a gaining of clear control over the open countryside leading to the city of Gezer, countryside whose possession was a matter of dispute between the Israelites and the Philistines. As news of the palace revolt and the transfer of power that had taken place in Tirzah reached the military camp at Gibbethon, the warriors gathered there refused to recognize Zimri as their new ruler but rather proclaimed their commander-in-chief, Omri, as king. We can no longer determine whether behind this course of events there might have been some sort of rivalry between the militia and the chariot contingent, perhaps even some deep-seated conflict rooted in the fact that the militia tended to be drawn from the tribes and therefore was oriented toward specifically Israelite traditions whereas the chariot contingent was comprised of professional soldiers who were more strongly oriented toward Canaanite ways.

Omri immediately seized the advantage of the moment, lifted the seige of Gibbethon, and with his army turned against Tirzah. Apparently the forces in support of Zimri proved too weak to be able to mount serious resistance to Omri and the Israelite army. With the final conquest of Tirzah by Omri impending,

Zimri burned down a portion of the palace complex over his own head and perished in the blaze. His reign had lasted a mere seven days.

With the conquest of Tirzah, however, the rulership was by no means secured solely in the hands of Omri. As is noted all too briefly (1 Kgs 16:21–22), a portion of the populace raised against Omri another pretender to the throne, Tibni, the son of Ginath. Here the particulars escape us; we can only speculate about the corresponding details. For instance, perhaps certain of the tribes did not concur with the decision of the army encamped before Gibbethon and chose their own candidate for the kingship. Perhaps traditionalist circles opposed the elevation to the throne of a mercenary whose family background was not Israelite. We are just as poorly informed about the regional distribution of the spheres of influence of, respectively, Omri and Tibni. One can imagine that Omri exercised control over the tribes of the central highlands, while Tibni's base of power was Galilee and perhaps also the plain of Jezreel. But all of this remains pure speculation. At the very least, however, one must assume that the Israelite throne was divided for several years—from 882 until 878 B.C.E., according to Begrich and Jepsen, or from 885 until 880 B.C.E., according to Thiele. Andersen's hypothesis that no divided monarchy actually developed, but rather that the reign of Tibni amounted to no more than an episode lasting a few weeks, or at most a few months, during 886–885 B.C.E. must be judged a minority opinion. In the confrontation between these two concurrently ruling monarchs, which hardly ran its course without some military clashes, Omri gained the upper hand. The death of Tibni, which took place under unknown circumstances, finally opened the way for Omri to assume sole rulership over Israel.

Several chronological discrepancies in the OT regarding Omri's accession to the throne and the duration of his reign can be explained by reference to the fact that the throne was divided for several years. In 1 Kgs 16:15 the events which led to both the deaths of Elah and Zimri and the elevation of Omri are said to have fallen in the 27th year of Asa of Judah; according to 16:23, however, Omri did not ascend to the throne until the 31st year of Asa. The difference between these two statements is obviously a reflection of the period of divided rule. Also according to 16:23 Omri reigned for 12 years, whereas according to 16:29 he died in the 38th year of Asa of Judah, which at first glance would seem to ascribe to him a reign of only 7 years. The 12-year ascription actually describes the total time that Omri ruled, including the time that Tibni was his rival, and therefore properly begins with the 27th year of Asa (16:15). The 7-year span between the 31st year of Asa (16:23) and his 38th year (16:29) thus refers to the years when Omri was sole monarch. With some justification one can assume that there were two systems of dating in the N kingdom, one which incorporated the reign of Tibni and the other which ignored it (cf. Noth *Könige I* BK, 351).

The OT conveys very little information regarding the actual reign of Omri (1 Kgs 16:23–28). On the basis of indirect references and extrabiblical sources, however, one can see that Omri must have been one of Israel's greatest, most energetic, and most foresighted kings. He had a new vision for the government of Israel, one which looked beyond the needs of the moment and which went on to become the characteristic Omride policy; it was carried out in exemplary fashion, particularly by his son Ahab, and was continued even by his grandsons Ahaziah and Joram. The guiding principles of his governmental policy were two: treaties without and parity within. Omri introduced a foreign policy in which Israel sought to win the support of certain neighboring states by means of treaties and diplomatic marriages. So, for example, the marriage of the crown prince Ahab to the Phoenician princess Jezebel, which served to guarantee the accord with the Phoenicians, was certainly proposed by Omri and was brought to fruition during his own lifetime. Liekwise the termination of tensions with the neighboring state to the S, Judah, is most probably to be ascribed to the time of Omri, even though the actual marriage between the Judean crown prince Joram and Omri's daughter Athaliah, a marriage which sealed the peaceful relations between the two states, only took place somewhat later. In order to reach agreement with Judah, Omri apparently accepted certain territorial losses; he abandoned efforts to regain portions of the tribal territory of Benjamin that had been annexed to Judah by Asa several decades earlier (1 Kgs 15:22).

This deliberate policy of peaceful alliance was a response to the external state of affairs at the time: it obviously served a defensive purpose in the face of a menacing danger. Since there is no evidence for

encroachment by the Assyrians into the Syro-Palestinian area during this time, the opponent against which the policy of Omri was directed can only have been the Aramean state of Damascus. On the basis of their raid into Galilee at the time of King Baasha (1 Kgs 15:16–22), the Arameans had proved themselves a dangerous, militarily effective antagonist. It is quite possible that they had been exerting steady pressure on the N boundaries of Israel, and especially on the N reaches of Israelite Transjordan, ever since. Included in the overall plan of Omri as king was obviously the goal of securing Israel against this constant threat from the N.

Similar intentions can also be recognized as lying behind Omri's domestic policy. With regard to the latter, the primary concern was to reduce tensions within the realm, particularly tensions between the Israelite tribes and the traditionally Canaanite elements of the populace. The sociocultural, and above all religious, differences between these two groups had apparently not been appreciably relaxed since the time of the united monarchy under David and Solomon. In order to eliminate, or at least to reduce, the growing internal tensions that went back to the time of the incorporation of both elements into one state, Omri initiated a policy of parity, a policy that aimed at equal treatment for both factions of the population. Included within this policy was a recognition, and even fostering, of Canaanite religion on the part of the state. This policy of equal treatment in matters of religion subsequently aroused the opposition of staunchly Yahwistic circles, especially of the prophets Elijah and Elisha and of the prophetic groups that gathered about the latter. In the final analysis, it is also with reference to these Yahwistic opponents and the allies who stood with them that the negative judgment upon Omri and his dynasty in OT traditions is to be explained. So, finally, it must be said that the domestic policy set into effect by Omri did not achieve its desired goal, but that it rather conjured up new tensions, tensions which eventually contributed in no small way to the downfall of the Omride dynasty.

Part of Omri's grand design for the governing of Israel was the building of the new capital city, Samaria (Sebastiya). Up to this point the royal residences of the N kingdom, specifically Shechem (Tell Balatah, 1 Kgs 12:25—the transferring of the capital to Penuel, apparently necessitated by the pharaoh Shishak's invasion, amounted to only a temporary measure) and Tirzah (Tell el-Far‘ah North, 1 Kgs 14:17; 15:33), had been located in territories belonging to the Israelite tribes. For a time Omri continued to use Tirzah as the royal residence after taking it over from Zimri; he had the damage done during the conflict repaired, and he even started to enlarge the city. However, two years after he succeeded in gaining the sole rulership, Omri discontinued the rebuilding of Tirzah and abandoned the city. The excavations at Tell el-Far‘ah North (Stratum III) under the direction of R. de Vaux (*EAEHL* 2: 395–404) have been able to show a destruction of the city, obviously the destruction at the time of Omri's conflict with Zimri, and also a rebuilding of the city that was begun but not finished.

Omri constructed his new capital city of Samaria on a previously unbuilt site. He purchased the hill of Samaria in consonance with Canaanite law—which also suggests that he purchased the land from a Canaanite landowner. The seller is called Shemer (1 Kgs 16:24), but this can hardly be historically correct. Rather, this name must have arisen later as part of an attempt to provide an etiology for the name *šōmrôn,* which in all probability was originally the name of the hill itself. The hill was an advantageous site for the building of a national capital, since it was militarily defensible and also strategically located on the N-S trade route. Since the site had been purchased, the new residence built there fell to the royal family as a private estate. In this way the city acquired a singular juridical position. None of the tribes could lay claim to it as a part of its territory; rather, it stood directly under the jurisdiction of the king. In this way the status of Samaria corresponded to that enjoyed by Jerusalem, the capital city of Judah, since the time that David had conquered it for himself. Finally, the acquisition by Omri of previously unbuilt land offered the advantage that in constructing the new city, no attention needed to be paid to existing structures or to foundations already in place.

Construction work on Samaria lasted until the time of Omri's son Ahab. It is not an easy matter to distinguish between the phases of building activity already completed under Omri from those that were finished only later under Ahab. However, the excavators at Samaria assign—even if not without question—to the time of Omri the weaker, inner walls of the upper city as well as the palace complex

(Stratum I). There is no doubt that the palace received its final fitting out only under Ahab, but it is by no means impossible that Omri had already employed Phoenician craftsmen during the palace's basic construction phase.

Omri may have intended from the outset that his capital city, newly erected on formerly Canaanite property and hence not reckoned to any Israelite tribal territory, should be primarily for the benefit of the Canaanite portion of the populace. The hypothesis of A. Alt (*KlSchr* 2: 116–34), namely that under the Omrides Samaria was the capital city for the Canaanite element while Jezreel (Zerʿin) served as the center for the Israelite element in the population, is admittedly much in dispute. In favor of Alt's thesis, however, is the fact that only during the Omride dynasty—neither before nor after—did Jezreel, which was located in the tribal territory of Issachar, play the role of a secondary royal residence. Whether this duality can be carried back to the time of Omri himself remains open to question, however. Clear attestation for Jezreel as a royal residence does not come until the time of Ahab (1 Kgs 18:45–46; 21:1), and it was not Omri but rather Ahab who built the Baal temple in Samaria (1 Kgs 16:32).

Only an extrabiblical source, the stele of King Mesha of Moab (*ANET,* 320–21), gives information concerning the military successes of Omri. In the retrospect portion of the stele, Mesha reports that "Omri had occupied the land of Medeba" (lines 7–8). Omri therefore did enjoy a certain military success against the Moabites, checked their northward expansion, and pushed them back beyond the Seil Heidan. The area which Omri won back from the Moabites lay between the N tip of the Dead Sea and the Seil Heidan; it was territory traditionally reckoned to the tribe of Gad. Omri restored Israelite settlement to the region and apparently also reaffirmed Israelite hegemony over Moab. Word of further military actions on the part of Omri, which may be hinted at in 1 Kgs 16:27, has not been recorded. However, one can assume that Omri was able to hold and to secure Israel's N boundary against the Arameans. It is historically improbable that he suffered a decisive defeat at the hands of the Aramean state of Damascus and had to accept harsh terms in a peace settlement, despite being presupposed in 1 Kgs 20:34. The whole incident related in 1 Kings 20 probably originally referred to a time during the Jehu dynasty, later in the history of Israel. All in all, there can be little doubt that at the time of his death Omri left behind for his son Ahab an Israelite state that was both strong and well equipped to deal with external threats.

In 845 B.C.E. Jehu overthrew the Omride dynasty and exterminated the Omride royal house. However, the name of Omri outlasted this catastrophe. In Assyrian inscriptions from the time of the Jehu dynasty and even afterward (*ANET,* 280–81, 284–85), not only is Jehu called "son of Omri" *(mār Ḫumrî)* but even the whole of the N kingdom of Israel is referred to as "land of Omri" *(Bīt-Ḫumrî).* The international reputation of the Omride dynasty is reflected in this development from a dynastic appellation to the name of a country. Within the OT, on the other hand, the phrase "house of Omri" never appears; "house of Ahab" is used as a designation for the Omride dynasty.

The Deuteronomistic redactors selected for inclusion in their work only a small amount of the total material which tradition had preserved regarding Omri. Their theological evaluation of him is a negative one (1 Kgs 16:25–26). Their particularly sharp remark that Omri "did more evil than all that were before him" (v 25)—a remark which is then repeated with reference to Omri's son Ahab (v 33)—is not grounded in anything specific, since the reference in the immediately following verse (v 26) to the perpetuation of the "sin of Jeroboam," by which is meant the veneration of the calf images at Bethel and Dan, is a stereotypical charge having nothing uniquely to do with Omri. Perhaps the Deuteronomists derived their particularly negative evaluation of Omri from the fact that he was Ahab's father; in the traditions surrounding the figure of Elijah, Ahab appears as the foremost protagonist of N Israelite idolatry (1 Kgs 16:30–33). An analogous evaluation of Omri and, synonymously, of the "house of Ahab" is also to be found in the Deuteronomically influenced Mic 6:16. Finally, the Chronicler simply passes over the reign of Omri in silence; his name appears only in conjunction with a reference to his daughter Athaliah (2 Chr 22:2). See also *BHH* 2: 1341–42; Eissfeldt *KlSchr* 2: 453–63; Alt *KlSchr* 3: 258–302; *RGG* 4: 1630; *IDB* 3: 600–1.

2. A Benjaminite who appears in the genealogy of the patriarch Benjamin (1 Chr 7:8). It is more likely that he belonged to a postexilic Benjaminite family.

3. A Jerusalemite (1 Chr 9:4), most likely a member of a Judean clan in postexilic Jerusalem.

4. A leader of the tribe of Issachar, ostensibly from the time of David (1 Chr 27:18), but who appears in a list of obviously later origin and in a tradition of questionable historical value (1 Chr 27:16–22).

WINFRIED THIEL
TRANS. CHARLES MUENCHOW

ON (PERSON) [Heb *ʾon* (אָוֹן)]. The son of Peleth, a Reubenite, who participated in a rebellion against Moses along with Korah, Dathan, and Abiram (Num 16:1). There is some question concerning the reliability of this information since this is the only occurrence of the name On. In the account of the rebellion, the names of Korah, Dathan, and Abiram recur, but not On. In addition, Num 26:5–9, which lists the genealogy of Reuben, does not include On. Furthermore, Num 26:8 lists Eliab as the son of Pallu. On this basis, Noth has suggested that two changes be made so that Num 16:11 would read, "he (referring to Eliab) was the son of Pallu" (*Numbers* OTL, 118), rather than, "On was the son of Peleth." Another suggestion involves omitting the name On, and reading, "sons of Eliab, son of Peleth" (Sturdy *Numbers* CBC, 116). There is, however, no manuscript evidence that would support these emendations. Hence, it is wiser to let the enigmatic On stand as the son of Peleth.

CHRISTINA DE GROOT VAN HOUTEN

ON (PLACE). See HELIOPOLIS.

ONAGER. See ZOOLOGY.

ONAM (PERSON) [Heb *ʾônām* (אוֹנָם)]. **1.** A clan name in the genealogical clan list of Seir the Horite. This person is referred to in Gen 36:23 and in the matching genealogy in 1 Chr 1:40 as the fifth son of the clan chief Shobal, and is thus a grandson of Seir. These Horite clans are not to be associated with the Hurrians. They represent the original inhabitants (perhaps as cave dwellers) of the region of Edom, but they lost control of that area to the encroaching "sons of Esau" (Deut 2:12–22). The conquest by the Esau tribes of Edom is matched in the text with the conquest of Canaan by the tribes of Israel.

2. A clan name in the genealogical clan list of Judah in 1 Chr 2:26, 28. Onam is described as the son of Jerameel by his second wife Atarah. Onam, in turn, is the father of Shammai and Jada. Wilson (*GHBW*, 183) suggests that the inclusion of Onam in both the Horite and Judahite lists demonstrates social and/or political contact between these people. Intermarriage might have taken place and economic or political treaties initiated. These agreements in turn may have led the Chronicler to add the Horite genealogies to those of Judah.

VICTOR H. MATTHEWS

ONAN (PERSON) [Heb *ʾônān* (אוֹנָן)]. The second son of Judah and Shua, a Canaanite woman (Gen 38:2–4). He was the brother of Er and Shelah. In the genealogical list of Judah's descendants, Onan is mentioned as the daughter of Bath-shua (1 Chr 2:3).

Judah had arranged a marriage between his firstborn, Er, and a woman named Tamar. Er, however, died an early death, which was attributed to an act of Yahweh because of Er's unmentioned wickedness (Gen 36:7). Because Er had died childless, Tamar was left a widow without a son to continue the family of her deceased husband. According to the custom of levirate marriage, it fell upon Onan to continue the family of his brother by fulfilling the responsibility of the brother-in-law. The meaning of this responsibility is expressed by the Hebrew word *yābām,* "the husband's brother." The Latin translation of the OT rendered the Hebrew word as *levir,* "brother," from which comes the concept of levirate marriage.

The purpose of levirate marriage is expressed by Deut 25:6: "that his name [the name of the dead brother] may not be blotted out of Israel." Thus, in order to comply with the intent of the tradition, Judah commanded Onan to take the wife of his deceased brother in order to raise an offspring for his brother (Gen 38:8). Onan was not required to actually marry Tamar, for in levirate marriage the widow only had the right to a son to preserve her husband's name (Coats 1972: 463). Onan obeyed his father; however, he was unwilling to fulfill his responsibility toward his deceased brother. Whenever he had sexual relations with Tamar he would let the semen fall to the ground (Gen 38:9), thereby avoiding giving a child to Tamar. This action of Onan probably was a reference to coitus interruptus, but Onan's conduct has produced the word "onanism," which has come to be a reference to masturbation.

The reason given in the narrative for Onan's reluctance to provide a son for his brother was that he knew that the offspring to be born of Tamar would not be his son but would belong to his brother and would carry the name of the deceased. It is possible that he refused to provide the heir for his deceased brother because he desired the inheritance of his dead brother for himself (Thompson and Thompson 1968: 9). However, Onan's reluctance to give a child to his sister-in-law may reflect a rejection of this custom already present in society. The regulation of levirate marriage in Deut 25:5–10 shows that the custom had encountered some opposition. The law in Deuteronomy allowing a man to refuse his duty was a concession to the reluctance to comply with the custom. Because of Onan's unwillingness to bear a son for his deceased brother, Yahweh was displeased with Onan and slew him also (Gen 38:10).

The names of Onan and Er are mentioned in the list of the people who descended with Jacob to Egypt (Gen 46:12). Although Onan and Er had died in the land of Canaan, they are counted among the seventy people who migrated to Egypt with Jacob. The marriage of Judah to a Canaanite woman may reflect a political alliance between the tribe of Judah and the Canaanites and consequently be a veiled reference to territorial expansion by the tribe of Judah. Albright (*YGC,* 69) identified the name Onan with the Babylonian clan Awnanum and surmised that the deaths of Er and Onan might reflect the early extinction of two minor clans of Judah. Thompson (1974: 185) has strongly rejected this view.

CLAUDE F. MARIOTTINI

ONESIMUS (PERSON) [Gk *Onēsimos* (Ὀνησιμος)]. The slave of the addressee of the "Epistle to Philemon" (probably Philemon, also possibly Archippus; Phlm 1–2). Onesimus' name means "useful," representing the type of slave name that expressed what a master wished from his slave. Though his master was Christian and hosted a house-church in Colossae (Phlm 2; Col 4:9, 17), Onesimus himself was still a pagan. Thus, the case differed from others in which a whole household had become Christian (e.g., 1 Cor 1:16; 16:15; cf. Acts 10:2, 44–48; 16:15; 18:8).

The common exegesis of the letter to Philemon is that Onesimus at some time ran away from his master. See also PHILEMON, EPISTLE TO. As a fugitive slave, he went to the imprisoned Paul (e.g., Gnilka *Philemon* HTKNT, 68) after he had embezzled money for his flight (Phlm 18–19; e.g., Gülzow

1969: 31). But this version leaves open why he did not—like other runaway slaves—hide abroad in a robber band or in a big city. Paul's prison (probably in Ephesus) was not a logical place to hide, because fugitive slaves were pursued. Roman legal texts render another solution more probable (Lampe 1985: 135–37). Like many other slaves who had done something wrong (cf. Phlm 18–19) and feared the anger of their master, Onesimus went to a person whom he asked to plead his case with his master. See also SLAVERY. Often, a close friend of the master was chosen by these slaves for this purpose. Asking for intercession, they were not considered fugitive slaves. Their intention was to *return* to the master's house and to continue living there peacefully. (*Digesta* 21:1:17:4, 5, 12; 21:1:43:1; Plinius *Epistulae* 9:21, 24). Exactly what Onesimus' misdeed was we do not know; but it did some damage (Phlm 18–19) so that he needed a mediator. Interestingly enough, the pagan slave asked the Christian apostle for help against his Christian master.

Paul sent Onesimus back with a letter appealing to the master to swallow his anger about the damage Onesimus committed and to accept him again with love. Paul stressed his appeal by pointing out that he had converted Onesimus into a Christian in the meantime (something that the master had not achieved); Onesimus therefore deserved to be welcomed as a "beloved brother" in the master's house church, leaving no more room for anger (Phlm 10, 16, 17).

As a Christian, Onesimus was now "useful" for Paul and his master (v 11). Paul combined his appeal for Onesimus with a request for himself; Paul asked the master to send Onesimus back so that the latter could "serve" the apostle (vv 12–14). The "service" has often been interpreted as a personal one for Paul in prison (e.g., Stuhlmacher *Philemon* EKKNT, 40). It is more probable (Ollrog 1979: 102–6, 122) that Paul asked to have Onesimus as a co-worker in mission for a time in place of the master himself (Phlm 13). This temporary delegation of a co-worker by a single congregation to serve another in mission (cf. Phlm 14) is known elsewhere (2 Cor 8:23; Phil 2:25–30; 1 Cor 16:17; Col 1:7). Through these workers, the congregations shared actively in Paul's mission work. Since Onesimus' master represented a house church (Phlm 2), Paul's wish can be interpreted as such a wish for a congregational delegate. Paul asked for Onesimus to be a mission co-worker as a representative of the master and his house church. Other mission helpers were already present in Ephesus when Paul wrote his letter in prison, and sent their greetings (Phlm 24).

From Col 4:9, it can be concluded that the master indeed released Onesimus for temporary service to Paul's mission. After a while, Paul sent him back to his master together with Tychicus and the letter to the Colossians (Col 4:7). It should be noted, however, that this conclusion from Colossians is based on the assumption that Colossians was written a few weeks later than the letter to Philemon by a co-worker of the apostle (which seems most likely; Schweizer *Colossians* EKKNT, 27–28. Others date Colossians either at exactly the same time as the letter to Philemon or later than Paul's death).

Paul, in the Epistle to Philemon, defined a new relationship between slave and master, but he did not ask to free Onesimus from slavery. Paul never criticized the institution of slavery. (Neither is it clear that in 1 Cor 7:21 he really encouraged the slaves to avail themselves of the opportunity to gain freedom whenever this chance came. Everybody should "remain in whatever state he was called" [7:24].) What mattered to Paul is that the existing social difference between slave and master no longer had relevance in the Christian community (Gal 3:27–28; 1 Cor 12:13), where all should treat each other as equally worthy and with love. Existing worldly social differences should no longer be used to the disadvantage of the (in worldly eyes) lower classes. Paul himself did not care whether his mission co-worker Onesimus was a slave or freeborn. In the Church, "free" and "slave" were no longer relevant social terms; they were transformed into spiritual terms: all Christians were "slaves of Christ" and "free" from sin's power (1 Cor 7:22).

As with almost all slaves in the cities of that time (Alföldy 1981: 359), however, Onesimus was probably freed while he was in his thirties at the latest. That Onesimus later, at the age of over 70 at the beginning of the 2d century, was bishop of Ephesus (*Ign. Eph.* 1:3, 6:2) is only a possibility. For further discussion, see commentaries on Philemon and Colossians in Hermeneia, NCBC, WBC, and BBC.

ONESIPHORUS (PERSON) [Gk *Onēsiphoros* (Ὀνησιφορος)]. Onesiphorus is referred to in 2 Tim 1:16–18 as one who had rendered much service at Ephesus and who later had eagerly searched for and found Paul in his captivity in Rome. This Ephesian, not being "ashamed of [Paul's] chains" (1:16), had often "refreshed" him (1:16)—in contrast to other Asians, e.g. Phygelus and Hermogenes, who had "turned away" from Paul (1:15). 2 Timothy also includes greetings to the household of Onesiphorus (4:19) and a prayer that the Lord might grant mercy to his household because of his service to Paul (1:16). Onesiphorus himself does not seem to be included, suggesting that he was either not envisioned as present among the (alleged) recipients of 2 Timothy, was with Paul, or was already dead. The latter is most likely since the author of 2 Timothy writes: "May the Lord grant him to find mercy from the Lord on that Day" (1:18). If Onesiphorus had indeed died, then this prayer is the earliest one for the dead found in Christian literature. As such it has been cited as clear scriptural support (especially among Roman Catholics) for prayer for the dead. (Jewish precedent for such prayer is found in 2 Macc 12:43–45.) The prayer itself in 1:18 with its double use of "the Lord" is problematic; it raises the question of whether the references are to Christ and/or God (Hanson *Pastoral Epistles* NCBC, 127).

The idea that Onesiphorus searched eagerly for Paul "when he arrived in Rome" (1:17) has been subjected to close scrutiny. The underlying Greek phrase, *genomenos 'en rhōmę̄,* literally means "being in Rome" or "having arrived in Rome." Yet, in the interest of reconstructing whatever apparently historical details can be extracted from the Pastoral Epistles—and harmonizing them with what is known about Paul from the authentic letters and Acts—attempts have been made to give a different sense to this phrase. One suggestion had been to take *rhōmę̄* as a Greek word for "strength," not the name of a city, and thus read "when he regained his strength." While this removes the necessity of locating Onesiphorus' visit and thus the imprisonment of Paul referred to in 2 Timothy in Rome, it is an improbable reading, for, as Dibelius and Conzelmann (*Pastoral Epistles* Hermeneia, 106) point out, nothing was said previously about Onesiphorus being sick. Paul, and consequently Onesiphorus, must therefore have been envisioned as `eing in Rome.

Another theory about Onesiphorus, an improbable one because it is too strained, is the attempt to identify him with Onesimus. This is based on the assumption that Onesimus is a shortened form of Onesiphorus (Lyman *IDB* 3: 602).

Apart from the references in 2 Timothy cited above, Onesiphorus is not mentioned elsewhere in the NT. He is, however, rather prominent in the apocryphal *Acts of Paul* (3.2–7, 15, 23–26, 42). There Onesiphorus is described as a resident of Iconium who, with his wife Lectra and children Simmias and Zeno, welcomes Paul into Iconium and acts as his host. Paul's appreciation of Onesiphorus inspires jealousy in his traveling companions Demas and Hermogenes, who oppose him from that point on. It is in the house of Onesiphorus that the virgin Thecla is inspired by Paul to break her betrothal and follow Paul.

In contrast to 2 Timothy, the apocryphal *Acts* locates Onesiphorus not in Ephesus but in Iconium and names his family members. The document also contrasts him with Demas and Hermogenes, while 2 Timothy contrasts the exemplary Onesiphorus with Phygelus and Hermogenes (2 Tim 1:15), although it refers to Demas later as well (4:10), casting him in an unfavorable light. Apart from these differences, however, both 2 Timothy and *Acts of Paul* share an emphasis on the faithfulness of Onesiphorus and his

family to Paul in spite of the desertion of others. While these differences and similarities could be explained as the elaborative dependence of the *Acts of Paul* on 2 Timothy, it remains possible that both are also independent witnesses to a common strand of oral tradition from Asia Minor (MacDonald 1983: 65–66).

FLORENCE MORGAN GILLMAN

ONIAS (PERSON) [Gk *Onias* (Ὀνιας)]. The name of four persons of a priestly family in Hellenistic Palestine. "Onias" is the Greek form of the Hebrew name *ḥônĕyû* or *ḥônî.* This form is related to the name John (Heb *y (ĕh)ôḥānan*). The Oniads are traced back to Jehoiada, the high priest who returned from the Babylonian Captivity, and through him to Zadok, who was appointed by King Solomon. For a genealogical table of this family line see Fig. ONI.01.

1. Son of Jaddua, who was high priest in Jerusalem at the time of Alexander the Great. He held office about 300 B.C.E., and may have been the Onias who corresponded with a Spartan king named Areus (1 Macc 12:7, 19–23). There is no agreement about who the correspondents were, and various combinations of the four candidates (Onias I or II and Areus I or II) have been proposed. Onias I was father of Simon I.

2. Onias II was the son of the high priest Simon I. On his father's death he was still young, and was substituted temporarily in this office, first by his uncle Eleazar, and then by his grandfather's brother Manasses (*Ant* 12.44, 157). Onias II officiated about the middle of the 3d century B.C.E. He might have been in correspondence with the Spartan king Areus (see #1 above). He came into conflict with Ptolemy III (246–222 B.C.E.), according to Josephus (*Ant* 12.158–59) because of his refusal to pay tribute. But the issue of tribute (and Josephus' characterization of Onias as greedy) cannot serve as a full and satisfactory explanation for the conflict. Political motives may account in part for Onias' behavior. At the accession of Ptolemy III, the third Syrian war began. Onias II sided with the Syrians, perhaps because he believed that direct contact with the Babylonian diaspora accorded better with his interests. But Onias miscalculated the outcome. Ptolemy III was the victor, and Onias II fell into disfavor in the Ptolemaic court. His fall enabled Joseph, the head of the Tobiad family, to strengthen his position in Judea. With this began a power struggle between Tobiads and Oniads that ended eighty years later with the consolidation of Hasmonean power. Nonetheless, under his son Simon II, the high priesthood regained power and prestige.

3. Onias III succeeded his father, the high priest Simon II (known as "the Just"), about 190 B.C.E. At the time he inherited the office of high priest, its influence was at a peak. But the power of the office began to decline, in part because of a severe crisis in Judean society caused by tensions between various political, social, and cultural power groups. Onias III faced opposition from Simon and his supporters.

Simon was the brother of Menelaus and Lysimachus, the leaders of the more extreme hellenizers; he was additionally a member of the priestly order of Bilga (Balgea), who, in cooperation with the Tobiads, contested the hegemony of the Oniads. The confrontation between Simon and Onias III foreshadowed the hellenizers' coup d'état and its consequences for Judea.

Conflict between Simon and Onias III began over supervision of the market in Jerusalem. The main issue was probably pecuniary, although Simon was encroaching on the jurisdiction of the high priest to enlarge his own authority. The incident was a portent of the future of the high priestly office, with increasing interference from the imperial government and greater impetus toward hellenization.

Onias III next faced interference (at Simon's instigation) from Heliodoros, the minister of King Seleucus IV (187–175 B.C.E.), in the fiscal management of the temple (2 Maccabees 3). Heliodoros intended to confiscate deposits entrusted to the temple's treasury, probably because of suspicion sowed by Simon that they belonged to enemies of the Seleucid regime. His intention aroused alarm in Jerusalem. According to the florid account in 2 Maccabees 3, when he approached the treasury office with his bodyguards, a supernatural horseman in golden armor reared against him and two young men beat him nearly to death. The incident was seen by the author of 2 Maccabees as a manifestation of God's power in defense of his sanctuary (2 Macc 3:24). Friends of Heliodoros asked the high priest Onias, who then prayed and offered sacrifice for him with the result that God restored Heliodoros to life. The chastened

official returned to Seleucus IV and declared to him the deeds of the supreme God of the temple of Jerusalem. (This story resembles the narrative in Daniel 1–6; see Bickerman 1939–44.)

The "miracle" of Heliodoros' chastisement was not taken at face value, and Simon accused Onias of perpetuating a hoax (2 Macc 4:1–2). Animosity progressed to violence; murders between the factions in Jerusalem and malice on the part of the governor of Coele-Syria and Phoenicia, Appolonius son of Menestheus, convinced Onias that the rivalry had gone too far. Onias traveled in person to meet with the king himself at Antioch.

Onias arrived at Antioch (the year is 175 B.C.E.) to find that Seleucus IV had been murdered by his minister Heliodoros. The throne was subsequently occupied by the king's brother, who became Antiochus IV.

Jason, Onias' brother, took advantage of the new situation and bought from the new king the appointment to the high priesthood. Jason held the office for approximately three years and implemented changes in Jerusalem. During that time Onias remained in exile in Antioch (whether voluntarily or under detention is not clear).

At this point the story of Onias dissolves in conflicting accounts. Jason was dethroned by Menelaus, brother of Simon, in the year 172 B.C.E. Menelaus wished to dispose of Onias, the legitimate high priest. To achieve his aim he bribed Andronicus, a regent for Antiochus IV at that time, to murder Onias. Onias took refuge in an asylum at Daphne, near Antioch. He was finally lured out and murdered (2 Macc 4:30–38). The story of the murder of Onias III has a parallel in Diodorus Siculus (30.7.2), where Andronicus is implicated in the murder of Antiochus, son of Seleucus IV, and executed for it. The similarity of the two stories is evident, yet their relationship is unclear.

Josephus records two different accounts of Onias' fate. In *JW* (1.33; 7.423) he states that Onias III was never detained in Antioch and that he founded a Jewish temple in Egypt. But the account of Onias in the *Antiquities* accords with 2 Maccabees 4. For the various critical opinions see Stern (1960).

4. Onias IV was a son of Onias III. The main source about him is *Ant* 13.62–73, to which may be added *Ant* 12.387–88; and 20.236. The narrative in *JW* is erroneous. According to *Ant* 13, Onias had immigrated to Egypt and was living in Alexandria at the time of the Maccabean wars. He requested from the Ptolemaic ruling couple Ptolemy VI Philometor (180–145 B.C.E.) and Queen Cleopatra permission to build a temple to the God of Israel in Egypt. The king and the queen consented to his request, and allotted to him a ruined Egyptian temple in Leontopolis in the nome of Heliopolis. The site was reconstructed as a Jewish temple under Onias as "high priest" and with other priests and Levites. It served mainly as the worship center of the Jewish inhabitants of this region.

There are some problems concerning the date and purpose of Onias' migration to Egypt. According to *Ant* 12.387, this took place in 162 B.C.E., after the execution of Menelaus and the appointment of Alcimus to the high priesthood. His motive for immigrating may have been despair of obtaining the high priesthood in Jerusalem for himself.

The chronology of his activities is not confirmed by *Ant* 13.62, and may be in conflict with *CPJ* 1 no. 132. This papyrus, dated to September 21, 164 B.C.E., is a letter from Heroides to a certain person whose name was restored by Wilcken as *Oni[ai]* (Onias). If the restoration (endorsed by Tcherikover in *CPJ* 1: 244–46) is correct, and the recipient was Onias IV, as seems probable, then Onias IV should have come to Egypt some time before 164 B.C.E. This chronology is in conflict with *Ant* 12.387, but not with *Ant* 13.62, which supposes that a certain time elapsed between Onias IV's arrival at Alexandria and his request to build a temple.

In view of this, we accept Tcherikover's opinion that Onias IV came to Egypt about a decade before he requested permission from Philometor and Cleopatra to build the temple; the temple would then be dated about 160 B.C.E. A reminiscence of Onias as founder of a temple in Egypt is preserved in *b. Menah.* 109:2. There Onias is a son of Simon the Just (Simon II), who founded a temple in Alexandria.

Onias IV also stood at the head of a Jewish army, which was centered in the Heliopolite nome. He and his sons served as generals under the Ptolemies, and played a role in Ptolemaic politics.

ONION. See FLORA.

ONO (PLACE) [Heb *ʾônô* (אוֹנוֹ)]. A settlement in the NW Shephelah (M.R. 137159), first mentioned in a list of locations in Upper Retenu (Palestine and Syria) conquered by Thutmose III (1490–1436 B.C.). Its hieroglyphic representation, as it appears in these annals (Simons 1937: 112, no. 65) carved on the walls of the Sanctuary of Amon at Karnak, is, according to Albright (1934: 35, 46), vocalized as *ʾU-nu.* Although its location is not precisely fixed, the sequence of towns on the roster provides some geographical perspective (Aharoni *LBHG,* 49): Mahoz, Joppa, Gath, Lod, Ono, Aphek, Socoh, Yaḥam, *hbdn,* Gath, Migdol. Dorsey (1981: 175, 180; fc.: 319) places it at the crossing of the international coastal route (from Gaza to Aphek) with a NW extension (Beth-horon—T. Hadid—Ono—Joppa: the path of a 19th-century-A.D. road) of an alternate branch (between Lod and Beth-horon) of the main road linking Joppa to Beth-horon.

A tradition preserved in 1 Chr 8:12 assigns the building, or rebuilding, of "Ono and Lod and its daughters (i.e., villages, LXX *lōmas*)" to one of the three sons of Elpaal, a Benjaminite. The Greek Codex Vaticanus of this text lacks the words "and Lod." The location of Benjaminite towns so far to the W is problematic. Mazar (*WHJP* 3: 113) believed that during the early settlement, the Benjaminites spread W into the northern coastal plain—to Ono and Lod and elsewhere—to escape the overcrowding of the area bounded by Ephraim, Jerusalem, and the Gibeonite cities. Myers (*1 Chronicles* AB, 60–61) suggests that when the Danites, whose initial allotment included "territory over against Joppa" (Josh 19:46), were removed to Leshem/Laish, their land was absorbed by Judah and Ephraim. Since Judah and Benjamin had, to some extent, merged since the division of the kingdom, Benjaminites, who earlier enjoyed close ties with the Joseph tribes (Gen 35:24; 46:19–21), moved into this territory. Alt (*KlSchr* 2: 283) proposed that following a period of Philistine dominion, probably as part of the state of Ekron, the land N of Ekron to the *Nahr el-ʿAuja* was annexed by Josiah following an overthrow of Ekron.

That Benjaminites were living in Ono during the Persian period is attested by Neh 11:35. Here "Lod and Ono" (see Neubauer 1868: 86) is thought by Simons (*GTTOT,* 390) to be the referent of the apposition "the valley of Craftsmen (*gê haḥărāšîm,* although cf. 1 Chr 4:14 and *b. Meg.* 4a)." Simons (*GTTOT,* 381) believes Lod and Ono formed an "enclave in the territory outlined by the Danite city-list of Josh 19:40–48." Smith (1896: 253, n. 1) understood the area around Lod to be Samaritan. Avi-Yonah (1966: 17–18) suggested that Ono, along with Lod and Hadid, should be considered similar to Judean villages dispersed through Edom which were to be excluded from the Persian province of Judah/Yehud. Both Aharoni (*LBHG,* 416) and Blenkinsopp (*Ezra-Nehemiah* OTL, 268) concur in excluding this region from Judea during the Persian period. On the other hand, Albright (1963: 93) speculated that Lod and its adjoining towns were added to the province of Judah by Nehemiah himself. Stern (1982: 246, 248–49) maintains that the region of the NW Shephelah was part of the Gezer district of the province of Judah during the Persian period.

Ono is also mentioned in the rosters of returnees from exile as the town of origin of some of those who came back to Jerusalem and Judah. In Ezra 2:33 the "sons (i.e., citizens) of Ono" are listed along with those of Lod and Hadid as numbering 725. In Neh 7:37 these same three localities claim 721 of the returnees. In 1 Esdr 5:22 the "sons of Ono" are paired with those of "the other Elam (LXX A *kalamōlalou,* LXX B *kalamōkalou*—a corrupt combination of "Lod and Hadid" according to Turner [*IDB* 1: 482])" and number 725.

Neh 6:2 records a proposal by Nehemiah's enemies to meet him "in the villages *(bakkĕpîrîm)* in the plain of Ono." Although LXX (*kōmais,* cf. LXX 1 Chr 8:12) and the Vulgate read "villages," Myers (*1 Chronicles* AB, 135), Blenkinsopp (*Ezra-Nehemiah* OTL, 267), and others treat *hakkĕpîrîm* as a place-name. Simons (*GTTOT,* 390) suggests that "the plain of Ono" may be the same area referred to as "the

valley of Craftsmen." The choice of this location is understandable if, as Blenkinsopp (*ibid.,* 216, 268) suggests, Sanballat's home was nearby in one of the Beth-horons in the Shephelah NW of Jerusalem or if, as Alt (*KlSchr* 2: 343 n. 4) proposes, the territory was a neutral zone between the provinces of Ashdod and Samaria.

Talmudic sources contribute to our knowledge of Ono. It was a walled city in the days of Joshua (*b. Meg.* 4a, *m. ʿArak.* 9:6). It was a part of Judea (*b. ʿArak.* 32a, b). The towns of Lod, Ono, and Ge Haharashim were laid waste in the days of the concubine of Gibeah (Judges 20) and rebuilt by Elpaal; after falling again they were repaired by Asa (*b. Meg.* 4a). The distance from Lod to Ono was three miles (*b. Ketub.* 111b). A Rabbi Ḥanina resided in Ono (*m. Giṭ.* 6:7). Two rabbis spent a Sabbath in Ono on their way to Lydda/Lod (*b. Ḥul.* 56b). The Midrash on Lam 1:17 (also quoted in the Midrashim on Lev 23:5 and Cant 2:2 [section 5]) describes Lydda/Lod and Ono as adversaries.

A late-3d-century-A.D. manumission text (No. 1205) from Oxyrhynchus in Egypt (Hunt 1912: 240) mentions a councillor *(bouleutēs)* of *Oneitai.* If, as Hunt (1912: 241) and Avi-Yonah (1966: 123, n. 43) suggest, this designation refers to Ono (or its inhabitants) it may indicate that Ono was made an independent municipality sometime during the 3d century, maybe as a consequence of the strife with Lod (Avi-Yonah 1966: 123, 158; *EncJud* 12: 1407). Ono appears in 5th- and 6th-century Byzantine town lists as an independent town (Abel *GP* 2: 401; Avi-Yonah *EncJud* 12: 1407).

ONYCHA. See PERFUMES AND SPICES.

OPHEL (PLACE) [Heb *ʿōpel* (עֹפֶל)]. The word means "hill," "mound," or "bulge," and in some instances refers to a hill (Isa 32:14; Mic 4:8). With the article, the word refers to a specific hill or mound, such as the hill of Samaria (2 Kgs 5:24; cf. the Mesha Stone from Dhiban, which speaks of the wall of the "citadel" of Qarhoh [the high acropolis of Kerak in Jordan]).

Usually, however, the word *haʿōpel* is used as a proper noun to refer to a section of the SE ridge of ancient Jerusalem, south of the temple platform and just north of the City of David where the ridge widens to join the temple platform, or it may refer to the hill of Zion itself (Kenyon 1967: 14–15). Some of the kings of the divided monarchy initiated various construction programs on the Ophel (Jotham, 2 Chr 27:3; Manasseh, 2 Chr 33:14). After the Exile, the Nethanim (i.e., various temple servants) took their turn in repairing the city walls on the Ophel (Neh 3:26–27; cf. 11:21).

During the Roman period, Josephus calls the area Ophlas, a transliteration into Greek from the Aramaic *apla,* and locates it next to the temple platform. He describes the course of the first old wall of Jerusalem as "passing a spot which they call Ophlas, [which] finally joined the eastern portion of the temple" (*JW* 5.4.2 145). This reference to the Ophlas indicates the external bulge just below and SE of the corner of the present Haram esh-Sharif of the temple platform.

The area was strategically important, and during the Roman siege of Jerusalem, John, one of the Jewish leaders, was able to control the temple area with the "Ophla and the valley called Kedron" (*JW* 5.6.1 §254). Josephus correctly distinguished between the Ophlas, located at the N end of the SE ridge, and the area he called "Akra, that is to say, the lower town" (i.e., farther down the SE ridge) which during the

Roman siege was held by another Jewish leader, Simon (*JW* 5.6.1 §253; cf. *JW* 6.6.3 §354; Simons 1952: 60–66; Mazar 1975: 173; Mare 1987: 66).

OPHIR (PERSON) [Heb *ʾôpir* (אוֹפִר)]. According to the Table of Nations (Gen 10:29) and the parallel genealogy in 1 Chr 1:23, Ophir was a Semite, son of Joktan, born six generations after Noah. His name is also associated with a geographical area. The names of his brothers in the genealogy would seem to place him and his descendants in Arabia. See HAVILAH (PLACE); SHEBA (PERSON) #1. This location is supported by a descriptive note that places the sons of Joktan in the "eastern hill-country" in the region between Mesha and Sephar (Gen 10:30). An exact location is not known, but the S Arabian area around Yemen would fit the evidence. The name itself is recorded in inscriptions coming from the pre-Islamic period (Ryckmans 1934: 298, 339–40).

DAVID W. BAKER

OPHIR (PLACE) [Heb *ʾôpîr* (אוֹפִיר)]. A maritime nation which was a source of gold from at least the reign of Solomon (1 Kgs 9:28; 22:49; 2 Chr 8:18). It also provided fine wood and precious stones (1 Kgs 10:11; 2 Chr 9:10; Job 28:16). All of these were delivered to Israel by ship through the port of Ezion-geber on the Red Sea. The gold seems to have been of a particularly high quality since in some of the passages it is used in conjunction with more specific Hebrew terms for fine, choice gold (Job 22:24; Ps 45:10[—Eng 45:9]; Isa 13:12). Ophir became so associated with this rare metal that the name Ophir itself, without any further qualifier, is to be understood as "gold" in Job 22:24. Gold from this source is also known from an extrabiblical inscription from Israel (Maisler 1951).

In poetic and prophetic references to the wealth of Ophir, it is not the source or origin but rather the quality of the metal which is stressed. It is said to be precious indeed, but less so than wisdom (Job 28:16), a relationship with God (Job 22:24), or even humanity itself (Isa 13:12).

The geographical location of Ophir is unclear, and the question has raised a multitude of suggestions ranging from southern Africa to India. The popular attraction to the romantic idea of some distant, exotic location of fantastic wealth has undoubtedly fueled the speculation.

Some have suggested that Ophir is strictly a legend, with no historical existence at all. Because of the large amount of gold which is claimed to have been delivered from there (15 tons), some have suggested that it is the mythical equivalent of Eldorado (North 1967: 197–98). Based on other ANE records, however, it is possible to show that this amount of the metal is not implausible.

An issue which has exacerbated the problem of identifying the location of Ophir concerns the possible relationship between the Ophir of the genealogies of Noah (Gen 10:29; 1 Chr 1:23; see OPHIR [PERSON]) and that mentioned above. The former has been fairly certainly located in the Arabian peninsula, leading to the same suggestion as to the location of Ophir in all of its biblical occurrences. A problem with this location has been suggested because it does not lend itself to the production of some of the exotic animal life associated by some with Ophir's gold (1 Kgs 10:22). This argument against an Arabian site is not compelling since the gold mentioned in 1 Kings 10 is not specifically stated to originate in Ophir. Its source is unspecified, and its mass (666 shekels, v 14) exceeds that which is said to have been transported from Ophir (420 shekels; 1 Kgs 9:28). Even if the gold of chap. 10 were from Ophir, it is not stated that the exotic animals were from the same location. They could have come from a different place, with the ships then on-loading the gold en route back to Israel (North 1967: 200). The

association of the gold from Ophir with the queen of Sheba (1 Kgs 10:10–12), generally identified with Seba and the Sabeans in SW Arabia, adds to the merit of the Arabian identification of Ophir.

Christidès rejects the identification of the Solomonic Ophir with that of the genealogies on the basis of alternative readings of the name (1970: 242). Most of the non-genealogical texts in their Greek and Latin versions have the place-name with an initial *s* not found in the Hebrew text, i.e., Sōphēr (a) (1 Kgs 9:28; 10:11), Sōpheir (a) (Job 22:24; 28:16; 2 Chr 8:18), Soupheir (1 Chr 29:4; 2 Chr 9:10), and Souphir (Isa 13:12). This distinction from the "Ophir" form of the genealogies he feels sufficient to warrant an interpretation which sees the two as separate entities.

Aside from an Arabian site, one of the two other major contenders for the location of Ophir is India (Schreiden 1953: 587–90). This identification was made by Josephus (*Ant* 8.164) concerning 1 Kgs 9:28, and applied by Jerome to Job 28:16 in his translation of the Latin Vulgate. (S)upara, a site some 40 miles N of Bombay, and mentioned by Ptolemy (*Geog.* 7.1.5), has been suggested (see Christidès 1970: 243), as has Goa (Gray *HDB*, 713). In favor of a location on this subcontinent is a sea trade between India and the Middle East from at least the 2d millennium B.C. Also, the commodities which might be associated in Kings with the biblical Ophir are indigenous to India.

Several have also suggested Africa as the site of Ophir. With the discovery of the wealth of Zimbabwe in southern Africa during the 19th century, some suggested that Ophir had been found (Peters 1895; see North 1967: 200). Albright (*ARI*, 133–34) suggested a location farther N along the African coast in what is now Somalia. This is an area associated with the Egyptian *punt.* See PUT. The commodities associated with Ophir are found in this area. This is especially so if one accepts the possibility that some of the geographical descriptions used for parts of this area extend to both sides of the Red Sea, including East Africa and the W Arabian peninsula (ibid.; also North 1967: 201). This would be a combination of two of the suggestions already mentioned.

None of these possibilities have been compellingly proven. The only extrabiblical reference to Ophir does not shed much geographical light on the subject. A text from Tell Qasile dating from the 8th century B.C. reads "gold of Ophir to Beth-horon. 30 shekels" (Maisler 1951: 266). This could indicate the transfer of the metal from its source to another location. Another possibility is that "Ophir" is a description of the fine quality of the gold, as has already been shown for some OT texts. In neither case are we able to obtain any more geographical precision. Though not conclusive, the Arabian or East African sites seem more likely.

DAVID W. BAKER

OPHNI (PLACE) [Heb *ʿopnî* (עָפְנִי)]. A settlement in the E half of Benjamin (Josh 18:23). The text is not explicit regarding its exact location. The fact that it appears in a list that tends to group names according to geographical proximity, in this case neighboring Geba, suggests that it would be located at the modern site of Jifna (M.R. 170152), some 3 miles (5 km) NW of Bethel. If so, the settlement would actually lie in Ephraim rather than Benjamin as suggested by the larger context, leading us to conclude either (1) that the N boundary of Benjamin was in actuality much more irregular than the schematic description of Josh 18:11–20 would suggest, or, as is now more commonly assumed, (2) that the border description and the listing of towns are contradictory, the two deriving from quite different periods in Israel's history.

ELMER H. DYCK

OPHRAH (PERSON) [Heb ‹*oprâ* (עָפְרָה)]. The son of Meonothai in the genealogy of Judah (1 Chr 4:14).
H. C. LO

OPHRAH (PLACE) [Heb ‹*oprâ* (עָפְרָה)]. **1.** A town in the tribal allotment of Benjamin (Josh 18:23). This Ophrah has been identified with modern et-Taiyibeh (M.R. 178151), about 4 miles N of Bethel (Boling *Joshua* AB, 430; McCarter *1 Samuel* AB, 238). It may also be described as lying on the intersection of two lines, one running NE from Jerusalem, the other NW from Jericho. This Ophrah also figures in the story of Jonathan's surprise raid on the Philistines at Michmash, where it is said to be the road (roads at this time being named by their end points) taken by one of three Philistine raiding parties (1 Sam 13:17). The other two roads named are "Beth-Horon" and the "valley of Zeboim." Morton (*IDB* 3: 607) and McCarter (*1 Samuel* AB, 238) equate this Ophrah with the Ephron of 2 Chr 13:17 and, on the basis of evidence from the early Christian father Jerome, with Ephraim of 2 Sam 13:23 and John 11:54 (on the former, see the textual note in McCarter *1 Samuel* AB, 330, who cites manuscripts of the LXX which lend credence to this equation). In addition, Morton (*IDB* 3: 607) cites Aphairema, a district given to Judea from Samaria by Demetrius in 1 Macc 11:34 as identical with the Benjaminite Ophrah.

2. A second Ophrah is associated with the traditions surrounding the judge Gideon (Judg 6:11, 24). This Ophrah is located by these stories in the territory of the tribe Manasseh (that is, to the N of the tribal claim of Benjamin). Judg 6:11 tells us that the Manassite Ophrah belonged to the clan of Abiezer (cf. Josh 17:2, 1 Chr 7:18; see *IDB* 3: 607), and the naming of the place as "the Oak at Ophrah" suggests a place of prophetic activity (cf. the tradition of "Deborah's Palm" in Judg 4:5; see Boling *Judges* AB, 130), though in this case one operating in the Baal cult (cf. Judg 6:25ff). The stories about Gideon continue with no further mention of Ophrah until Judg 8:27 when Gideon makes an ephod there, which the text tells us became a source of apostasy for Gideon and Israel. Upon his death, Gideon is buried in his hometown of Ophrah (Judg 8:32). His son Abimelech killed his brothers there (Judg 9:5), save for Jotham, in a bid to gain sole rule for himself. This Manassite Ophrah has not been located with any certainty, though the location of Gideon traditions in the valley of Jezreel (e.g. Judg 6:35) gives weight to the suggestion of Aharoni (*LBHG*, 263) that this Ophrah should be identified with modern ‹Affuleh (M.R. 177223) in the center of the valley of Jezreel.
JEFFRIES M. HAMILTON

ORACLE. An oracle is information transmitted from the deity to human beings, usually either answers to important questions or revelations about future events. This entry consists of two articles, one surveying the use of the word "oracle" (Heb *maśśā›*) in the OT, and the other surveying oracles as an element in ancient Egyptian religion. For other discussions of oracles, see PROPHECY; SIBYLLINE ORACLES; and WOE.

OLD TESTAMENT

Although discussions of prophecy in the OT often use the English word "oracle" as a general term for any speech by a prophet, the RSV and other modern translations use it mostly to translate a single Hebrew word, *maśśā›*. *Maśśā›* designates a specific type of speech used by ancient Israelite prophets. Thus when translating *maśśā›,* "oracle" indicates that a prophetic passage or speech belongs to this specific type.

The OT identifies eighteen passages by means of the Hebrew term *maśśā›*. The RSV labels all of them with the term "oracle." These are: 2 Kgs 9:26a; Isa 13:2–14:23; 14:29–32; 15:1b–16:12; 17:1b–11; 19:1b–25; 21:1b–10, 11b–12, 13b–17; 22:1b–14; 23:1b–18; 30:6b–7; Ezek 12:11–16; Nah 1:2–3:19; Hab 1:2–2:20; Zech 9:1–11:3; 12:1b–14:21; Mal 1:2–3:24[—Eng1:2–4:6].

Jer 23:33–38, Lam 2:14, and 2 Chr 24:27 use the term *maśśā›* to refer to unreported speeches of Israelite prophets. In the Lamentations and Chronicles passages the RSV translates *maśśā›* with "oracle," but uses "burden" in the Jeremiah passage to show the pun created in Jer 23:33 through the use of a homonym of *maśśā›* meaning "burden" (i.e., "You are the burden"). Other passages where translations

use the term "oracle" do not contain the term *maśśā᾽,* and in Prov 30:1 and 31:1 *maśśā᾽* is a name. See MASSA [PERSON].

Maśśā᾽ has often been thought to designate a specific type of prophetic speech, but a comprehensive definition of the genre has been reconstructed only lately. This definition, developed in a recent study (Weis 1986), indicates that a translation for *maśśā᾽* such as "prophetic exposition of divine revelation" would be preferable to "oracle."

Within ancient Israel the type, or genre, of speech called *maśśā᾽* is found exclusively within the prophetic movement. A *maśśā᾽* responds to a question about a lack of clarity in the relation between divine intention and human reality. Either the divine intention being expressed in some aspect of human experience is unclear, or the divine intention is clear enough, but the human events through which it will gain expression are unclear. In any event, the initiative for a *maśśā᾽* lies not with the deity or the prophet, but with the prophet's community—or a member thereof—which asks the question to which the *maśśā᾽* is a response.

The topic of a *maśśā᾽* is thus always some person, group, situation, or event (e.g., Philistia, the ravaging of Moab, the destruction of Tyre, Babylon, the renovation of postexilic Judah, Nineveh, Jerusalem, King Ahab). The addressee of a *maśśā᾽* is either the prophet's own community or the person or group that is the topic of the passage.

A *maśśā᾽* is based on a particular revelation (given to the prophet) of the divine intention or of a forthcoming divine action. A speech or text belonging to this genre was composed by the prophet in order to expound the way in which the revealed divine action or intention would actually express itself in human affairs. Thus, regardless of the overall formal structure they exhibit, all texts belonging to the genre *maśśā᾽* link descriptions of God's acts or intentions with descriptions of human acts and events in order to present events taking place in the human realm as the manifestation or result of divine initiation (e.g., Isa 13:6–8; 19:1b; 23:11–13; Zech 9:4–5a).

On the basis of this exposition a *maśśā᾽* gives direction for human action in the present or near future, or provides insight into the future. Those texts that give insight into the future are predominantly announcements of future events and conditions (e.g., Isa 17:1b–11; 30:6b–7; Ezek 12:11–16). Those texts that give direction contain commands and/or prohibitions that are justified by reports of past or present events and conditions (e.g., Isa 15:1b–16:12; 21:1b–10; 22:1b–14; 23:1b–18). Commands or prohibitions concerning jubilation and lamentation are addressed to the person or group that is the text's topic (e.g., Isa 23:1b–6, 14). Commands or prohibitions concerning concrete human action apart from jubilation or lamentation are always given to the text's addressee (e.g., Isa 16:3–4a is addressed to officials of Judah, not to the Moabites).

The oldest texts of the OT that belong to this genre (e.g., Isa 14:29–32; 15:1b–16:12; 21:1b–10; 22:1b–14) come from the 8th century B.C.E., and contain within themselves the revelation on which they are based (e.g., Isa 14:32b; 16:6–11, 21:2b [+ 21:9?]; 22:14b). They communicate and expound that revelation for the first time, and respond to a specific inquiry addressed to the prophet about some aspect of the immediate human situation for which the significance is unclear (e.g., Isa 15:1b–16:12 concerns the advisability of giving sanctuary to refugees from an attack on Moab). These examples of the genre *maśśā᾽* usually give direction for action. These texts are produced by prophets who appeal to a living revelatory encounter with the deity, and out of that—through the *maśśā᾽,* which they compose—seek to communicate how the deity is at work in human affairs, and thus how the audience should itself act. The texts are written compositions, but were probably delivered orally. This version of the genre *maśśā᾽* predominates *before* the Exile.

There is some evidence that the prophets who used this type of speech thought of themselves in terms of the metaphor of the lookout on the city wall who watches for dust clouds and other signs of approaching events. These lookouts then had to interpret the significance of the phenomena, or the meaning of the signs that they observed, in order to deliver usable insight or direction—just as the prophets using the genre had to expound the revelation they received in order to give usable insight or direction.

The latest texts of the OT that belong to this genre (e.g., Zech 9:1–11:3; 12:1b–14:21; Mal 1:2–3:24—[Eng1:2–4:6]) come from the late 6th and early 5th centuries B.C.E. Unlike the earliest examples of *maśśā᾽* they refer to a previously communicated revelation that is found outside the *maśśā᾽* (e.g., the previously communicated revelations for the three texts listed above are Haggai 1–2 and Zechariah 1–8, plus Zech 11:4–17 for the last two). Here a *maśśā᾽* is the prophet's response to a generalized complaint that God's intention expressed in the prior communication has not shown itself in human affairs as expected. These examples of the genre tend to give insight into the future rather than direction for action. In other words, they accept the revelatory status of some previous prophetic communication of the divine intention, and in the face of the failure of that intention to appear in human affairs as expected expound how it will actually manifest itself in the near future. These examples of *maśśā᾽* are produced by prophets who derive their authority chiefly from a revelatory text (i.e., earlier prophecy) and only a little (if at all) from a living revelatory encounter with the deity. Although this usage of *maśśā᾽* is a pattern of the postexilic period, there are signs that the shift had begun by the very end of the preexilic period (note the reference to a previously communicated revelation in Hab 2:2–3, although Habakkuk 1–2 otherwise conforms to the preexilic pattern for a *maśśā᾽*).

It is not clear whether the prophets responsible for the postexilic texts conceived of their work under any particular metaphor, but they had become less the originators of new prophecies and more the guardians and interpreters of old prophecies deemed still to have life. The evolution of the genre *maśśā᾽,* in this respect, participates in the evolution currently posited by some for the prophetic movement as a whole. The shift from localizing revelation in a personal encounter with the deity to localizing revelation in a written text, seen in the development of the genre *maśśā᾽,* is also an important step on the road to a religion centered around a canonical Scripture as the source of divine guidance.

RICHARD D. WEIS

ANCIENT EGYPT

An oracle is information transmitted from the world of the gods to humans. Different from theological revelations, the term "oracle" is usually reserved for those occasions which relate to the will or knowledge of god with regard to the actions of human beings. Because of this, oracles have often been assumed to reveal a person's destiny, and, therefore, they are indicative of cultures which have a very fatalistic worldview. On analysis, however, this proves to be a highly problematic position.

Oracles can be divided into two categories: the solicited and the unsolicited (Blackman 1925: 249ff.; 1926: 176ff.). The unsolicited oracle, the less common of the two, is a sudden, unexpected message from the divine, often occurring in dreams. We are familiar with such oracles in Egypt in relation to royalty, such as Prince Osorkon (Caminos 1958: 88–89), Pharaoh Merenptah, and on the famous sphinx stele of Tuthmoses IV (Sauneron 1959: 19ff.).

Solicited oracles result from a conscious human attempt to discover the divine will. This attempt usually comes in the form of a question which is phrased either to solicit verification ("yes" or "no") or for specification, the answer to which requires explanation. The former is, of course, the most common type of oracular question (Černý 1935: 41ff.), and it is regularly encountered in Egypt in cases of adjudication where the petitioner presents his case to the god who will, by one means or another, communicate

agreement or disagreement (Parker 1962: 44–45). The latter type of question requests much more information from the god; the most common example of this is incubation, creating a situation—usually through an altered state of sleep or deep meditation—wherein one induces the god to communicate the divine will or knowledge (Volten 1942: 40–41). This practice of incubation, or dream invocation, does not seem to occur in the earlier stages of Egyptian history (Ray 1976: 131 ff.), and may be concomitant with the Late Period change in Egyptian thought, which saw a distinct change in the Egyptian acceptance of the power and prominence of fate (Miosi 1982: 69 ff.).

Oracles were made in numerous ways and related to various topics (Roeder 1959: passim). They frequently involved voices which emanated from the recesses of chapels or from statues. These "divine" voices were certainly those of priests who interpreted the will of god. Prophetic messages were also associated with dreams, particularly associated with temple incubation, and they were often transmitted by people who were possessed or in a trance. Oracles could also occur without speech, as was the case for those made during processions of the god in his sacred boat, when he communicated his will by forcing the boat carriers to move in one direction or another or by interpreting the movement of sacred animals (Ray 1976: 131).

Oracles were sought by all classes—from peasants to pharaohs—and they covered all topics; e.g., whether some food was good enough to eat; what was the most effective cure for a disease (Ray 1976: 134); how to ensure conception; matters of commerce; the selection of a high priest or of a pharaoh; and whether professional advancement was likely. Quite often oracles were sought to decide guilt or innocence in legal disputes; usually these were solicited, requiring only a "yes" or "no" response.

The presence of a priest was absolutely essential in oracular matters. Priests sometimes wrote the questions, were usually the vehicle through which a god transmitted an oracle, were responsible for recording oracles, particularly in legal matters (Posener 1968: 99), and were often responsible for interpreting the meaning of oracles. Indeed, there existed at the serapeum at Memphis expert and professional dream interpreters who were available to anyone. Some of these individuals may have been part of the personnel of the main temple, while others worked independently. In the late Ptolemaic and Roman periods, cults and their priesthoods may have been quite competitive in attracting clients for their particular oracular interpretation skills (Ray 1976: 130 ff.).

As mentioned above, there is a tendency to connect too quickly oracles with a fatalistic worldview. However, it can be seen that many oracles, especially those which involved adjudication, refer to *past* events; predictions and fate are certainly not involved with these. Some appeal to god's omniscience and reflect a present circumstance—knowing the most appropriate cure or the whereabouts of someone or something—and again are not associated with fate or predictions. Others merely show a god's preference or favor (e.g., his choice of high priest or pharaoh).

Of course, many oracles do refer to the outcome of future events, but even here we must be wary of automatically linking ability to predict with fate or predestination. Other explanations are possible. An Egyptian's future was not considered fixed and predestined. It was, instead, seen as the result of a dynamic interaction between the individual—with his own desires, motivations, and actions, and his own physical and temporal environment—and the gods. The divine was imminent and was always reacting to man, principally through the process of reward and punishment. When the future was revealed to a person through an oracle, he may simply have been finding out what god wanted him to do or what particular response or reaction god had in store for him based on his position at any given moment within the process of the law of reward and punishment. Divine revelation of some event in a totally static and predestined future is quite different from god's revealing to someone what his future responses will be within a dynamically interactive relationship.

Thus, reference to oracles does not necessarily indicate a belief in a predestined life. Oracles could refer to the past, or to god's omniscience or preference; these are not related to fate. Oracles relating to the future may merely record what deserved rewards or punishments might or will occur, or what questions man feels are beyond his capacity to answer.

FRANK T. MIOSI

ORAL TRADITION. This entry consists of two articles. The first deals with the role of oral tradition in the formation of the NT writings. The second deals with the role and importance of oral tradition in early Judaism. For the role of oral tradition in the formation of the OT writings, see FORM CRITICISM (OT); GENESIS, THE NARRATIVE OF; JOSHUA, BOOK OF; JUDGES, BOOK OF; SCANDINAVIAN SCHOOL (OT); TRADITION HISTORY.

NEW TESTAMENT

The oral tradition of the NT developed in a world which had set a high premium on both the written and the spoken word.

On the one hand, early Christianity was in its Jewish and Hellenistic loyalties heir to literate cultures of distinction. In ancient Judaism scrolls were revered as repositories of wisdom and revelation. From the 3d century B.C.E. onward the hellenization of the ANE world accelerated chirographic processes, rapidly increasing the quantity and variety of Hellenistic and Jewish-Hellenistic literature. There had never been in Western history a production of scrolls, papyri, and manuscripts on such a massive scale. The Christian movement, therefore, originated in a Jewish-Hellenistic milieu which highly prized the written word.

On the other hand, the canonization of biblical literature is apt to delude us into thinking of texts as the single most important tool of civilized existence in the ancient world. Orality, which had been humankind's sole or predominant medium for millennia, prevailed long after the introduction of alphabetic writing systems (Ong 1982: 115–16). Despite the growth of a chirographic culture in antiquity, the Hellenistic age remained strongly beholden to oral modes of communication, composition, and education. Mnemonic devices and formulaic modes of expression dominated thought structures. Orators could carry in their minds a vast stock of commonplaces, and rhetoric was one of the most serious and consequential subjects of civilized life. Texts themselves were hearer-friendly. Any text worthy of consideration was meant to be read aloud (Balogh 1926; Hendrickson 1929; Saenger 1982).

As a result of this dual commitment to textuality and orality in late antiquity, Christianity does not possess a tradition transmitted in purely oral fashion over a millennium (like the Hindu Vedas). Texts came early to the Christian movement, and oral proclamation was subject to textualization almost from its inception. But it must likewise be acknowledged that in early Christianity, as elsewhere in the ancient world, speech remained a principal means of communication. There is no rational ground for rejecting the existence of oral tradition altogether (Ellis 1975: 299–315). In early Christian life and worship the oral proclamation was the rule. As is evident from the Pauline letters, this proclamation was saturated with traditional forms and formulas. Even glossolalia was a learned skill which availed itself of fixed sounds and rhythmic utterances. The interaction, moreover, of discourse with texts and vice versa took on many forms, ranging from close partnership to strained relations all the way to textuality's urge to revise antecedent proclamation.

A. Oral Proclamation of Jesus

The oral gospel originated with Jesus himself. In the only canonical passage pertaining to his educational, linguistic background, he is called a man of literary, scriptural knowledge, although without formal rabbinic schooling (John 7:15). In communicating his message, he entrusted himself to the oral medium without—as far as is known—ever committing a word to writing. Insofar as all four canonical Gospels have given us the portrait of an itinerant speaker of authoritative words, surrounded by audiences and engaged in debates, they will have retained genuine features of Jesus the oral performer.

The aphoristic saying *(ho logos)* and the parabolic story (*hē parabolē*) constituted the two formal units of Jesus' proclamation. Both were oral operations, not literary categories, and together they formed the basis of what came to be the gospel tradition. Their formation, moreover, was rooted in Jewish and Greco-Roman culture. Far from being Christian inventions, the saying and the parable presented themselves as ready-made linguistic instruments to Jesus and his early followers.

1. The Saying. Speaking in sayings was a proven way of managing information in antiquity. Teachers and philosophers, prophets and scientists were trained to handle knowledge in aphoristic fashion. Brevity, rhythmic patterning, and appeal to visual imagination were characteristic aspects of ancient sayings, including those of the Jesus tradition. As is true of all generic choices, a commitment to the genre of saying imposed artistic and ideological limitations upon the speaker. An effective operation of the sayings, therefore, depended not only on a rhetorically skilled performance, but on using the genre to its full potential. The latter is well documented by the rich display of varied types of sayings in the gospel tradition: proverbial sayings, wisdom sayings, prophetic sayings, apocalyptic sayings, ethical sayings, curses and beatitudes, among others (Bultmann 1963: 69–166). Within the limitations set by the genre, diversity was desirable in order to achieve maximal rhetorical effects. Irrespective of the literary fixation of Jesus' sayings, the mnemonic structuring, the rhetorical appeal, and the compositional variability of many reminds us of their oral genesis and performance.

2. The Parable. Parable availed itself of story, a chief vehicle in oral teaching. Brevity as well as rhythmic and thematic patterning must once again be viewed as concessions to hearers. Another hallmark of Jesus' parables is their narrative variety; they are not reducible to one single tale (Crossan 1973). The parable, as the saying, functioned like an instrument the effectiveness of which depended on the skills of the performer. In keeping with oral proprieties, Jesus' parables stayed close to the human world. Up to a point hearers could recognize themselves in these stories. But in the course of a parabolic rendition, the narrative realism frequently conflicted with the social experience of the hearers. At this very point the parabolic logic intruded upon hearers' lives, making their engagement in the story inescapable. Remembering, therefore, was not the only, and not even the most important, objective of parables. The tradition has, quite appropriately, furnished some parables with the closing formula: "He who has ears to hear, let him hear." It invited hearers to complete the parable, and to make sense of it in their lives.

a. Plurality of Originals. What was fundamental about the rendition of sayings and parables was their disposition to function as autonomous speech acts. They were not meant to be heard as scattered pieces or fragmented knowledge in need of an explanatory framework. Saying and parable constituted discrete utterances. Each oral performance carried with it its own logic and sense of integrity; each was an authentic act of communication. Our search for *the* one original saying or parable of Jesus is, therefore, not only fraught with technical difficulties, but from the perspective of oral performance meaningless.

Multiple oral renditions of a saying or parable produced a plurality of originals, and hence not the one original (Lord 1960).

b. Clustering Processes. If saying and parable constituted the initial phase of proclamation, then their clustering arrangements began to enrich and complicate the tradition. The juxtaposition of sayings and parables resulted in a variety of formations. Two sayings combined into an aphoristic compound. Three or more sayings and parables coalesced into speech complexes (Crossan 1983). Clustering also was at the root of the formation of Jesus' speeches, the best known of which were the Sermon on the Mount (Matthew 5–7), the Sermon on the Plain (Luke 6:20–49), and the Farewell Speech (John 13:31–17:26). Further development of the clustering processes led to sayings collections, arrangements with little or no interest in narrative syntax. A notable example is Q, which was, however, acceptable to the canonizers only by way of Matthean and Lukan mediation. Clustering, moreover, elevated sayings, dialogues, and parables to a gospel in its own right, the sayings gospel or revelation discourse. A prominent example of a sayings gospel was the gospel of Thomas. See THOMAS, GOSPEL OF (NHC II,*2)*. Its Jesus functioned as a teacher of wisdom more than as object of faith. Most clustering processes were products of writing: one does not speak in series of sayings. But in seeking to perpetuate the living authority of Jesus as speaker of sayings and parables, the sayings gospel remained committed to oral sensibilities. It displayed, therefore, the competing interests of speech and writing in the tradition.

3. Miracle, Exorcism, Apothegm. In addition to saying and parable other types of oral communication developed which organized and recollected vital information. The miracle (or heroic) story centered on the single, spectacular aspect of Jesus' healings. Simultaneously simplifying and magnifying the dramatic healing action, it created a heroic image of Jesus which conformed to the mnemonic and aesthetic requirements of oral communication. In the exorcism (or polarization) story life was grasped by its opposites and Jesus was profiled as a memorable figure in conflict with evil. Ideological simplicity and adversary relations had obvious imaginative advantages over the monotonous course of daily life. The apothegmatic (or didactic) story enacted a variety of controversy or dialogue scenes which culminated in a saying. In this case the stories served as a mnemonic bridge designed to call attention to the final saying, which carried the tradition's social, cultic, and moral values. What all three types of oral stories had in common was a mnemonic structuring, a high degree of imaginative appeal, and a personalization and actualization of information.

B. Synoptic Tradition

In the 20th century Bultmann (1963), Gerhardsson (1961; 1964; 1979; 1986), and Riesner (1984) developed the most influential models of the precanonical, synoptic tradition. Together with Schmidt (1919) and Dibelius (1934), Bultmann pioneered the school of form criticism. See FORM CRITICISM. Its basic premise was that many of the sayings and brief narrative units in the Gospels had formerly been operating as speech events. This form-critical insight gave rise to the concept of a pre-gospel, oral tradition. Bultmann suggested an active transmission of the tradition along evolutionary lines from oral simplicity to gospel complexity. Gerhardsson and Riesner, questioning many of the assumptions of form criticism, advocated a relatively stable process of transmission. The former appealed to rabbinic transmissional processes, while the latter located a reliable transfer of sayings in circles comprised of Jesus' disciples and sympathizers. It has, however, been questioned as to whether the synoptic tradition submits to a single conceptual model (Kelber 1983). All oral proclamations were discrete acts of speech, separated by intervals of nonspeaking and unconnectable by linear, evolutionary tracts. Nor was the tradition limited to orality. Stories, sayings, and cluster arrangements came to be written down. Once textualized, they were as a rule recycled back into speech. This interplay of text and proclamation ruled out progressive solidification of orality into textuality. While speech was often written down out of preservative instincts, interpretive impulses were built into the tradition from its inception. The parable, for example, always called for interpretation. Prophetic and apostolic figures continued to proclaim Jesus' words, updating them and adding new ones to their repertoire (Beare 1967; Boring 1982). Forgetting and suppression, moreover, were as much part of tradition as remembering and interpretation (Abel 1971). In sum, the synoptic tradition is a catchword used to reify a tangle of transmissional and hermeneutical

processes, of recall and revision, of omission and deconstruction, which in their entirety may elude diagrammatic representation.

C. Gospel Composition

According to the two-source hypothesis, the Matthean and Lukan narratives were composed in dependence on Mark and the sayings source Q. Mark in turn had developed out of an orally dominant tradition. The thesis of Griesbach, which has recently been revived in some quarters, presents an alternative model (Farmer 1964). On that hypothesis, Mark wrote after Matthew and Luke, and Luke was dependent on Matthew. The Matthean gospel in turn had developed out of a tradition of early "eyewitnesses." How the ancients were supposed to have proceeded, however, technically and practically, in merging Mark and Q into the Matthean/Lukan syntheses, or in conflating Matthew and Luke into the Markan composition, has remained unexplained and unexplored. What to the modern mind appears to be a skillful juggling of textual sources may in ancient scribality have been a partnership of chirographic activity with an oral memory in possession of multiple traditions.

Whatever the genetic history of the Gospels, their narrative design appeals to the ear more than to the eye. An oral, paratactic style dominates over subordinate, dependent clauses. Multiple kinds of redundancies accommodate listeners to hear their way through these narratives. Single-action scenes, controversies, and speeches make up the backbone of their syntax. Doings and sayings take over narrative functions where the modern reader would expect character development and psychological probing. This is not to suggest that the Gospels are oral traditional literature, e.g., direct transcriptions of the same oral story (Lord 1978). The marks of textuality are unmistakably present in the Gospels. But textual constructions and dependencies notwithstanding, the gospel narratives still operate in the interest of an aesthetics of hearing.

D. Paul

The bulk of the pre-Pauline Christian materials recoverable from the apostolic letters appears in forms fashioned by oral needs and/or designed for oral use in worship: baptismal formula (Gal 3:28), eucharistic formula (1 Cor 11:23–26), acclamation formula (1 Cor 12:3; 16:22), confessional formula (1 Cor 15:3–5; Roman 1:3–4), faith formula (1 Thess 4:14; Rom 10:9b), doxology (Rom 1:25c; 9:5c), and hymn (Phil 2:6–11). In addition, the apostle made use of dominical sayings (1 Cor 7:10–11; 9:14), although with surprising infrequency.

While the degree of Paul's indebtedness to Jewish, Hellenistic, and Jewish-Hellenistic culture has remained controversial, there is growing certainty that his style of argumentation was informed by ancient rhetoric (Wuellner 1979; 1986). The exercise of theology in such a world was primarily a dynamic interpersonal affair. It did not intend to prove truth abstractly, but through persuasion and by soliciting action. Partiality rather than objectivity was desirable. In a number of his letters Paul communicated the nature and terms of the gospel in a disputational, polemical style. This is traditionally understood as a response to historical adversaries but it can also be appreciated as a rhetorically effective communication. Assertion against opposition, rather than dispassionate logic, was a proven rhetorical strategy. In the same vein, Paul communicated by means of popular polarities: Jew/gentile, male/female, master/slave, believer/unbeliever, spirit/flesh, wise/foolish, among others. The best-known example of his rhetorical style is the diatribe (Bultmann 1910; Stowers 1981). In using it, the apostle simulated objections to his argument, or drew false inferences from it, both of which he subsequently refuted (1 Cor 15:35–37; Gal 2:17). In effect the diatribe furnished him with a method of creating dialogues between himself and imaginary interlocutors (Rom 3:27–4:2). The purpose of the diatribe was pedagogical more than polemical. Dialogue enhanced contact with the addressees and the exposition of error sought to deepen their commitment to the gospel. In keeping with the ancient rhetorical tradition, moreover, Paul was in command of an arsenal of fixed topics and popular maxims. The paraenetic section of Galatians (5:25–6:10), for example, is composed of diverse sayings; Galatians 4:12–20 constitutes a collection of maxims focused on the topic of friendship; Romans 12:9–21 contains another series of sayings loosely arranged around the topos of love. Typically, many of these maxims had parallels in Judaism, Hellenism, and

Jewish-Hellenistic philosophy. They belonged to a common stock of ancient philosophical, rhetorical wisdom.

In Pauline studies a notable shift is taking place from epistolography to rhetoric (Wuellner 1976). It is based on the premise that the key to the apostle's writings does not lie in theories of literature but rather in theories of argumentation. Work on the rhetorical design of an entire Pauline letter, however, is still in its infancy. The most successful rhetorical interpretation of a Pauline letter has been Betz's commentary on Galatians (*Galatians* Hermeneia). On Betz's reading, Galatians conjures up the situation of a law court, with Paul functioning as the defendant, the addressees as jury, and Paul's opponents as the accusers.

E. Commonplace Tradition

The use of common stock materials was a recurrent feature outside the *corpus Paulinum* as well. The Letter of James, for example, carries clusters of sayings which were occasionally connected by catchwords, but more often lack a discernible connectedness (1:2–27; 3:13–4:12; 5:7–20). Some sayings in James bear a close resemblance to those in the Sermon on the Mount (1:22 = Matt 7:24–27; 5:12 = Matt 5:34–37). But whether or not they originated with Jesus, for James they were *loci communes* in that they belonged to a tradition common to all believers irrespective of individual authorship. The topic of the rules for the household enjoyed special popularity (Col 3:18–4:1; Eph 5:22–6:9; 1 Tim 2:8–15; 6:1–2; Titus 2:1–10; 1 Pet 2:13–3:7). Again, there was little that was specifically Christian in these rules. The ethos they displayed belonged to the common tradition shared by non-Christians and Christians alike.

F. Rhetoric of the NT

The oral tradition of the NT was a phenomenon comprised of a plurality of speech acts and diverse modes of proclamation. Ranging from saying to hymn, and from parable to doxology, it represented a rich world of sound and voices, of shared knowledge and intimacy, of loyalties and polemics, of remembering and participation. Once textualized, each item of proclamation, including its aesthetic, ideological ambience, was subject to revision. In different words, none of the twenty-seven texts was in its entirety the product of orality. The oral tradition of the NT exists only in forms embedded in and overridden by textuality.

A distinction must be made between the primary orality and literary rhetoric. The former entailed acts of speech at specific situations. It was not itself a text, although it could become textualized. At the point of textualization, primary orality was inevitably subject to the norms of the written medium. Literary rhetoric, on the other hand, described the stylistic and argumentative disposition of texts which shared basic objectives with oral proclamation. Not unlike primary orality, literary rhetoric developed strategies appealing to hearers, but owing to its textual identity it had to negotiate rapprochements with the chirographic technology. It may justly be assumed that all twenty-seven texts of the NT, not merely the Pauline letters, represent various degrees of literary rhetoric. The Apocalypse, for example, was constructed less according to a linear plot, but rather as a drama of recapitulation, allowing hearers through successive remembering to immerse themselves in a world of expanding symbols and images (Barr 1987). Even the Letter to the Hebrews, which is distinguished by a polished and educated style, defines itself as a "word of exhortation" (Heb 13:22: *logos tēs paraklēseōs*), a discourse designed to prove a case and to move hearers to take appropriate action. Reader-response criticism or reception theory, which has scarcely begun to be employed in biblical studies, is destined to make a crucial contribution to our understanding of the rhetorical nature of the NT texts.

WERNER H. KELBER

EARLY JUDAISM

According to rabbinic Judaism, "oral tradition" is the authoritative interpretation of the Written Law. Judaism understands the oral tradition to have been given by God to Moses on Sinai and therefore to be equal in authority and holiness to the Written Torah, represented by the Pentateuch.

A. The Concept of Oral Tradition
B. The Character and Antiquity of the Oral Tradition
C. Past Perspectives on the Oral Tradition

———

A. The Concept of Oral Tradition

Judaism maintains that God's revelation to Moses at Sinai, described in the book of Exodus, contained two distinct parts. One component was the Written Law, embodied in the text of the Pentateuch. This component was transmitted in writing and made accessible to all the people of Israel. The other part was the Oral Law. This aspect of the revelation was formulated for memorization and was transmitted orally by successive generations of sages. Judaism holds that God taught the oral tradition to Moses, who repeated it to Joshua. After Joshua, the chain of tradition lists "elders" and the biblical prophets. Ultimately, the oral materials passed into the hands of rabbinic authorities. To assure that this revelation would not be lost as a result of war, national strife, or other physical or intellectual calamity, beginning in the 2d century C.E., the rabbis codified the oral materials and preserved them in written form.

The first and principal document of the Oral Torah is the Mishnah, a Hebrew-language law code, edited in the land of Israel ca. 200 C.E., but containing statements attributed to rabbis who flourished over the preceding 200 years. Other rabbinic texts, including the Tosefta, Midrashic documents, and the Talmuds of the land of Israel and of Babylonia, are deemed also to embody the originally oral revelation. The Babylonian Talmud, completed in ca. 600 A.E., is the final document considered to be part of the oral tradition. The rabbinic theory of Oral Torah thus holds that statements and principles expressed by sages who lived over a period of close to 600 years preserve teachings that derive from God's original revelation to Moses at Sinai.

In this theory, the Written and Oral Torahs are part of a single, uniform revelation and are, accordingly, of equal authority and importance. When a 2d-century rabbi in the Mishnah or a 5th-century sage in the Midrash or Talmud responds to a discussion or question from his own day, his judgment does not comprise his own thinking and analysis. Rather, it is part and parcel of the divine revelation of Torah at Sinai. Even though the sage's comment is expressed in his own words and responds to a question or issue raised in his own day, it is understood to derive, in detail, from what God told Moses at the time of the original revelation (Neusner 1986: viii). The statement in every respect has the authority of divine revelation.

The first evidence for this concept of Oral Torah is found in Mishnah tractate *ʾAbot,* which dates to early in the 3d century C.E. It begins:

> Moses received Torah at Sinai and passed it on to Joshua, Joshua to elders, and elders to prophets. And prophets handed it on to the men of the great assembly …

(trans. Neusner 1986: 47)

Use of the term "Torah," without the definite article, indicates that the passage does not speak of the Pentateuch, always referred to as "the" Torah. Further, the passage describes Torah's closed transmission to specific individuals and groups. This process does not pertain to the written Scriptures, which were made accessible to all Israelites. The passage thus describes Moses' receiving of a second component of revelation, referred to elsewhere in rabbinic literature as Oral Torah. Developing the theme introduced here, the remainder of the first chapter of *ʾAbot* describes the subsequent transmission of this Oral Torah through generations of Jewish leaders and ultimately to those same rabbis who are cited in the Mishnah.

The notion introduced in *ʾAbot,* of the closed transmission of an esoteric revelation, functions polemically within rabbinic Judaism. The claim to possess an otherwise unknown component of God's revelation legitimates rabbinic authority and promotes the Israelite people's acceptance of rabbinic leadership. The concept of Oral Torah claims that rabbinic leaders are direct successors to Moses, whom these authorities call "our Rabbi," thus designating him the first rabbinic sage. According to the notion of oral tradition, furthermore, only under rabbinic guidance can the Israelite people correctly observe God's will. The Written Torah, available to all of Israel, contains only half of God's revelation. Access to the written Scriptures alone does not provide the people with all the information needed to properly observe the law. Correct observance is possible only under the guidance of rabbinic authorities, who have the revealed key to understanding the written Scripture.

The concept of oral tradition described here is uniquely rabbinic. Other postbiblical Jewish writings know nothing comparable. This is evident, for instance, in Josephus' descriptions of the Pharisees, whom the later rabbis understand to be the direct recipients of the oral tradition. In his first book, *The Jewish War,* Josephus says nothing about the Pharisees' knowledge of inherited traditions. He states only that of the several Jewish philosophical schools, the Pharisees are "considered the more accurate interpreters of the laws" (*JW* 1.97, LCL). Josephus' later work, the *Antiquities,* reworks his earlier descriptions so as to encourage the Roman government to support the Pharisees as leaders of the Jewish people (Smith 1956: 81). To substantiate his case that the Pharisees are the nation's legitimate rulers, Josephus notes that they preserve and follow certain traditions developed in accordance with their distinctive philosophical doctrine:

> They follow the guidance of that which their doctrine has selected and transmitted as good, attaching the chief importance to the observance of those commandments which it has seen fit to dictate to them.

(13.171, LCL)

It is one thing to say that a group preserves and follows some traditions received from past generations. That is what Josephus argues in the passage in *Antiquities.* The same general idea is found in Philo, who focuses upon the Jews' adherence to laws and traditions handed down from Moses, their lawgiver. It is quite another to claim, as the rabbis do, that *all* of the legal and exegetical dicta of a particular group have been passed down by tradition and derive, ultimately, from divine revelation. Outside of the rabbinic writings, such a notion is absent from Jewish discussions of oral tradition.

In sum, the notion of oral tradition legitimates all rabbinic statements about the meaning of Scripture and the content of revelation. Under the theory of Orah Torah, rabbinic interpretations have the authority of the word of God. At the same time, the concept of Oral Torah delegitimizes all interpretations that derive from outside of rabbinic circles. These are viewed as (simply) the work of fallible human intellect. By establishing the rabbis as the only authoritative source for correct practice and understanding of the divine word, the theory of Oral Torah promotes and justifies the rabbis' spiritual and political leadership over the Israelite people.

B. The Character and Antiquity of the Oral Tradition

The nature and content of the documents of rabbinic Judaism lead to conclusions quite different from those suggested by the notion of Oral Torah. What the rabbis conceive of as an oral tradition originating at Sinai takes the concrete form of arguments and discussions among rabbinic sages of the first centuries of the Common Era. The earliest of these discussions, found in the Mishnah, took place for the most part in the aftermath of the destruction of the temple in 70 C.E. and the failed Bar Kokhba revolt of 133–35 C.E. During this decisive period in Jewish history, rabbinic sages studied and interpreted Scripture, working out a program of ritual and legal practice that eventually would shape Judaism according to the rabbis' own ideals and aspirations. By the end of the Mishnaic period, the rabbis came to consider the results of their deliberations to be part of a divinely revealed oral tradition. From the principles, rules, and issues at play in the rabbinic documents, it is apparent, however, that this Oral Torah is substantially the product of the rabbis' own day and of their own distinctive attitudes and philosophies.

To illustrate this point, let us examine Mishnah tractate *Berakot* 1:1, a typical legal discussion:

A. From what time may they recite the Shema-prayer in the evening?
B. From the hour that the priests enter [their homes] to eat their heave offering,
C. "until the end of the first watch"—the words of Rabbi Eliezer.
D. But sages say, "Until midnight."
E. Rabban Gamaliel says, "Until the rise of dawn."
F. There was an incident: His [that is, Gamaliel's] sons returned from a banquet hall [after midnight].
G. They said to him, "We did not [yet] recite the Shema."
H. He said to them, "If the dawn has not yet risen, you are obligated to recite [the Shema].
I. "And [this applies] not only [in] this [case]. Rather, [as regards] all [commandments] which sages said [may be performed] 'Until midnight,' the obligation [to perform them persists] until the rise of dawn."
J. [For example] the offering of the fats and entrails—their obligation [persists] until the rise of dawn [see Lev 1:9, 3:3–5].
K. And all [sacrifices] which must be eaten within one day, the obligation [to eat them persists] until the rise of dawn.
L. If so why did sages [D] say [that these actions may be performed only] until midnight?
M. In order to protect man from sin.

Rabbinic sages discuss the time frame within which a certain obligatory prayer may be recited. As presented here, this issue clearly was live in the period of the discussion's named authorities, the early 2d century C.E. Since the matter is still under dispute, it appears hardly to represent the end product of a tradition of revealed law, intended by God to define exactly how the rules of the Written Torah are to be carried out. The Shema prayer itself is known only from the rabbinic literature. Accordingly, there is no reason to posit a long history of legislation concerning its recitation.

While Eliezer, B-C, suggests temple practice as the guide to the answer to A's question, neither he nor the other cited authorities argue or imply that these positions represent the way things always—or even recently—have been done. Quite to the contrary, L-M explains that the opinion of sages (that is, anonymous rabbinic authorities), D, is not meant to represent the true law at all. These unnamed authorities give an early time—midnight—for completion of the requirement in order to prevent people from becoming lax and failing to fulfill their obligation. So here matters are explicit: the sages do not simply repeat what they know to be a revealed law, passed on through tradition. Rather, they intentionally

refrain from indicating the correct parameters for proper practice, preferring, instead, to give their own reasoned opinion as to what the people should be told.

The form and concerns of this passage suggest that the rabbinic literature records discussions and opinions from the time of the rabbis themselves. This impression is supported by recent analyses of the content of the discussions found in the Mishnah as a whole. The consensus of this scholarship is that the ideals and principles that inform the Mishnah's rules are the creations of those same rabbis cited in that document. These rabbis, that is to say, report their own opinions and disputes on a variety of topics. They do not simply repeat, in their own names, laws that they inherited.

This point is illustrated by reference to the Mishnaic division of Agriculture, which contains the rabbinic treatment of Scripture's laws for tithing and maintenance of the holy land, e.g., observance of the prohibitions against planting mixed kinds and tilling the land during the Sabbatical Year. Observance of these restrictions would have been of central concern to the Israelite people from antiquity all the way through Second Temple times. Meticulous observance of the tithing laws also is generally considered one central characteristic of the Pharisaic movement. If the Mishnah preserves an ancient oral tradition at all, we should likely find substantial traces of it here.

This, however, is not the case. Like the rest of the Mishnah, the vast majority of the division of Agriculture is attributed to authorities who lived in the period after the destruction of the temple in 70 C.E., and, to an even greater extent, after the Bar Kokhba revolt of 133–35 C.E. (Avery-Peck 1985: 359–61). It is from this later period that most of the division's attributed laws and all of its anonymous materials appear to derive. Further, the smattering of facts and ideas attributed to authorities from the period before 70 does not present a coherent interpretation of the character or meaning of the agricultural law. Nor are these facts sufficient to allow practical implementation of Scripture's tithing restrictions. In all, then, it is clear that traditions of agricultural practice that might have existed in or prior to rabbinic times simply are not preserved in the rabbinic literature.

It is noteworthy, too, that the few extant details of agricultural practice attributed to authorities who lived during the Second Temple period do not provide the starting point for the later rabbinic deliberations. Within the division of Agriculture, that is, the rabbis followed their own interests. Their legal deliberations exhibit no significant dependence upon a knowledge of practices that might already have existed. These deliberations follow a path that is distinct even from the concerns introduced by the earliest cited rabbinic masters. The few extant details from this early period, that is, offer no clue to the character of the system of Mishnaic law as it develops in the later rabbinic academies. This suggests that both the topical interests of and the program of inquiry followed by the rabbis were their own, developed independently of any inherited body of law and interpretation.

This is not to suggest that traditions of agricultural and other practices were not known in the first centuries. From a variety of historical sources it is clear that from the time of Scripture itself, Jews did tithe and observe the other laws introduced in Scripture. Further, the Mishnah does assume a number of details not available in Scripture. These include the identification of the distinctive set of agricultural gifts discussed by the Mishnah's authorities. Accordingly, it is clear that at some point prior to the inception of the discussion later recorded in the Mishnah, unidentified individuals carefully read Scripture and delineated a set of agricultural tithes.

In light of this fact, the point must be clearly stated. It is not that traditions regarding ritual practice and the meaning of Scripture did not in all probability exist in late antiquity. The point, rather, is that so far as the literary evidence indicates, the rabbis did not take up and preserve any such traditions, using them as significant components of their own legislation. Rather than a compendium of prior oral traditions, the Mishnah and other rabbinic writings, as they have come down to us, are the independent intellectual and literary creations of rabbinic circles. These documents do not preserve an ancient tradition of law, but rather develop themes and ideas suggested by Scripture and worked out by the rabbis themselves.

This is not to deny that the sages did, at points, use facts, such as the definitions of the agricultural offerings, which antedate the discussions recorded in the Mishnah. But the historical provenance of these facts cannot be determined. Even in their case, therefore, it is impossible to speak with confidence about

an ancient oral tradition, let alone about one going back to Sinai. Moreover, the way in which the rabbis took over such facts, incorporating them within their own systematic legal and theological discussions, means that the meaning and significance they might have had within a prior context cannot be recovered. In the division of Agriculture, like the rest of the Mishnah, accordingly, rabbinic authorities preserved little of any inherited corpus of laws and interpretations. The content and character of rabbinic law, rather, is worked out fully within the Mishnah itself, by the authorities cited there.

C. Past Perspectives on the Oral Tradition

The evidence of the Mishnah and other rabbinic literature does not disprove the existence within early Judaism of an oral tradition extending back into history. This evidence only shows that even if the rabbis knew such a tradition, they did not embody it within their own legal dicta and scriptural interpretations. As a result, what rabbinic Judaism calls Oral Torah in fact is the creation of the sages who flourished in the 1st through 6th centuries C.E.

An earlier generation of scholars of Judaism, however, failed to make this important distinction between the system of law and exegesis that the rabbis created and transmitted under the heading Oral Torah, on the one hand, and ancient traditions of practice and interpretation that theoretically existed, but for which we have no extant literary evidence, on the other. Instead these scholars largely accepted the rabbinic version of matters. They attempted, therefore, to conceive of how an oral tradition, beginning at or close to the time of Sinai, could have existed and developed so as ultimately to be codified and preserved in the rabbinic texts.

In light of this perspective, scholars argued that the very nature of the Written Torah necessitates the existence of an oral tradition. This view is described in detail by M. D. Herr (*EncJud* 12: cols. 1439–40):

> [I]t is clear that there can be no real existence for the Written Law without the Oral. The need for the positing of the existence of the Oral Law is inherent in the very character and nature of the Torah. The statutes of the Written Law could not have been fulfilled literally even in the generation in which they were given, since "that which is plain in the Torah is obscure, all the more that which is obscure" (Judah Halevi, *Kuzari*, 3, 35) …
>
> If, therefore, the statutes of the Torah could not be properly understood in the generation in which it was given, how much less could it be understood by later generations? In addition to this consideration, it was a fundamental doctrine of the rabbis that the Torah was given by God for all time, that it would never be exchanged for another Torah and certainly never rescinded, and that it provided for all possible circumstances which might arise at any time in the future … It can thus be regarded as a historical fact that the Oral Law existed not merely from the moment the Written Law was given (and in this sense it is correct to say that the Written and Oral Laws were given together to Moses at Sinai), but it may even be maintained that the Oral Law anticipated the Written Law, as the Written Law not only assumed the observance of the Oral Law in the future, but is in effect based on its previous existence. Since the written law relies—by allusion or by its silence—on statues, customs, and basic laws not explicitly mentioned in it (marriage, divorce, business …), these statutes are ipso facto converted into part of the Oral Law.

Herr continues by describing the continuous existence and development of the Oral Law throughout Jewish history, tracing it in the books of the Bible, the Jewish literature of the Second Temple period, the early Targums, and the rabbinic literature.

This approach, much like that of the rabbis themselves, sees the transmission of law and theology within Judaism as the result of a unitary and linear process, beginning with Scripture and continuing through all later developments within (Orthodox) Judaism. While Herr stops short of making claims concerning the divine origin of the oral tradition, his view still makes an important theological point. It argues that the corpus of law and interpretation embodied within rabbinic Judaism is authentic, having existed at least from the moment (if not before) the Written Law was given and having been accurately preserved and transmitted through the generations.

The problem, as we have seen, is not with the claim for the existence, throughout Jewish history, of traditions external to the Written Law. Certainly, in each period within Jewish history, cultural, legal, and

ritual practice was determined not only by scriptural statements but, additionally, by interpretations of the meaning and import of those statements. The problem, rather, is how to conceive of and describe these traditions. Until recently, scholars understood them to comprise a monolithic corpus, rightly designated "the" oral tradition and correctly understood as being embodied in the rabbinic writings. This perspective failed to recognize the difference between any traditions that did in fact exist, on the one hand, and the intellectual and literary processes that gave way to the documents of rabbinic Judaism, on the other. As recent study of those documents has made clear, they are the products of the authorities cited in them and are not the end product of a long history of transmission of originally oral laws and interpretations.

In the minds of the rabbis, the oral tradition of Sinai took shape in the Mishnah and in the successive documents of rabbinic Judaism (Neusner 1986: viii). But this rabbinic notion of Oral Torah cannot be equated in any concrete sense with a corpus of laws and interpretations that actually existed throughout Israelite history. Clearly, Jews in different historical periods and places observed Scripture's dicta according to interpretations of the biblical text, some of which may have been transmitted from generation to generation. But there is no evidence that such traditions ever comprised a unitary tradition stretching back to Sinai. Even if such an oral tradition existed, the clear evidence of the rabbinic writings indicates that these texts do not embody it. They are, rather, the products of their authors, who pursued their own independent program in order to create a system of practice and belief that would take Judaism from their day to our own.

ORATORY. See RHETORIC AND RHETORICAL CRITICISM.

ORDAIN, ORDINATION. Appointment to formal functions in a religious community. Greeks and Romans knew a variety of modes of selection and installation to public office, and some of these influenced the later developments in the Church. Greek society commonly filled magistracies and priesthoods by election, by taking lots, or by a combination of the two methods. *Cheirotonia* was voting by a show of hands. Entrance into office involved the candidate undergoing a formal scrutiny of his qualifications, taking an oath, and bringing entrance sacrifices.

The Roman Republic chose magistrates by an election by the voting units of the assembly. Existing magistrates had great influence in determining the outcome and had the right to designate lesser magistrates. Colleges of Roman priests filled vacancies by co-optation. Offices were formally assumed by taking the auspices to determine divine favor and formally beginning to exercise the functions. The oath held a prominent place. Under the empire the imperial designation eclipsed other methods of selection.

The divine choice was determinative for positions of leadership in Israel. This may be seen in the hereditary principle governing the levitical priesthood (Numbers 3) and God's choice of kings, made known through prophets (1 Sam 9:16; 16:1; 1 Kgs 11:30–38). Out of the elaborate ceremony of consecration to the priesthood (Exodus 19; Leviticus 8), the anointing with olive oil was understood as the crucial element. The oil was sprinkled on all the priests, but it was poured on the head of the high priest (Lev 21:10), so that the term "anointed priest" referred to the high priest. Anointing with oil was likewise crucial in the appointment of kings (1 Sam 10:1; 16:13–14; 1 Kgs 19:16). Exodus 29 and Leviticus 8 use words from the root *mlʾ* ("to fill") in reference to the installation of a priest. The full expression seems to have been "to fill the hand" (Judg 17:5, 12), but with what is not clear—portions of the sacrificial animal (Lev 8:27) or divining stones (Lev 8:8) are the most likely interpretations. In most OT passages the sense is "appoint" without reference to the original denotation. The OT accounts of consecration of priests did not influence early Christian practice of ordination.

Accounts of two special appointments became important in the later Jewish and Christian practices. In the account of the consecration of the Levites in Num 8:5–13 the people of Israel were instructed to "lay

their hands upon the Levites" (v 10). This action perhaps expressed the idea that the Levites were a sacrificial offering or, more precisely, a substitute for the firstborn of the nation (vv 17–18). When Moses appointed Joshua to succeed to the leadership of Israel in Num 27:15–23, he laid his hands on him, so investing him with authority, and commissioned him. Although Num 27:18 says Joshua was chosen because the spirit was in him, Deut 34:9 seems to say that Joshua was full of the spirit of wisdom because "Moses had laid his hands on him." On the other hand, the text may be understood as saying that Moses' laying on of hands was evidence for and not the cause of the spirit of wisdom in Joshua.

By Herodian times, if not earlier, investiture with the garments of the high priesthood and not chrismation was constitutive in the making of the high priest (Josephus *Ant.*20.6–14; *m. Hor.*3:4; *b. Yoma* 12a–b).

Admission to the Sanhedrin was obtained by a formal seating in the chair of teaching and judging (*Assum. Mos.* 12.2; *Sipre* Num 27:18, 20). The Mishnah, therefore, may reflect pre-70 conditions in its description:

> The Sanhedrin was arranged like the half of a round threshing-floor so that they all might see one another. Before them stood the two scribes of the judges …
>
> Before them sat three rows of disciples of the Sages, and each knew his proper place. If they needed to appoint another as judge, they appointed him from the first row, and one from the second row came into the first row, and one from the third row came into the second; and they chose yet another from the congregation and set him in the third row. He did not sit in the place of the former, but he sat in the place that was proper for him …

(*m. Sanh.* 4:3)

The same procedure apparently was employed for the lesser Sanhedrins of 23 in places away from Jerusalem (*b. Sanh.*17b). A similar concern with being seated in one's proper place may be observed in the Qumran community (1QS etc. 5.23–24; 6.8–13).

Ordination of individual rabbis is first attested for Johanan b. Zakkai after 70:

> Originally, every one [i.e. every teacher] ordained his own pupils, thus R. Johanan b. Zakkai ordained R. Eliezer and R. Joshua; R. Joshua ordained R. Akiba; R. Akiba ordained R. Meir and R. Simeon. They were anxious to honor this house [the house of the Nasi] and declared that if the Beth Din ordained without the approval of the Nasi the ordination was not valid, but if a Nasi ordained without the knowledge of the Beth Din the Semikah was valid; then again they made a regulation that ordination should be performed with the mutual approval of the Beth Din and the Nasi.

(*j. Sanh.*1, 19a, 43)

Private ordination of a student by his rabbi belongs to the troubled period between 70 and 135. The limitation to the Nasi presumably occurred after 135, and the requirement of mutual consent in the 3d century. Rabbinic ordination employed the imposition of hands, but not prayer, and developed its technical terminology from the Hebrew word *sāmak* ("to lean upon"). It granted an equal status and had a legal significance in that it conferred juridical functions.

Christian ordination did not derive directly from rabbinic ordination; rather, both practices were independent developments from the Jewish heritage.

The Qumran community was hierarchically organized with a priestly dominance. Nonetheless, the voice of the "many" was heard in the selection of leaders. The whole congregation appears to have made the choice of the ten judges (CD 10.4–6), and the phrase *yṣʾ hgwrl* ("the lot shall go out") was used figuratively for all decisions in which the whole assembly had a part, including the selection of leaders by the members (1QSa etc. 1.13–17).

The divine initiative in the selection of leaders is manifested in Jesus' selection of the Twelve and in Paul's words about spirit-inspired ministers given to the Church. A selection of an inner circle of twelve disciples by Jesus is firmly embedded in the synoptic tradition (Matt 10:1–4; Mark 3:13–19; Luke 6:12–16). No special act accompanied their choice, although a later apocryphal tradition supplies an imposition of hands (*Acts Pet.*10).

Paul often mentions gifts and functions bestowed on the Church by God (Rom 12:6–8; 1 Cor 12:28–30; cf. Eph 4:11); but these cannot be identified with offices in the Church, nor does Paul give any indication how these inspired functionaries might be recognized or set apart: presumably their charisma was self-evident and its own authorization. Paul does refer to churches' choosing messengers to carry their contribution to the Judean Christians (2 Cor 8:19), using the word *cheirotonein.* During Hellenistic times this word had come to mean "elect," in whatever way, or even "select" or "appoint." Philo and Josephus attest a religious usage of *cheirotonein* in Hellenistic Judaism in reference to the appointments of God, including his selection of leaders for his people (Philo *Quod Det* 39; Josephus *Ant.* 4 §34, 54, 66).

Acts and the Pastoral Epistles give evidence of more developed practices which later provided the precedents for the ceremony of Christian ordination.

The selection of Matthias to replace Judas (Acts 1:23–26, according to the best supported text) employed a procedure without parallel in the early history of the Church—the taking of lots, which preserved the idea of the Lord himself choosing his apostles. The prayer, particularly the designation of God as the "knower of hearts," found echoes in later ordination liturgies.

Acts 6:1–6, the most complete account of the selection and setting apart of Church functionaries in the NT, was one of the most influential texts. There are numerous verbal parallels with the Greek version of Num 27:15–23, as well as a common sequence: a command to select someone meeting definite qualifications to be appointed for a responsibility, who is then publicly presented to receive the laying on of hands. The roles, however, are in a measure reversed: the disciples take the place of God and Moses in making the selection (cf. Acts 15:22 for the whole Church choosing representatives), and the apostles take the place of Israel as witnesses before whom the appointees are formally presented to receive a public commissioning. Luke's linking of the first step in developing an organization for the Church with the first transmission of authority in Israel (an event which also served as the pattern for rabbinic ordination) was a bold claim that Christians were the true heirs of the biblical traditions.

Acts 13:1–3 refers to a choice by the Holy Spirit speaking through prophets, and based on this choice a human commissioning by fasting, prayer, and laying on of hands. The account has allusions to Numbers 8. The laying on of hands did not impart the Holy Spirit to Paul and Barnabas, but, as in Numbers 8, ratified the divine choice and set apart representatives who were offered to the Lord for his service. The significance of the event is made clear by Acts 14:26.

The linking of the laying on of hands with prayer points to the practice of bestowing a blessing in this manner (Gen 48:14, *šit*) as the primary origin of Christian usage. Jesus used this gesture in blessing (Mark 10:13–16); the varying usages of the act in early Christianity (healing, bestowing the Holy Spirit, reconciling penitents, exorcism) had in common the bestowal of a blessing; and the Church Fathers interpreted the act in terms of a benediction (Jerome *In Isa.* 16. 58; John Chrysostom *hom. 14 in Ac.; Vita Polycarpi* 11).

The centrality of prayer emerges in the more summary account in Acts 14:23 of the appointment of elders in the churches. The chief problem of this text is the meaning of *cheirotonein.* Does it keep the Hellenistic meaning of "elect" or "select," so that Paul and Barnabas made the choice (cf. the meaning in *Did.* 15 and Ign., *Philad.* 10; *Smyrn.* 11; *Polyc.* 7 for congregational election)? Or is the word used in the sense of "appoint" or "install," and so looks in the direction of the later ecclesiastical meaning of "ordination" (for an appointment with the idea of commission, see Justin, *Dial.* 108)?

A set of passages which belong together—1 Tim 1:18; 4:14; and 2 Tim 1:6—provides a parallel to Acts 13:1–3. Prophecies pointed out Timothy, according to 1 Tim 1:18; in view of this verse, *dia prophēteias* in 4:14 should be taken as accusative and translated "on account of prophecies" (if "prophecy" is genitive, then the reference may be to prayer as the means of imparting the gift). Similarly, Acts 20:28 speaks of bishops made by the Holy Spirit, i.e. designated by spirit-inspired prophecies. The college of presbyters laid hands on Timothy (this was not laying on of hands to make him one of the presbyters, who are throughout distinct from Timothy). If the prepositions may be pressed, Timothy received the charisma "through" *(dia)* the laying on of Paul's hands (2 Tim 1:6) but "with" (*meta* as an accompanying circumstance) the laying on of the hands of the elders (1 Tim 4:14).

The *Apostolic Tradition* of Hippolytus from the beginning of the 3d century provides the first complete description of an ordination ceremony. Some of its features reflect widely representative practices: the congregation chose or approved the bishop; *cheirotonia* meant "ordination" (if the restoration of the text is correct); the right to confer ordination was limited to a bishop, although presbyters shared in the ceremony; the ordination was by the laying on of hands and a prayer for the bestowal of the Holy Spirit; the newly ordained bishop proceeded immediately to the celebration of the eucharist; and lesser clergy (appointed by the bishop) were named or received the symbol of their office.

Christian ordination put its emphasis on the divine choice of ministers for the Church, a choice mediated by prophetic utterance or by selection by the people. God bestowed with his call his blessing, mediated by prayer, which was reinforced by fasting and the laying on of hands. Although the central element of ordination was the benediction, there were the accompanying themes of commissioning or authorization and the ratification or creation of representatives for service to God.

EVERETT FERGUSON

ORDEAL. Like most of their contemporaries, the ancient Israelites were familiar with ordeal procedures. The conceptual basis for this judicial practice was the belief that God possessed a knowledge surpassing that of humans. A crime might have been committed without a soul in sight, but the Lord had been a witness. "The eyes of the Lord are in every place, keeping watch on the evil and the good," says Prov 15:3 (cf. Zech 4:10; 2 Chr 16:9). The Lord "tries the kidneys and the heart" of men (Jer 11:20; 17:10; 20:12; Ps 7:10—Eng v 9; 26:2, and from his investigation there is no escaping (Ps 139:1–12). In this respect, the Lord had assumed functions attributed elsewhere in the ANE to solar deities, like the Mesopotamian Shamash. Just as nothing remains hidden before the penetrating sunlight (Ps 19:7—Eng v 6, no sin remains hidden before the scrutinizing face of the Lord (Ps 19:13—Eng v 12). Should a judicial inquest prove inconclusive, an appeal to God for a verdict from on high was bound to clear things up.

The ordeal is not the only means by which humans could involve the supernatural in a legal case. It has close affinities with divination and oath, both of which could also be resorted to in cases where the court was unable to reach a verdict. In order to avoid confusion, one must try to distinguish between the three procedures. Generally speaking, divination is primarily used in the early stages of the legal process, as a preliminary procedure. It can be resorted to as a means of justifying bringing a charge against an individual. Ordeals, on the other hand, may be invoked to determine whether the accused is in fact guilty or not. Also, the ordeal involves the suspect in a far more direct manner than divination. In the ordeal, the accused is subjected to a physical test, the outcome of which decides his guilt or innocence. Such a test is also one of the elements in which the ordeal differs from the oath. In its simplest form, the oath consists of a solemn statement by which the juror refers his case to the heavenly court. It is fundamentally a transfer of jurisdiction. The divine agent invoked is expected to render a verdict by implementing the

appropriate sanction. In the ordeal, verdict and punishment usually make up two separate phases. Once the deity has manifested his verdict in the ordeal, the human judges decide the measures to be taken in consequence.

In practice, however, these distinctions are often blurred, making it sometimes difficult to decide whether a given procedure is actually an oath, an ordeal, or a species of divination. A case in point is the treatment of the wife whom her husband suspects of adultery, dealt with in Num 5:1–31. Although the relevant passage probably belongs to the postexilic strata of the Pentateuch, it incorporates material that savors of great antiquity. In two originally separate literary strands, one and the same procedure is described. In summary, this is what the text says. Since legal proof is lacking, the suspected wife, possibly pregnant, is to be taken to the sanctuary where, among other things, her husband presents a "remembrance offering, a reminder of iniquity" (Num 5:15). The priest then sets the wife "before the LORD" and makes her take an oath. Thereupon she is given a powerful potion to drink, a mixture of "holy water" and dust from the temple floor, into which conditional curses, written in ink and erased in the liquid, have materially passed. In case of guilt, the water will turn out to be "bitter" and make the woman's body swell and her thigh fall away. Apparently, the sexual organs of the wife will be affected. If she is innocent, nothing will happen to the woman, who will then have no difficulty conceiving children.

In studies on Israelite jurisprudence, the case of the *śôṭâ,* "the errant woman" as the suspected wife is referred to in the Mishna, is often cited as a crown witness of trial by ordeal. In the strictest sense of the term, however, this can hardly be called an ordeal. Verdict and sanction coalesce, and the matter does not belong to the competence of the human judge. Perhaps we should speak here of a dramatized oath. As a rule, the oath is exacted from the accused on the assumption that God will curse the perjurer. In the case of Num 5:11–31 the penalty is specified beforehand. Through the consumption of the "bitter water that brings the curse" (Num 5:24), the sanction has been ritually anchored in the woman's body, ready to be activated when circumstances trigger it. Once the ceremony is over, the wife is left to her fate. No human jury intervenes to decide about the appropriate punitive measures. Also the delay in which the curse will go into effect is left vague; it may be a matter of hours, days, weeks, or months.

The procedure followed for the *śôṭâ* falls into the category of drinking trials. The latter have in common that the guilt of the suspect is established, and in some cases penalized, by his reaction to a special potion which he is made to drink. When one searches the OT for traces of this practice, one discovers that apart from Num 5:11–31, there are only indirect allusions. Yet these are clear enough to warrant at least a twofold distinction, based on the nature of the potion that is used. Sometimes the suspect is given water to drink; at other times it is wine. Setting aside Num 5:11–31, a drinking trial by means of water is alluded to twice. According to Exod 32:20, Moses made the Israelites drink water mixed with the powder of the ground "golden calf." Presumably, those guilty of idolatry would not prove impervious to this noxious mixture. The sober description is reminiscent of trial by ordeal and was interpreted as such in *b. ʿAbod. Zar.* 44a. Exod 15:22–26 can also be connected with the drinking trials, if the "bitter water" (Exod 15:23) of Marah was indeed used by the Lord to "try" his people.

The use of water in drinking trials was by no means restricted to the soil of Palestine. T. Frymer-Kensky (1977) found evidence for it in Susa texts, and could also point to a Hittite parallel. J. M. Sasson (1972) drew attention to a similar practice in Mari. There are also a few Neo-Assyrian texts which bear on the theme. They show that a promissory oath (as contrasted with the purgatory oath) could be accompanied by "drinking water from a *ṣarṣaru*-jar." In the same vein, the series *Šurpu* speaks of a "curse" *(māmītu)* incurred "by drinking water from a *ṣarṣaru*-jar" (III 62). Presumably, this water became harmful when the oaths were false. Thus, the taking of an oath was coupled with an act that linked it to threats of punishment in case of noncompliance. In other words, the perjurer was exposed to an imminent curse which would "enter his inwards like water," as Ps 109:18 puts it. There is no need to assume that some sort of poison was added to the water, since in the ANE the water itself was often rather unhealthy. Thus, a Babylonian extispicy text pictures the situation of an army overcome by thirst during a campaign. "They will drink bad water," goes the prediction, "and they will die." Similarly, the water around Jericho is purported to have caused death and miscarriages until the actions of Elisha made it wholesome (2 Kgs

2:19–22). Under such circumstances, water that had neither been filtered nor boiled could very well serve as a judgment drink.

Most of the OT allusions to drinking trials, however, seem to envisage the use of wine. The relevant texts are often referred to as the "cup of wrath" passages (Isa 51:17–23; Jer 25:15–29; 49:12; 51:7, 39; Ezek 23:31–34; Obadiah 16; Hab 2:15–16; Zech 12:2; Pss 60:5—Eng v 3; 75:9; Lam 4:21). They conjure up the image of an "anti-banquet" (W. McKane 1980), during which the Lord provides his guests with poisonous food and drink instead of wholesome dishes and wine that cheers the heart. A special emphasis falls on the "cup" *(kôs)* or "chalice" *(qubbaʿat)* (Mayer *TWAT* 4: 107–11). It apparently contains wine (Jer 25:15; Ps 75:9), but this is "wine of poison" (Jer 25:15), according to the primary meaning of *ḥēmâ,* "venom, poison" (cf. Ug *ḥmt* and Akk *imtu*). Hab 2:15 indicates that poison could be purposefully added to the wine, partly at least in view of heightening the narcotic qualities of the beverage. The effect of the wine was expected to be twofold: it would bring about intoxication and drunkenness, making the drinkers totter and stagger, and would eventually lead to their destruction (Jer 25:27; 51:39). The ingestion of the potion resulted in the eliciting of a verdict, a proof of guilt, and the imposition of a penalty.

Although the imagery of the "cup of wrath" passages was inspired by ordeal procedures, the biblical authors detached it from its judicial context to serve as a literary motif in descriptions of God's judgment. The connection between the cup of judgment and the ordeal is still present, however, in some of the individual laments in the Psalter. In 1928, H. Schmidt published a monograph in which he argued that various psalms were purgatory prayers, spoken by suspects in the context of sacral jurisdiction (Psalms 3; 4; 5; 7; 17; 26; 27; 31:2–9—Eng vv 1–8; 57; 139; 142; cf. Pss 11; 13; 55:2–20—Eng vv 1–19; 56; 59; 94:16–23; 109; 140; Beyerlin 1970 added Pss 23; 63). Even though Schmidt has perhaps included too many psalms in his newly defined *Gattung,* the thrust of his argument appears to be valid. Several psalms do indeed hint at a nightly ordeal, to be followed by an acquittal in the morning (Ps 17:3, 15; cf. Pss 3:6—Eng v 5; 139:18). Because these prayers have come down to us without a description of the accompanying rituals, the nature of the ordeal must be pieced together from the oblique allusions occurring in the pertinent complaints. The recurrent reference to a "cup" *(kôs)* suggests that it was a drinking trial (Pss 11:6; 16:5; 23:5; cf. 116:13). The expected effect of this cup was dual: judgment upon the wicked, salvation for the righteous. Ps 11:6 says that the wicked will have "a scorching wind" *(rûaḥ zilʿāpôt)* as "the portion of their cup" (*mĕnāt kôsām*), whereas in Ps 23:5, the cup, said to be overflowing (*rĕwayâ*; Vg. *calix meus inebrians*), is drunk in a festive mood. Guilt or innocence determined one's attitude toward this cup: either fearful apprehension or joyful anticipation. Also the description of God's judgment in Ps 17:14 suggests that it materialized in the effects of a drinking trial.

The hypothesis of a drinking trial as the institutional background of the "Psalms of the Accused" makes sense when it is set in the broader context of the sacral repast. In the ANE, oath ceremonies were frequently connected with the celebration of a sacrificial meal. Pacts were concluded over a solemn banquet (Gen 31:53–54; Exod 24:11); according to a letter from the Mari archives, the partners "ate from the same platter, drank from the same goblet, and anointed themselves (or each other) with oil" (ARM VIII 13 rev. 11´–14´). The effect of the various actions—eating, drinking, being anointed—was twofold: it signified the mutual bond as well as the danger of disloyalty. In case the oath was taken in a callous way, the food would turn into a source of illness, and the water and the oil which had penetrated the body would prove to be the bearers of a curse (Ps 109:18). Traces of the belief that under certain conditions, normally harmless food could have detrimental effects are also contained in the Talmud. Significantly, the second cup drunk during a meal is called the "cup of retribution" (*kôs šel pûrʿānût,* b. Ber. 51b), a designation used by the *Tg. Jon.,* Ezek 23:32 for the "cup of wrath." Paul's interpretation of the Lord's Supper seems to be indebted to similar conceptions. He says that "anyone who eats and drinks in an unworthy manner eats and drinks judgment upon himself," a judgment consisting of weakness, illness, and possibly death (1 Cor 11:27–30). The drinking trials alluded to in the Psalms and the various "cup of wrath" passages pertain to the same conceptual sphere. Through the consumption of a consecrated substance the faith of the juror was put to the test.

The instances of ordeal considered until now were all closely connected with the oath. A similar connection gleams through in Exod 22:7–10—Eng vv 8–11. When one Israelite has a grudge against another, suspecting him of the embezzlement of his property, "the case of those two shall come to the gods *(ʿad-hāʾelōhîm);* the one whom the gods declare guilty shall restitute in double to his neighbor" (Exod 22:8—Eng v 9). Once the litigants had committed themselves by oath (Exod 22:10—Eng v 11), the deities—the term was later interpreted as "judges"—were to manifest their verdict. This is probably the clearest instance of an ordeal to be found in the OT, even though the actual procedure remains in the dark. The drinking trials discussed above implied a transfer of jurisdiction. In Exod 22:7–10, the sentence is determined by the human agents. The gods are asked to indicate the verdict, but the appropriate sanction is for the court to take.

A most unusual type of ordeal, bordering on divination, is to be found in Num 17:16–26—Eng vv 1–11. It is the story of Aaron's rod, miraculously transformed overnight. In its present form the passage looks like a piece of propaganda for the Levites. The episode relates how a dispute over sacrificial rights was settled by means of an ordeal. Twelve rods, each inscribed with the name of one of Israel's clans, were deposited in the "tent of meeting." On inspection the following morning only the rod of Aaron had sprouted, the sign agreed upon beforehand as indicating God's election. As far as we can see, this way of eliciting a divine verdict is unique and it hardly reflects actual custom. The etiological nature of the story is evident: the author may well have based his account on the presence in the sanctuary of a staff, a relic purportedly harking back to the time of Aaron (cf., perhaps, Jer 1:11). The described procedure, probably fictitious, stands between ordeal and divination.

Finally, the OT contains a literary reflection of ordeal by fire. The story of Daniel and his comrades in the fiery furnace (Daniel 3), legendary in nature, shows familiarity with the Persian trial by fire. The latter consisted of a passage through flames; it was introduced in Babylonia under the reign of the Achaemenids. Since the experiences of Daniel are set in a Babylonian milieu, the author probably used the Persian fire ordeal as a model. Rabbinical sources contain a similar account, also set in Babylonia, in which Abraham figures. This story of "Abraham in the Fiery Furnace," of which Pseudo-Philo offers an extended version (*L.A.B.* 6.15–18), is found in *Gen. Rab.* 38:13. In Israel itself, though, ordeal by fire was never practiced.

Judging by the biblical sources, the only type of ordeal to enjoy some popularity was the drinking trial. It should be kept in mind, however, that the latter was always preceded by an oath. The ordeal, taken in the broad sense of the term, served as an immediate test to verify the reliability of the oath-taker's witness. In many cases, the ordeal may not even have been necessary. Fear of God's curse was such that the prospect of the ordeal may have sufficed to scare feigned innocents into confessing.

KAREL VAN DER TOORN

OREB AND ZEEB (PERSONS) [Heb *ʿōrēb ûzĕʾēb* (עֹרֵב וְזְאֵב)]. The two "princes of Midian" who were captured and slain by the men of Ephraim when Gideon defeated the Midianites (Judg 7:25; 8:3; Ps 83:12—Eng 83:11). They were killed, respectively, at "the rock of Oreb" and "the winepress of Zeeb." The former location, at least, became legendary in later tradition (Isa 10:26), and it is uncertain

whether these place names gave rise to etiological legends about "Midianite princes," or vice versa. Both names are authentic pre-Islamic Arabic personal names, common to the onomastics of the Arabian desert fringe area (but not Amorite, Ugaritic, or biblical Hebrew). The name Oreb can be compared with Safaitic and Old S Arabic *ġrb, ġurāb* ("raven"), *ġārib.* "Zeeb" can be compared with *ḏ›b,* "wolf," found in Old S Arabic dialects, Thamudic, and very often in Safaitic and Nabatean (*d›bw* and the diminuitive *d›ybw, ḏu›aib*); in Classical Arabic until recent times it was used as a personal and tribal name. Regardless of how the names got into the biblical tradition and Israelite toponymy, they must be associated with the pre-Islamic Arabic cultural and linguistic complex (Knauf 1988: 90).

GEORGE E. MENDENHALL

OREN (PERSON) [Heb *›ōren* (אֹרֶן)]. Individual of the tribe of Judah, the third son of Jerahmeel who was firstborn of Hezron (1 Chr 2:25). His name is spelled the same as the mountain ash found in Isa 44:14.

DAVID CHANNING SMITH

ORIENTATION. See DIRECTION AND ORIENTATION.

ORIGEN (PERSON). An Alexandrian-born early Church Father (ca. 185–253); most of what we know about him comes from Eusebius' *Ecclesiastical History* (ca. 340).

I. Origen's Legacy

———

A. Life

Not a biographer in the modern sense, Eusebius presents Origen as a model scholar and saint, combining in his person ideals admired by pagans and Christians alike (Cox 1983). We can also glean information from such sources as the *Panegyric* by a student of Origen traditionally identified as Gregory Thaumaturgus (ca. 213–ca. 270), occasional personal references in Origen's surviving works, and some of Jerome's (ca. 342–420) letters. Pierre Nautin (1977) provides the most persuasive account of Origen's life, based on a critical analysis of all sources, but has been challenged on many points (Barnes 1981: 81–93; Crouzel 1984).

Notwithstanding the difficulties involved in reconstructing the details of Origen's life and work, the following outline is reasonably certain. Origen was born, ca. 185, in Alexandria, where he was reared in a Christian family of some means. He received an education in Greek literature and the Christian Bible. During the reign of Septimius Severus (193–211), when Origen was in his teens, his father was martyred and his estate confiscated, leaving his family destitute. A wealthy Christian woman enabled Origen to complete his studies so as to become a teacher of Greek literature. During his youth Origen also became familiar with other intellectual traditions. His patron also supported a gnostic whose teaching Origen

attended; he studied philosophy under the Platonist Ammonius Saccas (early 3d century), who later taught Plotinus (205–ca. 269); and he became familiar with Jewish exegetical traditions. He probably studied also with Clement of Alexandria (ca. 150–ca. 215), who dealt with many issues Origen was to develop more fully. During a second period of persecution under Severus, when Bishop Demetrius of Alexandria (d. ca. 231) and most of the Church's teachers hid or fled, Origen courageously provided Christian instruction. Shortly thereafter he underwent a conversion that led him to abandon pagan literature, to adopt a life of rigorous self-mortification (almost certainly including voluntary castration), and to restrict himself to Christian teaching.

Origen's learning commanded the respect of pagans and Christians alike. When he converted Ambrosius, a wealthy Alexandrian, from Gnosticism, he gained a lifelong friend and patron. Ambrosius encouraged Origen to write and provided Origen with stenographers and copyists so that he could compose treatises *ex tempore,* becoming one of the most prolific authors of antiquity. His fame soon spread far beyond Alexandria, reaching the highest circles of the empire. In 231 the dowager empress Julia Mammaea called him to audience at Antioch.

Although Bishop Demetrius gave after-the-fact approval to Origen's teaching, his efforts at establishing episcopal hegemony over the Church in Egypt provided little scope for a brilliant lay teacher. Journeys to Rome and to Greece, undertaken at various times, were probably attempts to find an intellectual center where the Church would be more congenial. After 233 Origen settled at Caesarea in Palestine, whose bishop, Theoctistus, had ordained him to the presbyterate during an earlier sojourn. This ordination infuriated Demetrius, who had come to view Origen as a heretic.

Most of Origen's surviving works were written at Caesarea, where he preached extensively. Although Heraclas (d. 247), Demetrius' successor as bishop of Alexandria, also considered Origen unorthodox, the bishops of Palestine and the nearby province of Arabia (modern Jordan) made use of his expertise at least twice in synods concerned with christological doctrine. After being imprisoned and tortured during the Decian persecution of 251, Origen died at Tyre, his health broken by his sufferings (ca. 253).

B. Works

The emperor Justinian (483–565) procured Origen's condemnation as a heretic in 553 and saw to the destruction of most his works. Even so, extensive writings have survived, some, including his treatise *On First Principles,* in Latin translations of regrettably questionable accuracy. Nautin (1977: 241–60) provides a comprehensive list of Origen's works and their editions. Origen wrote in four established genres: (1) learned treatises, (2) homilies, (3) letters, and (4) dialogues. Outside such classification is his massive *Hexapla,* an edition of the OT in which, most likely, six parallel columns enabled the reader to see the Hebrew text, its Greek transcription; and four translations into Greek, those of Aquila and Symmachus, the LXX, and that of Theodotion. To these Origen added two Greek translations of the Psalms that he had personally discovered.

1. Treatises. Most of Origen's treatises, including his earliest work, *On Psalms 1–25,* were biblical commentaries. He also wrote a commentary on Lamentations and began massive commentaries on Genesis and on John while still at Alexandria. Of these only the first two books of the *Commentary on John* (CJ), vital for understanding Origen's christology, survive in more than fragments. While there he also wrote treatises, now lost, *On the Resurrection,* against what he considered the crudely materialist views of simple Christians; *On Natures,* against Valentinian anthropology; and a work called *Stromata* (his use of this unusual title, evoking a variegated oriental carpet, is our best indication that he was familiar with Clement of Alexandria).

Origen's great treatise at Alexandria, *On First Principles* (OFP), often known by its Greek title, *Peri Archon,* was the first Christian attempt to provide a systematic and philosophically informed account of the principal doctrine of the faith. Recent scholarship has shown that the *Peri Archon* belongs to the genre of philosophical treatises on "physics" (the doctrine of God and God's relationship to the world). Such treatises are characterized by a two-part structure in which a general conspectus is followed by a treatment in more detail, but in the same order, of particular issues (Harl 1975; Dorival 1975). Origen's treatise actually has a fourfold structure. A preface briefly enumerates the "*archai,*" first principles in the

philosophical sense employed by the pre-Socratics, but also, for him, elementary principles of the Christian faith as transmitted by the Church's tradition. The first major section of the work deals with God; rational creatures and their fall from God into various kinds of embodiment; and the world and its place in the process whereby God is bringing about the return of rational creatures to their original state. The second deals with particular issues such as the manner of the incarnation, the free will of rational creatures, and biblical interpretation. A short recapitulation sums up these doctrines and ties up loose ends.

Origen continued his never-completed commentaries on Genesis and John after removing to Caesarea. He also wrote commentaries on Proverbs, the Song of Songs, Isaiah, Ezekiel, the Minor Prophets, Luke, Matthew, and most of the Pauline Epistles, as well as a fuller commentary on the Psalms. Some books of the commentaries on John and Matthew survive in Greek, and more or less faithful translations of the commentaries on Romans, the Song of Songs, and much of the rest of the commentary on Matthew survive in Latin. The others survive, at best, only in fragments. In addition, Origen wrote *scholiae,* which appear to have been commentaries on selected passages of works or parts of works not covered by continuous commentaries (Nautin 1977: 372–75). We know of scholiae on the Pentateuch, the Psalms, Ecclesiastes, Isaiah, and John.

Three nonexegetical treatises written at Caesarea, his *Exhortation to Martyrdom, On Prayer,* and *Contra Celsum,* survive in Greek. A further work, a treatise (or homily) *On the Passover,* a spiritual interpretation of Exodus 12, has recently been discovered and edited (Nautin and Guéraud 1979). The *Exhortation to Martyrdom* exhibits the Maccabean veneration of martyrdom that suffused the Church of Origen's time. For him this signified a preference for intellectual over corporeal existence. *On Prayer* provides a concise introduction to Origen's piety; its justification of prayer for its own sake, as opposed to having petitions granted, places it at the head of a long succession of Christian mystical literature. The *Contra Celsum* (CC), in eight books, refutes Celsus' *True Logos.* Celsus, a 2d-century Platonist, attacked Christianity on philosophical grounds and provided a rationale for persecution by accusing Christians of disloyalty to the empire. Origen's reply is the most cogent apology for Christianity written in Greek.

2. Homilies. While in Palestine Origen preached homilies, recorded by stenographers, on Genesis, Exodus, Leviticus, Numbers, Deuteronomy, Joshua, Judges, 1 Samuel, Job, the Psalms, Proverbs, Ecclesiastes, the Song of Songs, Isaiah, Jeremiah, Ezekiel, Matthew, Luke, Acts, 1 Corinthians, 2 Corinthians, Galatians, 1 and 2 Thessalonians, Titus, and Hebrews. One hundred and fifty-six OT homilies, along with thirty-nine on Luke, survive in Latin translations by Jerome and Rufinus. Vittorio Peri (1980) has recently demonstrated that an additional seventy-five homilies in the Latin *Treatise or Homilies on the Psalms,* ascribed to Jerome, are in fact adaptations of homilies by Origen. Twenty homilies on Jeremiah (HJ) and one on 1 Samuel survive in Greek. These works do not display the oratory of the great 4th-century preachers, but employ the subtle diatribe style of philosophical teachers like Epictetus (ca. 55–ca. 135). Like the commentaries, they interpret the biblical text verse by verse, but they treat it in less detail and concentrate on moral exhortation.

3. Letters. Little is left of Origen's extensive correspondence, but those fragments that survive provide valuable insights into the man and his thought. We have one letter written to him along with his reply, his correspondence with Julius Africanus concerning the authenticity of the story of Susanna in the LXX version of Daniel.

4. Dialogues. Ancient sources mention among Origen's works a *Dialogue with Candidus* from his Alexandrian period; and part of his *Dialogues with Heracleides,* which almost certainly dates from his Caesarean period, has recently been discovered. Neither of these works were literary dialogues in the tradition of Plato, but were transcripts of debates in which Origen had engaged.

C. Difficulties in Interpretation

The loss of so many works makes interpreting Origen difficult. A comparison of Latin translations with Greek texts reveals, at the very least, a loss in nuance and subtlety. It is particularly regrettable that we lack the full Greek text of *On First Principles,* crucial for interpreting Origen's thought. That work was controversial in its own time. It became even more so as Christian doctrine became more fixed in the

century and a half that elapsed between its composition and its translation. In his translator's preface Rufinus (ca. 345–410) justified correcting theological errors in the Greek text on the pretext that there had been heretical interpolations. However, if Rufinus understated putatively heterodox elements in Origen's works, others have overstated them. Antoine Guillaumont (1962) has shown that the views of Evagrius Ponticus, a 4th-century Origenist, have become confused with Origen's own, so that we cannot assume that Origen taught all the doctrines for which he was condemned in 553.

Origen's theological method also poses difficulties of interpretation. He presupposes a division between the vast majority of simple Christians, who accept the Church's teaching on faith and are motivated by fear, and a small minority of spiritual Christians, who rationally understand their faith and are motivated by love (Rius-Camps 1970; Hällström 1984). Valentinian gnostics made a distinction between psychics and pneumatics, but Origen differentiated his position from theirs by insisting that spiritual Christians differ from their simpler fellow believers not by nature, but because they have progressed further toward likeness to God. Origen taught that the Christian theologian should exercise a prudent reserve, extending even to deliberate deception (as, in his opinion, the biblical authors themselves did) in presenting profound doctrines that might shock or demoralize simple believers (CC 4.19 and HJ 20.3–7). We must, therefore, be attentive in studying Origen to determine to what extent doctrines simply hinted at or presented as mere speculations are in fact serious expressions of his thought. This difficulty has led to widely divergent estimates of Origen's thought.

D. Sources

Origen seldom cites authors outside the Bible, and those works that he did use he thoroughly transformed. When we speak of sources, therefore, we are not ordinarily speaking of borrowings but of constituent elements of a remarkably original intellectual synthesis. This is true of the Bible itself. Given Origen's intimate knowledge of and ardent devotion to the biblical text, it may seem paradoxical that the extent of this influence is a matter of controversy. Thus, for example, Eugène de Faye, author of a pioneering study of Origen, argued that the Bible was, in effect, an empty shell into which Origen poured his own thought (1923: 72–95). Henri de Lubac (1950), by contrast, presented Origen as a genuinely biblical thinker. Such widely divergent views are possible because Origen understood the Bible in terms of intellectual traditions of his time.

Origen received the Bible through the mediation of early Christianity. His statement of the fundamental principles of the faith conforms to earlier summaries by such authors as Irenaeus and Hippolytus and his ethical teaching reflects the asceticism and veneration of martyrdom which were current in the Church of his time. His christology depends on the Logos speculation which writers such as Justin Martyr (ca. 100–ca. 165) brought into the Christian tradition from Philo (ca. 29 B.C.–ca. A.D. 50). Although he mentions Ignatius of Antioch (ca. 35–ca. 107) and is said to have met Hippolytus of Rome (ca. 170–ca. 236), he does not mention either Irenaeus (ca. 130–ca. 200), whom he may have read, or, for that matter, Clement of Alexandria.

Gnosticism's influence on Origen is of a different character. Although one can speak of a limited positive influence of Gnosticism on Origen's exegesis (Daniélou 1955: 191–99), its principal influence is negative. Origen may justly be called the greatest of the anti-gnostic Fathers (le Boulluec 1985), and Hal Koch has shown that the refutation of gnostic understandings of God, the world, and the human condition is a mainspring of Origen's theology (1932). He never tired of refuting the schools of Valentinus, Basilides, and Marcion. He also denied any access to a secret, esoteric tradition such as many gnostics appealed to (Hanson 1956). Origen, by contrast with Irenaeus, sought not simply to refute the gnostics but to provide a reasoned response to the serious issues they raised. He regarded the refusal to identify the Creator and Lawgiver of the OT with the God and Father of Jesus Christ as the fundamental error of all gnostics (CC 5.4 and 5.61), and he felt obliged to demonstrate the fundamental consistency of the Christian tradition that identified them. In doing so, Origen was forced to go far beyond the Church's traditional rule of faith, which simply did not deal with such issues as why the world came into being or why some souls have a better lot than others. Ironically, this led him to develop an esoteric account of the

origin and destiny of the cosmos that, as Hans Jonas (1934) has pointed out, is structurally much like a gnostic system.

Although Origen taught that Judaism was superseded by Christianity and engaged in anti-Jewish polemic occasioned by the intense competition between Christians and Jews in Caesarea, his relationship to Judaism is much more positive (de Lange 1976: Sgherri 1982). He regarded Philo more highly than any postbiblical Christian writer and he respected the learning of the rabbinic teachers of his time. Origen recognized the importance of the Hebrew text for the understanding of Scripture and he sought out and utilized, with or without attribution, Jewish Haggadah in his exegesis.

Origen's biblical interpretation constantly testifies to his training in Hellenistic literary theory, known as grammar, which determines his method of approaching a text and, for that matter, his literary, if unadorned, style (Neuschäfer 1987). He was also trained in the scientific and mathematical disciplines that made up encyclical education and could use the astronomical discovery of the precession of the equinoxes to refute astrology.

Origen studied under Ammonius Saccas and continued throughout his life to read and teach philosophy, which he saw as an indispensable preparation for biblical interpretation. He was a sophisticated philosopher of the school we call Middle Platonism, itself an eclectic blend of Platonic metaphysics, Aristotelian logic, and elements of Stoic ethics, along with Neo-Pythagorean mystical speculation (Berchman 1984). Philosophical terms continually occur in his writings, and philosophical concepts inform his theology. Origen, like Justin Martyr before him, considered Christianity the true philosophy and parted company with pagan philosophy when the Church's teaching compelled him to do so, most notably in his doctrine of the incarnation.

E. Origen and the Church

Origen described himself as a "man of the Church," remained throughout his life in communion with the Church, and vigorously defended its teachings against heretics, Jews, and pagans. Nonetheless, the Church has had difficulty assimilating his thought and, as his tensions with the Alexandrian episcopate indicate, he was already suspected of unorthodoxy during his lifetime. Origen, for that matter, frequently and unsparingly criticized bishops.

Origen's understanding of the Church and of his role as a theologian made tensions inevitable. Essential to both is the distinction between "spiritual" and "simple" Christians. Most Christians are simple, and, although this should not be the case, so are many who hold clerical office. Unspiritual clerics, however, have no right to arrogate for themselves disciplinary authority that can only be exercised by the spiritual. Furthermore, teaching, as a mediation of the word of God, is the highest ecclesiastical function and the source of genuine authority. The administration of the sacraments is distinctly subordinate to this function (Lies 1978). While Origen professed loyalty to the Church's rule of faith, he held that as a spiritual man, it was his duty to pass beyond the acceptance of such doctrines on faith, as is appropriate for the simple, and to acquire a rational understanding of them. Such an understanding would uncover the hidden system of thought that gave the Church's teaching its coherence (Kettler 1965). Not surprisingly, bishops considered such views subversive.

F. Theology

In *On First Principles* Origen discussed the doctrines which, in his opinion, the soul most needs in its journey toward God (OFP 4.2.7). Hal Koch (1932) has shown that Origen employed the Middle Platonic philosophy to construct a system in which the driving force is God's providence, which employs the material and spiritual worlds as *paideia* (a Gk word that means both "education" and "discipline") for rational beings while respecting their freedom of choice. Origen believed that such a system underlay and made sense of the Bible. In his doctrine of God (God the Father) Origen argued for the incorporeality of God and for God's utter unity and simplicity in contrast with the multiplicity of the created world. His understanding of God's purpose enabled him to provide a rational justification, over against the gnostics, for the Church's teaching that the Creator and Lawgiver in the OT is the Father of Jesus Christ in the NT.

For Origen the Son is God's Logos ("Word" or "Reason"), and Wisdom, a second divine hypostasis, or second God, subordinate to and eternally generated by the Father. Although consistent with Middle

Platonic speculation about the divine hypostases, Origen's subordinationism was characteristic of Christian thought in his time; Arius' (ca. 250–ca. 336) retention of it comes not from Origenism, but from theological conservatism. By contrast, his concept of eternal generation was highly influential in the formation of the Christian doctrine of the trinity. The manifold aspects *(epinoiai)* of the Logos, the "express image of [God's] substance" (Heb 1:3), mediate between the absolute unity of God and the multiplicity of the Created World (Lyons 1982). Likewise, various aspects meet the needs of fallen rational spirits at every stage of their return to God (Harl 1958). The incarnation enables rational beings to know the Logos and, through the Logos, to know God. It involves the inseparable union between the Logos and a full human person. This is possible because of the Son's preincarnate union with his human soul, the one rational being who did not fall from its original adherence to God. The Holy Spirit, the third divine hypostasis, is eternally generated through the Son and shares in the Son's knowledge of and subordination to the Father. The Spirit's sphere is limited to sanctifying the saints, an activity which includes giving insight into those who wrote the Bible and to those who interpret it spiritually.

Rational beings were created in unity with God and all but the being who was united with the Logos fell from God through satiety. Some did not fall very far, and their return is relatively easy. These beings constitute the angels and the spirits that animate the heavenly bodies, whose task is to serve those below them. Other rational creatures fell more precipitously; these are called "souls" *(psychai)* because they have "cooled" *(psychesthai)* from their once ardent love of God. God created the material cosmos from nothing in order to arrest the fall of these beings and to facilitate their return. Origen thus affirmed, against the gnostics and with Plato and the Bible, the goodness of the cosmos.

Once in each world age these souls can become enfleshed in grossly material human bodies. Through God's providence, their situation in the world is a just recompense for their sin and their experience here provides a means for them to choose freely to return to God and, in so doing, to become intellectually and ethically more like God. Origen thus transforms Christian eschatology. Our experience in this life determines whether our future life will be a continual growth in the knowledge of God, including knowledge of the Bible and the created order, both of which reveal God, or will be the painful purgation symbolized by the fires of hell in which simple Christians do well to believe literally. Christian belief in the resurrection is a way of talking about the identity of the embodied person who dies in this world with the glorified person of the world to come. Similarly the advent (Parousia) of Christ that is significant for us is his advent in our souls.

Other rational beings, the adverse powers, have fallen too far for such embodiment to be useful. These beings continually attempt to frustrate the progress of human beings and, in the guise of pagan deities, to deceive them into worshipping them to the neglect of the one true God. Origen holds forth the hope that all creatures, however, shall eventually return to God. To deny even Satan, the prince of demons, the possibility of repentance would mean to deny the free choice of a rational being. To bring even the most obdurate beings to the point where their existence apart from God is unbearable, a very long cycle of world ages will be necessary.

G. Biblical Study

Origen is best known for his allegorical interpretation, but, in keeping with his training in Hellenistic literary study, he was a master of all aspects of biblical scholarship. This ranged from establishment of the text, through careful study of grammar and syntax, to the most speculative theological application. Origen's students reputedly dreamed about the Bible at night from having studied it so assiduously all day, and Origen found the erotic imagery of the Song of Songs entirely suitable to describe the soul's intercourse with the Logos in Scripture.

Origen never attained the ability to read Hebrew, even though keenly aware of its need. His *Hexapla* was an attempt to make up for this lack by enabling him to compare the Church's LXX text with all other Greek translations. Its use is apparent in his *Homilies on Jeremiah*, where he occasionally mentioned that he preferred another reading to that of the LXX. Origen used Hellenistic critical signs to mark places where the LXX evidently differed from the Hebrew. This immense work was probably never copied in its entirety and unfortunately perished with Origen's original manuscript.

Origen's works reveal him being careful of grammatical niceties and using historical or geographical information to illuminate the Bible's literal meaning, which he respected. Although he had a high doctrine of biblical inspiration and lacked a modern appreciation of history, Origen's approach to Scripture was neither naive nor insensitive. He was able, in his interpretation of Paul, for example, to grasp the overall thrust of a biblical author's argument and to recognize when that author was using categories of thought not identical to his own (Gorday 1983). He recognized serious inconsistencies in the Bible and explained them as a deliberate policy on the part of the inspired authors to hide deeper insights from the simple and to signal their presence to the more intelligent by interweaving falsehoods into the narrative. Intelligent readers of the Bible can recognize that a text is literally false when it is unworthy of God, contradicts another inspired text, or is manifestly improbable. A striking instance of interweaving is in the gospel of John, where Origen argues on the basis of inconsistencies among the gospel accounts and historical improbabilities that Jesus' entry into Jerusalem and cleansing of the temple did not literally happen at all (Grant 1961; Kettler 1973). Instead, the account symbolizes the Logos' entry into and purification of the soul (CJ 10.22–34).

Although he found historical investigation helpful in understanding the text, Origen rejected historical information as a goal of interpretation because he could see no way in which purely historical knowledge could lead the soul toward God. It is this attitude toward history that distinguishes Origen sharply from the approach exemplified by Theodore of Mopsuestia (ca. 350–428) and often referred to by the modern term "typology." While his allegory may initially strike the reader as arbitrary, it possesses remarkable internal consistency throughout his works. Origen believed in a natural symbolism, grounded in the sensible world's dependence on the intelligible world, which Charles Bigg (1913: 173) aptly referred to as a "sacramental mystery of nature."

The anti-gnostic thrust of Origen's theology, with its concern to vindicate the unity of the Creator and Lawgiver of the OT and the Father of Jesus Christ of the NT, implied exegetically the unity of the two testaments. God's command to consume the entire Passover lamb (Exod 12:10) symbolizes the need to interpret the whole Bible as a unity and is a standing rebuke to Jews and gnostics who only accept one testament (CJ 10.28.107). The Bible is treated as a consistent and harmonious whole, in which every part illuminates every other part; Origen frequently brings to bear a multitude of verses containing the same word or concept in order to elucidate a difficult passage. There is, however, a significant difference between the testaments: Christ, who is only announced in a shadowy way in the OT, is shone forth in the NT. Even so, the NT requires interpretation. An inspired interpreter must transform the sensible gospel shown forth in the NT into the eternal, or spiritual, gospel of Rev 14:6, which bears a relation to the NT similar to that which the NT bears to the OT (CJ 1.3.12–8.46).

H. Piety

Walther Völker's pioneering study (1931) demonstrated a rich affective piety in Origen and laid the groundwork for an appreciation of Origen's key role in the history of Christian spirituality. Origen depicted the Christian life as, ideally, a continual progress toward the knowledge of God, a progress by which we are transformed both ethically and intellectually so as to become more like God. Unlike the Cappadocians, whom he resembles in many ways, Origen, as Hans Urs von Balthasar noted (1936–37), locates the reason for our ignorance of God not in the absolute incomprehensibility of God, but in the silence of the Logos, who communicates to us what we need to know when we need to know it. For Origen, God, as Raoul Mortley puts it (1986: 84) "whilst incommunicable in language, is accessible to the mind and the object of knowledge."

There is no tension between Origen's piety and the intellectual rigor of his theology and exegesis (Crouzel 1961). Indeed, the latter is the highest expression of the former. It is precisely in the interpretation of Scripture, informed by the best insights of all aspects of learning, that the soul makes its progress. Spiritual interpretation was, in fact, the chief means by which the Logos conferred to souls at all levels of progress the saving knowledge of God. Origen's interpretation of Scripture is consistently oriented toward the transformation of the person who reads the Bible or hears it interpreted (Torjesen 1985). This process requires divine grace and a willingness to wait upon the Logos. Origen, in fact,

believed that the Christian soul continues to study Scripture as it progresses toward God after death (CJ 32.3; OFP 2.11.3).

I. Origen's Legacy

Manlio Simonetti (1986) has pointed out that Origen presents an elitist way of living the Christian life which could only have arisen during a time when the Christian community permitted a relatively great freedom of thought and which was doomed by that community's organizational evolution. Nevertheless, while Origenism per se rapidly became a bypath in the history of Christianity, Origen's influence was immense. This is particularly true of monastic theology, where Origen's way of life to some extent survived. Athanasius and the Cappadocian Fathers freely adapted Origen to the needs of their own time and through them and others Origen became the father of scriptural study and systematic theology in the Christian tradition.

ORIGEN'S HEXAPLA. See HEXAPLA OF ORIGEN.

ORIGIN OF THE WORLD (NHC II,*5*). See WORLD, ON THE ORIGIN OF (NHC II,*5)*.
ORNAMENTS. See DRESS AND ORNAMENTATION.

ORNAN (PERSON) [Heb *ʿornān* (אָרְנָן)]. An alternate form of ARAUNAH.

ORPAH (PERSON) [Heb *ʿorpâ* (עָרְפָּה)]. The wife of Chilion and sister-in-law of Ruth (Ruth 1:4; 4:10). See CHILION. Due to famine in Bethlehem, Elimelech and Naomi moved to Moab, where their sons, Mahlon and Chilion, married the Moabite women Ruth and Orpah (1:1–4). See RUTH, BOOK OF. With the deaths of Elimelech and his sons, Naomi and the Moabitesses were left without male progeny. Naomi decided to return to her homeland, but she urged her daughters-in-law to remain and marry Moabite husbands, where they could secure for themselves a future. Orpah elected to stay in Moab while Ruth insisted on accompanying Naomi (1:13–17).

Orpah's character in the story serves as a foil for Ruth. Since her decision to stay behind is not condemned by the story's narrator, Ruth's decision is recognized as an exceptional act of devotion to the family. By contrasting the women, the storyteller shows Ruth to be a woman of great value to Naomi and the family of Elimelech.

To highlight the difference in their characters, the story paints this word portrait of Orpah: "Orpah kissed her mother-in-law, but Ruth clung to her" (1:14). By subtle means, the story continues to compare Orpah with Ruth. Naomi says of Orpah, "See, your sister-in-law has gone back to her people and to her gods, return after your sister-in-law" (1:15). The reference to Orpah as "sister-in-law" *(yĕbimēk)* is the term occurring in Deut 25:5–10, which describes the responsibilities of the brother-in-law (or lever) to a widowed sister-in-law. See MARRIAGE (OLD TESTAMENT AND ANE); FAMILY. The irony of Naomi's statement is that it is Ruth who comes closer to playing that role than Orpah.

Also, the story contrasts Orpah with Ruth when Naomi remarks that Orpah has returned to her "people and her gods" (1:15). This is proleptic of Ruth's exclamation: "Your people shall be my people and your God my God" (1:16). The final gate scene provides another subtle comparison for the reader. A significant theme in the story is reward for faithfulness. When Boaz concludes his negotiations, he declares that he has purchased all that belonged "to Chilion and to Mahlon" (4:9). Whereas Ruth shall enjoy through Boaz both Chilion's and Mahlon's inheritance, Orpah is not present to benefit from the legacy of her deceased husband, Chilion.

The etymology of Orpah is usually related to *ʿōrep*, meaning "neck." Thus, Jewish midrash explains that Orpah turned her back on her mother-in-law. Jewish tradition also has Orpah and Ruth sisters, the daughters of the Moabite king Eglon. An alternative explanation for the name is *ʿarîp*, "cloud."

KENNETH A. MATHEWS

ORPHISM. A religious movement dating to the 6th century B.C.E. centering on the figure of Orpheus, producing a sizable literature with cosmogonic and theological themes, and inviting people to find salvation by living a particular lifestyle. Although the materials we may call "Orphic" first appear in the 6th centuries B.C.E. and much evidence comes from Neoplatonic authors living as late as the 6th century C.E., the movement was likely the strongest in the 6th and 5th century B.C.E. and lasted into the 3d century B.C.E. Three relatively discrete types of materials comprise Orphism: legends about Orpheus, an Orphic literature, and ritual practices and regulations for an Orphic way of life.

Orpheus was first and foremost a musician with shamanic powers. His voice and his lyre had the magical ability to charm animals and to change the course of rivers. He joined the expedition of the Argonauts, as Apollonios of Rhodes writes in the mid-3d century B.C.E., a somewhat effeminate man whose entertaining music prevented the sailors from quarreling and whose sacrifices won the blessing and aid of the gods. His journey to Hades to reclaim Eurydice remains ambiguous; Euripides (*Alc.* 357–59) indicates that Orpheus successfully retrieved his wife, but Plato (*Symp.* 179D) suggests that he left Hades

without her because he lacked the courage to join her in death. Orpheus himself is portrayed on numerous vase paintings of the 5th century B.C.E. as dying at the hands of Thracian women and their spears, clubs, and stones, perhaps because he refused to initiate them into his mysteries or because his music enthralled their husbands. Somehow Orpheus managed to survive his death or at least to enjoy a pleasurable existence in Hades. A number of 4th- and 3d-century vases from S Italy show him playing his lyre in the underworld and his initiates holding a papyrus scroll, suggesting that victory over death was thought possible for those following an Orphic regimen, while the noninitiates would continue to suffer for their sin.

The Orphic literature of the 5th and 4th centuries exhibits a keen interest in the origin of the gods and the world. One of the richest creation accounts, the Derveni commentary of the 4th century, tells how Zeus, a monotheistic deity, produced the world through his power (Okeanos) and his thought (Moira). Although Zeus has no partner, he created the world by "aphroditing," or making love; his sexual energy functions as a metaphor rather than a mythical description of the world's beginning. A sharp distinction seems to identify Zeus as permanent and the world as temporal, perpetually undergoing change as its elements combine to form entities only to dissolve and recombine to make new entities. Even though deities and cosmos are distinct, continuity between them is assured because Zeus governs the world as its king. The author of the Derveni text developed his linguistic and allegorical theories to comment on Orpheus' creation account, for he tried to show that as sexual activity both unites and divides, so the linguistic act of naming objects and events indicates the unity of the world even as it shows its differences.

Other Orphic creation myths elaborate themes of the Derveni account and also introduce new topics. Most accounts show the world deriving from a primal unity, with strife or tension soon arising as the force which divides beings and objects. Descriptions of the bizarre Orphic deities demonstrate how Orphism differs from the orderly gods of the Olympian religion of the polis: bodies of dragons, multiple heads, angelic wings of gold, and voices of bulls. We also hear of incest and parental emasculation. Several accounts tell of a succession of rulers from Phanes to Ouranos and Gaia, thence to Kronos and Rhea, and finally to Zeus, the transitions anything but smooth yet all culminating in the reign of Zeus. Common to all myths is the recognition that the world cannot be sustained by its own power but instead needs the attention and effort of a ruler or a king who is beyond it. However, the monstrosity of the gods prior to Zeus' rule and the divine struggles before Zeus takes the throne are neither capricious nor fanciful, because they show the trials and experiments that preceded the rule of Zeus (and as one account has it, his son Dionysos). The rule of Zeus adds unity to the division and tension characterizing previous generations of rulers, and thus transforms deformity in to clarity and beauty; the birth of Dionysos makes salvation possible for humans caught in their hereditary sin.

Mention of Dionysos and soteriology prompts us to move from Orphic creation accounts to anthropological motifs in Orphic literature. Aristotle writes that the Orphic poems distinguish soul from body, holding, moreover, that the soul enters the body from the universe (*De An.* 1.5.410b). Plato adds that the body is a sort of prison for the soul, not one where the soul is punished but a garrison where it resides for safekeeping and with the gods as its guardians (*Cra.* 400C and *Phd* 62B). But why are souls in bodies? And how do they get there? The myth of the dismemberment of Dionysos by the Titans, considered by many scholars to be the cardinal Orphic myth, provides the clue to answers. According to the myth, when the Titans observed the child Dionysos at play, they disguised themselves and then dismembered Dionysos, boiled and roasted him, and finally ate him; Zeus, however, struck the Titans with his thunderbolt, reducing them to ashes. From the ashes, the human species arose—partly Titanic and partly Dionysiac. The myth is not the basis for a sacramental ritual of intimacy with the gods, but one which describes the divine deeds which led to the human plight.

Several times Plato refers to Orphic notions of a judgment and destiny of the human soul, as though to suggest that the duality of humans, i.e., their Titanic-Dionysiac nature, presents humans with choices and responsibilities. In the *Phaedo* and the *Gorgias*, Plato draws on the Orphics to develop his own views; to the Orphics he attributes the view that the human soul retains after the death of the body those traits and

characteristics it had acquired when the two were together, and that the soul would be judged—naked, and thus without any ability to deceive the judges. Pure and just souls are to be rewarded, whereas impure and uninitiated souls are to suffer severe penalties in Hades.

Where a distinction between life before death and life after death is marked by a final judgment, a connection is also established by the belief that the soul's destiny after death is determined by its behavior in its body prior to death. An Orphic way of life provides both ritual and ethical foundations for happiness after death. Euripides (*Hipp.* 952–53), Aristophanes (*Batrachoi* 1032), and Plato (*Leg.* 6.782) refer to the Orphic initiatory rituals as well as their prohibition on eating meat and sacrificing animals. Plato (*Resp.* 364D–365A) also refers to a large number of Orphic books or liturgical texts used to persuade individuals as well as large groups that ritual participation can eliminate guilt and pardon injustices, and that proper sacrifices can save the dead as well as the living from punishment in the next world. Among the most interesting materials providing information about Orphic practices is a statement in the Derveni text about the wandering Orphic practitioners who journeyed from city to city to perform their rites and received payment for performing rituals to mollify fears about life after death. All these references to Orphic rituals and bans demonstrate that Orphism was more than merely a literary religion, and that it offered an alternative to the traditional Greek religion of warring deities and blood sacrifice.

At the center of the Orphic life was a ban on killing, be it for food or for sacrifice. This prohibition meant that those who followed an Orphic way of life put themselves in sharp and uncompromising opposition to the mainstream of Greek religion with its sacrifices, which served to distinguish eternal gods from mortal humans at the same time it linked the two by apportioning rights and duties among them. The Orphics renounced the general Greek way in favor of a life of purity, nonviolence, and vegetarianism. The negative model was the Titans who swallowed Dionysos to kill him; the positive model was Zeus who, according to one creation account, swallowed the entire universe in order to give it new life and peace and order. The Orphics could imitate Dionysos and thus transport themselves back to a pure time of the beginnings of the world, and thus procure salvation for their souls. Hence it was not the Titanic killing and eating of Dionysos that brought a sacramental intimacy with the gods but a rejection of killing based on Dionysiac hope that made salvation ritually and ethically possible for the Orphics. Here we have an encouragement to preserve life, for killing damaged the psyche in a body whereas avoidance of killing enhanced the psyche. And because the psyche continued to exist after the death of the body, it could anticipate a blessed life after death if it followed the Orphic way of life. Orphism became a religion of salvation—renouncing blood sacrifice, abandoning the Greek civil religion, and finding in liturgical and ethical practices a life of Dionysiac joy.

Orpheus does not appear as the historical or even legendary founder of Orphism. It is likely, however, that the people we have come to know as Orphics adopted Orpheus as their teacher and master because his nonviolence established a pattern they desired and his shamanic powers enabled them to look beyond society and nature to another world where their salvation was guaranteed.

ORTHOSIA (PLACE) [Gk *Orthosias* (Ὀρθοσιας)]. A port city in Phoenicia to which Trypho, the usurper to the Syrian throne, fled in 138 B.C. when defeated in Palestine by Antiochus VII Sedetes (1 Macc 15:37). The site is attested in many ancient manuscripts and was later a bishopric. The name of the city indicates a great deal of Hellenistic influence. Its name is derived from an epithet attributed to

Artemis, meaning "upright." This toponym was also used to name a city in the Maeander River drainage area of W Asia Minor. The port city of Orthosia is located by ancient geographers S of the Eleutherus River and N of Tripolis (Pliny *HN* 5.17; Ptolemy *Geog.* 5.14). It is located through the use of the Peutinger Tables to be in modern Lebanon in the vicinity of Ard Artuzi near the mouth of the Barid River (ca. 34°31′N; 35°57′E). Trypho's flight to Orthosia was a retreat toward his original base of support in Apamaea. He was not able to land at Tripolis since it was loyal to Antiochus. From Orthosia he was able to travel along the Barid River and through the Homs Gap in the Lebanon Mountains into the Orontes Valley.

ROBERT W. SMITH

OSNAPPAR (PERSON) [Heb *ʾosnappar* (אָסְנַפַּר)]. The king reported to have transported some of the people of Babylonia to Samaria (Ezra 4:10). The context clearly suggests an Assyrian king, and some Greek codices of Ezra read *salmanassarēs,* suggesting an identification with Shalmaneser. To the best of our knowledge, Samaria was besieged and captured by Shalmaneser V, while the various transfers of population groups were carried out by his successor Sargon II. See SARGON. There seems to be no way to reconcile the name "Sargon" with the biblical form Osnappar. Some scholars have suggested that the name is actually a corruption of the name of the last great Assyrian king Ashurbanipal, since he waged numerous campaigns against the Elamites and since Elamites and "men of Susa" are listed among those peoples deported to Samaria (Ezra 4:9).

OSPREY. See ZOOLOGY.

OSTRACA, SEMITIC. The word "ostraca," plural of Gk *ostrakon,* "shell, sherd" (cf. Heb *ḥeres, ḥăsap*), is used in epigraphy for inscriptions written on sherds. Mostly written with ink but sometimes incised, these ostraca can be from various dimensions: from a few centimeters up to the size of a sheet of paper (ca. 21.5 × 28 cm; Lemaire and Vernus 1983). Written on one side (generally the convex one) or on both sides (recto and verso), they can contain texts ranging from one word (personal name) to several-dozen lines or columns of ciphers.

Sherd, as a material for writing, was not so practical as leather or papyrus but much cheaper: ostraca were mainly used for learning writing, for short and provisory administrative notes such as receipts, or for short letters, especially in war time, when it was difficult to get imported papyrus.

In Palestine, during biblical times, besides the Beth-shemesh and Izbet-Sartah ostraca from the late 2d millennium B.C. and a few Gk ostraca from the beginning of the Christian era, one may distinguish three groups of Semitic ostraca corresponding to three periods of writing.

(1) *Paleo-Hebrew ostraca* were mainly used in the royal administration from the 8th century B.C. to the fall of Jerusalem in 587. The main collections were found in Samaria, Lachish, and Arad (Lemaire 1977) but several other ones come from Jerusalem, Meṣad Hashavyahu, Kadesh-Barnea, and Ḥorvat ʿUza. From the same period, a few Ammonite, Moabite, Edomite, and Philistine (Naveh 1985b) ostraca were found in Transjordan, the Negev, and the Philistine plain. See EPIGRAPHY, TRANSJORDANIAN.

(2) *Aramaic ostraca* were used in administration during the Persian period. Two collections of these ostraca have been found in Arad and Beer-sheba while various exemplars were discovered at Samaria and several other places.

(3) *Square Hebrew ostraca* were used toward the turning of the Christian era at Qumrân, Massada, Murabbaʿât, and Herodium. They contain mostly abecedaries, names, and schoolboy's exercises. See also LACHISH LETTERS; ARAD OSTRACA; SAMARIA (PLACE) (OSTRACA).

ANDRÉ LEMAIRE

OSTRICH. See ZOOLOGY.

OTHNI (PERSON) [Heb *ʿotnî* (עָתְנִי)]. A Levitical gatekeeper in the Jerusalem temple, one of the sons of Shemaiah (1 Chr 26:7) who was the firstborn son of Obed-Edom (1 Chr 26:4). While no other mention is made of Othni, considerable discussion attaches to his grandfather, Obed-Edom: in this passage (1 Chr 26:4–8) he and his posterity are listed among the gatekeepers, while other passages include him among the Levitical musicians, of the clan of Asaph ("with harps and lyres," 1 Chr 16:5; "with lyres," 1 Chr 15:21). Perhaps the Obed-Edom clan members originally were temple musicians, but later were demoted to the rank of gatekeepers (1 Chr 15:24, which also designates them as gatekeepers, is often considered a later gloss; see Williamson *1 and 2 Chronicles* NCBC, 125–27, 169–71). If that shift actually happened, Othni may have been a temple musician who was later remembered as a gatekeeper when the reputation of his family was downgraded.

JOHN C. ENDRES

OTHNIEL [Heb *ʾotnîʾēl* (עָתְנִיאֵל)]. The first of the military leaders who "judged" Israel in the book of Judges (3:7–11). Only the Heb verb *šāpaṭ* "to judge," and never the noun *šōpēṭ* "judge," is used with reference to those leaders. In such usage, it appears, "to judge" is to organize successful counteroffensive against oppressive overlords.

Othniel's career description displays an outlook and employs framework rubrics that are variously observed in the stories of other "judges." It appears, therefore, that Othniel's story is offered as an example, presenting the relationship between Othniel and Israel as exemplary. It is told at the beginning of the book of Judges in such a way as to introduce the problems with which Israel and Yahweh would be confronted in Israel's remembering the rest of the era.

The narrative unit is compact. When Israelites forsook Yahweh and turned instead to Baal and Asherah, Yahweh sold them into the hand of Cushan-rishathaim, "king of *ʾărām nahărāyim"* (Judg 3:8; RSV: "Mesopotamia"). When the Israelites cried out to Yahweh, he raised up a savior who rescued them, Othniel the son of Kenaz, further identified as Caleb's younger brother (Judg 3:9; cf. Josh 15:17). Othniel's leadership was recognized as manifesting the spirit of Yahweh when he went forth to defeat Cushan-rishathaim and win forty years (a generation?) of "rest" for the land. Such, overall, will be the repeated pattern of the premonarchy period. Information about the protagonists here at the outset is minimal.

References to the spirit of Yahweh occur sporadically throughout Judges (6:34; 11:29; 13:25; 14:6, 19; 15:14), differently manifested in various individuals. Here it stands for an impersonal power or force which can be absorbed or can so envelope a person that he or she becomes capable of extraordinary deeds.

The meaning of Othniel's name is not clear, except for the final syllable, Heb *ʾēl*, "God." The first element is a root that appears elsewhere in OT only in the personal name Othni (1 Chr 26:7), who was a Levitical gatekeeper in the temple (note *TPNAH*, 96).

Othniel appears to be presented as Caleb's nephew, who won Caleb's daughter Achsah as his wife by capturing the town of Debir (Josh 15:15–19), a town apparently identical with Kiriath-sepher (Judg 1:11–15). The genealogy in 1 Chr 4:13 supports the statement in Judg 3:9 that Othniel was the son of Kenaz, Caleb's brother. On the other hand, Othniel is also a clan or tribal name in 1 Chr 27:15. Thus Othniel and Caleb are clans of the tribe of Judah. The eponymous hero Othniel is a southerner, from the area where Debir is also situated (probably Khirbet Rabud), not far from Hebron, which Joshua allotted to Caleb (Josh 15:13–14).

The name of the oppressor, "Cushan Doubly Wicked," is obviously a distortion, and "king of Mesopotamia" (Heb *melek ʾărām;* Judg 3:10) is problematical. (RSV's translation of *ʾărām* as "Mesopotamia" is unique here and dependent on the inferred meaning of Judg 3:8; elsewhere the name is translated "Aram" [e.g., Num 23:7] or "Syria" [e.g., Judg 10:6; 1 Kgs 10:29].) The oppressors of Israel in the premonarchy period never came from so far away as Mesopotamia. The suggestion that the oppressor's name may be related to one Irsu, a Syrian usurper in Egypt during the period of anarchy which concluded the 19th Dynasty (Malamat 1954), has not fared well. Recognizing the ease of misdivision in an unpointed consonantal Hebrew text, the oppressor might instead have been king of *ʾarmōn-hărîm,* "a hill country fortress" (Boling *Judges* AB, 81), located not far from Hebron and Debir. If so, and Othniel was a southern hill country liberator, then the story rings with a sound of more authenticity than is generally granted.

This tradition about the southerner Othniel as conqueror of Debir remains in tension with the tradition about the northerner, Joshua of Ephraim, who is elsewhere credited with the conquest of Debir (Josh 10:38–39). Or perhaps the place had changed hands again, in the interim.

ROBERT G. BOLING

OTHONIAH (PERSON) [Gk *Othonias* (Ὀθονιας)]. One of the sons of Zattu who returned with Ezra (1 Esdr 9:28). He was one of the Israelites who had married foreign wives and had to put them away with their children in accordance with Ezra's reform. The parallel list in Ezra calls him Mattaniah (Ezra 10:27).

JIN HEE HAN

OVENS, TOWER OF THE (PLACE) [Heb *migdal hattannûrîm* (מִגְדַּל הַתַּנּוּרִים)]. A tower in the outer wall of Jerusalem to the W of Ophel. Nehemiah refers to this tower in both the restoration (3:8–13) and the procession (12:38–39) texts and places the tower to the N of the Valley Gate and S of the Broad Wall and the Ephraim Gate. The Tower of the Ovens was probably an integral part of the bakers quarter NW of the City of David and near the royal residence where the "Bakers' Street" was found (Jer 37:21). Avi-Yonah (1954: 244) alludes to the prevailing breezes from the W that would provide the drafts and ventilation for such a complex of ovens. Those who have held to a maximalist view of Jerusalem during Nehemiah's reconstruction have associated the Tower of the Ovens with reinforcement of the Corner Gate by Uzziah (2 Chr 26:9; Sayce 1883: 218; Simons 1952: 234 and n. 2; and Vincent 1954: 243). Simons' suggestion that Nehemiah refers to the Corner Gate when he speaks of the Tower of the Ovens (3:11; 12:38) and Vincent's equation of the Tower of the Angle (2 Chr 26:9) with the Tower of the Ovens have obscured rather than clarified the location of the tower. The accumulative evidence appears to corroborate Avi-Yonah's proposal that the Tower of the Ovens should be placed near the NW limits of the City of David, N of the Valley Gate and S of where the Broad Wall intersects the W wall of the Temple mount (Avi-Yonah 1954: 244; Williamson 1984: 85).

DALE C. LIID

OVERLAY. An English word that translates five different Hebrew terms signifying various technical applications of metal—gold, silver, and bronze—over a wooden or stone object or structural element. The most common term is from the verb *ṣph* and is used frequently in the tabernacle texts of Exodus to describe the covering of "pure gold" attached to various appurtenances such as the ark (Exod 25:11; 37:2) and its fittings. It also designates the brass and silver overlay for other tabernacle objects or structural features. Similarly, the holiest places and items of the First Temple are said to be overlaid with gold (e.g., 1 Kgs 6:20; 6:28; 2 Kgs 10:18) although the designation for gold in the Temple differs from that of the tabernacle texts. Similarly, the royal throne was overlaid with gold (2 Kgs 10:18; 2 Chr 9:17).

In several other passages, different Hebrew words are found for gold. They are probably not synonyms but rather indicate differences in technology. In 2 Chr 3:8, 9, *ḥph* is used with "fine gold" in Isa 40:19, *rkʿ* is used to describe the covering of an image (made of metal?) with gold; and in Hab 2:19, gold and silver are said to overlay (from Heb *tpš*) stone idols.

The frequent use of the root *ṣph* apparently refers to the use of hammered-out sheets of metal. The other words may designate variations on the process that depend on the quality of the gold or the nature of the object to be overlaid. The technique for covering stone, for example, would have to be different than for that used to cover wood (acacia wood in the Tabernacle; cedar, olivewood, and cypress wood in the Temple).
CAROL MEYERS

OWL. See ZOOLOGY.

OX (ANIMAL). See ZOOLOGY.

OX (PERSON) [Gk *Ōx* (Ὼξ)]. A name given as part of the genealogy of Judith (Jdt 8:1). The name in its Greek form is non-Semitic. It appears in certain manuscripts as Oz (Gk *Ōz;* see Vaticanus, OL^{s}, Syr), which is a translation of the Hebrew name Uzzi (Heb *ʿuzzî*). If "Ox" is a corruption of "Oz," its Hebrew original, Uzzi, appears eleven times in the OT (Ezra 7:4, Neh 11:22, 1 Chr 5:31—Eng 6:5, etc.). However, none of these occurrences connect the name "Uzzi" with the tribe of Simeon, the tribe to which, according to the author, Judith belongs. Therefore, it is probable, given the genre of the book of Judith, that the name is part of what Noth (*HPT*) calls a "secondary genealogy," and thus completely fictitious. See further JUDITH, BOOK OF.
SIDNIE ANN WHITE

OXYRHYNCHUS SAYINGS. See SAYINGS OF JESUS, OXYRHYNCHUS.

OYSTERS. See ZOOLOGY.

OZEM (PERSON) [Heb *ʾōṣem* (אֹצֶם)]. Two individuals of the tribe of Judah.

1. Sixth son of Jesse and the brother of David the King. The sons of Jesse are listed here as being seven whereas 1 Sam 16:10 indicates eight sons.

2. Fourth son of Jerahmeel (1 Chr 2:25).
DAVID CHANNING SMITH

OZIEL (PERSON) [Gk *Oziēl*]. A name given as part of the genealogy of Judith (Jdt 8:1). The Hebrew form of the name is Uzziel (Heb *ʿuzzîʾēl*), which occurs several times in the OT. The occurrence of which the author of the book of Judith was most likely thinking is 1 Chr 4:42, where a certain Uzziel appears as a member of the tribe of Simeon. Judith, according to the author, is also a Simeonite. The purpose of the genealogy is to prove the purity of Judith's Jewish descent, and to provide the story with verisimilitude. See JUDITH, BOOK OF.
SIDNIE ANN WHITE

OZNI (PERSON) [Heb *ʿoznî* (אָזְנִי)]. Var. EZBON. OZNITE. One of the sons of Gad and founder of the clan of the Oznites, according to the genealogy of Num 26:16. He is preceded in the list by Shuni and followed by Eri. This second census in Numbers is closely related to the genealogy of Genesis 46. There (Gen 46:16) and also in *Jub.* 44:20, Ezbon is listed as the son of Gad between Shuni and Eri. There is no manuscript evidence which would support Ozni or Ezbon as the preferred reading in both places. Rather, there seem to be two renditions of the same name.

CHRISTINA DE GROOT VAN HOUTEN

P

P. The abbreviation used in Pentateuchal source criticism to designate the Priestly Writer. See PRIESTLY ("P") SOURCE; TORAH (PENTATEUCH); SOURCE CRITICISM (OT) .

PAARAI (PERSON) [Heb *pa‹ăray* (פַּעְרַי)]. One of "The Thirty," an elite group of the warriors of King David (2 Sam 23:35). He is called "the Arbite" (Heb *›arbî*), which is a reference to his home village, ARAB, in the hill country district of Hebron (Josh 15:52).

There is some textual confusion over both the name "Paarai," and the gentilic "Arbite." In the parallel list of David's champions in 1 Chr 11:26–47, the reading corresponding to "Paarai the Arbite" is "Naarai the son of Ezbai" (1 Chr 11:37; LXX supports this). Although certainty is impossible, scholars generally feel that Samuel has the superior reading, Naarai resulting from a confusion of the Hebrew letters *pe* and *nun,* and "son of Ezbai" being the result of corruption.

In the LXX of 2 Kgdms 23:35, Codex Vaticanus reads *Ouraioerchi* for the term "Arbite" in MT. This suggests the translator read Heb *›arḥi* instead of *›arbi,* "Archite" in place of "Arbite." This would then place the home town of Paarai in the hill country of Ephraim. Although some scholars have argued for the originality of this reading, it has a weak textual basis. It would also be incongruous with the geographical arrangement of the list, since Paarai's name is included with other warriors, all of whom came from the southern district of Judah (Elliger 1966: 101–2).

STEPHEN G. DEMPSTER

PADDAN-ARAM (PLACE) [Heb *paddan-›ărām* (פַּדַּן־אֲרָם)]. Var. PADDAN. A name for the area around Haran, the homeland of Abraham's family in upper Mesopotamia. This designation occurs only in Genesis and only in passages generally ascribed to the Priestly source. It appears particularly in reference to Jacob's sojourn with Laban at Haran in Genesis 28–31. It is to Paddan-aram that Isaac sends Jacob in Gen 28:1–7, and it is there that most of Jacob's sons are born (Gen 29:31–30:24; cf. Gen 35:26; 46:15). Scholars have generally seen it as an alternate name for ARAM-NAHARAIM, a substantial region of upper Mesopotamia located around the great bend of the Euphrates River (Skinner *Genesis* ICC, 358; de Vaux *EHI,* 195). On the other hand, some have argued that Paddan-aram was an Aramaic rendering of the city name HARAN (PLACE) (O'Callaghan 1948: 96).

These two distinct identifications depend upon the meaning of the word *paddān.* Those who argue that the name designates a large geographical area generally translate it as "field," thus making Paddan-aram mean "Field of Aram." This has been based largely on two arguments (already referred to in Rashi's commentary on Gen 25:20): (1) the noun *paddān* has a cognate in Arabic which means "field," and thus Aramaic may also have had a similar meaning for the word; and (2) Hosea 12:13 (—Eng 12:12) refers to this area as *śĕdēh ›ărām,* "Field of Aram," in a reference to Jacob's sojourn there, and this is deemed to be a Hebrew translation of *paddan-›ărām* (de Vaux 1948: 323; Albright *FSAC,* 237; Skinner *Genesis* ICC, 358). However, neither of these arguments is conclusive. There appears to be no clear Aramaic or Syriac occurrence of *paddān* as "field." Its regular meanings in Aramaic and Syriac are "plough, yoke (of oxen)," and in Arabic the primary meaning is "yoke" as well. The derivative meaning, "field," may be an inner-Arabic development. As for the second argument, one must admit that the use of *śĕdēh ›ărām* in Hosea need not be understood as the translation of a place name at all.

The other proposal, that Paddan-aram is an Aramaic rendering of the city name Haran, relates *paddān* to the Akkadian *padānu/paddānu,* which means "road, highway." This is a synonym for Akkadian *ḫarrānu,* "road, highway, caravan," the probable source of the name, Har (r)an (O'Callaghan 1948: 96). But the

argument depends on the Aramaic word also having the meaning "road" or "caravan," and there is no such evidence currently available. Thus the exact extent of the area designated by this name remains uncertain.

WAYNE T. PITARD

PADON (PERSON) [Heb *pādôn* (פָּדוֹן)]. The head of a family of Nethinim (Temple servants) who returned from the Babylonian Exile (Ezra 2:44 and parallels in Neh 7:47 and 1 Esdr 5:29). The list in Ezra-Nehemiah implies that this return took place immediately in response to Cyrus's declaration in 538 B.C.E. But 1 Esdras places this return in its more probable date at the time of King Darius (ca. 522). As members of the guild of NETHINIM, the family of Padon would have had a special role in the temple cult, perhaps assisting the Levites (Levine 1963; Weinberg 1975). Although some scholars consider the Nethinim to be foreigners or of foreign origin (largely on the basis of later rabbinic sources), it is more likely that during the postexilic period the Nethinim, as cultic personnel, were neither considered foreigners nor slaves. Rather, like the Levites, they had been devoted to cultic service the precise nature of which can no longer be identified. The size of Padon's family, its origins, and specific role are no longer discernible. See Blenkinsopp *Ezra-Nehemiah* OTL; Williamson *Ezra, Nehemiah* WBC.

TAMARA C. ESKENAZI

PAGANS. See NATIONS.

PAGIEL (PERSON) [Heb *pag‹î›ēl* (פַּגְעִיאֵל)]. The son of Ochran and the chief (*nāśî›*, Num 2:27) of the tribe of Asher during the wilderness sojourn after the Exodus. He is mentioned only five times in the OT in four different tribal lists. He helped Moses conduct a census of all able-bodied warriors among the Israelites (Num 1:13). He led the tribe of Asher to its proper place on the N side of the tabernacle in the Israelite camp (2:27) and to its position in the rear guard when the Israelites prepared to depart from Mt. Sinai (Num 10:26). He also presented the offerings of the tribe of Asher on the eleventh day of the twelve-day celebration of the dedication of the altar (Num 7:72, 77). While the meaning of the name "Pagiel" is uncertain, *HALAT* (861) suggests that it means "the one who intercedes with God"; Gray (*Numbers* ICC, 8) proposes the meaning: "the lot or fate given by God."

DALE F. LAUNDERVILLE

ḤPAḤAD. See NAMES OF GOD IN THE OT.

PAHATH-MOAB (PERSON) [Heb *paḥat-mô›āb* (פַּחַת־מוֹאָב)]. The name Pahath-Moab suggests a title, (military) governor of Moab, rather than a personal name. It is derived from the Hebrew word *peḥâ*, meaning military governor, and is related to the Akk *paḥâtu/piḥâtu* of the same meaning. The best explanation for the use of Pahath-Moab as a personal name is that a person of humble origins rose to a position as governor of Moab and assumed his title in place of his given name. One can only guess that this person was one of obscure background who achieved this position under David (1 Sam 22:1–2) and became the governor of the newly subjugated land of Moab (2 Sam 8:2). This person is never otherwise identified, however, and is known primarily as the ancestor of one of the large Judean clans which returned from the Babylonian exile with Zerubbabel (Ezra 2:6; 8:4; 10:30; Neh 3:11; 7:11; 1 Esdr 5:11; 8:31). Neh 10:15—Eng10:14 names Pahath-Moab as one of the chiefs of the people who set his seal to Nehemiah's covenant.

D. G. SCHLEY

PAI (PLACE) [Heb *pāʿî* (פָּעִי)]. Var. PAU. Residence of the Edomite king Hadad (1 Chr 1:50). See also PAU (PLACE).

PALACE. Neither the Hebrew OT nor the Greek NT has a specific word for "palace," although various terms so translated suggest a structure that was an elite residence and at the same time served certain military, judicial, and even religious functions. For instance, *bêt hammelek* (2 Chr 9:11), "house of the king," denotes what we would call a palace. Similarly, in the NT, *aulē,* literally "hall" or "court," clearly implies in some passages a palace (cf. Matt 26:3; Luke 11:21).

Few actual palaces are known thus far from excavations in Palestine, and certainly none that compare to the famous palaces brought to light in ancient Egypt, Syria, and Mesopotamia. Ancient Palestine was a marginal region, relatively poor in material culture in comparison with Egypt, Syria, and Mesopotamia. It has thus yielded few remains of luxurious buildings such as palaces. This brief survey will note the principal structures that might be considered "palaces" in the pre-Classical sites and Classical periods (see articles on specific sites for further detail). We shall regard as a "palace" any unusually large and elaborate structure that is clearly not an ordinary private dwelling, especially those whose locations and/or contents and furnishings suggest both residential and administrative functions.

A. Bronze Age

1. The Early Bronze Age (ca. 3400–2000 B.C.). The only truly palatial structure known from the first urban era in the 3d millennium B.C. is the ʿAi *palais* of Mm. Marquet-Krause (1949), reinvestigated by J. A. Callaway. See Figs. PAL.01 and AIP.01. In its initial phase, it no doubt functioned as a temple, but by EB III (ca. 2600–2400 B.C.) it had become a citadel-palace, of monumental proportions and excellent stone masonry.

2. The Middle Bronze Age (ca. 2000–1500 B.C.). The phase of urban revival in the early 2d millennium B.C. produced a number of elaborate structures, possibly the residences and also administrative centers for local dynasts in Palestine's characteristic "city-state" system. "Palace 7200" adjacent to the city gate at Shechem (Dever 1974) is a large, two-story colonnaded structure, incorporating a tripartite temple and located on a public plaza. It resembles and even rivals the royal complex of stratum VII at Alalakh in Syria. Petrie's old "Palace II" at Tell el-ʿAjjül (1931–34) is an impressive multiroomed structure, also near the city gate. The largest (and earliest) such structure is the Ras el-ʿAin/Aphek "Palace I" of MB I, with spacious, thickly plastered rooms and courtyards, and massive column bases that rival or surpass any in contemporary Syria in size. A recently discovered palace at Kabri, in Lower Galilee, even boasts plastered floors with painted designs. It is likely that other Middle Bronze Age palaces existed in Palestine.

3. The Late Bronze Age (ca. 1500–1200 B.C.). When Palestine came under Egyptian New Kingdom domination in the Late Bronze Age—especially in the well-known "Amarna Age" of about the 14th century B.C.—a number of palatial structures appeared. Several were clearly palaces, since they were modeled along the lines of Egyptian-style "Governor's Residencies," as E. Oren has shown (1985). Among the latter are elaborate, multiroomed buildings such as those at Beth-shan, Aphek ("Palace 1"; Beck and Kochavi 1983; 1985), Tel Batash VII (Kelm and Mazar 1984), Tell esh-Shariya IX (Oren 1982), Tell el-ʿAjjûl ("Palace III") (Petrie 1931–1934), Tel Masos, Tell Jemmeh, Tell el-Ḥesi, Tell el-Farʿah (S), and Deir al-Bâlah in the Gaza strip. The Aphek palace is exceptional. It has two stories, the lower no doubt administrative and the upper residential. The lower story features an entrance court with a large water basin, several large work and service rooms, and a still larger area that is probably an audience chamber. The administrative function of the Aphek palace is indicated by its relative wealth of textual remains (for a Palestinian site), including cuneiform fragments, a lexical tablet in Akkadian, and a Hittite *bulla.* A monumental building unearthed at Gezer long ago by Macalister along the N "Inner Wall" may constitute another example, as does also the badly ruined "Palace 14120" of the modern excavations.

B. Iron Age

1. The Iron I Period (ca. 1200–900 B.C.). The periods of the Israelite settlement and early monarchy have yielded a few palacelike structures, such as Albright's "fortress of King Saul" at Tell el-Fûl/Gibeah (Albright 1924; Sinclair 1960; Lapp 1965). More certain are the Solomonic period *bit ḫilani-style* "Palace 6000" and Building 1723 (Ussishkin 1973) at Megiddo (both str. VA/IVB)—the latter possibly the residence of the district governor Baʿana, who is known from the Hebrew Bible (1 Kgs 4:12). "Palace 10,000" at Gezer is connected with the city gate (Dever 1985), like "Palace 6000" at Megiddo, but it is less elaborate; both appear to be more administrative than residential, i.e., citadels. The most important Iron I palace in early Israel would have been, of course, the Royal Palace in Jerusalem. This is described in 1 Kgs 7:1–12 (cf. also 2 Sam 5:11–15 for David's palace), but no trace of this structure has been (or ever likely will be) discovered. Similar structures, however, which fit even the details of the biblical structure, have been found in 9th–8th century Syria at such sites as Zinjirli (ancient Samʿal) and Tell Halaf. Here one finds, as with the Jerusalem temple, a location on the citadel near the main temple, ashlar (dressed) masonry construction, etc.

2. The Iron II Period (ca. 900–600 B.C.). Similar palaces at regional centers existed during the period of the divided monarchy. In Israel, was the Hazor VIII–V Citadel in the upper city, a massive residence-fortress. The Gezer "Palace 10,000" continued in use, but more as a residence. The most significant palace in the N kingdom of Israel was no doubt that of the Omride kings at the capitol of Samaria (Crowfoot, Kenyon, and Sukenik 1942), in the 9th–8th centuries B.C. The royal quarter on the acropolis was surrounded by a casemate (double) wall. The palace area included a splendid building constructed in the finest Phoenician ashlar masonry ever found in ancient Palestine. Dubbed the "ivory house" by the excavators, this building yielded more than 500 fragments of carved ivory inlays, no doubt from wooden furniture (see Ahab's "house of ivory" in 1 Kgs 23:39; cf. "beds of ivory" in Amos 6:4). These are the finest Phoenician-style ivories known from Palestine, and they hint at the luxury goods that once embellished the local palaces but which were almost always looted in antiquity. Just to the W of this building was found a group of 63 ostraca, mostly tax receipts, indicating the administrative functions of the palace.

In Judah, Ramat Raḥel (Aharoni 1962; 1964), on the outskirts of Jerusalem, may have been an auxiliary residence of the kings of Judah; it had splendid ashlar masonry, capitols, and balustrades of Phoenician style. Albright's "West Building" at Tell Beit Mirsim, a *ḫilani-style* structure built into a city gate, is probably another palace (Albright 1932; Albright and Kelso 1943). See Fig. PAL.02. The most monumental Iron II palace in Palestine is the strata V–II "Residency" at Lachish (Tufnell 1953; Aharoni 1975), an enormous masonry structure with several successive additions, still standing to an impressive height today. It continued in use until the Assyrian destructions, and was even rebuilt in the Persian period.

C. Later Palaces

There may have been Assyrian or Babylonian palaces in Palestine following the destruction of the N and S kingdoms, but no trace of these has survived, with one possible exception. A large building built in Assyrian-style vaulted mudbrick construction, containing Assyrian "palace ware," was found at Tell Jemmeh, possibly ancient Yurza, of the 8th–7th centuries B.C.

The Persian rebuild of the Lachish "Residency" has been mentioned above. The Hellenistic period in Palestine has yielded a number of monumental buildings, but none that can be positively identified as a palace.

In the Roman era, the most notable remains of palaces are those identified with the well-known building activities of Herod the Great (37–4 B.C.). His principal residence in Jerusalem is relatively well described by Josephus, and archaeological investigation has confirmed that it is to be identified in the earliest phases of the Citadel, now incorporated into the Jaffa Gate in the W wall of the Old City. Herod's "Winter Palace" on both banks of the Wadi Qelt, W of Jericho, has been investigated by both American and Israeli archaeologists (Pritchard 1958; Netzer 1982) and has produced splendid remains of residential areas, courtyards, and luxurious gardens. See Fig. JER.06. Another retreat of Herod's was the Herodium (Netzer 1981; Netzer and Arazi 1985), a fortress (and also Herod's tomb) 4 miles SE of Bethlehem, excavated in

recent years. An even more grandiose Herodian palace and desert retreat was erected, along with other structures, at Masada, on the W shore of the Dead Sea. Masada was extensively cleared by Y. Yadin in 1965–67 (1966) and gives the visitor an unforgettable impression of Herod's ambition and his taste for the Roman lifestyle.

WILLIAM G. DEVER

PALAEOGRAPHY. Palaeography provides the student of the Bible with a tool for studying both the material culture of ancient civilizations and the religious, political, and intellectual culture of these societies. By providing a sound basis for establishing relative chronologies for manuscripts, inscriptions on monuments, potsherds, and coins, palaeography joins with other archaeological evidence in allowing the student to gain a better understanding of everyday life in the ancient world.

Palaeography is the study of ancient writing with reference to the way the letters are formed and how these letters change form over a period of time. There are several subcategories within palaeography which are defined in relation to the type of material the scribe wrote upon and the tools the scribe used. As a subcategory, *palaeography* refers to the study of writing drawn with a pen or a brush, upon any material which will hold the ink or paint, but particularly leather, parchment, papyrus, paper, and ostraca (Metzger, 1981: 1). *Epigraphy* refers to the study of writing carved into nonporous materials such as stone, metal, bone. *Numismatics* refers to the study of coins; coins often bear an inscription and other symbols or designs representative of the minting authority.

A. Functions and History

Once sufficient evidence is in hand, a palaeographer is able to establish a typological sequence of the changes which occur in the form and orientation of the characters written by the scribes. Not every newly discovered manuscript, inscription, or coin comes with an absolute date written upon it. But the palaeographer can date the newly discovered writing on the basis of the relative chronology that the typological sequence provides.

This makes palaeography an indispensable tool for detecting forgeries and authenticating genuine manuscripts, inscriptions, and coins. The science of palaeography was born out of an attempt to prove the authenticity of the credentials of several Benedictine monasteries through classifying Latin manuscripts

by age using handwriting and other internal evidence. This led to the publication of *De Re Diplomatica* by Jean Mabillon (1632–1707) of St. Maur. Mabillon's methodology was soon adapted to the study of Greek manuscripts (Metzger 1981: 1).

With a sufficient base of evidence, one can even identify the work of individual scribes in a number of manuscripts or the hand of specific engravers in a number of different coin dies. An example of this is found in the palaeographic and numismatic study of the abundant Hasmonean coinage (ca. 103–37 B.C.) available for study. At least twelve different engravers made dies for the Hasmonean rulers (McLean 1982: 111).

B. Methodology and Techniques

The palaeographer tries to envision the ideal form which the scribe or engraver was trying to achieve. The scribe had in mind a basic form with a certain sequence and direction of strokes, and had some understanding of the proper proportions of the character to be produced, whatever the actual outcome might be. The feature of human nature that allows us to use typological analysis for scripts, pottery, and art forms is that the individual execution of the "ideal form" is different each time. No person signs his or her name exactly the same way each time. Yet the signature must be recognizable. Therefore the range of tolerated variation is limited in any given instance.

It is the innovations, whether accidental or deliberate, in the actual production of a form which result in reinterpretation of the form, its proportions, and even the sequence and direction of strokes. Subsequent students or apprentices have a new ideal form as their standard. It is this continual modification that allows us to determine typological sequences over the long term. The more frequent the use of a script or individual letter within the script, the greater is the possibility of innovations and reinterpretation. More frequent letters will have a faster rate of development than less frequently used forms.

However, one cannot study the change in any given letter in isolation from the rest of the letters of the script. Just as each of us learned that our printed and cursive letters have ideal proportions, spacing, and angular relationships with the other letters in a word or line, these same considerations must be taken into account. The palaeographer must create a horizontal script chart which displays examples of all the letters found in a given manuscript in alphabetical order. The proper proportions, spacing, and angular relationships must be recorded with reference to the ceiling or base line used in any given manuscript. The term "swing" is used for scripts hanging from a ceiling line; "stance" is used for scripts oriented to a base line.

Modern English and Hebrew alphabets are drawn in relationship to a base line. The early Semitic alphabets, including Aramaic, Hebrew, and Phoenician, were drawn hanging from a ceiling line. Often the ceiling or base line used by the original scribe is still visible on the manuscript. The Palaeo-Hebrew manuscript of Leviticus found in Cave 11 at Qumran (11QpaleoLev) provides a good example of the horizontal ceiling and vertical margin lines used by scribes (Freedman and Mathews 1985: pl. 9).

Inscriptions on coins and other media create special problems for determining the ideal swing or stance envisioned by the engraver. Stones and other natural objects have limitations of size, and possible flaws; miscalculation of available space by the engraver further modifies letter shape and stance or swing. The die cutter has limited space upon which to put the required inscription on the coin. Letters are often squeezed into odd corners at odd angles. A line of script will start at one angle and finish on another. A script chart for a Hasmonean coin might show extreme variations of swing or shape of letters owing to the engraver's attempt to use available space. The palaeographer must recognize that such variations have no bearing on the development of the script. Also, a common numismatic convention of writing the inscription around the circumference of the coin makes the establishment of an orientation line difficult.

Perhaps the most important development in palaeography is the continuing work of perfecting techniques in infrared and microphotography, computer enhancement, and digital recording of images. One of the scholars in the forefront of these developments is Prof. Bruce Zuckerman, director of the West Semitic Research Project of the University of Southern California. One of the major goals of the project is to make good-quality photographs of West Semitic inscriptions available to the whole scholarly community (Coughlin 1987). Standard photography has made reproductions of manuscripts, inscriptions,

and coins available to the beginning and experienced palaeographer that would otherwise be unavailable because of the cost of travel and the restrictions of various institutions on access to their collections.

The use of photographic materials, however, is not without its dangers. Photographs of manuscripts do not pose too much of a problem. But a photograph of an inscription or a coin involves reducing a three-dimensional object to a two-dimensional reproduction. The position of the camera, the angle and type of lighting, the amount of relief in the original inscription or coin result in different images being recorded. The best palaeographic analysis remains dependent on access to as many of the original artifacts as is possible. The palaeographer can turn the objects to get different lighting effects and identify distortions caused by lighting that might be impossible to detect in a photograph.

The use of original coins or inscriptions does not completely solve the problem; the making of a script chart once again involves reducing a three-dimensional character to two dimensions. This reinforces the earlier observation that the palaeographer must be able to envision the ideal form behind the actual form which the scribe or engraver produced. Naturally, the palaeographer is limited by what she sees, or thinks she sees.

This interpretation and reproduction of what the palaeographer perceives means palaeography is both a science and an art. Therefore, the value of palaeographic analysis is dependent on the quantity of material available for comparison. The methodology, techniques, and abilities of the palaeographer are crucial. The information gleaned from palaeography is vital for creating, supplementing, or debunking relative chronologies or absolute datings not only for writings, but also for pottery and other archaeological artifacts. It is useful for determining the authenticity of manuscripts, inscriptions, and coins.

PALAL (PERSON) [Heb *pālāl* (פָּלָל)]. One of those who worked on the wall of Jerusalem following the return from Babylonian exile (Neh 3:25). His name may be a shortened form of Pelaliah, which means "Yahweh has interposed/judged" (Brockington *Ezra, Nehemiah and Esther* Century Bible, 143). Palal was the son of Uzai.

PALEOPATHOLOGY. The study of ancient health and disease in man and animals from the evidence of archaeological remains. While the term "paleopathology" itself is often thought to have been coined by Armand Ruffer early this century, it is clear that it was used in dictionaries as early as 1895 (Moodie 1921: 21), and as early as 1892 in articles dealing specifically with the subject (Zimmerman and Kelley 1982: 1). The terms "pathology" and "pathologies" are still often used incorrectly in the sense of "lesion(s)" or "disease process (es)," rather than correctly to mean the *study* of such conditions (see the Editorial 1985). The field of paleopathology is very broad and includes the study of disease processes in plants, lower and higher animals, and hominids from the earliest eras from which there is evidence to the recent historical past. One can find paleopathological studies on a variety of specimens—evidence of

fungal parasitism in fossil plants, traumatic lesions in ancient crustaceans, fractures and arthritis in dinosaurs, osseous lesions in extinct cave bears and bison, dental attrition among Neanderthals, and a myriad of paleopathologic studies on recent man (Tasnadi-Kubacska 1962; Moodie 1921). The present discussion will necessarily focus on human paleopathology as it concerns the biblical world.

A. History and Development of Paleopathology

The science of paleopathology appears to have emerged nearly simultaneously in America and Europe near the turn of the century from out of its early beginnings in the late 18th century and early 19th century, with work based largely upon specimens indigenous to each hemisphere. It seems valid to speak of paleopathology in the narrower sense of the biblical world as its development is directly related to British and European advances in paleopathology which were early based almost entirely upon human and animal remains from Egypt. The history of paleopathology in the biblical world might be outlined as follows (for a worldwide perspective, see Pales 1930; Armelagos et al. 1971; Buikstra and Cook 1980; and Angel 1981).

1. Prior to ca. 1850. Before the mid-1800s, interest in human paleopathology ultimately emerged from curiosity and interest in the mummies which accompanied the flow of antiquities from Egypt into Europe and Great Britain. And indeed, human paleopathology is to a large extent the spawn of formative Egyptian archaeology. Already by 1662, German naturalist Andreas Gryphius (1616–1664) had published an anatomical treatise on two mummies which, however, stemmed from his preoccupation with mystery, ritual, and death (Neveux 1964). This early general curiosity surrounding Egyptian mummies soon developed into a more serious interest in their anatomy and health. In 1765, English physician John Hadley (1731–1764) published a scientific description of an Egyptian mummy belonging to the Royal Society (Dawson and Uphill 1972: 130). And in America as well, surgeon John C. Warren (1778–1856) of the Massachusetts General Hospital described a Ptolemaic period mummy in 1821 (Dawson and Uphill 1972: 298). A number of such accounts followed by physicians and others who had either acquired mummies locally or had purchased them as tourists in Egypt. Typical of the increasingly scientific and medical nature of early paleopathology, English physician A. B. Granville (1783–1872) published in 1825 an account of a Persian period mummy in which he observed a cystadenoma of the ovary. The report of the mummy and its unwrapping is still useful reading (Dawson and Uphill 1972: 77). Particularly

important in this period is the work of surgeon Thomas J. Pettigrew (1791–1865), who studied a particularly large number of mummies and produced his *History of Egyptian Mummies* in 1834, recently reprinted (Pettigrew 1834). This work was an early landmark in paleopathology as well as being the first book written in England on the archaeology of Egypt (Dawson 1934). It contained, by the standards of the day, many important observations of mummification, anatomy, and other issues of interest to the paleopathologist. Serious accounts of mummies also began to appear early in the century from nonphysicians such as German anthropologist Johann F. Blumenbach, one of the early founders of the science of physical anthropology, and English historian William Osburn (Dawson and Uphill 1972: 31, 219).

Similarly, while studies of the human skeleton also dated back to the 1600s, detailed work did not appear until the 1800s, notably with the appearance in 1844 of such works as S. G. Morton's *Crania Egyptiaca* (Brothwell 1968: 1). Interest in skeletal remains would continue through the century, with the development of several models and theories concerning the various races of man as early understood and characterized from skeletal remains, especially the skull.

2. From ca. 1850 to ca. 1930. From the mid-1800s to roughly 1930, human paleopathology in the biblical world continued to center largely on mummified human and faunal remains from Egypt. Austrian physician Johann Czermak (1828–1873), who perfected the early laryngoscope, published the first microscopic anatomical and histological observations on mummified organs and tissues in 1852 (Dawson and Uphill 1972: 75). Among many other figures of importance in this period are physician D. M. Fouquet (1850–1914) (whose work on mummies was influential but contained many errors), and French naturalist Louis Charles Lortet (1836–1909), who continued work on mummified fauna of Egypt. Toward the turn of the century and later, human paleopathology in the biblical world was largely a British affair focused upon Egypt with landmark contributions by anthropologists G. Elliot Smith (1871–1937) and Frederic Wood-Jones (1879–1954) during the archaeological survey of Nubia, the first and largest systematic pathological survey of ancient human remains to date (Smith and Wood-Jones 1910).

Under the direction of Egyptologist Margaret Murray (1863–1963), the first serious interdisciplinary approach to the dissection and medical study of a mummy was made in 1907 before an audience at the Manchester Museum (Murray 1910). English pathologist Marc Armand Ruffer (1859–1917) made many important early contributions to descriptive paleopathology and the scientific study of mummified human tissues, and is commonly regarded as the "Father of Paleopathology," although others such as Pales have applied this epithet to the great Rudolph Virchow (ascribing to him "la paternité de la paleopathologie," and more accurately, it seems, calling Ruffer "le grand animateur" [Pales, 1930: 7, 13]). During the last part of the 19th century, Virchow reported on a broad group of paleopathological specimens ranging from early prehistoric mammals and hominids to the specifics of the hair of Egyptian mummies, quite aside from the fact that some of his conclusions were later shown to be incorrect. Ruffer's contributions were nevertheless a major landmark in paleopathological method also. While the first histological studies on mummified tissue dates to the work of Czermack in 1852, Ruffer left a lasting imprint on the field with pioneering work which employed relatively modern histological techniques on mummified tissues and also with the formulation of the so-called Ruffer's Solution. This histologic reagent is used in the rehydration of mummified human tissues, although the formula has been slightly modified in recent years (Sandison 1955, and others). A number of Ruffer's papers were collected and reprinted after his death (Sandison 1967; Moodie 1921).

Characteristics of this period is the descriptive paleopathology of human remains, centering largely on trauma, skeletal lesions, and early interest in infectious diseases, especially syphilis, which was then incorrectly diagnosed in human remains from early Egypt by Lortet, Zambaco Pasha, and others (Lortet 1907; Zambaco Pacha 1897). Also, the period is marked by the first application in paleopathology of several scientific methods and technologies. Flinders Petrie, for instance, utilized X-ray studies on mummies just three years after its application in medicine (Petrie 1898).

3. From ca. 1930 to ca. 1960. It has been stated that the years of ca. 1930–1960 reflect a period of relative stagnation in paleopathology worldwide (Buikstra and Cook 1980). This was due in part to the

criticism of several established racial osteometric models and theories and the subsequent shift of interest away from the study of bones to the study of living populations in anthropological circles (Brothwell 1968: 2). However, work did not cease entirely. Among the contributions of this period could be mentioned a number of papers by Douglas Derry on a variety of paleopathological subjects (see Armelagos et al. 1971) or the important work of British physician William C. Boyd, who surveyed a large number of mummies in the first large-scale effort to determine blood groups from associated ancient mummified tissues (Boyd and Boyd 1934; Boyd and Boyd, 1937). Also, in 1931 Moodie published X-ray studies of seventeen Egyptian mummies. However, aside from various individual studies, no attempts were made at assembling a major synthesis of paleopathologic knowledge on a scale such as those which had been produced earlier in the century by Moodie or Pales.

4. From ca. 1960 to the Present. Since about 1960 and more recently, and paralleling progress in technology and anthropological theory, there have been numerous advances in the field of paleopathology with an increase in the number of paleopathologic subspecialties as well. The increase in the number of published reports on human remains since about 1960 is notable (cf. Bass 1979). Several important syntheses and collections of paleopathologic knowledge have appeared, although none have dealt specifically with the biblical world (e.g., Brothwell and Sandison 1967; Brothwell 1968; Janssens 1970; Steinbock 1976; Cockburn and Cockburn 1980; Ortner and Putschar 1981; Cohen and Armelagos 1984; David 1986; Zimmerman and Angel 1986; others). Work on the histology of dessicated and mummified tissues has been advanced with the appearance of a paleohistological atlas and a number of detailed studies on the microstructure and staining characteristics of preserved soft tissues (Zimmerman and Kelley 1982). A radiographic survey of 133 mummies from museums in Europe and Britain was made by Gray in 1967 (Gray 1967), and an X-ray atlas and new pathological study of the royal mummies in the Cairo Museum has appeared (Harris and Wente 1980). Several specialized studies have provided vast improvements in the diagnostic criteria for the evidence of several diseases in skeletal remains, especially syphilis (Hackett 1976), and leprosy (Moller-Christensen 1961; 1978). Major advances have been made in the area of paleonutrition providing several new nonspecific skeletal indicators of metabolic stresses. Technological advances have provided medical diagnostic tools and techniques which have been of importance to paleopathology such as CAT (computed axial tomography) and scanning of human remains, and fiber optics, which allow the study of body cavities and the sampling of the internal tissues of mummified corpses without the unacceptable massive destruction of museum specimens previously associated with the gross dissection of autopsies. The facial reconstruction techniques of forensic medicine have been usefully applied to ancient human remains as well (David 1978). Indeed, the blossoming of paleopathology in recent years holds great promise for unprecedented discoveries and advances in our ability to extract knowledge from human remains. Achievements such as the successful cloning of ancient Egyptian mummy DNA in the modern laboratory demonstrates the potential for obtaining *direct* knowledge of the biological nature and makeup of the ancient inhabitants of the biblical world (Pääbo 1985).

Examples of what can be accomplished by interdisciplinary teams employing modern techniques can be seen from the efforts of Rosalie David, whose team conducted a thorough interdisciplinary mummy autopsy at the Manchester Museum, in the tradition established by Margaret Murray (David 1978; David and Tapp 1984). Important also is the more recent team study of the mummy of Ramesses II, which was flown to France for the application of a battery of modern diagnostic procedures, then sterilized by gamma radiation before being returned to Cairo (Balout and Roubet 1985).

However, with advances in techniques and technologies is associated the increasing cost of paleopathological research and the difficulty in applying some techniques to large numbers of specimens. From a practical standpoint, much that is potentially available for use in paleopathology is usually unavailable in the field to the archaeologist and paleopathologist. Advances in diagnostic technology which are relatively common in medicine are often applied only exceptionally to archaeologic period human remains. Unfortunately, paleopathology in the archaeological setting still relies largely on

descriptive osteological studies with specialized study of smaller specimens or portions of specimens which can be studied at, or taken from, the site.

B. The Nature of the Evidence

The various specimens obtained from archaeological excavations from which paleopathologic data are obtained may be grouped as follows:

1. Decarnated Skeletal Remains, Including Teeth. Skeletal remains are the most frequently encountered human remains in biblical archaeology. A large variety of evidence can be obtained from the skeleton, such as information regarding the age, sex (still difficult or impossible with immature specimens), stature of the individual, identification of blood groups, relative health, and the existence of certain general disease processes, evidence of parturition (past childbirth), the presence of accidental and inflicted trauma, dietary information and nutritional status, several nonspecific markers for biological stress, and information about certain social customs (i.e., changes in bones owing to frequent kneeling). Often, evidence of specific diseases can be detected such as arthritis, leprosy, tuberculosis, treponemal infections, septic infection (pyogenic osteomyelitis), certain anemias and metabolic bone diseases, and malignancies and tumorlike processes (Steinbock 1976). A number of nonspecific indicators may be found singly or together in skeletal remains to suggest the presence of stress and disease, such as early age at death, Harris lines, dental crowding, dental hypoplasias, or thin long bone cortices. When large numbers of burials are found, populations may be profiled and defined by the application of osteometric analysis to the skeletons.

The information gained from skeletal material depends upon many factors, most important being the presence of a complete skeleton in good condition. However, much may still be learned from fragmentary skeletal remains as well. In fact, the probable sex, relative age, and an estimate of the stature of an ancient person may be determinable from a single recovered bone. An example of the wealth of data which can be extracted from an incomplete, poorly preserved, prehistoric skeleton in the hands of competent osteologists is seen in the recent and superb analysis of the paleolithic period skeleton from Wadi Kubbaniya, Egypt (Close 1986). The presence of a healthy skeleton does not eliminate the presence of disease since most acute illnesses and conditions resulting in death leave no imprint upon the bones. Teeth also may provide evidence of the age of the individual, the quality of the diet, and several nonspecific indicators of nutritional stress and growth disturbances (Price et al. 1985). Occasionally, evidence of certain social customs and occupations is present in teeth such as grooves in the teeth of weavers who pulled fibers from the mouth, etc.

2. Preserved Soft Tissues and Hair. With the survival of soft tissues is often preserved information regarding the specific health of that particular tissue, and thus certain implications may be drawn for the health of the individual. Important advances in the study of preserved tissues have been made in recent years (Zimmerman 1979; Zimmerman and Kelley 1982), and it is from Egypt that we have the greatest amount of knowledge in this regard. Zimmerman, for example, has shown the wealth of data extractable from preserved soft tissues in a recent study of a small group of mummies which demonstrated the presence of tuberculosis, anthracosis (the accumulation of carbon particles from inhaled smoke from cooking fires, etc.), severe atherosclerosis, a rare ancient occurrence of a benign dermatofibroma of the skin on the heel of one mummy, cases of spina bifida, and an infected but healed fracture (Zimmerman 1977). Work on the histology of mummified tissue has shown that many preserved tissues and lesions retain most of the characteristics comparable to freshly processed tissues of the same type. However, some inflammatory reactions (and associated neutrophils), areas of hemorrhage, malignancies of the colon, and evidence of acute myocardial infarction are poorly preserved in mummified tissues (Zimmerman 1979; Zimmerman and Kelley 1982).

Hair is important for the assessment of the nutritional status of the individual and for racial and population profiles (e.g., Hrdy 1978). The color of preserved hair must be interpreted cautiously especially when red-brown and near-blond colors are encountered in populations where dark and black hair is to be expected. Factors such as the oxidation of pigments, damage to the hair, the process of mummification, or fungal invasion of the hair shaft are all known to alter the color of hair.

3. Blood, Biological Pigments, and Stains of Biological Origin. Blood and other biological stains are encountered infrequently in archaeology and in the past were often ignored. However, when properly studied, such material can reveal extraordinary information. Dessicated ancient blood—indeed, the survival of even intact erythrocytes of several thousand years age has been demonstrated (Zimmerman 1973)—contains much potential information concerning the person to whom it belonged, at least the blood type (groups A, B, O, M, and N, usually excluding the Rh antigens, which are unstable over time) if not the manner in which the blood might have been shed. Wounds sustained before death may cause bloodstains on associated bone (Wood-Jones 1908a). Also, the discovery and proper analysis of the pink-colored bones from the cemeteries at Qumran revealed dietary practices among the monks at Qumran which are unattested by any of the published Dead Sea Scrolls or archaeological artifacts (Steckoll et al. 1971). The presence of bright yellow hematoidin on a femur from Tell esh-Shuqafiya, Egypt, is proof of the presence of an old wound and a subsequent nonacute or nonsudden death in the individual a few weeks after the wound was sustained (Jones 1988). However, quite unreliable are the conclusions drawn from the study of red-stained bedrock during the excavations at Bethel which attempt to link it with blood shed by sacrificial victims on a Canaanite altar (Kelso 1968).

4. Coprolites, Soil from the Burial, and Ancient Cesspits. Recent broadened interests in human paleopathology now require an examination of the soil of the burial, especially the soil in the pelvic and abdominal areas, for the presence of coprolites, or ancient fecal remains. Fecal remains may be found as part of the individual grave soil or in masses in ancient pit toilets. Archaeologic fecal remains may contain direct evidence of the diet of ancient man, data on the domestication of plants and the use of wild plant foods, the presence of hair and bone of animal and fish origin used as food, evidence of ancient technologies, the season of defecation of the specimen determined from seasonally specific food remains, as well as data on the microbiological and parasitic inhabitants of the human or animal alimentary tract. The soil from the pelvis and burial may also contain urinary parasites or various materials inserted into the rectum of the individual for medicinal or magical purposes prior to death. Unfortunately, much less may be learned concerning nutrition from fecal analysis owing simply to the fact that it is difficult or impossible to assess the nutritional value of foods assimilated by the body from the undigestible fibers and residues which are not assimilated. Many problems remain in the study of coprolites such as the difficulty in determining if a sample is of human versus animal origin, and various quantitative and qualitative assessments implied by the indigestible remains present in the coprolite. Attempts at culturing and recovering viable ancient human intestinal microorganisms from coprolites have failed repeatedly (see, Wilke and Hall 1975; Bryant 1974 and references).

With regard to the biblical world, paleofecal studies are very few. One analysis of coprolite specimens from caves near the Dead Sea dating to the late Second Temple period, suggest the presence, perhaps commonly, of *Entamoeba histolytica, Giardia lamblia,* and *Chilomastix mesnili.* All three are common intestinal protozoa in developing countries, the first two of which may cause diarrhea and abdominal complaints but also may be life-threatening, the latter being a harmless protozoan inhabitant on the colon (Witenberg 1961). Several studies of Egyptian coprolites have provided some data on food items and ancient parasites from various periods (Cockburn et al. 1975; Smith and Wood-Jones 1910: 181–220; Netolitzky 1911; 1912).

Occasionally, other biological artifacts are recovered with the burial soil such as tissue and arterial calcifications, urinary and gall stones, and echinococcal cysts, among others.

5. Foreign Objects Associated with Grave Contents. Burials may contain durable objects which provide considerable evidence for the paleopathologist. Among these may be weapons embedded within a portion of the skeleton such as arrowheads (Pahl 1983), the remains of rope nooses and garrotes (Wood-Jones 1908b), crucifixion nails (Zias and Sekeles 1985), the presence of splints or bandaging (Smith 1908b), and many other items.

6. Fabricated Cultic, Artistic, and Other Fashioned Artifacts. While this group of artifacts easily may fall within other spheres of study such as the history of medicine, sociology, cult, or myth, they often have relevance directly to paleopathology as well. Various objects found in association with human

habitation and burials sometimes preserve replicas or images of certain human activities of medical importance or portrayals of pathological conditions. However, such artifacts must be interpreted with caution. For example, from Egypt, the painted limestone statue of the dwarf Khnumhotep (Egyptian Museum no. 160), the granite sarcophagus lid with the portrait of its dwarf occupant Djehor (Egyptian Museum no. 1294), or the statuette group of the dwarf Seneb with his wife (Egyptian Museum no. 6055) prove the existence of achondroplastic dwarfism in ancient Egypt, agreeing importantly with the literary and artistic evidence from ancient Egypt as attested by many examples (Ruffer 1911 = Moodie 1921: 35–48; Dawson 1938). However, the claim of Yoeli (1955 and 1968), that a single Canaanite figurine dated to the 14th century B.C. portrays the *facies leonis* of advanced leprosy at such an early date runs counter to current knowledge of that disease in antiquity. Also, several ancient portrayals of the Pharaoh Akhenaten have stimulated much discussion about several possible diseases he may have had although his mummy itself has not yet been found (Aldred and Sandison 1962).

Another area which holds some potential in anthropology, genetics, and paleopathology is the study of ancient fingerprints left on pottery by the potter, pressed into the insides of bivalve molded figurines, pottery, etc. Fingerprints on various objects uncovered by the archaeologist are a relatively common discovery, but little study has been made of these important sources of ancient dermatoglyphs.

More directly applicable to the biblical world is the unusual case of the famous woman Babata from the time of Bar Kokhba, whose artifacts were found in the so-called Cave of Letters in Nahal Hever. Her possessions included a basket (her "purse") which contained such traditional feminine objects as scraps of cloth, a mirror, household items, and various personal documents. Also recovered were two important and telling artifacts, her sandals. One sandal had a normal sole pattern, but the other was peculiarly shaped to conform to the outline of her pathologically malformed foot. Babata, it appears, was crippled and had a visibly deformed foot, the shape of which was reflected in her sandal, a disability she bore her entire life. She likely had the noticeable limp of a cripple, and certainly she could not run well. See LAME, LAMENESS. None of Babata's skeletal remains have yet been identified (Yadin 1963; 1971).

C. Pseudopathological Changes in Human Remains

An area of paleopathology of which we still know little is the study of false diseaselike lesions or changes in human remains which are due to factors in the burial environment and therefore occur *post mortem.* Relatively common are such changes as bending or warping of long bones due to grave soil pressure over time, tracks along bones made by roots or insects which mimic venous imprints in bone, or scratches and erosions due to carnivorous animals, all of which may appear pathologic in their origin (Wells 1967). Such alterations in skeletal remains may be particularly enigmatic—at times one may not be sure if certain lesions on ancient bone represent disease processes or are the result of innumerable environmental factors. One of the most important examples of pseudopathological changes in human bone being interpreted as truly pathological are the past attempts of several physicians to see the existence of syphilis anciently in skulls from Egypt dating many centuries earlier (even to the late Predynastic period of Egypt) than any previously known from any part of the world (Fouquet 1896; Zambaco Pacha 1897; Lortet 1907; others). These pseudo-syphilitic bony changes of the skull resembled true syphilitic changes so closely that the claims of ancient syphilis in Egypt remained unchallenged for more than a decade until it was shown that such changes were actually due to a combination of the effects of insects and sandy burials upon the skull (Smith 1908a).

A more recent example is the question of the true incidence of ochronosis in ancient Egypt. Several claims for its existence were called into question only because ochronosis in modern times is a rare autosomal recessive condition. X-ray films of the intervertebral discs of Egyptian mummies often present an impression indistinguishable from the densification of the intervertebral spaces characteristic of alkaptonuric ochronosis seen in modern examples, and thus several claims for the common existence of ochronosis in ancient Egypt have now been shown to be the result of artifacts owing to the processes of mummification (Sandison 1968; Vyhanek and Strouhal 1976).

D. Animal Paleopathology

Much of the present discussion may be relevant to the paleopathology of animal remains. Ancient animals also may be found to have had arthritis, broken bones, and other diseases, although the impact of such discoveries is often minor or insignificant in archaeological terms. However, other findings are clearly more applicable to the archaeological setting. Among the more important aspects of animal paleopathology are the evidences of man-inflicted wounds associated with hostilities, animal sacrifice, etc. (Holladay 1982).

E. Are Archaeological Human Remains a Biohazard?

The issue of biohazardous risk associated with archaeological period biological evidence has been raised occasionally, most recently with regard to the smallpox virus. Smallpox was eradicated worldwide by 1979, but some have cautioned that viable smallpox virus particles may be entombed in potential reservoirs such as the mummy of Rameses V, which is covered with smallpox pustules (Meers 1985). However, the infectious risks associated with archaeologic human remains appear to be extremely small, generally speaking. Smallpox virus particles have not been proven viable after more than a year in dormancy. It is often difficult or impossible to culture viable organisms from mummy viscera, or matter from ancient pit toilets which must have initially received a variety of contagious organisms. However, there are few studies of this question and presently there are no established guidelines regarding the biohazardous potential of archaeologic period human remains.

F. The Paleopathologist

During the early days of paleopathology, the paleopathologist (although many early researchers in ancient disease process never thought of themselves in such terms) was most often an anthropologist or physician, but sometimes an historian, antiquarian, or chemist. At the present day, and reflecting the diverse nature of diagnostic techniques and technologies, the paleopathologist, now more than ever, represents many fields and orientations—most often anthropologists and archaeologists specializing in osteology and paleopathology, and physicians who may represent such specialties as pathology and radiography. Also, one often finds paleopathological studies, especially in team efforts, which include the work of biochemists, microbiologists, demographers, forensic artists, and many others. Such diversity in paleopathologic science is its major strength and this interdisciplinary nature of paleopathology will only increase in the future. However, the paleopathologist must necessarily bridge several fields, no matter what one's initial training might be. The paleopathologist must understand human physiology and pathology, the concepts of diagnostic osteology (often not the same as that of modern surgical pathology), or such fields as paleoenvironment, biochemistry, and many others, while at the same time being aware of the requirements of solid archaeological technique and the elements and principles of accurate history. It is to be expected, therefore, that paleopathological studies may occasionally vary in quality.

G. Paleopathology and Reburial Laws

Without question, the greatest obstacle to the paleopathologist is the established laws and regulations in most modern countries of the biblical world which require reburial of excavated ancient human remains. The implications of such regulations are many, such as greatly restricting the length of time permitted for the study of human remains, restriction of the application of special techniques and technologies to the specimens, or elimination of the opportunity for future study of problems which were not touched upon initially in the field. For example, the reader will note that many of the references to studies of osteological material used in this article mention the frustration of time restrictions and reburial requirements attached to the study of human remains. Such laws also prevent the restudy of osteological samples years after an initial assessment. One possible effect of this is seen in a recent craniometric restudy of skulls from Lachish which determined that only 39 percent of the specimens had been assessed correctly in the initial study performed soon after their excavation. Had these skulls been reburied instead of deposited in the British Museum of Natural History, much of our data on the population at Lachish derived from these skulls would have remained forever incorrect (Keita 1988).

Local religious and cultural sensitivities often even prevent the excavation of human remains from their ancient burial sites. And so, for example, important sources of data for the anthropology and paleopathology of the ancient Jews, such as the Jericho necropolis containing many thousands of burials,

or the cemeteries at Qumran containing approximately 1200 burials, still remain largely unstudied except for a few samplings (Hachlili et al. 1981; Steckoll 1967–69; Haas and Nathan 1967–69; Steckoll et al. 1971). One can appreciate and understand the many religious, social, and traditional motivations underlying the establishment of reburial laws, but clearly, the dead can only speak to us and tell us of their ancient lives when their remains are accessible for careful and reverent study by sympathetic modern scientists. Many ancient people still wait to speak. That skeletal remains may be housed in museums is only to their honor rather than the comparative anonymity of a cursory examination and haphazard reburial.

H. Paleopathology and Archaeology of the Biblical World

It is only in recent years that human and animal remains from archaeological excavations have begun to receive the attention they deserve. Today, it is apparent that paleopathology often touches upon issues which relate directly to biblical period history, problems, and personalities. Some random examples of this applicability might include the following out of many possible examples.

Without question, the best evidence for the paleopathologist is to be found in mummified human remains where the skeleton as well as some or all of the soft tissues are preserved. In this regard, we know that Merneptah, the probable Pharaoh of the Exodus, had severe periodontal disease and had lost all of his upper maxillary teeth in the molar-bicuspid regions, leaving only his frontal teeth with which to chew food. He also had extensive arteriosclerosis and was obese (Harris and Wente 1980: 330, 294). A restudy of male skulls from ancient Lachish has provided new confirmation of the multinational population suggested by data from the Bible and excavations at the site (Keita 1988).

Paleopathological studies of human skeletal remains from the ancient Middle East have yet to demonstrate the existence of leprosy and syphilis in the ancient biblical world before the 6th century A.D., although some biblical translations of and commentaries on Leviticus 13 and 15 have led many to believe that it existed at an earlier date. See LEPROSY; DISCHARGE. A skeleton from the Abba cave at Giv‘at ha-Mivtar, thought to be that of one of the Maccabean heroes and which possessed evidence of wounds which generally agreed with that reported of his death, has been shown with reasonable probability by modern paleopathologists to be the remains of a woman who had sustained a sword wound to the face *post mortem* (Smith 1977). Important new contributions to our previously sketchy knowledge of the methods of crucifixion have also been reported (Zias and Sekeles 1985 and references).

Populations of several periods in ancient Israel have been osteometrically profiled (Arensburg 1973; Nathan 1961; Smith and Zias 1980; Arensburg and Rak 1985; others), and for example, the Jewish population during the Second Temple period has been described as generally of a robust short to medium stature, having brachycranic to mesocranic skulls, with short broad faces. Jewish families of this period were faced with a child mortality of 30 percent although this was lower than that experienced by non-Jewish neighbors of the same period (Smith and Zias 1980), and similar to that of Bedouin skeletal remains from Israel dating to the last century (Goldstein et al. 1976). Dental disease and arthritis were evident by middle age (Hachlili et al. 1981; Smith and Zias 1980). Specific diagnostic problems such as various forms of trauma in late ancient Israel have been described (Rak et al. 1976), as well as numerous observations on the health and diseases of Jewish inhabitants of Israel during the period of 100 B.C. to A.D. 600 (Arensburg, Goldstein, and Rak 1985).

Among the most important recent studies of human remains from Transjordan have been the series of reports dealing with EB Age human remains from shaft tombs at Bab edh-Dhra (Ortner 1979; Ortner 1981; Ortner 1982), and the skeletal remains from Tell el-Mazar which represent a significant number of Iron Age human remains known elsewhere in large numbers only from Kamid el-Loz and Lachish (Disi et al. 1983). Iron Age human remains are very much fewer from other sites in the biblical world such as Megiddo (Hrdlička 1938), Ain Shems (i.e., Beth-shemesh; Hooton 1939), Azur, or Gezer (Macalister 1912). All of these studies demonstrate that degenerative arthritic conditions, trauma, and dental attrition are the most obvious conditions reflected in these human remains. Trephaning is also evident in a significant number of crania from this period, however it is to be interpreted.

Less work has been done on the osteology and paleopathology of skeletal specimens from Mesopotamia. The region is most famous for the discovery of the prebiblical Neanderthal remains from the Shanidar Cave in N Iraq (Trinkaus 1983). Otherwise, a number of scattered and relatively recent reports have appeared which focus largely on isolated or small groups of human specimens, although "bin" ossuaries are known from several sites. Nevertheless, some of these studies present important and rare paleopathological cases such as the possible remains of conjoined ("Siamese") twins from early Tell Hassuna (Abdul Aziz and Slipka 1966). Clearly, the most important and only synthesis of paleopathological data from this area is the recent study of Rathbun which concentrates largely on specimens dated earlier than about 1000 B.C. (Rathbun 1984). In this region, he notes that "pathology has yet to be considered adequately," and further, although the majority of specimens date from the metal ages, superficial study and reporting in the past "again makes comprehensive comparisons tenuous" (Rathbun 1984: 138). However, several skeletal markers for inadequate or periodic nutritional stresses are present in remains from earlier periods, as is generalized dental attrition, especially in earlier specimens and in the Neanderthal remains. Bronze and Iron Age skulls from some sites show a very high incidence (40 percent) of advanced otitis media or inner ear infections and resultant sequelae with a presumably high incidence of associated deafness. Trauma, often violent in origin, was evident in four of six Shanidar Neanderthals and 15 percent of metal age specimens. Osteoarthritic changes were common in all specimens and the average age at death was low (Rathbun 1984).

From Egypt, there are of a host of studies, too many to be properly sampled here owing to space considerations. Egyptian specimens have given us the most comprehensive body of data on health and disease in the entire ancient world. Evidence of trauma of many types has long been known from this region. Several infectious diseases are known from ancient Egypt such as tuberculosis, poliomyelitis, smallpox, and degenerative vascular disease. Arthritis of several types was common. There is no evidence of vitamin D deficiency (rickets) or syphilis. Parasitism was widespread throughout the entire biblical world with a variety of probable sequelae such as anemia, reduced work output, poor health and longevity, and poor nutrition. Parasites such as schistosomiasis, for example, are well documented in ancient Egypt as early as 1000 B.C. beginning with the discovery of schistosome ova in the renal tubules of a mummy by Ruffer in his early landmark paper (Ruffer 1910). It was probably also present in much of ancient Mesopotamia as well since the habitat in this region was and is well suited for the spread of the disease and the shells of the snail intermediate host can be found in mudbricks used in the construction of ancient Babylonian *ziggurats.* Various other conditions are known, among them the presence of renal stones and gallstones, hernia, rectal disease, anthracosis, emphysema and pneumonia, acromegaly, achrondroplastic dwarfism, or vesicovaginal fistula associated with narrow pelvic architecture in childbirth (for further references, begin with Sandison 1985). The human remains also present us with some surprises. The high incidence of periosteal reactions in the tibias of ancient Egyptians is not convincingly accounted for, and sepsis seems only occasionally or rarely to have followed severe examples of broken bones which likely were compound fractures. Nearly all septic changes of the facial bones are due to advanced dental disease. Many other less threatening and less fatal conditions existed as well. Mummies from Egypt have shown that societies with high-population-density dwellings suffered from carbon deposits in the lungs owing to smoke inhalation from domestic fires (Zimmermann 1977).

I. Observations on Health and Disease Applicable to the Biblical World

While more specific information on health and disease in the biblical world can be had in another article in this dictionary, some results and inferences drawn from the efforts of paleopathologists may be summarized to provide here a broad general statement on the subject. Many things are clear from the study of ancient health and disease, that is, paleopathology, which are applicable to most or all of the biblical world. See SICKNESS AND DISEASE.

While there are always some long-lived individuals in every society, life expectancy in the ancient biblical world was short by modern standards, averaging in the range of 30 to 45 years depending upon the place and time. The advances of Greek society alone are credited by some with the extension of average longevity about five years to roughly 40–45 years of age, and it appears that at turn-of-the-era

Jericho, one-fourth of the population survived beyond age 50. Women generally lived shorter lives than men by as much as ten years (Arensburg, Goldstein, and Rak 1985) in contrast to the life span of modern American women, which surpasses that of men by about ten years. Mortality associated with childbirth was greater, as was also infant and subadult mortality. Indeed, the figures obtained from some skeletal groups suggest that by age 18 as much as 30 percent of the population had already perished (Hachlili et al. 1981; Ortner 1979). More startling are the burials from the Meroitic cemetery at Aksha (N Sudan), where 45 percent of the burials were age 12 and less (Vila 1967).

In ancient times there was always the constant reality of uncertain nutrition, reflected by the presence of *cribra orbitalia*, a skeletal lesion which is apparently a reaction to sustained iron deficiency, found in the ocular orbits of the skull. This has been observed commonly, for example, in ancient Jewish skeletal remains, especially those of children, which date to the Second Temple period (Arensburg, Goldstein, and Rak 1985).

Trauma, accidental and inflicted, was one of the most common causes of injury and disability, and is one of the most frequent causes of pathological conditions apparent in ancient skeletal remains. Healed broken bones are often found in various states of union and disunion as evidence of accidents and inflicted wounds. Certain forms of arthritis and degenerative conditions were common. By the Coptic/Byzantine periods, dental caries became much more notable and increasingly so thereafter in association with refinements in diet and lifestyle, whereas before this time and in association with more unrefined diets, attrition (wear) was common and caries were rare (Arensburg, Goldstein, and Rak 1985; Brothwell 1959). Infectious diseases went largely unchecked except for natural immunity. A variety of states of disability must have existed anciently owing to many causes. It cannot be stressed too strongly that pain was a common fact of life for much of the ancient population.

Arterial disease was probably widespread anciently and is known to have existed in Egypt at least. Evidence of cancer from antiquity is very rare, but the reasons for this are not clear. A possible explanation may be the shorter life span of most people anciently, and thus the probability that malignancies were expressed in many fewer of the population. Another explanation may be that many malignancies often do not spread to the bone before death and are thus not apparent to the paleopathologist.

J. Conclusion

The importance of a serious study of human remains from archaeological excavations in view of the real and potential knowledge to be gained thereby has resulted in the frequent participation of a paleopathologist as part of the staff of archaeological expeditions, and reflects the increasing sophistication of the theory and method of the so-called "New Archaeology." See ARCHAEOLOGY, SYRO-PALESTINIAN. Clearly, as much may be learned about the inhabitants of an ancient tell from their skeletal remains as from associated artifacts.

PALESTINE, ADMINISTRATION OF. With the collapse first of Samaria (722 B.C.) and then of Jerusalem (586 B.C.), political control of the land of Canaan passed from Israelite/Judean hands into the hands of successive conquering empires. This entry surveys how those various imperial powers arranged to administer this territory. The entry consists of six sequential articles covering (1) Assyrian and Babylonian administration, (2) Persian administration, (3) local Judean officials during the Persian period, (4) Ptolemaic (Hellenistic Egyptian) administration, (5) Seleucid (Hellenistic Syrian) administration, and (6) Roman administration. For the Hellenistic Jewish administration of Palestine in the period between Seleucid and Roman rule, see HASMONEAN DYNASTY.

ASSYRIAN AND BABYLONIAN ADMINISTRATION

The administrative domination of Mesopotamia over Palestine, as manifested first in the Neo-Assyrian then in the Neo-Babylonian empire, spans the two centuries from the 730s to 539 B.C. "Palestine" here will be understood essentially as the territories comprising the biblical Israel and Judah. However, to follow the Mesopotamian impact on them, occasional notice must be taken of the contiguous regions of Transjordan, including Ammon, Moab, and Edom; of Philistia, including Ekron, Ashdod, Ashkelon, and Gaza; and of Phoenicia, especially Tyre and Sidon.

———

A. Neo-Assyrian Period

1. First Contacts (853–745 B.C.). Prior to the 730s, Mesopotamian (which at this time means Assyrian) contact with Palestine was intermittent and unimportant. Three moments are recorded in the sources available. Two of them come in the middle of the 9th century B.C., when the Assyrian king, Shalmaneser III, attempted to advance beyond the N Syrian region, attacked already by his predecessors, into S Syria: (1) 853, at the battle of Qarqar, near Hamath in Syria. Here Shalmaneser's advance was apparently stopped by a Syro-Palestinian coalition led by the Aramean Hadadezer of Damascus and Irhulena of Hamath, and among its other prominent members was Ahab of Israel (*ANET*, 278–79); (2) 841, in which Shalmaneser finally broke through the local coalition, overrunning S Syria and apparently Transjordan and Israel (Hos 10:14 may be an echo of this: cf. Astour 1971). In his mention of Syrian rulers who paid him tribute, Shalmaneser includes the apparent leader, Hazael, the recent usurper of the Aramean throne of Damascus who had been attacking Israel, and the ruler of Israel himself, who seems to be Jehu (^{I}*Ia-ú-a/Ia-a-ú mār* ^{I}*Ḫu-um-ri-i*), the recent usurper of the dynasty of Ahab (*ANET*, 280–81; cf. P. K. McCarter's proposal that the king here is Jehoram, son of Ahab [McCarter 1974], and the responses by Weippert 1978 and Halpern 1987). Shalmaneser III's victory may have given Israel some relief from the Aramaeans, but it was only temporary. For with the withdrawal of Assyrian forces, Aramean pressure from Hazael returned, and another forty years remained before a "deliverer" appeared (2 Kgs 13:5), in the person of Adad-nirari III. The latter king records in several inscriptions his defeat of Syria-Palestine, especially Damascus, and in one of them adds that he accepted tribute from "Joash, the Samarian" (Page 1968), i.e., Joash, grandson of Jehu, king of Israel. The date of submission is disputed between 803/802

(e.g., Schramm 1972) and 796 (e.g., Millard and Tadmor 1973), but two results can be discerned. First, the submission seems to have brought some Israelite captives to Assyria, as revealed by their inclusion in wine ration lists from Kalah a couple of decades later (Kinnier-Wilson 1972: 91–93). Second, the submission, with the defeat of Damascus, allowed Joash and his son, Jeroboam II, under the nominal protection of Assyria, to gain back territory in Transjordan previously lost to Damascus and then, eventually, when Assyria became too preoccupied elsewhere to interfere, to embark on an expansion of their own (2 Kgs 13:25; 14:25,28).

The three moments just noted represent no sustained concern for Palestine on the part of the Assyrians. Insofar as they had an interest in permanent control it extended, to the W, only so far as the Syrian states up to the W bend of the Euphrates, which were either annexed as provinces or, more often, kept as vassal states (e.g., Nasibina, Rasappa, Guzana, Harran, Bit Adini; cf. the Tell Fakhariyeh stela, probably of the middle 9th century B.C. [Abou-Assaf, Bordreuil, and Millard 1982]). Syria farther W and S was largely for periodic raids to gather booty and personnel and to keep lines of commerce open to the Mediterranean and beyond. Into this area N Israel—never Judah—was drawn, but Assyrian armies barely grazed its territory. The tribute and captives thus taken can be construed as a kind of imposition of vassalage upon the local Syro-Palestinian states, but it was a vassalage clearly not regularly enforced, all the more as Assyria in the century between 850 and 745 also faced serious challenges from other outsiders on other borders, especially Urartu to its N, and from rival elites within its midst.

2. Neo-Assyrian Empire in Its Classical Period (745–609 B.C.). a. Tiglath-pileser III and His Imperial Reforms. This pattern changed with the accession of Tiglath-pileser III as Assyrian king in 745. Apparently a usurper, who succeeded to the throne out of the struggle among rival elites, Tiglath-pileser undertook a vigorous program to rebuild the Assyrian state. On the one hand, he seems to have curtailed the independence of various high officials, who had become virtually kings in their own right. On the other, he initiated almost immediately upon his accession a wide-ranging series of military campaigns in all directions: first to the south to Babylonia (745); then to the E to the Zagros and W Iran (744); next to N and central Syria, detaching them from the Urartian sphere of influence (743–738); then to the N to Urartu and E to the Medes in W Iran (738–735); back to Damascus and Syria along with Palestine (734–732); and finally, to Babylonia once more (731–727), with which he was involved almost until his death in 727. The successes of these campaigns Tiglath-pileser sought to consolidate into an imperial system. While it rested on earlier Assyrian efforts, in extent and complexity it was really something new, and continued, with some modifications, as the basic political structure until the collapse of Assyria at the end of the 7th century.

This imperial system relied on a large-scale bureaucracy that radiated from the imperial cities in the Upper Tigris area outward, and more particularly on an increasingly professional army hardened by regular campaigning, a well-maintained road network, and an intelligence and propaganda apparatus to monitor potential trouble spots and spread the message of Assyrian invincibility. The areas conquered were arranged in two basic categories, both of which had been used by Assyrian rulers before Tiglath-pileser, though over a more limited territory. The first were the vassal states. Here the local state and ruler were kept intact—although if the ruler had been resistant, he could be replaced by someone else in his family or community who would be more pliant—in return for which the ruler had to agree to become a loyal subordinate of the Assyrian sovereign. The agreement seems to have been formalized in an oath-treaty to the Assyrian king directly, the *adê,* which stipulated loyalty to the king and his dynasty, coordination of foreign policy with that of the king, and approval from the king for any local change of ruler. The vassal was also obligated economically in the form of material goods and personnel. These were often taken in a large amount upon conquest by the Assyrian king, and after that the vassal sent them in smaller sums annually as tribute *(biltu, mandattu/maddattu)* as well as in occasional special taxes *(katru, tāmartu/nāmurtu).* It was also expected that the vassal would furnish men and supplies to Assyrian military campaigns and building enterprises conducted in his vicinity. What may not have been required was worship of the Assyrian gods (see further below). To ensure compliance with the obligations that were demanded, at least in the case of potentially uncertain vassals—it is not clear whether this applied to

all vassals—the Assyrian central administration installed an official called a *qēpu* at or near the vassal's court, together with a small garrison, or sometimes it relied on a nearby governor *(šaknu)* for this task.

If the vassal rebelled or if the newly conquered state in other ways required it, the Assyrian king could annex it outright as a part of Assyrian territory (the formulas in the Assyrian royal inscriptions speak of "seizing it anew," which probably means "reorganize" [*ana eššūti ṣabātu*] or "reckoning the local population with my people/the Assyrian people" [*ana/itti nišê mātīya/māt Aššur manû*]). In this way, the state lost its independence and became an Assyrian province *(pīḫatu)* ruled directly by an Assyrian official labelled either *šaknu* (= Heb *sagan*) or *bēl pīḫati* (= Heb *peḥāh*). These two titles have been conventionally translated as "governor," but what difference, if any, existed between them has not yet been agreed on. The governor maintained his own palace complex in the capital city of the province. He also controlled various other locales of authority within the province: fortresses *(birtu, ḫalṣu)*, royal roads, and stations for royal messengers and the army *(bīt mardīte)*. Collecting taxes—in addition to the general terms for tribute, *biltu* and *mandattu/maddattu*, the particular categories used were the *ilku*, a tax in labor service, and the *šibšu*, a tax on agricultural produce—was one of the governor's main duties; part of these was sent on to the central imperial cities in the Assyrian heartland, while the other part remained in the province to maintain the local administration. The governor had to keep the imperial center regularly informed of all activities and to join the Assyrian army on campaign when ordered. He also, unlike the apparent situation in the vassal states, provided for Assyrian religious cults, though native gods and their worship were certainly not proscribed. And in the process of carrying out his duties, assisted by a variety of subordinates—the *rab ālāni*, in charge of a subdistrict (perhaps = *qannu*) of settlements with its own urban center, was the most important—the governor was normally able to gain profit of his own: at least of some of the taxes left over after the distribution to the central and provincial administrations could be used by him personally, and he was normally granted land by the king, often tax-free, outside his own province.

A province was created normally as a result of Assyrian military action, which resulted in the destruction of certain of the local cities and towns of the region and deportation of significant elements of the population, especially from the local elites and craftsworkers, to other parts of the empire, most prominently to the central imperial cities in the Upper Tigris triangle. Here the deportees entered the work force, as skilled craftsmen or as laborers, on state building projects, were mustered into the army, or became part of the governing bureaucracy. In turn, the lost population was replaced, at least partially, by deportees brought in from other provincial regions. While it is clear that Tiglath-pileser III created provinces and practiced deportation on a far larger scale than his predecessors, and that his policy was continued by his successors, the origins of this policy are no longer certain. Forrer (1920: 10–11) had argued that it began by his breaking up into smaller units the large provinces in existence from earlier decades in the area from the Tigris to the western bend of the Euphrates—provinces that had been controlled by powerful, rather independent governors. As noted above, it does appear that Tiglath-pileser curbed the power of these officials, but Garelli (Garelli and Nikiprowetzky 1974: 113–14, 232–34) has more recently cast strong doubts on the assumed breakup of territory as one of the means by which this was done.

This imperial system of vassal states and provinces exhibited several peculiarities or partial modifications. Babylonia, because of its ancient cultural associations, was the most troublesome part of the empire, and at various times was a vassal, province, and especially a state ruled by a member of the Assyrian royal family, whether a son, brother, or the reigning king himself. In the west, the Phoenician cities remained vassal states under special protection, so that their maritime commerce would flourish to Assyria's benefit. Vassals of another kind were the nomadic Arab tribes in the Syro-Arabian desert and the N Sinai—similar arrangements operated with other nomadic groups like the Medes—who were too elusive, resistant, and far away to be coerced into provinces. Rather, with their sheiks nominated as vassal rulers and pasture rights occasionally given on the margins of Assyrian imperial lands, the Arabs could be used to facilitate trade, the passage of Assyrian armies, and other kinds of communication through the

deserts and other border areas over which they alone had mastery. This was particularly crucial in the Assyrian campaigns against Egypt, which had to go through the Sinai.

b. Israel in the Classical Neo-Assyrian Period. Within the imperial system just described, the fortunes of Israel and Judah can be followed. Israel, from the first campaigns of Tiglath-pileser III to the W in 743–738, passed rapidly from vassal to province. In 738, in the wake of Tiglath-pileser's defeat of a N Syrian coalition led by Azriyau of Yaudi (not = Azariah/Uzziah of Judah!), Menahem, king of Israel paid the Assyrian tribute (2 Kgs 15:18–20; *ANET*, 283a; Levine 1972: 18.II 5). The resulting vassal status, however, was shattered by 734, when a new Israelite king, Pekah, joined forces with the king of Damascus, Razyan II (= biblical Rezin), in an anti-Assyrian pact to enlarge their territory at the expense of Judah under Ahaz. This so-called Syro-Ephraimite war brought Tiglath-pileser back to the region, and in 732 he defeated the coalition and conquered the two states. Damascus became a set of provinces; Israel lost, it appears, its W and E territories to provinces (see below). The core of Israel, around the capital Samaria, was allowed to remain a vassal state under a new, seemingly pro-Assyrian ruler, Hoshea, whose accession had to be approved by Tiglath-pileser III (*ANET*, 284a; cf. Borger and Tadmor 1982: 244–249). But by 725 Hoshea was in open revolt against the successor of Tiglath-pileser, Shalmaneser V. And the response was equally decisive. Israel was attacked and Samaria was besieged. Hoshea seems to have been captured and deported at the beginning of this siege (2 Kgs 18:9–10 with 17:4–6), and after three years, during which time, leadership may have been assumed by city elders or generals, Samaria fell in 722, at the end of Shalmaneser's reign (2 Kgs 17:5–6; TCS 5: 73.I 28; cf. Tadmor 1958: 37). His successor, Sargon II, however unfairly claimed responsibility for this success (Tadmor 1958: 34), dating it to his accession year. But two years later, in 720, Sargon had a legitimate boast when Samaria revolted a second time, in conjunction with a widespread uprising of the W vassals and provinces supported by Egypt, and he put it down (*ANET*, 285, and victory stelae of Sargon from Samaria [Crowfoot, Crowfoot, and Kenyon 1957: 35 & pl. IV 2] and Qāqūn [cf. *RLA* 5: 203b]. At this point, apparently, Samaria and its environs became definitively an Assyrian province, under the name *Sāmerīna*, the Assyrian equivalent of Hebrew *Šōmĕrōn* (= Samaria). And as in 722, population deportation took place.

After 720, therefore, no independent or vassal state existed in the territory of (N) Israel. The classic study of Forrer (1920: 60–61,63) had supposed that four provinces were established in what had been the Israelite state prior to 732. Three came in 732 after Tiglath-pileser III's campaign: Dor (= Assyrian *Du'ru*) on the Mediterranean coast from above Ashdod to the Mt. Carmel region; Megiddo (= Assyrian *Magiddû/Magaddû*) in the Jezreel Valley and Galilee; and Gilead (= Assyrian *Gal'a[d (d)a];* on the form see Weippert 1972: 154–55) in the N Transjordan. The fourth province was Samaria (= Assyrian *Sāmerīna*) in the hill country below the province of Megiddo, established in 722–20 under Sargon II. As Eph'al (*WHJP* 4/1: 284–86), however, has noted, no Assyrian or Biblical texts unequivocally mention Gilead as an Assyrian province; when the name occurs in Tiglath-pileser III's inscriptions, it designates only a city, and only by extrapolation from biblical texts that describe earlier periods and later Hellenistic Greek texts can one infer that Gilead in 8th–7th-century Assyrian history designated the capital city of a province. Similarly for Dor, the Assyrian references are only to a city, and one can only guess whether this was an isolated Assyrian center or the capital of an Assyrian province by the same name. Only for Megiddo and Samaria do the Assyrian records—and for Samaria, also the biblical (2 Kgs 17:24, 26)—testify clearly to their existence as provinces. And at least by Esarhaddon's time, the territory of Samaria appears to have included Aphek, close to the Mediterranean coast (Borger 1956: §76:16, as collated by Tadmor *apud* Cogan 1974: 100, n. 19).

As for the deportations, these proceeded over a number of decades, beginning with Tiglath-pileser III's campaign of 734–732. In 733–732, the king deported large numbers from the Transjordanian tribes of Reuben, Gad, and half-Manasseh, then within the N kingdom of Israel (1 Chr 5:6, 26) and from Upper Galilee (2 Kgs 15:29; Tiglath-pileser III annals, which give the number as 13,520 [Tadmor 1967: 66]). With the fall of Samaria in 722/720, the inscriptions of Sargon II number the deportees at 27,290 (*ANET*, 285a), but whether this figure represents the sum from the conquest in 722, by Shalmaneser V, and 720, by Sargon II, who also, it may be recalled, took credit for the 722 conquest, or just the sum from 720 is

not clear. The Biblical record (2 Kgs 17:6; 18:11; 1 Chr 5:26) seems to record only the 722 deportation, which it indicates took the captives to the upper Euphrates, around the Habur River (Habor, river of Gozan), to the area apparently NE of Nineveh beyond the Tigris (Halah, cities of the Medes). Assyrian texts, in turn, indicate the presence of Israelites after 722/20 in Gozan (= Tell Halaf), Kalah (= Nimrud), and Nineveh as various kinds of officials and workers, military and otherwise. Of these, recent evidence from the reign of Sargon II suggests that the Assyrian especially prized Samarians for their expertise in chariot and equestrian warfare and deported them to serve both as contingents within and as experts to advise the army (Dalley 1985).

Doubtless not all the inhabitants of the former kingdom of Israel were exiled. But to replace those who were the Assyrians brought in deportees from other parts of the empire. 2 Kgs 17:24 (cf. 30–31) speaks of people brought from a variety of cities in Babylonia (Babylon, Kutha, perhaps Hamath and Sepharvaim), probably in Elam (Avva, though some have located this in Babylonia), and possibly in Syria (Hamath and Sepharvaim, if they are not in Babylonia). These are presented as coming in the wake of the 722/20 conquests (cf. also Sargon II annals, *ANET*, 284b; Tadmor 1958: 34), though it is likely that the 2 Kgs list is a composite of several deportations, both from 722/20 and later. Clearly later, either in 716 or in 715, Sargon records the transfer of parts of Arab tribes—the Tamudi, Ibadidi, Marsimani, and Hayyapa (*ANET*, 286a). And in Ezra 4:2, 9–10, there are notices of additional deportations to Samaria in the following 7th century by Esarhaddon and Ashurbanipal (= Heb Osnappar), the latter, according to vv 9–10, including people from Babylonia (Erech/Uruk and Babylon) and Elam (Susa) as well as other places.

The operation of Assyrian administration in these provinces of the former kingdom of Israel can be followed only in limited fashion. Sargon II's inscriptions speak of imposing on the newly created province of Samaria, after its conquest, tribute (Akk *biltu, mandattu/maddattu)*, continuing "the *biltu* of their former king" (Winckler 1889: 1.100.24–25, *ANET*, 285a, which should refer to the tax system of Israel when it was an independent state). Three governors are known from Assyrian documents, all important enough to have achieved the status of eponym (references in *RLA* 5: 203): Itti-Adad- (a)ninu of Megiddo (679, reign of Esarhaddon); Nabu-kitta-uṣur of Samaria (690, reign of Sennacherib; in different documents he is described as *bēl pīḫati* [Grayson 1963: 96.120] and as *šaknu* [Postgate 1970: 148]); and Nabu-sar-ahhesu (646 or 645, reign of Ashurbanipal) also of Samaria. A *rab ālāni* is attested from an Assyrian document found in Samaria, in which he is to be given, apparently on order of the governor, a ration of animals (Reisner, Fisher, and Lyon 1924: 1.247; 2, pl. 56b). Samaria and Megiddo, apparently as capital cities of their respective provinces, are noted in several lists of Assyrian administrative centers, some of which indicate tribute submitted by these centers to the Assyrian crown. Dor is also listed in these texts, but note above Eph'al's caution about identifying it as the capital of a province. Several Assyrian texts, letters, and administrative lists, indicate contingents from Samaria in the Assyrian army, though it is not clear whether these represent forces sent by the province or deportees from the original Assyrian conquest in 722/720 (cf. Dalley 1985 and other references in *RLA* 5: 204). Akkadian texts reflecting Assyrian control have been found in three settlements: Samaria (Reisner, Fisher, and Lyon 1924: 1.247; 2, pl. 56a–b; Crowfoot, Crowfoot, and Kenyon 1957: 35, pls. II–III, XV: 18a), Gezer (republished by Becking 1981–82), and Tell Keisan near Acco (Sigrist 1982). The texts at issue include: for Samaria, a legal order, a bulla with the royal Assyrian seal that bears the name of a local resident, a cylinder seal of a Nabu-zabil with an inscription mentioning various Babylonian gods, and a fragment of an Assyrian royal stela, probably of Sargon II; for Gezer, two legal contracts, one dated to 651, recording the sale of an estate with houses and slaves, and the other dated to 649, describing the sale of a plot of land, in addition to several uninscribed cylinder and stamp seals and impressions (Reich and Brandl 1985: 45–48); for Tell Keisan, a list of bread rations perhaps for foreign soldiers or settlers. The texts, thus, are of standard Mesopotamian types, found elsewhere in the Assyrian empire, and reflect Mesopotamian/Assyrian administrative/legal procedures. The personnel involved, if one may judge from the names, are of mixed background—Assyrian, Babylonians, Egyptians, Aramaeans, Israelites—exactly what one would expect from Assyrian deportation policy and confirming, at least in broad outline, the

range of population pictured for conquered Samaria in the biblical sources noted above (2 Kgs 17; Ezra 4).

The archaeological picture of the N kingdom after the Assyrian conquest correlates with the picture described in the written sources. Sites like Hazor (Level VA), Megiddo (Level IVA), Beth-shan (Level IV), and Gezer (Level VIA) show destruction in the latter 8th century that fits with the written evidence of Tiglath-pileser III's campaigning in their area in 733–32. In turn, the destruction of Samaria (Period V–VI)—not complete, but centered on the buildings of the Israelite royal quarter—and of other sites like Tell el-Farah of the N (Level VIIc–d) and Shechem (Level VII) can be attributed to the conquest of 722. Most of the destroyed sites—Beth-shan is one of the exceptions—were resettled, although not all immediately. Some like Tell el-Farah of the north (Level VII e) and Shechem (Level VI) were now poorer and less extensive than before. In the case of Samaria (Level VII), the earlier defensive walls seem to have been kept and restored, although the general rebuilding indicated by Sargon II in his annals (*ANET*, 284b) has not been found on the site.

Megiddo (level III), Hazor (Level IV), and Gezer (Level VB) evidence refortification that suggests their positions as Assyrian administrative centers: Megiddo as capital of the province of the same name; Hazor and Gezer as subprovincial centers perhaps for *rab ālāni,* Hazor within Megiddo and Gezer within Samaria or possibly Dor. At all three sites, the remains of fortified buildings were discovered that doubtless served administrative needs, and hence have been called palaces. The plan of the one at Gezer is unclear, but at Hazor (citadel) and Megiddo (buildings 1052 and 1369), the structures are of the "open court" type, in which a series of rooms is arranged along the four walls of the building with an open court in the middle. This type appears to derive from Babylonia, and was brought to Palestine, where it was previously unknown, by the Assyrians; Lachish (where, however, the structure, called by the excavators the Residency, is now to be dated to the Achaemenid Persian period), Tell Jemmeh, and Buseirah represent other (southern) sites in Palestine where the building is found. Note that at Hazor and Megiddo, these "open court" buildings were in central locations: at Hazor occupying the whole of the W bluff of the citadel; at Megiddo, both near the city gate. In addition, just NE of Hazor at Ayyelet Ha-Shahar a new settlement was established, more or less contemporaneous with the Assyrian occupation of Hazor III. The bulk of this is another palace, whose fragmentary plan seems directly to reflect the palaces of the Assyrian imperial capitals, with two, not one, open courtyards, slightly separated, around which rooms are arranged (Reich 1975). A recent suggestion by J. Bloom (1989) is that the Ayyelet Ha-Shahar palace represents the dwelling of the Hazor *rab ālāni,* while the open court building on the citadel of Hazor III is an Assyrian *ekal mašarti,* the armory and headquarters of the Assyrian garrison at Hazor. Indeed, that there appears to be no real settlement in Hazor III beyond this building suggests that the site served then exclusively military-administrative purposes.

Besides these architectural features, the Assyrian presence in Samaria and adjacent provinces can be traced in various artifacts. The small, but noticeable number of cuneiform texts and seals from Samaria, Gezer, and Tell Keisan has been described above. The other noticeable artifact is a distinctive pottery, hitherto unknown in Palestine, which has been labeled Assyrian palace ware because it is at home in the palaces of the Assyrian imperial capitals (Nimrud has furnished an especially large collection; see Oates 1959). This pottery is distinguished by its thin, fine ware, and its shapes include a bowl with a high flaring rim which reflects a metallic prototype. The pottery appears in Palestine primarily in the first years of Assyrian occupation both in imported and in local copy, and gives way rather soon to indigenous pottery styles.

What did the Assyrians expect from the population of natives and deportees settled in Samaria and the other provinces which they had created out of the former kingdom of Israel? Several inscriptions of Sargon II speak, as we have seen, of the tribute *(biltu, mandattu/maddattu)* imposed on the population, by which should probably be understood both the initial spoil and the subsequent regular payment of taxes. The inscriptions make a point that this was done "just as if they were Assyrian" *(ki ša Aššurî),* and add that "I also had them trained in proper behavior" *(inušunu ušāḫiz)* (Lie 1929: 6:7.17; Winckler 1889: 1.100–1.24; cf. *ANET*, 284–85). What is involved here is elaborated on in another inscription of Sargon,

treating the resettlement of captives and others in his new capital of Dur-Sarrukin (Khorsabad): "I ordered citizens of Assyria, knowledgeable in all the proper behavior *(mūdūte ini kalama),* as overseers and supervisors to teach them correct conduct, the worship of god and king" *(ana šūḫuz ṣibitte pālaḫ ili u šarri)* (Lyon 1883: 12.74). These statements reflect, as Cogan (1974: 49–55) has pointed out, the effort to organize the new and mixed population of the provinces and to teach them proper obedience. Indeed, the possibility that such statements may have been broadcast to the local population, at least to the local elites, is suggested by the way they are echoed in a biblical text like 2 Kgs 17:27–28 (Paul 1969). What the obedience involved, certainly, was the orderly payment of taxes, service to the crown, and resistance to rebellion. Included as well was a degree of religious obeisance, which, as other Assyrian texts, not relating to Israel, suggest, could take such forms as taxes for support of the temples of the Assyrian gods in the imperial centers and the erection of images of deified weapons, particularly associated with the imperial god Ashur, in provincial cities, around which, one can assume, worship occurred. But obeisance to the Assyrian gods did not apparently displace the worship of other deities connected with the provincial populations. This is clearly indicated by the narrative in 2 Kings 17, which describes the various deportees in Samaria each worshipping their own gods along with Yahweh, whose cult is said to have been reactivated there with the approval of the Assyrian king, and eventually to have predominated among the population. While there is doubtless some special pleading in this narrative on the part of its Deuteronomistic editors, the religious tolerance it assumes from the Assyrian authorities is borne out by practice elsewhere in the empire (Cogan 1974: 55; 38 n. 101; 104–7).

The waning of Assyrian rule in Samaria and adjacent provinces seems to have begun, or at least becomes noticeable, in the late 640s, in the wake of Ashurbanipal's costly wars in the S and E parts of the empire, viz., against Babylonia (652–648) and Elam (647–646). Against the background of these wars, the West saw the opportunity to challenge Assyrian control, and the last attested Assyrian interventions in the S Levant were in the mid-latter 640s in response: a campaign against the nomads who were menacing the provinces from the middle Euphrates to the Transjordan; and the conquest of mainland Tyre (Ushu) and Acco, which had rebelled. By the 620s and the death of Ashurbanipal (627), the situation of the empire as a whole became urgent, provoked and aggravated by strife within the ruling Assyrian elite joined to a resurgent independence in Babylonia and Iran. Not surprisingly, Egypt took advantage to extend its influence through Palestine, to which Assyria seems eventually to have agreed in return for support elsewhere; one by-product may have been the Assyrian cession of Megiddo to Egypt in this period (Malamat 1973; archaeologically this is Megiddo II). It is probably no accident as well that the 620s mark the full emergence of the political and religious reforms undertaken by Josiah of Judah, reforms that may have included a reclamation of territory in Judah previously removed by Sennacherib in his 701 campaign (2 Kgs 23:5, 8; 2 Chr 34:9, 32; letter from Meṣad Ḥashavyahu [*ANET*, 568) and an attempt to expand into Samaria and perhaps adjacent provinces (2 Kgs 23:15–20; 2 Chr 34:6–7, 9, 33; for the debate on this see D. Edelman 1991). Significantly, the extant sources on Josiah's reforms (2 Kgs 22–23; 2 Chr 34–35) do not report any concomitant defensive measures against Assyria nor, in turn, any Assyrian response.

c. Judah in the Classical Neo-Assyrian Period. Unlike Israel, Judah's involvement with Assyria, from the western campaigns of Tiglath-pileser III in the 730s B.C. until the collapse of the Assyrian empire in 614–609 B.C., shows a basic consistency: its status as vassal is never changed. That status first becomes clear in 734–732 B.C., when Judah was attacked by the "Syro-Ephraimite" coalition of Damascus and Israel as part of a general agitation against Assyrian authority in the region, and Tiglath-pileser III responded with a campaign of conquest through S Syria, Israel, Transjordan, and the Mediterranean coast from Phoenicia to "the city of the Brook of Egypt" in the Sinai (Wiseman 1951: 23.18). In this campaign, Ahaz of Judah affirmed his loyalty to the Assyrian, who secured his throne, and this affirmation is made clear in the biblical text (especially 2 Kgs 16:7–18) and in an Assyrian list of tribute providers either from 734 or 732 (*ANET*, 282a, where the name appears in Akkadian, as ^{I}*Ia-ú-ḫa-zi* = Jehoahaz). Sometime around his conquest of Samaria in 720, Sargon II noted in one inscription that he was "the subduer of the country Judah which is far away" (*ANET*, 287a), which would not seem to indicate that Judah had

revolted at that time, but rather had paid tribute as a loyal vassal (so Tadmor 1958: 39 n. 146). And two other occasions of demonstrated loyalty are recorded in Assyrian texts for the long fifty-five-year reign of Manasseh of Judah: the first in the annals of Esarhaddon, where Manasseh is listed among twenty-two W vassal kings who were commanded, about 679 or 677, to bring to the imperial capital at Nineveh materials for the construction of the royal armory and storehouse *(ekal mašarti)* (*ANET*, 291); the second from the annals of Esarhaddon's successor, Ashurbanipal, in which many of the same rulers brought gifts to the king and troop contingents to join his first campaign against Egypt in 668/667 (*ANET*, 294).

This history of vassalship was disturbed on several occasions, but it is noteworthy that none of them resulted in a change of status for Judah. Thus, in the anti-Assyrian revolt of 713–712 led by Ashdod, Judah was at least tempted to join, if it did not actually do so (cf. Isa 20:1–6; Prism A of Sargon II in *ANET*, 287a). But the outcome for her was at the most a payment of tribute, as recorded in an Assyrian text that may date from the end of this revolt and lists tribute payments from various Palestinian and Transjordanian groups as well as Egypt (ND 2765; cf. Cogan 1974: 118). In the great rebellion against Sennacherib of 705–701, Hezekiah of Judah was one of the major western leaders, extending his influence perhaps to Samaria and the other N provinces (2 Chr 30:5, 10–11, 18; 31:1) as well as to Philistia (Sennacherib annals, *ANET*, 287b). In turn, Sennacherib's counterattack, in his third campaign of 701, resulted in a sizable conquest of Judean territory ("46 of his strong cities, walled forts and … countless small villages in their vicinity" [Sennacherib annals, *ANET*, 288a]), the transfer of this territory to loyal Philistine vassals (Mitinti of Ashdod, Padi of Ekron, and Ṣilli-bel of Gaza), large slaughter and deportations from the captured settlements (Sennacherib's annals number the deportees at 200,150 [*ANET*, 288a], and the slaughter and deportation from Lachish are the most graphically recorded in the excavations at the site and in reliefs from Nineveh [Ussishkin 1982]), and a very large payment of tribute from Judah as well as an increased annual tax. Yet the Assyrian siege of Jerusalem was suddenly withdrawn; and Judah, though now reduced essentially to Jerusalem and its environs, was allowed to retain its vassal status and even its rebel king, Hezekiah (Sennacherib annals, *ANET*, 287b–88; Naʾaman 1974; main Biblical sources are 2 Kgs 18–20 = Isa 36–39 and 2 Chr 32).

Judah's vassalship was again disturbed, though still not broken, in the reign of Hezekiah's successor, Manasseh. 2 Chr 33:11–13 reports that Manasseh was captured and brought before an unnamed Assyrian king in Babylon. If the incident is authentic, as seems likely, it cannot easily be equated with either the Esarhaddon or the Ashurbanipal mentions of Manasseh noted above. It may refer, rather, to the possible involvement of Judah, along with other W vassals, in the rebellion of the Egyptian Taharqa (biblical Tirhakah) in 671 against Esarhaddon (so Cogan 1974: 69 with earlier opinions). Or it may be connected with Judean (and other western) restiveness in reaction to the Babylonian war or Ashurbanipal in 652–648 (see in Cogan 1974: 68–69; as Cogan and others have also suggested, this same rebellion and war, respectively, may also be behind the deportations to Samaria in the reigns of Esarhaddon [Ezra 4:2] and Ashurbanipal [Ezra 4:9–10]). Whatever the case, the account in 2 Chronicles 33 makes clear that Manasseh was not removed from his throne, but with the help of Yahweh, restored to Jerusalem by the Assyrians, presumably after a sizable tribute payment (which is not, however, noted). Finally, we may recall the political and religious reforms of the last Judean king, Josiah, which went unchallenged by Assyria even though they appear to have become increasingly aggressive in the 620s. Indeed, the only external force Josiah had to deal with was Egypt, which moved, as noted above, to fill something of the Assyrian vacuum in Palestine. Whether Josiah actually became an Egyptian vassal is moot (cf. *HAIJ*, 388–90), but by 609, they were at odds. For in that year, Pharaoh Necho II slew Josiah at Megiddo, evidently when Josiah attempted to stop the Egyptians from marching to the aid of the beleaguered Assyrian army in Harran (2 Kgs 23:29–30; 2 Chr 35:22–24).

Within the historical framework just given, details about the Assyrian management of Judah as vassal are, as they were for Israel, sparse. The effectiveness of the Assyrian propaganda apparatus in communicating authority and demands is made clear by the many echoes of imperial rhetoric in the biblical texts of the period, none more than in (First) Isaiah (Cohen 1979; Machinist 1983). More concretely, as we have seen, the vassal's duty of regular tribute (*biltu, mandattu/maddattu* [= tribute] and

tāmartu/nāmurtu [= supplementary gifts]) is documented for the reigns of Ahaz, Hezekiah, and Manasseh; the punitive tribute and spoil from rebellion for the reign of Hezekiah. Judeans in Assyrian army service are likewise known from Manasseh's reign, as mentioned, where they apparently were grouped into a separate unit, and the same is true for a regiment of Judeans from Lachish, deported in the wake of Sennacherib's campaign of 701, who served as palace guards in Nineveh (Barnett 1958; cf. Reade 1972: 106–7). The Assyrian practice of supervising a vassal state by placing one or more government commissioners *(qēpu)* in or near it, or of using a nearby governor *(šaknu),* is attested for several W states: e.g., the Arabs of Queen Samsi, under Tiglath-pileser III; Tyre and Ashdod, under Esarhaddon and Ashurbanipal and perhaps also, in the case of Ashdod, under Sargon II after the 713–712 rebellion (*WHJP* 4/1: 286–87; Elat 1975: 64–66; Tadmor 1966: 95). Whether such a commissioner was placed in Judah is moot. None is explicitly attested, but Elat (1975: 63–64) has argued on indirect grounds that one was appointed after the 701 campaign, and set up his headquarters in Lachish. This argument has been opposed by Ussishkin (1977: 53 and n. 14), who notes that there is nothing in the archaeological record of Lachish level II (the level of the post-701 period) that points to an Assyrian presence. Especially, Ussishkin (1977: 39) shows that the so-called Residency building, which was an "open court" structure and for Elat and Aharoni was used by the commissioner, belongs not to level II, but to level I of the Achaemenid Persian period. It represents, thus, a survival of the "open court" form beyond Assyrian times. Ussishkin's refutation notwithstanding, it makes sense to suppose that Assyrian garrisons and associated officials were at least within range of Judah to monitor affairs. Among the places they may be looked for are the sites of Tell esh-Sharia (probably Ziklag) and Tell Jemmeh (probably Arṣa) in the northwestern Negeb just inside or over the Judean border. Here excavations by Oren (1982: 159–61 for Level VI) and Van Beek (1983), respectively, have revealed in the 7th–century levels such features as Assyrian palace ware, iron spearheads, and massive fortresslike buildings. The Jemmeh building is of the "open court" form and has mud-brick barrel vaulting. Together such remains suggest that at that time both sites were Assyrian military posts.

Other archaeological traces of Assyrian activity may be found elsewhere in Judah. Thus, the devastation of Sennacherib's 701 campaign is attested at a number of sites, most dramatically at Lachish level III (on the dating see Ussishkin 1977), with such features as the massive siege ramp and counterramp against the city wall (Ussishkin 1983: 137–46; Eph'al 1984), tomb 120 with its mass burial of some 1500 persons, and numerous iron arrowheads; there is also, one will recall, the Assyrian record of all this in the extensive wall reliefs from Nineveh (Ussishkin 1982). Moreover, some pieces of Assyrian palace ware have turned up in Judah, though far less and generally later—in the latter half of the 7th century (e.g., Ramat Rahel Level VA)—than in Samaria and the other N provinces. In general, the archaeological indications, combined with other sources, suggest that Judah only slowly recovered from the devastation and truncation of its territory caused by the 701 campaign, and that the burden of heavy taxation never allowed a return to full economic health.

In the Assyrian management of its vassals, the matter of religious control has become a disputed question. Against an older opinion, Cogan (1974) and McKay (1973) have independently concluded that while religious obeisance in some form was expected of the provinces, it was not of the vassals. No Assyrian sources, they argue, indicate that vassals were required to support Assyrian sanctuaries or to maintain Assyrian religious symbols or cults within their own territory. On the other hand, vassals certainly had the option of making occasional gifts for Assyrian gods if they wanted to on their own volition. More recently, Spieckermann (1982) has returned to the older view; and while acknowledging that Assyrian texts rather infrequently mention demands for worship of the Assyrian gods, he believes that there are some instances (e.g., in Esarhaddon's treaty with the Median vassals, lines 393–96, 401–9 [*ANET,* 538a]) and that these are echoed by Assyrian practices such as deporting the statues of the gods of the people whom they conquer (e.g., for Samaria in 722/720: cf. Gadd 1954: 179, 4.32–33), presumably to be replaced (even if this is not explicitly stated) by the statues of Assyrian gods. The dispute between Cogan/McKay and Spieckermann is not easily resolved, but it appears to turn on the nature of the evidence each is seeking: Cogan/McKay looking for explicit concrete requirements and actual practices

involving Assyrian cults; Spieckermann willing to infer such requirements from more generally phrased statements, such as in the Esarhaddon treaty, because of his conviction that the religiously grounded character of Assyrian imperial ideology—promoting the superiority of the god Ashur—makes religious impositions a logical part of imperial practice.

The relevance of this debate for Judah centers on the religious innovations associated with the kings Ahaz and Manasseh: the erection of a new altar in Jerusalem copied from one seen by Ahaz in Damascus during his meeting with Tiglath-pileser III; the passing of children through fire and the Molech cult; and astral cults, which included also horses (2 Kgs 16:3–4, 10–16; 21:5–6, 18, 26; 23:5, 10–12; 2 Chr 28:3; 33:5–6). For Cogan and McKay, these innovations reflect long-standing Syrian (Aramean)-Canaanite traditions, not Assyrian, except possibly for the cultic use of horses; and their promotion by Ahaz and Manasseh was a voluntary revival of these traditions in Judah, not an Assyrian imposition. The new altar, in any case, was adapted, as the biblical text makes clear (2 Kgs 16:12–16), for a specifically Israelite/Judean worship of Yahweh in Jerusalem, not for any Assyrian god. Spieckermann admits this latter point, but supposes that the new altar was part of a religious change enforced on Ahaz when he met and affirmed his loyalty to Tiglath-pileser in Damascus, and that the old altar became then, in Jerusalem, the vehicle for the worship of Assyrian deities. It is difficult, however, to infer such worship from the only source we have, 2 Kgs 16:14, 16.

d. Trade and the Neo-Assyrian Involvement in Israel and Judah. The Assyrian treatment of Israel and Judah in the latter 8th and 7th centuries B.C. does not make sense, finally, unless it is seen with Assyrian policy toward the S Levant as a whole. Clearly a crucial aspect of this policy was opening up and maintaining lines of trade into the Mediterranean, along the coast into Egypt, and through the Sinai and down the Jordan Valley into Arabia. From these channels came a great variety of natural resources such as wood, precious objects like glass and gold, animals like horses and camels, and human personnel, which the Assyrians increasingly desired for their capital cities and elsewhere in the empire. Menacing the flow of this trade, on the other hand, were the Egyptians, especially under the aggressive 24th and 25th Dynasties, and the nomads of the Syrian desert. These occasionally accepted peaceful relations with and even the domination of Assyria, but often as not resisted it, in the process encouraging the breakdown of authority among the Assyrian provinces and vassal states of the S Levant—the Egyptians focusing on those W of the Jordan, the nomads on those E.

The Assyrians, in turn, sought to deal with these challenges as inexpensively as possible. Accordingly, they preferred to maintain control through vassal states, which obviated the need for large commitments of Assyrian troops and bureaucrats. While continually restive vassals were converted to provinces, this was not done, as Otzen (1977–78: 103–6) has acutely observed, S of a line running roughly E-W above Jerusalem and the Dead Sea. Thus, Samaria, Megiddo, and perhaps Dor and Gilead became provinces; but S of them Judah, the four Philistian kingdoms (Ekron, Ashdod, Ashkelon, and Gaza), and Ammon, Moab, and Edom in the Transjordan—plus various Arab tribes in the Sinai—all remained vassals, despite the rebellions they occasionally offered. Their distance from the Assyrian imperial centers made it simply too costly to establish and supply them as full provinces—though Ashdod may have had a brief period as such shortly after 712. As vassals, then, these S states could serve as facilitators of trade with the Mediterranean, Egypt, and Arabia and as buffers against Egyptian and nomadic hostility when it appeared, their activities watched by isolated Assyrian administrative posts at sites like Tell esh-Sharia, Tell Jemmeh, Tell Abu Salima, and Tel Qatif/Tell Rukeish. (The latter two have each been identified with the commercial and administrative center [Akk *kāru*] set up by Sargon II in 716 to organize trade in the region; see Reich 1984 [who advocates Abu Salima] and Oren et al. 1986 [who prefers, probably correctly, Qatif/Rukeish]). One exception to this geographical division, it should be added, was the Phoenician cities, Sidon, Tyre, Aradus, and Byblos. Although in the latitude N of the Dead Sea and occasionally rebellious, these were nonetheless preserved mostly as vassals, presumably because the Assyrians felt that a heavy hand would interfere with their mercantile activities, and thus with the benefit the Assyrians sought to derive from them.

B. Neo-Babylonian Period

1. Preliminaries. When the Assyrian state collapsed in the years 614–609, its empire in Syria-Palestine fell largely under Egyptian control of the Pharaoh Necho II. This control did not last long. Babylonia, under the Neo-Babylonian or Chaldean dynasty, first challenged it, though unsuccessfully, in 607. Then in 605, at the battle of Carchemish, a Babylonian army led by the crown prince, Nebuchadnezzar II, decisively defeated the Egyptians and so opened Syria-Palestine up to Babylonian control. Nebuchadnezzar became king the next year, 604, and with his successors appears to have followed Assyrian imperial practices rather closely, preserving the division into provinces and vassal states and utilizing deportation.

Babylonian domination of Judah and the former territory of Israel was briefer than the Neo-Assyrian, and is more sparsely recorded. Nebuchadnezzar II appears to have taken control of the region if not immediately after his Carchemish victory, then within the next couple of years (on the question and a rather late date for the capitulation of Judah at the end of 603, see Malamat *WHJP* 4/1: 208–9 and references). Babylonian sovereignty remained until 539, when the whole of the empire passed into the hands of the Achaemenid Persian ruler, Cyrus II.

2. Samaria in the Neo-Babylonian Period. Within this chronological framework, hardly anything is known about the Babylonian treatment of Samaria and the other N provinces set up by the Assyrians. If these provinces came, partly or largely, under the control of Josiah of Judah in the 620s, it is possible that the Babylonians at first allowed them to remain as such. But by 599/98, Samaria, at least, seems to have been a separate entity, if we follow the LXX of 2 Chr 36:5, which reports that Nebuchadnezzar II included Samarians among the local contingents of troops that he sent to counter the rebellion of Jehoiakim of Judah in that period. (The parallel account in 2 Kgs 24:2, both in the MT and in the LXX, leaves out the Samarians.) This argument was advanced by Alt (1934/1953: 325 and n. 3; cf. also Malamat *WHJP* 4/1: 209 and n. 16). Much more debated, because more conjectural, is Alt's further contention (1934/1953: 328–29) that at a later point, perhaps after the deportation of 582, the Babylonians brought Judah under the jurisdiction of the province of Samaria, and that this arrangement prevailed through Achaemenid Persian rule until the arrival of Nehemiah. In any event, Samaria continued to be occupied in the period after 586, as Jer 41:5 makes clear (referring to inhabitants of Shechem, Shiloh, and Samaria), though this cannot be confirmed easily by the archaeology of the area, given the scanty and poorly defined materials uncovered.

3. Judah as Vassal. In regard to Judah, Babylonian control under Nebuchadnezzar II moved through two stages: vassal and then province. The first lasted for almost twenty years, from 605/603 to 586, and through three Judean vassal kings: Jehoiakim (605 [became king in 609]–598), his son, Jehoiachin (598–597), and his brother, Mattaniah/Zedekiah (597–586) (on the problem of the dates in this period, see Malamat 1968: 144–51; Cogan and Tadmor *II Kings* AB, 317 *ad* 2). But it was marked by several severe strains: rebellion against Babylonia (ca. 600–597) led by Jehoiakim and then Jehoiachin; a conspiracy of Judean and neighboring leaders from the Transjordan and Phoenicia, held in Jerusalem under the aegis of Zedekiah (apparently 595–594), and concerned to plan, through it did not fully implement, further anti-Babylonian resistance; and a major new rebellion against Babylonia (589–586) involving the same Zedekiah. These rebellions and conspiracy followed the earlier Assyrian pattern: they began while the Babylonians were occupied elsewhere and were inevitably opposed by other Judean groups which thought them counterproductive (the prophet Jeremiah was a prominent member of these). Yet they regularly involved not only Judah, but also some other Palestinian states, Phoenician and/or Transjordan, although the broad coalitions of rebel states of Assyrian times seem not to be found. In turn, encouragement to rebel was always supplied by Egypt, whether indirectly or directly by military confrontations with Babylonian forces, but Egypt never offered sufficient strengths or persistance to sustain the rebellions (cf. Egypt as "a broken reed" not to be relied on, a motif used both in the Babylonian [e.g., Ezek 29:6] and in the earlier Assyrian periods [e.g., 2 Kgs 18:21 = Isa 36:6]).

Nebuchadnezzar's response was in each instance a strong one, although sometimes it was delayed by the necessity to attend to troubles in other parts of the empire. Thus in 599–597, the king first sent local imperial garrisons and auxiliaries to harass the Judeans, followed up a year later by an invasion of Judah

and capture of Jerusalem by the main Babylonian army, which resulted in a deportation of the local elites, including the rebel Judean king, Jehoiachin. The latter was replaced as vassal by his more pliant uncle, Mattaniah, renamed Zedekiah, who, in turn, was required, as in Assyrian practice, to pay a "heavy tribute" *(biltu kabittu)* (TCS 5: 102.11–13; 2 Kgs 24:1–17; cf. 2 Chr 36:5–10). Another Babylonian campaign to Syria-Palestine occurred in 594–593 (TCS 5: 102.25–26); and although not certain, this may have intersected with two events of the same year: the Jerusalem conspiracy, noted above, and the (enforced) visit of Zedekiah and/or one of his officials to Babylon (Jer 51:59). Finally, in 588 or 587—the date is disputed (cf. Malamat 1968: 150–51; Cogan and Tadmor *II Kings* AB, 317 *ad* 2)—Nebuchadnezzar invaded Judah once more, this time with much greater devastation of the countryside, and began a 11/2–2-year siege of Jerusalem (2 Kgs 25:1–22; 2 Chr 36:11–21; Jeremiah 34; 37; 52:1–27). Briefly interrupted when an Egyptian force came to help the Judeans then withdrew, the siege was brought to a violent conclusion in the summer of 586. Deportation and heavy slaughter, including the sons of the vassal Zedekiah and the highest priestly echelon, destruction of the city, especially of the royal palace and the Temple, and wide plunder, including the Temple's sacred implements, all marked the Babylonian effort. Judah's vassalship was thereby ended and a new provincial status for it begun (see below), and what is significant is that this change had not been made earlier, as a result of the troubles of 600–597 or 594–593. Apparently, Nebuchadnezzar tried to hold on as long as he could to the Assyrian policy of not establishing provinces below the Jerusalem–Dead Sea line; only the tenaciousness of the rebellion in 589–586 made him decide that this policy was too mild and indulgent.

Within this twenty-year period of vassalship, several features of the Babylonian management of Judah are discernible. As in the Assyrian empire, the Judean vassal kings were called the "servants" of their sovereign (e.g., 2 Kgs 24:1 for Jehoiakim; cf. 2 Kgs 16:7 for Ahaz), and received their status from him through some kind of loyalty oath, akin to the Assyrian *adê*. To be sure, no Neo-Babylonian oath document actually survives, but of the three Judeans, Zedekiah is reported to have been brought to the imperial capital at Babylon to take such an oath in 597 (Ezek 17:12–21; Josephus, *Ant* 10.102).

Vassal activity must have been monitored, as in the Assyrian case, by various administrative centers and their associated garrisons. Riblah, near Hamath in Syria, appears to have been the main one for Syria-Palestine, taken over by the Babylonians from the Egyptians who preceded them (2 Kgs 23:33); it is here that Zedekiah and his entourage were brought before Nebuchadnezzar for judgment when caught trying to escape the siege of Jerusalem in 586 (2 Kgs 25:6, 20; Jer 39:5–7, 52:9–12, 26–27). Of Babylonian centers within or adjacent to Judah, there are no clear indications, but they must have existed, as in the Assyrian period, probably in the provinces of Samaria and the Transjordan. From these it may well be that the initial harassment of Judah in 599–98 was coordinated, using a mixture of Chaldean forces, with local troops from Moab, Ammon, Syria, and perhaps Samaria (2 Kgs 24:2; LXX to 2 Chr 36:5, as noted above).

Babylonian deportation policy, as revealed by the Judean deportations of 597 and 586, as well as a third carried out in 582, also reflected Assyrian practice, but with some variations. For both Babylonia and Assyria, deportation was aimed particularly at the leading elements of the local population—even more, it seems, under Babylonia than under Assyria—and served to punish and (it was hoped) weaken local resistance to imperial authority, as well as to furnish the empire with workers and soldiers. On the other hand, Babylonian deportation appears to have been less extensive than Assyrian; at least the numbers and frequency of deportations stand out less in texts about the Neo-Babylonian state than in texts about the Neo-Assyrian. Compare, for example, the numbers for the Assyrian deportations from Samaria and Judah—27,290 and 200,150, respectively—with those for the three Babylonian deportations from Judah—10,000, 8,000, 3,023 in 597, probably to be totaled at not more than 11,000; 832 from Jerusalem in 586; 745 in 582 (2 Kgs 24:14–16; Jer 52:28–30)—although it must be admitted that these numbers raise serious problems of interpretation (see, e.g., Ackroyd 1968: 22–23. n.24; Malamat *WHJP* 4/1:211; *HAIJ*, 419–20). Further, the Babylonians did not replace those taken from Judah with deportees from elsewhere in the empire, either while Judah was a vassal (when Assyrian did not do it either) or after 586, with its apparent conversion to a province (when Assyrian would have done it). The point is that

Babylonian deportees seem to have been resettled virtually exclusively in Babylonia and not, as in Assyrian, all over the rest of the empire as well. And in resettling them, as the Judean deportees and other examples show (Jer 29:4–7; *ANET*, 308; cf. Eph'al 1978 and *WHJP* 5:17–27; 256–58, the Babylonians seem to have been more intent than the Assyrians on keeping exiled communities intact.

The deportation policy had another facet bearing on the management of Judah. This is the evidently deliberate tension created in 597, when the rebel Judean king, Jehoiachin, and his courtiers were exiled to Babylon and his uncle, Zedekiah, was appointed in his stead. As biblical (2 Kgs 25:27–30; Jer 52:31–34) and Babylonian sources (*ANET*, 308b) indicate, the exiled Jehoiachin was allowed to retain his community and treated reasonably well, if closely watched. He had the loyalty of many Judeans, both among the Babylonian exiles and back in Judah (Jer 28:4; note the dating by his reign even when in exile in Ezek 1:2). Since Babylonian records tell us of other exiled rulers who were similarly treated (*ANET*, 308a; *WHJP* 4/1: 213, 351 n. 26), the practice may have been, as Malamat notes (*WHJP* 4/1: 213), to keep the exiled ruler as a threatened replacement for the new vassal in case the latter failed or misbehaved. But if so, the situation had an unintended effect, since the tension it provoked with the new vassal helped, in Zedekiah's case, to weaken his authority and thus to reduce his chances for success as a Babylonian vassal.

4. Judah as Province. Nebuchadnezzar II was determined that after 586 Jerusalem should not remain the functioning capital of the area. This is clear from the biblical report about its massive destruction in that year, confirmed by the excavations in the ancient center of the city. See DAVID, CITY OF; OPHEL. Here the work of Kenyon (1974: 166–71) then of Shiloh (1984: 29 and *passim;* 1986; 1989) has laid bare the devastation of level X, with its revelations of collapsed city and house walls, scattered and crushed home furnishings, intermixed with arrowheads and other weapons and a hoard of inscribed bullae of Judean officials active on the eve of the destruction.

Babylonian destruction was not confined to Jerusalem. The biblical record only briefly alludes to this, in its note about the towns of Lachish and Azekah (Jer 34:7). One must go to the archaeological evidence, therefore, to get a sense of how much beyond Jerusalem destruction reached. The Babylonian goal seems to have been particularly the fortresses throughout Judah, and the evidence shows destruction, in levels regularly with groups of pottery similar to that found in the Jerusalem Ophel destruction, in the W hill country and Shephelah (Lachish II, Tell Beit Mirsim A^3, Gezer VA), in the central Judean hills (Beth-zur III, Khirbet Rabud [probably = Debir] IB, Ramat Rahel VA), in the Negeb (Arad VI, Tel Malhata, Tel Ira VI, Tel Masos, Aroer II, and Kadesh Barnea Upper Fort), and on the Western Dead Sea shores (Ein Gedi V). The letters written on ostraca from Arad VI and Lachish II add to this picture, by describing military activities at these two border fortresses just prior to or at an early stage of the rebellion, before matters became desperate (one exception may be Lachish letter 4, which may attest the fall of, or at least danger to, Azekah [*ANET*, 322]). Interestingly, the note about Lachish and Azekah in Jer 34:7 reports that while the Babylonians were besieging Jerusalem, only these two fortresses, of those outside the capital, remained in Judean hands. The indication is, then, that the Babylonians probably completed their devastation of the rest of Judah before they conquered Jerusalem, just as Sennacherib had undertaken to do in 701.

According to the biblical book of Chronicles (2 Chr 36:21), the Babylonian destruction and deportation were so thorough in 586 that the land "lay desolate" for seventy years thereafter, to "enjoy its sabbaths." But from other textual evidence and archaeological work, it becomes clear that this portrayal is inaccurate, the outgrowth of the particular ideological interests of the Chronicler. Some areas of settlement in fact survived. These included part of Jerusalem itself, notably the W quarter (note the rich burials from the Hinnom Valley [Barkay 1986]), but especially the territory of Benjamin N of Jerusalem. Whether because Benjamin had voluntarily surrendered to the Babylonians early in the 589–586 rebellion or because even earlier, perhaps in 598–597, the Babylonians had split it off from Judah (*WHJP* 4/1: 212; 217–18), Benjamin seems to have escaped extensive destruction. Although the stratigraphy is not always clear, it appears that Benjaminite sites like Bethel, Tell en Nasbeh (= Mizpah), Tell el-Ful (Gibeah), and Gibeon continued right though 586 without a break.

It was at an ancient political center of Benjamin, Mizpah (= Tell en Nasbeh), 12 km N of Jerusalem, that Nebuchadnezzar established a new Judean capital; and we should probably understand that the core of the new community was now in Benjaminite territory. The two deportations of 597 and 586 had depleted the land of many of its leading elements—most of the royal family, major officials, key military and religious figures, the upper class of landed wealth, and various skilled artisans (2 Kgs 24:12–16; 25:11–12; Jer 52:15–16; Jer 24:1; 27:20; 29:2, 21). Those who were left, according to the biblical sources, were "the poorest people of the land" (2 Kgs 24:14), "the poor people who owned nothing" (Jer 39:10)—that is, the peasantry and other lower classes who had owned little or no property before the destruction. In addition, there were still some of the ruling elite around, who had escaped harm by going into hiding or into the Transjordan or by professing loyalty to Babylonian rule (Jer 40:7–12; cf. *WHJP* 4/1: 220–21). From this elite, Nebuchadnezzar chose Gedaliah as the ruler of the surviving Judean community.

Gedaliah son of Ahikam came from a distinguished family of Judean royal officials (2 Kings 25:22; Jer 40:5), whose service reached back to the reign of Josiah. It makes sense that Gedaliah himself should also have had government experience, and that may be attested if we can connect him with the person named in a seal impression found at Lachish, apparently of the early 6th century (Tufnell 1953: 347–48 and pls. 44–45: No. 173). In that impression, which still bears traces of the papyrus fibers of the document to which it was fixed, the owner's name is written in the longer form, Gedalyahu, and is given the well-known title "the one over the house," which could designate a royal official. A similarly spelled Gedalyahu, together with his son, Hananiah, appears in another seal impression with papyrus fiber marks, which seems to date to about the same period (Avigad 1964: 193–94 + pl. 44C). Unfortunately, neither impression provides the name of Gedaliah's father, and since we know of other Gedaliahs in the period (Jer 38:1), an identification with the new Judean ruler is not certain.

Once installed in Mizpah, Gedaliah was able to attract various Judeans who had earlier fled the Babylonian invasion (Jer 40:7–12). He also had the support, and supervision, of a Babylonian garrison at the site (Jer 41:3). The arrangement fits best with the supposition that Gedaliah functioned as Babylonian governor over a provincial Judah, and not, as Miller and Hayes have recently proposed (*HAIJ*, 423), as king. The indications that they find in the Biblical text for this are all highly indirect and can be interpreted otherwise. The fact remains that Gedaliah was not of royal blood, and it is hard to see what advantage the Babylonians would have gained by appointing him king and flouting so flagrantly and provocatively native Judean royal tradition. Indeed, though Gedaliah is not explicitly labelled a governor, the designation he is given, the one whom Nebuchadnezzar "appointed (*Hipʿil* < *pāqad*) over them (=/ the people left in the land)" (2 Kgs 25:22; Jer 40:7, 11; 41:2, 18), would suit an imperial official like a governor nicely (cf. Gen 41:34; Esth 2:3); it is, however, never used in the Bible for making a king (expected would be a *Hipʿil* verb from *mālak,* as in Nebuchadnezzar's making Mattaniah/Zedekiah vassal king [2 Kgs 24:17]).

In establishing Gedaliah's governorship, the Babylonians were determined not to allow the economy of the area to languish. The biblical texts report that Nebuzaradan, the leader of the Babylonian army against Jerusalem in 586, made the Judean poor who were left in the land "vinedressers and plowmen" (2 Kgs 25:12), "and gave them vineyards and fields" (Jer 39:10). In turn, Gedaliah advised his people to "dwell in the land, serve the king of Babylon" and "gather wine and summer fruits and oil, and store them in your vessels" (Jer 40:9, 10). Graham's recent study (1984) has made clear that behind these notices—and perhaps also various archaeological finds at Mozah, Gibeon, Tell en Nasbeh/Mizpah, and En Gedi, though the dating is not in all instances secure—is the establishment of a deliberate economic policy, in which the estates of the Judean wealthy who had been deported were transferred to the lower classes, to be worked by them for the benefit of the Babylonian state. Gedaliah was the local coordinator of this policy; and through taxes and trade, the products of the Judean economy, wine, balm, oil, and dyes, appear to have made their way beyond Judah to Babylonia itself.

What about religious practices in provincial Judah after 586? The Babylonians' deliberate destruction of the Jerusalem Temple, plunder of its sacred implements for removal to Babylon, and execution of its principal priests (2 Kgs 25:9, 13–21 = Jer 52:13, 17–27) indicate an effort to destroy the cult at least as it

had been practiced in Judah. But there is evidence that the worship of Yahweh continued, albeit on a much more modest level, which the Babylonians presumably tolerated, although their attitude is not represented with any precision. The principal notice is Jer 41:4. It records a procession of pilgrims from Shechem, Shiloh, and Samaria, thus evidently from the Samarian province, coming in mourning garb to present *minḥāh* offerings and incense *(lebōnāh)* to the temple of Yahweh, all but ten of whom were waylaid and killed in Mizpah by Ishmael ben Nethaniah, who had assassinated Gedaliah the day before (vv 5–8). Mizpah has been suggested as the location of the temple in question (e.g., *HAIJ*, 426), but more likely it is the ruin of the Jerusalem Temple which was the goal, and the mourning garb was to lament its destruction. Whether within this ruin the altar survived as the point of worship is debated; those in favor point to the absence of any notice of the altar's destruction in the biblical descriptions of the Babylonian burning and sacking of the Temple. Likewise debated is the nature of the worship: whether animal sacrifices had ceased and only nonanimal sacrifices were continued, and whether sacrifices altogether were giving way to prayer. The passage of Jeremiah clearly indicates that sacrifices were still being made, but may suggest that these were only of the nonanimal kind, if *minḥāh* here means cereal offerings and is not used more ambiguously as a general term for sacrifice, animal and nonanimal. Who supervised the sacrifices is not specified. One would expect priests, but with the main Jerusalem leadership executed, it is possible that no priests were involved at the Temple ruin, or else other priestly orders, previously subordinate or peripheral, now took over. As for prayer, various biblical texts, for example 1 Kings 8 (especially vv 46–54), have been held to emphasize it over against sacrifice and to reflect the post-586 period in Judah (e.g., Jones 1963). But the interpretation and dating of these passages is far from clear, even though one should certainly not deny the existence of prayer in the worship of the period, ubiquitous as it was already in preexilic times when the Temple and other sanctuaries were functioning.

The tenure of Gedaliah, though not specified, seems to have been a short one. He had bitter enemies, opposed to his collaboration with Babylonia and perhaps to other things he stood for. The enemies centered on a group of royalists, led by Ishmael son of Nethaniah, of the royal family, who had initially professed support of him, but then conspired with the Ammonite king Baalis (= *baʿal-yišʿa,* in the seal impression referring possibly to this king: Herr 1985; Younker 1985) and assassinated Gedaliah, his entourage, and the Babylonian garrison at Mizpah (Jer 41:1–10). The aim of the plot may have been the restoration of an independent Judean kingdom, but the result was further disaster. Ishmael's forces were set upon by those Judeans supporting Gedaliah and Babylonian rule; the losing Ishmael and eight of his companions succeeded in escaping to their ally, Ammon. In turn, the bulk of the Gedaliah forces, fearing a severe Babylonian reaction, decided to flee Judah for Egypt, and took Jeremiah with them (Jer 41:11–43:7). The fear may have been warranted. Jer 52:30 mentions a third deportation from Judah in 582, after those of 597 and 586; and while the reason for this is not given, many scholars have connected it with the assassination of Gedaliah, thus yielding about four years for his rule. The matter is not resolved, because others have understood the laconic dating of the assassination to the "seventh month," without any elaboration (Jer 41:1–3), to imply a time within Gedaliah's first year of rule, i.e., 586–585 (cf. Holladay *Jeremiah 2* Hermeneia, 296). Be that as it may, the biblical authors provide no further notice about Judah under Babylonian rule. For them at least, the importance of Judah as a viable community had ceased for the moment, and all attention was turned to the exile in Babylonia.

PERSIAN ADMINISTRATION

The period of Persian dominance in the ANE, ushered in by Cyrus in 539 B.C., is not easily documented by the available epigraphic and archaeological evidence. Persian rulers dealt with the region that came to be called Palestine, which was defined differently over time, by using political and administrative savvy to serve their own interests. Although Persian policies toward and administrative structures governing Palestine are difficult to reconstruct because of the meager evidence, an overview of administrative practice in the south, the north, Samaria, and Judah is possible.

    4. Judah

———

A. Sources

The sources available for the study of the Persian administration of Palestine fall into two distinct groups, and the difficulty which confronts us in consequence is that of relating the one to the other. First, the literary and archaeological sources illuminate the history of Palestine (principally Judah) throughout this period. Alongside the relevant biblical texts, mention should also be made of the Aramaic texts from

the Jewish community in Elephantine, Upper Egypt, of the Aramaic texts from Wâdī ed-Dâliyeh, of a number of seals and coins throughout the region, and of course, the general conclusions which may be drawn from a study of the material remains of the period. Of later textual sources, none is more important than Josephus, whose history of the period (*Antiquities* 11) probably includes a few items of authentic material not otherwise preserved. These sources are not comprehensive and so do not enable us to reconstruct a satisfyingly connected history even of Judah, let alone the remainder of Palestine (see Williamson 1990). However, this is less serious for our present purposes than might at first appear, in so far as our concern is with policy and administrative structures rather than with the course of events as such.

Second, we have a good deal of information regarding the affairs of the Achaemenid empire as a whole. Until the last century, this was confined to classical sources, such as Herodotus, Ctesias, Thucydides, and Xenophon. Now, however, it is possible to refine and sometimes modify this picture by firsthand texts from the center of the empire itself: monumental texts in Old Persian, such as Darius I's Behistun inscription, have been joined by the Elamite and Aramaic texts from Persepolis, while information in local languages from Babylon, Egypt, Asia Minor, and elsewhere has helped to round out the picture (see Cook 1983; Frye 1984). Hardly any of these, however, make any mention whatsoever of Palestine; our problem, therefore, is to match what we know of Persian administrative practices in general with such specific texts as we have for the history of Palestine during this period.

B. The Region Called Palestine

"Palestine" was not a name or district officially recognized by the Persians. Furthermore, Herodotus is not fully consistent in his usage of the term. Generally in his writings, Palestine explicitly excludes Phoenicia (e.g., in his list of satrapies, 3.91: "… the whole of Phoenicia and that part of Syria which is called Palestine …"), but at 7.89, beyond the more restricted definition, he also goes on to say, "This part of Syria [i.e., including the land of the Phoenicians], together with the country which extends southward to Egypt, is all known as Palestine." In view of this ambiguity, it would seem best in the present context to concentrate attention primarily on the territories originally included within the preexilic kingdoms of Israel and Judah, but to include some comments on neighboring districts (where sources permit) for comparison and contrast.

At the macro level, the administrative status of this territory under the Persians is relatively straightforward. When Cyrus entered Babylon in 539 B.C., he inherited at a stroke the whole of the neo-Babylonian empire, which was made up of both Babylonia and former Assyria and thus stretched around the fertile crescent as far as Egypt. During the early years of Persian rule, this whole area ("Babylon and the land Beyond the River") was administered as a single unit under Gubaru, whom Cyrus appointed as governor.

Similarly, after Darius I crushed two rebellions in Babylon at the start of his reign, we find that a Persian named Ushtani is governor over the same extended area, but that in addition he has a subordinate with responsibility for "Beyond the River" (i.e., the western side of the fertile crescent) only, namely Tattannu Olmstead 1944), who is clearly to be identified with the Tattenai of Ezra 5:3, 6; 6:6, 13. Ushtani remained in office until at least 516 B.C. (Graf 1985: 87), and Tattenai until as late as 502 B.C. (Rainey 1969: 53, Oppenheim in Gershevitch 1985: 563). It is thus apparent, on the basis of firsthand sources, that we cannot follow without qualification the somewhat later account of Herodotus when he both implies that the major reform of the empire into twenty satrapies should be dated early in the reign of Darius I and that Babylon and Beyond the River were administered as separate satrapies (the ninth and fifth in his list respectively) from that time on. It is widely believed currently (though, cf. Dandamayev *CHJ* 1: 329) that whereas the major reorganization of the empire was achieved by Darius, the specific separation of Beyond the River to form a new satrapy was realized only in the early years of Xerxes' reign as part of his reforms following two Babylonian revolts (Rainey 1969: 57; Graf 1985: 89–93). Thereafter, Palestine will have remained as part of this new satrapy until the end of the Persian period.

There is little agreement as to where the capital of the new satrapy was located. Sidon, Tripolis, Damascus, Ashkelon, and Belesys all have some sort of claim (Cook 1983: 174), though the first-named

seems most probable (Elayi 1980: 25–26). More interestingly, it appears from material remains that the Persian overlords limited their presence to a few specific garrison towns (notably Lachish, Hazor, Tel Poleg, Shiqmonah, Ramat Rahel, Ein Gedi, Tell es-Sadiyeh, Tell Mazar, Tell el-Hesi, Samaria. Tell el-Farah, and Gezer; see Kenyon 1987: 145–47), and were content thereafter to leave the administration in local hands. They will have relied upon their excellent road system and periodic inspections by high officials of the king, known as "the King's Eye" (who traveled the provinces with a military patrol drawn from the Persian army itself) to ensure stability and provide an independent check on the loyalty of both satraps and governors.

C. Persian Administration.

It is when we turn to the issue of provincial administration within this satrapy that we encounter great difficulties, and indeed the almost complete lack of connection between our two major blocks of sources (to say nothing of their spasmodic character) means that over many issues we cannot hope for more than reasonably informed conjecture. Nor should we assume that the Persians administered every province alike; a brief look at the situation in the extreme S and the extreme N of our area should underline this point before we move on to a more detailed discussion of Judah and Samaria.

1. In the South. The S border of the Persian province of Judah ran along a line to the N of Hebron and Lachish, so that these prominent centers, to say nothing of more southerly towns such as Arad and Beer-sheba, lay outside the Jewish province. This situation probably reflects a continuation of that which developed after the first Babylonian conquest (597 B.C.), when the territory of Judah was diminished and Edomite and other Arabian tribes expanded into the area.

Herodotus (3.4–9; 3.91; 3:97) tells us that in return for Arabian help during his Egyptian campaign, Cyrus' successor Cambyses did not subdue their territory but rather established "friendly relations" and that this was continued later in the sense that the Arabs were not obliged to pay revenue but that they did make annual contributions in the form of "gifts." From the Persian point of view, this may well have been regarded as a practical means of securing one of their borders with a minimum of effort, while Eph'al (1982: 206–10) has suggested that the "gifts" were in fact a fixed amount paid in return for the delegation to "the king of the Arabs" of the supervision of the spice trade from Arabia to the coast S of Gaza. A less generous attitude might be to observe that the arrangement was as much as the Persians could hope to achieve in the light of what we now know of the power and extent of this kingdom. Geshem the Arabian, who was an enemy of Nehemiah located to the S of Judah (cf. Neh 2: 19; 6:1–2, 6), is probably to be identified with the father of ḳainū son of Geshem, king of Qedar," whose name appears on a silver bowl found at Tell el-Maskhūṭa in lower Egypt, and perhaps with the Gashm ben Shahr referred to in a Liḥyanite inscription from Arabian Dedan (see the most recent defense of this identification by Graf fc., 10–11, *contra* Eph'al 1982: 213–14). This suggests that in the middle of the 5th century B.C., at any rate, the Qedarite confederation was an extensive and powerful force whose total subjugation the Persians may have considered too costly.

It has been reasonably argued, however, that following the Egyptian revolt at the very end of the 5th century, the relationship changed and the Persians established the province of Idumaea; a further reason for this may have been that the growth in population of S Palestine made this fiscally rewarding (de Geus 1979–80). This would then account for the presence of 4th-century Aramaic ostraca at Arad and Beersheba whose terminology is suggestive of Achaemenid administration, but whose late date cannot support Stern's conjecture (*CHJ* 1: 81) that the area was a regular Persian province throughout the period of Persian rule. The history of S Palestine thus makes clear that Persian administration proceeded on a pragmatic basis and was subject to development in the face of changing circumstances.

2. In the North. Administration of the Phoenician cities, located basically to the N of Palestine, but with influence on and hence implications for virtually the whole of the Palestinian coast, leads by a quite different route to a comparable conclusion (see especially Elayi 1980). In the early years of Persian rule it is clear that they shared many common objectives with the Persians in terms of control of the eastern Mediterranean seaboard. Not only, therefore, did they rapidly submit to Cyrus after he had entered Babylon (assuming that they are included among "the kings of the West land" mentioned in the Cyrus

cylinder; see *ANET* 316), but they materially aided his successor Cambyses with naval assistance for his invasion of Egypt, as they did subsequent kings in the later Greco-Persian wars of the early 5th century.

In response to (if not indeed to secure) such loyalty, these Phoenician city-states seem to have been treated with a light hand by the Persians. They retained their hereditary monarchs, were able later to mint their own coinage (Betlyon 1982), and were given considerable freedom in their commercial enterprises. Thus although they were included within the fifth satrapy, it would be a mistake to think of them either individually or collectively as simply another province. Once again, Stern (1982: 239; *CHJ* 1: 80–81) rejects this conclusion, citing in particular the fact that the Eshmunazar inscription includes the description of a region which coincides with the boundaries of the Assyrian-Persian province of Dor. What he does not state, however, is (1) that this is south of the central area of the Phoenician city-states, (2) that the area was given to Sidon as a reward for loyalty by the Persian king (unidentified, but perhaps Xerxes I, following his wars with Greece), thus implying a change in what had formerly been the situation, and (3) that the area is geographically separated from Sidon by Tyre, so that it cannot be part of a single province. The political geography of this area is admittedly extremely complex (Elayi 1982) and we do not have sufficient sources to resolve all the issues satisfactorily. Furthermore, conditions did not remain static (Katzenstein 1979) and of course later on in the Persian period the area saw at least two major revolts against the central authorities, but none of this should detract from the fact that, once again, the Persians adopted a pragmatic approach to their administration in this area—granting considerable autonomy to a traditional way of government in order to secure the benefits of much-needed Phoenician maritime skills.

This brief survey of S and N Palestine has concluded that we cannot bring *a priori* considerations to bear on an analysis of the administrative structures of any given area within the satrapy of Beyond the River. Since we have to be alert to variety, we should not be afraid of concluding from a study of relevant evidence that one province may have been administered differently from another. Unfortunately, for parts of the coastal plain, as for Galilee and Transjordan, we do not have sufficient evidence to draw any firm conclusions whatever (for a survey of what is available, see Avi-Yonah 1966: 23–31; and Stern 1982: 237–53). But for the heartland of Judah and Samaria, the OT itself, together with epigraphic and other archaeological remains, enables us to be rather more positive.

3. Samaria. The first issue concerns whether these two districts were initially administered as a single province, or whether they were two separate provinces from the very start of Achaemenid rule. References to Sheshbazzar (Ezra 5:14) and Zerubbabel (Hag 1:1, 14) as "governors" of Judah, as well as to the territory of Judah as a "province" (Heb *hamĕdînâ*, Ezra 2:1), give initial support to the latter opinion (*IJH*, 510). This was challenged by Alt (*KlSchr* 2:316–37), however, who argued in an influential article that Judah became part of Samaria in Babylonian times and that this continued to be the case until Nehemiah's time, when Judah first gained its independence (hence the opposition which Nehemiah aroused). He further argued that *pḥh*, "governor," was a broad term that could equally well refer to a "special commissioner" (see more recently McEvenue 1981).

In a strongly worded riposte originally published in 1971, Smith (1987: 193–201) pointed to the hypothetical nature of Alt's case and to the fact that Neh 5:15 implies that there were governors of Judah before Nehemiah. In the second edition of his book (1987: 149–50), Smith was also probably right to draw attention to the appearance of "Elnathan the governor" on a bulla and seal published by Avigad (1976). Neither the precise significance of the title nor the date of this material is completely certain, although probability strongly favors Avigad's and Smith's position (Williamson 1988).

Finally, various historical considerations may be added to the foregoing proposals. For instance, it needs to be asked why, if Judah was not an independent province with Jerusalem as its capital, the various official enquiries in Ezra 4 and 5 were necessary. Presumably on Alt's view the governor of Samaria should have had authority to act within his own province (Ezra 4), while Tattenai in Ezra 5 should have approached him, and not the Jews, for an explanation of what was going on. On balance, therefore, we should conclude that Judah and Samaria were administered separately throughout the period of Persian rule.

What little further is known of Samaria may be conveniently summarized next. The precise boundaries of the province are uncertain, but Avi-Yonah (1966: 24–25) has argued convincingly that it did not include Galilee, the situation thus remaining as it had under the Assyrians. The mixed population of the province (Stern 1982: 245) appears to be reflected in the names and titles of Ezra 4: 9–10, but textual difficulties preclude pressing this evidence further. By the middle of the 5th century B.C., however, when Nehemiah came to Jerusalem, Sanballat was acting as governor. The biblical text never ascribes this title to him, but it appears on a seal from Wâdī ed-Dāliyeh (Cross 1974: 18) as well as in the Elephantine papyri (*CAP* 30.29). Because he was succeeded by his descendants through a further four generations and appears himself to have been the first in his family to act as governor (for the evidence for both these assertions, see SANBALLAT), it is likely that his appointment reflects some administrative changes by the Persians following the revolt of the western satrapies under the leadership of Megabyzos in about 449 B.C., but unless Nehemiah's appointment a few years later is to be seen in the same context we do not know what further measures they took at this time.

4. Judah. a. Boundaries. Turning finally to Judah, we find our evidence to be more abundant than for any other of the provinces in Beyond the River. First, we can reconstruct not only the approximate boundaries of the province, but even its internal divisions. From the list of those who returned from Babylon (Ezra 2; Nehemiah 7) and that in Nehemiah 3, which details the participants in the reconstruction of the walls of Jerusalem, we learn that Gibeon, Mizpah, and Bethel were included, suggesting a northern border slightly more extensive than that of the kingdom of Judah after the division of the monarchy. To the east, the mention of Jericho points to the river Jordan continuing as the natural border. To the south, however, the border was pulled back to a line between Hebron and Lachish outside the province and Beth-zur and Keilah inside, as already noted, this probably continued the situation established by Nebuchadnezzar. The southwestern border, including Keilah and Zanoah, is not controversial, but in the northwest there is considerable dispute as to whether the trio of Lod, Hadid, and Ono (Ezra 2:33) are to be included or not. For different reasons, Alt (*KlSchr* 2:338–45) and Avi-Yonah (1966), among others, have argued that this district lay outside the province of Judah, whereas to counter this Stern (1982: 245–49) has added archaeological considerations to the textual data, namely the place of discovery of a number of seal impressions which he believes belonged to the Judean administration and of coins bearing the legend *yh (w)d* (Judah). As regards the disputed area, he locates this within a district that he calls "northwest Shephelah," centered on Gezer, where such finds have been made. Unfortunately, however, this sort of evidence cannot at present finally settle the issue. The trio of towns are at quite some distance from Gezer, so that we cannot be sure exactly where the border lay. This leaves us with the literary evidence alone, which points unanimously to their inclusion. This may seem a little odd geographically, but it is possible to defend it on historical grounds (Williamson *Ezra, Nehemiah* WBC, 33–34, 254–55). It thus emerges that the province was probably no more than 40–50 km wide, less than half as large as the preexilic kingdom of Judah.

Again on the basis of Nehemiah 3, it is clear that the province was divided into at least five districts (themselves apparently further subdivided), with their "capitals" at Jerusalem, Keilah, Mizpah, Beth-haccherem, and Beth-zur. Some scholars accept that this reflects the actual situation (e.g., Aharoni *LBHG*, 364), while others believe that one or two districts may simply not be mentioned in the list. For instance, Avi-Yonah (1966: 22) adds Jericho, whereas Stern (1982: 248–49) adds Gezer and Jericho, but subsumes Beth-haccherem within Jerusalem. Such details, of course, are of less significance in the present context than the intensity of administrative structures which the data present as a whole.

b. Governor. As already noted, the Persians administered this province through a "governor" (Heb *peḥâ).* We may list the names of those known to us with the source which states their title, while recognizing that in the case of those known only from epigraphical sources, there can be little certainty as to absolute or relative chronology (Avigad 1976: 35; modified by Williamson 1988), as follows:

NAME	DATE	SOURCE
Sheshbazzar	538 B.C.	Ezra 5:14 (and 1:8?)

Zerubbabel	520 B.C.	Hag 1:1, 14
Elnathan	late 6th century B.C.	see avigad 1976
Nehamiah	445–433 B.C.	Neh 5:14–15, 18; 12:26
Bagohi	408 B.C.	*CAP* 30:1
Yeḥezpîyâ	4th century B.C.	see Rahmani 1971; Mildenberg 1979; Betlyon 1986
Yeh‹ezer	(uncertain)	Aharoni 1962: 28; Aharoni 1964: 19, 43
Ahzai	(uncertain)	Aharoni 1962: 28; Aharoni 1964: 19, 43

The dates refer to the year attested by the source, not the duration of the office, concerning which there is generally no information. The names "Yeh‹ezer" and "Ahzai" appear on stamps from a refuse dump at Ramat Raḥel, but there is no means of telling whether they were governors before or after Nehemiah's time. It thus appears as if the administration was wholly in Jewish hands. The only possible doubt here concerns Bagohi, but since we know that, despite its Iranian etymology, this name could be used by Jewish families (Ezra 2:2), it seems probable that this is also the case here. In any event, he should almost certainly not be associated with the famous general of Artaxerxes III (Williamson 1977).

c. Strategic Location. Moving beyond these rather severely factual matters, we should observe next that Judah probably benefited considerably under the Persian administration from its location near the border with Egypt. (The situation ought to have been the same in the case of such neighboring provinces as Ashdod, but we have no literary evidence by which to check.) Though Cyrus himself never invaded Egypt, there can be little doubt that he had it in mind, and his son Cambyses duly fulfilled his ambition. We have already noted how, in quite different ways, this turned out to the advantage both of the Arabs to the south and the Phoenician city-states to the north and west. The dealings of the early Achaemenids with Judah should be viewed in the same light. Although Cyrus is not so much regarded now as acting purely out of liberal humanitarian considerations (Kuhrt 1983), he was certainly not above making use of such when it could be seen to work to his advantage—and in the case of Judah, it surely was. The return of some of the exiles with their temple treasures from Babylon, together with permission to rebuild the temple itself, is not out of place in terms of Persian policy toward both the area of Babylon itself, as revealed in the Cyrus cylinder, or toward Beyond the River, as noted above.

Indeed, as it turns out, for most of the major turning points known to us in the history of the postexilic period which brought the Jews into close contact with the center of power in the empire, wider international considerations can always be postulated as motivation on the part of the king. In summary (and in addition to the factors already mentioned), we may link (1) the favor of Darius I (Ezra 5–6) with his desire to consolidate his rule after the spate of rebellions at its inception; (2) the mission of Ezra (on an early date) with the Egyptian revolt (though cf. Margalith 1986; (3) the harsh measures of Ezra 4: 8–23 soon after with the revolt of the satrap Megabyzos once he had successfully put down the Egyptian revolt; (4) the mission of Nehemiah with a postulated desire of Artaxerxes I to stabilize the position in the whole of the satrapy following Megabyzos' revolt (Williamson 1990); and (5) a late date of Ezra's mission (i.e., 398 B.C.) with a further Egyptian revolt (Cazelles 1954). Finally, the account of how one Bagoses "defiled the sanctuary, and imposed tribute on the Jews" because the high priest Joannes murdered his brother Jesus in the temple (Josephus, *Ant* 11.297–301) may be linked with the attempt by Artaxerxes III to recapture Egypt in 344–343 B.C. both because a Persian general named Bagoses played an important part in this campaign, and because it is possible that the Tennes revolt just before could well have divided Jerusalem into pro-Persian and pro-Egyptian parties; but this example is far less certain, and could equally well have been motivated by local issues alone.

Evidence is continuing to accumulate regarding the administrative procedures which undergirded this policy. Frei (1984) has collected examples from Egypt and Asia Minor as well as Judah to illustrate how frequently reforms in the spheres of law and the cult as they affected a particular province were initiated by the Persians in response to specific petitions by the local inhabitants under an indigenous leadership. Similarly, Blenkinsopp (1987) is only the latest in a long line of scholars who have compared the

accounts of Ezra and Nehemiah with that of the Egyptian Udjahorresnet (for his inscription, see *AEL* 3: 36–41). He was a collaborator who, again explicitly by means of a petition, "used his new position to influence Cambyses to carry out a thorough restoration of the cult at the dynastic sanctuary of Sais" (*AEL* 3: 410), and who was almost certainly involved in the codification and enforcement of the ancient laws of Egypt, as recorded in the Demotic Chronicle (Spiegelberg 1914).

In the light of these and other examples that could be listed, a picture emerges with regard to Judah in which king and subject were each willing to make some concessions in return for what was regarded as an even greater good. As texts from various sources show, the Jews, for their part, were generally quite willing to act loyally toward the empire—including offering prayers and sacrifices on behalf of the king and his family (Ezra 6: 10; 7: 23)—in return for relative religious and legal freedom as well as tax concessions (elsewhere it has been argued that, ironically, it was this administrative convenience rather than any internal ideological development which was the primary catalyst for the exclusive stance of the Jewish reformers; see Williamson 1989). Conversely, it is likely that the Persians regarded this as a small price to pay for loyalty on their W border. But of course, as Ezra at least demonstrates, any suspicion of an abuse of this delicate arrangement was speedily treated in a harsh and peremptory manner.

Another important area in the Persian administration of Palestine is unfortunately one regarding which we have least information. As part of the satrapy of Beyond the River, Judah must have had to contribute its share toward the 350 talents of silver which, according to Herodotus 3.90–97, the satrapy as a whole was liable to pay as revenue each year, but how much and by what means the province made its contribution we have no way of knowing. On the one hand, Cyrus (Ezra 6: 4), Darius I (Ezra 6: 8–10), and Artaxerxes (Ezra 7: 20–24) all made grants for the support of the temple, and it has often been supposed that this was administered by deducting the amount expended from the amount of revenue owed by the province. In addition, there were specific tax concessions for the cultic personnel (Ezra 7: 24). On the other hand, it is clear from Neh 5: 4 that the burden of taxation fell heavily on many in the population and, from vv 14–19 of the same chapter, that several of Nehemiah's predecessors as governor exacted their dues from the people with a heavy hand. (It is possible, on the basis of evidence from the Persepolis tablets, that these dues in kind were accepted as part of the province's overall dues in revenue, but we cannot be sure.) In addition, steps were taken periodically (Nehemiah 10 and 13) to enforce the payment of tithes for the support of the temple.

Now, it has frequently been stated in the past that in the later part of the Persian period, at least, the situation already obtained which seems certain for the Hellenistic period, namely that civil as well as sacred authority lay in the hands of the high priest. If that were so, then several of the kinds of payment just listed would have been concentrated into one, and the whole system would be relatively clear. Unfortunately, however there is virtually no evidence for this hypothesis (nor have I been able to find any serious attempt to defend it; most scholars just assert it, though see Meyers 1985), and much that tells against it, such as the list of (secular) governors given above (see also Laperrousaz 1982). Thus, beyond the suggestion that the jar handles stamped with the official name of the province were once part of a system for collecting revenues in kind, we remain in the dark about this important topic.

Finally, we should observe that a number of coins stamped with the name of the province are now known from the 4th century B.C., again attesting both the administrative independence and favorable status which Judah enjoyed at that time. The occurrence of the name of a governor on some of these coins is thus not expected. More difficult to account for, however, is Barag's reading of one coin as *yḥn[n] hkhn* "Johanan the priest" (1985). Were there other evidence to support it, this might be taken as signifying that by the second half of the 4th century B.C. (i.e., just before the collapse of Persian rule) Judah was indeed governed as a hierocracy, but in fact both Barag and Betylon (1986) agree that this single coin more likely attests a time of revolt or subversive activity against Persian rule.

In sum, therefore, the Persian administration of Palestine can be best characterized as one of enlightened self-interest, exploiting with no little skill their varied ways of gaining favor with the local peoples for their own strategic and political ends.

POSTEXILIC JUDEAN OFFICIALS

A problem for exegesis of biblical references to officials lies in the fact that the official of preexilic towns called a *śar* seems to be accompanied by *sĕganîm* and *ḥōrîm,* instead of the earlier "elders," just as the previously rare *peḥâ* has now become a top-ranking "governor" or *tiršātā*ʾ. Such changes might be expected to have some relation with Persian administrative reforms, either under Darius I, or perhaps more likely in Xerxes' reorganization following the Babylonian and Egyptian revolts at his accession. But a lexical scrutiny of the terms involved, together with what little new light archaeology has shed, may point rather to developing outlooks held within the biblical period itself.

A. The Monarchic Period
1. *śar*
2. Other Officials
3. *nāśî*

4. *sāris*—"Eunuch"
5. *sĕganîm*
6. "Elders"
7. Conclusion

B. The Postexilic Period
1. Overview of Sources
2. Ezra 9:1–2
3. Nehemiah 2
4. Nehemiah 12
5. *rō›š*

C. Ezra and Nehemiah as Officials

A. The Monarchic Period

1. *Śar.* In the Monarchic period, as reported in Kings and Chronicles, the typical upper-bracket official is *śar.* Though the term is taken from Akkadian *šarru,* "king," it rarely seems to mean so high a ruler. But it does have a wide variety of meanings. The term is applied to David in his condottiere days (1 Sam 22:2); to the top but rather collegial authorities of the Philistines (for *sarĕn* 5 times in 1 Samuel 29); and in Isa 49:7, the "Servant of Yahweh," though subject to *mōšlîm* (RSV "rulers"), will be honored by *mĕlākîm* and *śārîm* (RSV "princes"). The word *śar* is used for the highest officials of David (1 Chr 22:17); and Solomon (1 Kgs 4:2); for princes (Qoh 10:16; Hos 3:4); for magistrates, *per se* suggesting judicial powers (Isa 1:23); although in Deut 1:15 rather military, as distinct from *šōpēṭ* of 1:16; similarly Exod 2:14. But *śar* is also the "city-ruler" or mayor (Judg 9:30, of Shechem; "king" in Josh 12:9–24; 1 Kgs 22:26 = 2 Chr 18:25, Shomron?). In 2 Chr 34:8, Maaseiah is the *śar* of Jerusalem involved in the finding of "the [Deut-scroll] Law," but not in the parallel 2 Kgs 22:3, where 23:8 names Joshua as *śar* of Jerusalem. The *śārîm* of cities seem to have had an authority which was rather collegial (though not clearly in subordination to a single "ruler") and paired with "elders" (Judg 8:14, for Succoth; 2 Kgs 10:1, Shomron; 2 Chr 29:20, Jerusalem). The preexilic *śar* is quite insistently *‹ebed* of the king (Rüterswörden 1985: 4–19, 92–95), though in Zeph 1:8 he is distinct from the *bĕnê hammelek.* As synonym of *rō›š, rab, pāqîd,* and *‹al haṣṣebā›,* the *śar* is progressively militaristic, culminating in the "Archangel" Michael of Dan 12:1. Throughout Chronicles, as in Job 29:9–10, the plural *śārîm* is equated with *nĕgîdîm* (RSV "nobles"), though preexilically *nāgîd* occurs only in the singular for the king as Yahweh's choice (de Vaux *AncIsr*). The fact that *śar* is occasionally used for top authorities, even sovereigns, increases rather than diminishes its vagueness: like "leader," it is a term of honor even for the most supreme potentate, but is also fully applicable to a village mayor or razzia leader.

2. Other Officials. Flanking the preexilic *śar* are not only the *pāqîd* and *nāgîd* noticed above (really names for highest-level authority), but also his "counselors" (*yo‹aṣ, niṣṣāb* [de Boer 1955]), and "policemen" (*šōmēr;* also *šōṭēr* [van der Ploeg 1954]). Even *peḥâ* occurs as early as 1 Kgs 10:15 under Solomon, for a taxable official of "the land." It is not clear whether this is Israel or Judah, or perhaps the immediately preceding Arabia as in 2 Chr 9:14. In the relatively similar context of 1 Kgs 11:15, *śar* is plainly a military title, as indeed it is in a notable proportion of all its occurrences (BDB, 3ab), not unlike the military "dictator:" *qĕṣîn* (RSV "leader") of Isa 3:7 and Joshua-Judges. But no less than four times in 1 Kings 20 alone, *śar* seems to be the head of a *mĕdînâ:* no number of such *śārîm* is given, and they are curiously neither equated with, nor distinguished from, the exactly thirty-two "kinglets" *(mĕlākîm)* who were helping Ben-hadad and carousing with him (1 Kgs 20:16–17). The anomalous use of *mĕdînâ* here will reappear below in the controversy as to whether Judah ever became a separate province with its own top authority (? *peḥâ/tiršātā›*).

3. *nāśî›*. This term has a semantic and chronological range so similar to *śar* that it is striking not to find the two in parallel. Though it is used for Abraham by Hittites in Gen 23:6, for Solomon by Yahweh in 1 Kgs 11:34, and for top civil rulers in general in borrowed Israelite law (Exod 22:27), nevertheless already in Numbers and Ezekiel it is primarily used for lay posts in the religious organization. Mysteriously

falling out of use in the postexilic period, it reappears shortly after as the rabbinic term for a high or highest religious office equated with *nāgîd.* Mantel (1961: 51) has only a fleeting allusion to the possible equating of *nāśî›* with *śar* (*m. ›Abot* 1.2; Rost 1938: 65) or its Greek equivalents, or with *śārîm* as a group sometimes consulted by high priests. Schürer-Vermes's (*HJP²* 2: 203) discussion on *gerousia* is unrelated to *śar* or *nāśî›;* but the equivalence is examined by Horbury (1986) under the name "phylarch." The *nāśî›* of Ezra 1:8 for Sheshbazzar is declared "utterly unhistorical" by Donner (1986: 410).

4. *sāris*—"Eunuch." With two *sameks, sāris* only accidentally sounds to us like *śar;* its Akkadian origin is *ša rēšî,* "he who is chief," where *rô›š* is made an adjective. In 1 Kgs 22:9 the *sāris* is exactly the kind of official for minor errands which concerns us here. But he is usually a much higher and *foreign* official; as in Genesis 37–38; Esth 1:10–11; and Rab-Saris in parallel with the famous Hebrew-speaking Rab-Šakeh of 2 Kgs 18:17. Though such an official was often called "eunuch" in the Orient, BDB is rather outdated in assigning this as its principal meaning and relating it to admittedly denominative verbs for "castrate" in Syriac, Aramaic, and Arabic. Hence it will hardly prove relevant to the long-standing debate as to whether Nehemiah (1:11) was really a eunuch, as in the corresponding Greek (*2 Esdras* 11:11: *euno-échos* is also explainable as inner-Greek variant for *oino-chóos* [as MT]; North "Chronicles/Ezra/Nehemia" *NJBC;* Yamauchi 1980). Even if Nehemiah was called "eunuch," this term, like our "chamberlain," may have really signified some administrative office. If so, it would seem to have been of a higher and more privileged rank than the local officials being discussed here.

5. *sĕgānîm*. It is not included among the dozen terms for postexilic officials studied by Rüterswörden. It does in fact occur some six times in the major prophets (Isa 25:41) for high officials of Assyria, Babylon (always parallel with *pāḥôt,* Ezek 23:6; 12:23; Jer 51:23,57), or Media (Jer 51:28). But it will be prominent in Nehemiah as an official of Judah distinct from, but equated, with *ḥōrîm.* This *ḥōr[îm]* virtually never occurs in preexilic sources. Isa 34:12 (LXX), concerning Edom, begins "And there shall be no *ḥōrîm* [which RSV connects with the preceding verse]; 'No kingdom there' they will call it." In the exilic horizon of Jer 27:20; 39:6 it occurs for "the (slain) nobles;" later still we have Qoh 10:17, "happy is your land when your king is a son of *ḥōrîm,* and your *śārîm* dine at the proper time."

6. "Elders." Apart from the "pre-state judges" (not really judges before 1 Sam 7:16, but rather charismatic "leaders"), great importance is attached in preexilic times to the "elders." The *zāqēn* is doubtless largely equated with *rō›š,* presumably heads of families *(ro›šê ›abôt),* and had great consultative influence but no real authority.

7. Conclusion. Really *all* the above biblical terms for civil authority are shifting and interchangeable. This was the (orally communicated) conclusion of Alonso-Schökel in preparing his Chronicles (1976), after an exhaustive effort to attach specific significances. This is also held by McEvenue (1981: 364), "the form of political authority in Judah from 597 to 445 B.C. remains obscure in our sources" (p. 359, "the head [*rō›š*] of a district or [*›abôt*] family, *niṣṣāb* under Solomon [1 Kgs 4:5, 7], later *śar* [1 Kgs 20] and also *peḥâ* [1 Kgs 10:5 = 2 Chr 9:14] is a lower official whose chief responsibility is organizing the taxes").

B. The Postexilic Period

1. Overview of Sources. On the specifically postexilic administration our information comes wholly from Ezra, Nehemiah, and Chronicles. Their presumed authorship by the Chronicler, and also the likelihood of a post-Nehemiah date for Ezra, are now widely questioned but must still be regarded as fully open possibilities. In any case, terms for earlier history specific to Chronicles, some of which have been mentioned above, may reflect an Ezra-era usage. Furthermore, *śar* within Chronicles occurs frequently in combinations not attested earlier, and always plural: with *rēkûš,* "possessions" (1 Chr 27:31; cf. 28:1); *maḥlĕqôt,* "departments" (1 Chr 28:1); *mĕle›ket hammelek,* "royal works" (1 Chr 29:6); *šālîšāyn/milḥāmôt* (2 Chr 8:9; 32:6 "chief of the adjutants" [Rüterswörden 1985: 45]), comparing the only use of *śar* in the singular, "of determining the singers," Ezra 2:65). Also peculiar to the Chronicler is the equating of *śar* with *rō›š;* Rüterswörden gives a number of examples, mostly of *śar* for *rō›š,* but some of *rō›š* for *śar.* His general conclusion is that the Chronicler differs from the Deuteronomist in two points (p. 145): (1) he marks no hiatus between kingdom and prekingdom practices (*šōṭēr* and *šōpēṭ* are used also

for the Kings era) and he ignores the "King's *ʿăbādîm"* (2 Chr 8:9); and (2) he makes a distinction between secular and religious officials.

References in Haggai, Zechariah, Malachi, and such possibly contemporaneous works as Job, Joel, and Jonah are fleeting and vague. The Maccabees and the Wisdom Literature, while not ignored here, are not very instructive. De Vaux's *Ancient Israel* (1961: 98), though devoting a lengthy chapter to the Chr-Ezra priesthood, has only a half-page on the postexilic "state" (Ezra 5:9; 6:7, the *mišpāḥōt* and their *zāqēnîm,* families and elders).

2. Ezra 9:1–2. These verses provide the main source on administration. In v 1 a complaint against "mixed" marriages is lodged with Ezra by the *šārîm.* RSV and NJB render this "officials"; Fensham (*Ezra/Nehemiah* NICOT, 124) and NEB perhaps better use "leaders," whom they relate to the three groups immediately enumerated: "people" (laity), priests, and Levites—though the complaint will turn out to be precisely *against* these three groups. And the next verse comes to a climax with a claim that the worst offenders are the *śārîm* themselves and the *sĕgānîm.* We might harmonizingly render "*some śarîm* protested against the widespread abuse in which (other) *śarîm* and even Seganim were involved." But it seems more objective to recognize that *śar* has become, or remains, a rather mild term for any kind of leadership, "important people," which would fit equally both verses. As for a distinction between *śārîm* and *sĕgānîm,* Fensham admits it is very difficult to find any at all; he hesitantly suggests that the *sĕgānîm,* of which we do not even know a singular form, are a kind of council for the *śar;* thus they would be a kind of *zāqēnîm* or *ḥōrîm.* And yet, with a casual reserve for the Nehemiah usages below, he audaciously equates the *sĕgān* as Akkadian loanword *šaqnu* with *peḥâ/bēl peḥâtî* "governor." Henshaw (1968: 465–69) had found that *šaqnu* is never identical with *bēl peḥâtî,* but is also never clearly above or below him (see also Lipiński 1973).

3. Nehemiah 2. Neh 2:16 is a rich source of data on those *sĕgānîm* and other officials who knew nothing of his night ride. The *sĕgānîm* are mentioned first "because they were very important," says Fensham (*Ezra/Nehemiah* NICOT, 167); but he less guardedly adds (adapting Widengren 1977: 522) that they were "probably representatives who were chosen by the congregation"—like his "council" of Ezra 9:2, but not *zāqēnîm* as suggested above. Like *śārîm* in Ezra 9:1–2, *sĕgānîm* seems to be used here in two different senses, first as a general term including also other officials about to be enumerated; then as a specific group among these officials, distinct from the four other groups.

One of these groups is suitably enough "the priests" as in Ezra 9:1 but surprisingly without "the Levites." A second group in Neh 2:16 is "the *ḥôrîm*", not noblemen in the real sense of the word, but persons with certain rights, "citizens" according to Fensham. Williamson (*Ezra/Nehemiah* WBC, 191) rejects Kellermann's attempt to take *ḥôrîm* as the local leadership distinct from *sĕgānîm,* "Persian appointees." It is important to bear in mind that *ḥôr* nowhere in biblical Hebrew means "free" or "freedman" as it does in modern Hebrew, which follows Aramaic-Arabic (and perhaps Sabean-Amharic).

There remain in Neh 2:16 two anomalous groups. "The Judeans," even more than *sĕgānîm* itself, is applicable to *all* the groups. The term is perhaps used in contradistinction to "the people of the land" (2 Kgs 25:22; see *NJBC* on Neh 4:1), those Judeans who had never gone into exile and thus had become administratively a part of the Babylonian-Persian Samarian province (Williamson *Ezra/Nehemiah* WBC)—and remained such to the bitter end, despite claims of a separate "Judah-province" to be noticed below. Nehemiah has a very prickly relationship with this "people of the land." Much of his polemic against "the [or specific] Samaritans" seems in fact directed against those full-blooded Judeans and Yahweh worshipers who had never been deemed worthy of the hardships of exile (inflicted on only the upper crust: 2 Kgs 24:14, 16). Nehemiah does not in fact elsewhere use "Judeans" as an appellative for "returnees only," "Judeans worth listening to," but we might find this implication here if our interpretation of "low-brow Samaritan-province people of the land (of Judah)" is correct.

The fifth and even more anomalous group of "officials left in ignorance" in Neh 2:10 are "the doers of the work" (RSV "the rest that were to do the work"), presumably the heads of the various guilds or locality groups immediately enumerated in Nehemiah 3, "but we cannot deduce this from the Hebrew," says Fensham (*Ezra/Nehemiah* NICOT, 167) overcautiously, citing Kaupel (1940). In that chapter indeed

we have a *sixth* group to add to the five enumerated in Neh 2:16, namely the *śar* of *pelek* or half-*pelek*. The term is generally there taken as "chief of a district" (Neh 3:16, Bet-Zur; 3:15, Mizpah) or half-district (3:9, 12, Jerusalem; 3:17–18, Keilah; 3:16, Beth-zur, under a different Nehemiah). Rüterswörden (1985: 46) concludes that these uses of *śar* in the singular were formations invented by the Chronicler without foundation in actual usage, even in the postexilic period (except for *bîrâ* in Neh 7:2); more interestingly he claims that the *śar pelek* cannot be related to *rab pilkani*, because that Akkadian term relates to *building* supervision (Demsky 1983, "corvée"). But in this context of Nehemiah there is question precisely of building supervision; and even the more general commission of Nehemiah is primarily that of *building* contractor. In any case, mention of "the doers of the work" in Neh 2:16 may justifiably be focused as a very modern nuance: Nehemiah puts the labor union leaders on a par with the bureaucrats and hierarchs, even if only to bypass them all temporarily.

4. Nehemiah 12. Neh 12:40 is the third passage focusing on *sĕgānîm*. Here we have a procession, in which Nehemiah himself leads "half of the *sĕgānîm* with me," that is, the counterclockwise half of the parade. We may see in those *sĕgānîm* the *civil* authorities, or rather "Very Important Persons" including Nehemiah himself, since the clockwise half includes mostly priests. It also includes (obscurely in 33, but tardily as head of the procession in 36) "Ezra the scribe"; whereas Ezra "the priest, the scribe" is more directly paired with "Nehemiah the *peḥâ"* in Neh 12:26, but as a purely chronological colophon to a preceding list. Fensham discreetly finds it "of interest" that Nehemiah mentions only his own half of the leaders *(segānîm)* and not any other half under the leadership of Ezra. RSV flatly excises all three references to Ezra. We would say more cautiously that the common name "Ezra" may well belong to the obscure personage of Neh 12:33, and may have given rise to 36 assuming that *the* Ezra was meant, and he would thus of course go to the head of the parade. The chronological notice of Neh 12:26 does not imply that Nehemiah was *present* or even *contemporary* with Ezra any more than with Jeshua ben-Jozadak a century earlier (Ezra 5:2), but in noting this we must repeat that the question of whether Ezra was in fact at least briefly on the stage *with* Nehemiah, or only before or after him, is fully open, because the Albright-Rudolph emendation of 7th to 27th year of Artaxerxes in Ezra 7:7 is not one bit more audacious than to excise *all* the references to Ezra and Nehemiah functioning together.

In Neh 12:31 *both* groups of paraders are "marshaled" by Nehemiah as "master of ceremonies"—a very low place on the totem pole, whatever happens to be the actual rank of its incumbent; and the *śārîm* here used for the paraders doubtless means "the leaders of various degree along with their escorts." In verse 32 the clockwise half alone are called *śārîm*, which is thus a synonym of the *sĕgānîm* of the counterclockwise half in Neh 12:40.

5. *rō›š.* This term has not shown up prominently in these key passages from Ezra-Nehemiah. It is used postexilically for special groups (Müller 1976; Bartlett 1969) and, as noted above, becomes interchanged with *śar.* Despite *adrazdā›* of Ezra 7:23 (Rundgren 1982), the Bible rarely gives a Persian title except through Akkadian, from which Aikhenwald (1985: 66) concludes that the Persian administration left no lasting trace.

All in all, our search for the above data on *minor* officials has revealed that these are at times varyingly equated with the highest local authority, sometimes having no other title, sometimes *peḥâ*, to which *sĕgan/šaqnu* is not probably equal, superior, or inferior.

C. Ezra and Nehemiah as Officials

In no case is there further evidence calling in doubt the published view that neither Nehemiah nor Ezra possessed any genuine permanent civil office within the Persian government (North 1972). The sporadically recurring claims that Nehemiah as governor stood in an unbroken line with Zerubbabel and the previous (or identical: so Lust 1987) Sheshbazzar; or that some or all of these were of Davidic lineage, thus putting this "governorship" on a far more solid and even messianic plane, have not been followed up.

But what is apparent is that more recent studies (Klein 1976), some even after respectful note of North (1972), continue to maintain in various ways that Nehemiah as *peḥâ* and *tiršātā›* was truly a governor, a cog in the Persian satrapy system, over Judah created into a *mĕdînâ* or province distinct from Samaria (Bengtson 1965; Frye 1984; Gershevitch 1985). These general histories of Persia draw their accounts of

Judean administration mainly from the philology-based dictums of outdated exegetes, or from Herodotus, with no really new empirical data. This is despite interest in the questions raised by Cross (1975) in adding a new Sanballat to the dynasty of Nehemiah's opponents (Betlyon 1986).

The request made to the king by Nehemiah at his initial appointment (1:7–8) clearly excludes any civil authority. Nehemiah asks for a recommendation to the governors of the province and for help in his building project, and there is no evidence that the king's edict went beyond these modest requests. McEvenue (1981: 363; citing Nober 1961) demolishes Morton Smith's conclusions drawn from *peḥâ;* and he briefly dismisses *tiršātā*› as likewise ambivalent. Yet he goes on to maintain that Nehemiah had a genuine civil office in the Persian administration, proved not from his titles but from the way he is shown acting; and Alonso-Schökel agrees with this (oral communication). But as *Nehemiah* NJBC shows, what Nehemiah is actually shown doing is building a wall, incidentally surmounting "foreign intrusions" (Nehemiah 4), labor troubles (Nehemiah 5), and other national solidarity crises progressively taking on a religious tinge: mixed marriages, sabbath—his manhandling and threats in Neh 13:15, 21, 25 seem to imply he was exceeding whatever authority he may have had.

After surveying McEvenue's view that there was no independent province of Judah before Nehemiah, and equating it with Alt's, Williamson (1987: 40–50) goes on to prefer the position of M. Smith and Widengren: there was a Persian province of which Sheshbazzar was appointed governor, as Ezra 5:14 says. But in understandable diffidence about that verse, Donner (1986: 422) holds that Nehemiah's original Persian commission was simply to build the wall, and at a later stage he became the first real "governor" of the *newly constituted* province (*mĕdînâ;* Neh 11:3; 7:6 = Ezra 2:1; Esther often; but already also Neh 1:3) of Judah. No two events in the civil life of a region are less likely to pass unnoticed than its erection into a new degree of independence, or the inauguration of a ruler with the highest title thus far granted. It seems inconceivable that such a great day would have passed unnoticed either in Nehemiah's personal memoirs, or in the Ezra books otherwise so fond of describing in detail just such solemnities.

We know even less about Ezra (Donner 1986: 431), but what at any rate is certain is that between the two of them something momentous was accomplished in the creation of a new Israelite identity. For further discussion see Galling TGI, and *CHJ* 1: 130–61.

PTOLEMAIC ADMINSTRATION

A. Chronology and Extent of Ptolemaic Control

After two brief periods of control (320–315 and 312 B.C.), Ptolemy I Soter gained permanent possession of Palestine in 301 B.C., when Antigonus the One-Eyed was defeated at the Battle of Ipsos. Ptolemy and his successors held "Phoenicia and Hollow Syria," as they called it, for a century until Antiochus III ("the Great") defeated the forces of Ptolemy V Epiphanes at Paneion in 200 B.C. During the intervening years, Ptolemaic and Seleucid forces fought several wars over control of Palestine, but with one exception we do not know of any significant and lasting gains by either side in these wars until the final Ptolemaic loss. Shortly before his death in 146 B.C., Ptolemy VI Philometor made an attempt to recover Palestine, but death cut short his early success (for the chronology and extent of Ptolemaic rule, see Bagnall 1976: 11–13).

The area under Ptolemaic control during the 3d century was bounded on the S by Egypt, on the W by the Mediterranean, and on the N probably by the Eleutherus River (the modern Kebir), the northern boundary of modern Lebanon. It is clear that Arados and the territory to the N in general never came under lasting Ptolemaic control (Seyrig 1951: 206–20). Ptolemy III Euergetes did gain control of Seleucia-in-Pieria and of Laodiceia in the Third Syrian War (246–241 B.C.), but they were lost by his successor, Ptolemy IV Philopator, in 219 and not regained despite Philopator's victory at Raphia in 217 (for control of Laodicea, see Rey-Coquais 1978). The limits of Ptolemaic control to the E are less clear. Philadelphia (Rabbath-ammon, modern Amman) was certainly Ptolemaic, along with much of Transjordan, but we do not know how whether any of Moab was under Ptolemaic rule nor exactly how far N it extended E of the Jordan. Paneion (the site of the final loss in 200 B.C.) was probably part of the Ptolemaic domains; Damascus was in Ptolemaic hands at least from the 270s until the 250s, and perhaps throughout the period. It seems likely enough that Ptolemaic control extended to the E slopes of the Anti-lebanon Mountains throughout their extent.

B. Military Occupation and Settlement

The Ptolemies certainly kept garrisons in the principal cities of the region, made up of mercenaries recruited from all over the E Mediterranean (Bagnall 1976: 17; Rey-Coquais 1978). In peacetime their numbers were no doubt modest, but in time of war field forces were imported in much greater quantity. Most of the military commanders mentioned in the ancient sources appear in accounts of the Ptolemaic-Seleucid wars, and we know little about the regular garrisons and their commanders. There is not even any evidence until the last two decades of Ptolemaic rule of any military governor of the region as a whole. It seems likely, however, that as in many other regions of their empire (at varying dates), the Ptolemies appointed in Palestine a *stratēgos,* or provincial governor, who had both military and civil functions. But such an appointment may not have come until the second half of the 3d century (Bagnall 1976: 219). The first absolutely certain *strategos* of the area, indeed, is first found after Antiochus III's conquest; the title is mentioned in an inscription dealing with the property of Ptolemaius son of Thraseas, formerly a Ptolemaic general, who had gone over to the Selucid king at an unknown date and become a *stratēgos* and high-priest, evidently of Syria and Phoenicia (for this official and his landholdings, see Fischer 1979; Bertrand 1982).

The Ptolemies also settled troops on land in the region in much the same way they did in Egypt: a soldier was allocated land to support him and his family, but he held it on condition of continued military service, when needed, by him or his son. These soldiers evidently tried (as elsewhere) to take advantage of their superior economic positions to enslave natives, a practice firmly forbidden, with limited exceptions, by the Ptolemaic government (Liebesny 1936). Many of them married local women; and in the Ammanitis there was a group of them under the command of a local chieftain, Tobias (Edgar 1925: 1.59003). We have no idea of the numbers of these settlers, who provided substantial military reserves and helped ensure the loyalty to the Ptolemaic crown of the areas in which they were settled. Ptolemy II founded or refounded and renamed (as Greek cities) several towns (Ptolemais, from Acco; Philadelphia, from Rabbath-ammon; Philoteria, on the Sea of Galilee), and all of these presumably had Greek soldiers among the settlers and citizens.

C. Civil Administration in the Cities

The scarce inscriptions of the period give us almost no information at all about the administration of the cities of the inferior in this period, and only some limited facts about the coastal cities, which were no doubt the focus of Ptolemaic interest. Though the Phoenician monarchy was preserved for a time at least in Sidon (as some of the Cypriot monarchies had survived briefly under Ptolemaic rule), it probably did not outlast Philokles son of Apollodorus, who served as a Ptolemaic admiral (Merker 1970; Seibert 1970). Signs of Greek civic institutions soon appear: Sidon is called a *polis;* members of its upper class compete in Greek athletics at Delos, Delphi, and Nemea; and the city has an official in charge of athletic contests whose title *(agonothētes)* is Greek. The Greek civic title *archon* is attested for Sidon and Marissa. Even with all these signs of Hellenization, however, the substance of local government may not have changed very much. The Phoenician term *sufet,* president of the people, and its Greek rendering *dikastes,* appear in Tyre and Sidon.

In all probability the cities of the coast, and at least some of those in the interior, had some land attached to them and under their administration. But our evidence for this land under Ptolemaic rule is nonexistent. Nor do we have any real indication of the relationship of the civic officials to royal ones, either those at the level of the whole province or those with more local control. Ptolemaic administration elsewhere kept local governments in check with supervision by the garrison commander (or city commandant) and financial officials, and the same was probably true in Palestine.

D. Civil Administration in the Countryside

The countryside of the province of Phoenicia and Coele Syria was divided (at least by 261 B.C.) into administrative units called hyparchies *(hyparchiai),* of whose size and number we know nothing. At the head of the financial bureaucracy in each hyparchy, just as of each nome in Egypt, was an *oikonomos,* who was in charge of such things as supervising the underwriting of the collection of taxes to contractors, overseeing the actual tax collection, and registering ownership of slaves. (This information comes mostly from Lenger 1980: 21–22.) Administrative symmetry and Ptolemaic practice in Egypt suggest that the

oikonomos operated collegially with at least one other official, who was probably called a *hyparchos.* So far, however, no evidence for these officials at the level of the entire region, to whom the *oikonomoi* probably reported at least in this aspect of their work, called "the manager of the revenues in Syria and Phoenicia." His one appearance in the papyrus uses a participle of the verb *dioikeo,* but he may well have held the title *dioiketes,* as did the finance minister in Egypt to whom he doubtless reported.

At the village level, the royal administration was represented by komarchs. They were responsible for seeing that the proper declarations of taxable or restricted property (such as livestock and slaves) were filed with the *oikonomos.* There were also royal judges, called *dikastai,* but we know virtually nothing about who they were, what areas they were responsible for, or what their jurisdictional competence was.

Despite this structure, which appears to be a Greek framework imposed on the country, the Ptolemies relied substantially on local institutions and magnates to rule the countryside for them, just as they did in the cities. The story of Joseph son of Tobias (see below) indicates that wealthy locals acted as tax farmers on a large scale, just as Tobias' role as the commander in charge of military settlers in his area shows an attempt to enlist the most powerful local figures in the military side of Ptolemaic rule.

E. Economic Management

Like any empire, the Ptolemaic was interested in exploiting its opportunities for income from the lands it controlled. Palestine was a useful backup source of wheat for Egypt when the Egyptian harvest was poor, but in ordinary times its agricultural interest was certainly more for the wide range of fruits, vegetables, oils, and wine that it produced than for wheat, which Egypt produced in abundance. The Phoenician ports had a long history as commercial centers, and these clearly offered numerous opportunities to Greeks in Ptolemaic service to make money. The Zenon papyri from the 250s show us some of the range of economic interests at stake (Harper 1928; Tcherikover 1937).

Royal interest in these activities, however, centered on taxing them. Export and import taxes at the ports, largely in the control of tax farmers, were undoubtedly important (as they were elsewhere in the Ptolemaic empire). The agricultural land of the province was also taxed. The career of Joseph son of Tobias, recounted in book 12 of Josephus' *Jewish Antiquities,* shows us a prominent local notable bidding for the tax contract for the entire province, outbidding the longtime holders of the contract and still making a fortune over more than two decades (the dates are disputed: see Bagnall 1976: 21 n. 42).

From the reign of Ptolemy II on, the coinage for the entire region was supplied by seven coastal mints (Tyre, Sidon, Ptolemais, Joppa, Gaza, Berytos, and Askalon). Like Ptolemaic coinage elsewhere, it was minted on a standard with a lower weight for the drachma than was common elsewhere. The Ptolemies systematically excluded coinage from elsewhere from Palestine (as they did from Egypt, Cyprus, and Cyrene), and hoard and excavation finds from the middle of the 3d century until its end show almost exclusively Ptolemaic coins. Many of them remained in circulation after the Seleucid conquest (Bagnall 1976: 180–83).

SELEUCID ADMINSTRATION

Only a few sources provide information about the Seleucid administration and staff in Palestine. The sources comprise a few inscriptions, the more or less extensive but tendentious accounts in 1–2 Maccabees, and the later works of Josephus. The works of Polybius and Poseidonius, who were the most important contemporary authors in the Greco-Roman ambit, as well as those of their immediate successors, are almost completely lost. The authors of the Roman Imperial period only imprecisely or summarily inform us about the management and bureaucracy of the Hellenistic period. In spite of the many problems and uncertainties concerning the historical and political development (in particular of Judea), the following survey will attempt to depict some basic features of the Seleucid administration of Palestine in the 2d century.

———

A. Seleucid Conquest and Maccabean Revolt
B. Rise of Hasmonean Rule
C. Remnants of Seleucid Sovereignty
D. Conclusion

———

A. Seleucid Conquest and Maccabean Revolt (200–157 B.C.)

During the Fifth Syrian War (202–ca. 195 B.C.) Ptolemy, the governor of the Ptolemaic border province of Syria and Phoenicia, sided with the Seleucid Antiochus III the Great and thus retained his position as provincial governor after Antiochus' victory. In 199 B.C. the Seleucid king perhaps regulated the legal and property relations of his newly won territory in a "decree;" in so doing, it is likely that he simply confirmed the existing Ptolemaic arrangements (see the inscription of Hefzibah, Fischer 1980: 1–3; see also Bengston 1964: 147–48; Fisher 1986: 66). Accordingly, Antiochus allowed the theocracy of Jerusalem and Judea to retain its conventional form, including the "high priest" *(archiereus),* the "council of elders" (*gerousia,* also in its traditional and unofficial sense called *hoi presbyteroi*), the "priests" *(hiereis),* and the "rest of the Judeans" *(hoi alloi Ioudaioi).* However, as far as we are aware he did this only indirectly in a formal message directed to his provincial governor, Ptolemy. In this letter, Antiochus allowed "the Judean people" and their temple further "magnanimities" through the governor, although in a precarious and time-limited fashion (*Ant* 12.138–44; cf. *WHJP* 6: 81–86; Taylor 1979: 51–107, 169–70). A further "announcement" seeking to protect the domestic cult regulations in Jerusalem (*Ant* 12.145–46) may have been secured from the king by Jonathan, the father of Eupolemus. In the winter of 194/3 B.C. Antiochus married off his daughter Cleopatra to the Ptolemaic king; in so doing, he may have awarded her (rights to) half of the *phoroi* (tribute) of Phoenicia and Coele-Syria ("Syria," according to the earlier Ptolemaic nomenclature). However, this personal dowry was apparently understood by both Cleopatra and by the Egyptian (Ptolemaic) rulers as the Seleucid return, surrender, or renunciation of the (entire) province.

The hereditary Zadokite high priest in Jerusalem represented the now-subject "nation of the Judeans" to the king. His task included ensuring the deliveries of the *phoroi* to the king. He assumed the principal responsibility for the territorial administration, and with his own army, he assumed responsibility for the cultic, political, military, and administrative (juridical) interests of the Seleucid king on the regional level. Thus, for example, he communicated to the court the news of the "immeasurable wealth" of the temple in Jerusalem. He likewise presented to the sovereign an accusation emerging from the Judean council of elders against the high priest. He also presented to the sovereign "memoranda," that is, petitions, applications, or complaints. When appropriate, the Seleucid monarch informed him and/or assigned other functionaries to carry out his projects. In the sense of his royal "instruction," the governor apparently also issued executive "decisions" on behalf of the (pseudo-) autonomous congregations or cities of his region (2 Macc 6:8, according to Fischer 1985: 352, n. 10).

Unlike the *dynastēs,* the provincial governor—a Macedonian or Greek who was a foreigner and as such subject to transfer—could not normally bequeath his position to members of his own family. He probably dwelt in Acco-Ptolemais, which was officially called "Antioch-in-Ptolemais" from the time of Antiochus IV at the latest. Certainly this site was, in juridical terms, a *polis* which had its own more or less "free,"

"democratic," and/or Hellenized administration. The "people" plus their own "assembly," "council," and "magistrates" were the typical institutions of such communities. The Seleucids themselves, particularly Antiochus IV and his house, encouraged the urbanization and extension of such "Greek" *poleis* as Acco in order to support their rule, especially E of the Jordan. Moreover, in many cases such cities had originated in the foreign military settlements of the Macedonian kings.

According to *Ant* 12.154, 175, the province was originally divided into four (?) districts (*merides* in the official usage, perhaps *eparchiai* in the common usage): (1) Coele-Syria (in the strict sense); (2) Samaria (at least in the Maccabean period Judea seems to have belonged within its jurisdiction); (3) Idumea (?); and (4) Phoenicia (without the N parts, that is, the region N of the river Eleutherus). Each possessed its own district governors and troops. Similarly, at this district level "subcommanders" *(hyparchoi)* were empowered to act in the civil and particularly in the fiscal arena. They were served by the local leaders in the respective counties (Bengston 1964: 10–11, 21–29, 170; cf. *HJP²* 2: 186). According to the sources, there was, however, no satrap at the peak of the civil and financial administration of the province. It may be that the native and hereditary high priest of Jerusalem enjoyed the rank and/or function of "subcommander" *(hyparchus)* of Judea; the same possibly applied to the Samaritans. Galilee was perhaps a hyparchy within the district of Samaria. However, these details and functions remain quite unclear and problematical.

Stationed on the site itself, the "commanders of garrisons" (*phrourarchoi*; at larger places *akrophylakes* or *eparchoi*) exercised the supreme military authority. As representatives of the standing army they performed all the immediate and tangible functions of occupational, police, or general security forces. In this capacity they preserved the public order alongside the civilian functionary, the *hyparch* or high priest, and helped to ensure the regular payment of the tax monies to the crown. Occasionally such commanders were designated by the types of troops or weapons at their command (e.g., the "elephantarch," as well as the "Mysarch" and the "Kypriarch" who were, respectively, commanders of mercenary units from Mysias and Cyprus).

Local "mayors" *(kōmarchai)* are not attested in the entire province; however, it seems probable that the Hasmonean Mattathias (prior to the Maccabean Revolt) and (afterward) his son Jonathan exercised (as "judges") such an administrative function at Modein and Michmash, respectively (1 Macc 2:17; 9:73). Local traditions manifested themselves fairly strongly at the lower (local) level, whereas in the first half of the 2d century the Greco-Macedonian element predominated at the top of the administrative system.

It is not possible here to deal with the conflicts concerning the "immeasurable wealth" of the temple in Jerusalem, the rivalries about the position of high priest, or the events and prehistory of the Maccabean Revolt under Antiochus IV (175–164 B.C.), Antiochus V (164–162), and Demetrius I (162–150). See MACCABEAN REVOLT. Perhaps it would be best to emphasize the following points here in abbreviated terms. Jason had attempted to establish a sort of community or even a *polis* of the "Antiochenes-in-Hierosolyma" (Jerusalem). When he failed in the end to deliver "the immeasurable wealth" of the sanctuary (as Onias III had done before him), the Seleucid king appointed Menelaus, brother of the temple manager, to serve as the new Judean high priest. See MENELAUS. The appointment of Menelaus not only deposed the traditional Zadokite dynasty in this increasingly cosmopolitan town; it also shifted the focus of the office from the religious and cultic to the economic and political sphere. At first the league between Antiochus IV and his protégé Menelaus survived, but when Judas Maccabeus achieved preeminence among the people, the "failure" was liquidated by Antiochus V. The revolt itself began in 166; it extended steadily from the *phrourarch* of Jerusalem throughout the *meridarch* of Samaria up to the provincial governor *(stratēgos).* Finally, it escalated up to the central government, only to be put down by Demetrius I himself in 157 B.C. During the Revolt, the Hasmoneans had shown themselves to be capable military leaders and very able politicians, which recommended them to the king (note the personal meeting between Antiochus V and Judas, when the latter received "forgiveness" but by no means renounced his "rebellious temper").

B. Rise of Hasmonean Rule (152–129 B.C.)

The Seleucid pretender and bastard, Alexander Balas (150–145 B.C.), considered the Hasmonean Jonathan his "brother and friend," and as early as 152 B.C. appointed him to the office of high priest in Jerusalem. After Alexander's subsequent victory over Demetrius I, the general conditions in Palestine changed drastically. In the course of the Seleucid succession struggle, which lasted until 138, the Hasmonean leaders brought increased autonomy to Judea. Henceforth, the local leader served (in the Seleucid staff) as a *dynastēs,* with his own military forces; he ascended swiftly and won advantages for his own country and for himself from his double function, that is, against the rivaling kings as well as against his own Judean compatriots. On the other hand, the royal power in Palestine diminished both quantitatively and qualitatively, as Rome now had no serious opponent in the E Mediterranean. In other words, an additional destabilizing factor had now entered the political arena. In addition to this, the native element of the population now began more strongly to assume leadership positions in competition with the Greek-born and with the immigrant "Macedonians," a phenomenon which allows comparison with simultaneous developments in Egypt.

The events which took place in these years may be summarized in the following manner. In 152/51 B.C. Demetrius I had ended the general occupation of the territory of Judea, with the exceptions of Beth-zur and the citadel of Jerusalem; he also granted to Jonathan the right to assemble his own troops and to fortify Zion. In 150/49 the victorious Alexander Balas appointed the Judean leader to be his provincial governor *(stratēgos)* and district governor *(meridarches)* (of Samaria, including Judea?); about 145 B.C. Jonathan received the court title of "relative of the king," plus the territory of Ekron as his personal, immediate, and privileged fief, on the rank order of a *dynastēs* within the Seleucid realm. The next ruler, Demetrius II (145–139, 129–125 B.C.), who maintained the garrisons in Jerusalem and Beth-zur, confirmed Jonathan's cultic, military, and political position; he laid claim to the military forces of his Judean vassal, and in fact received them. The same disposition was accepted by his rival, Balas' minor son Antiochus VI (145–142 B.C.), who additionally appointed Jonathan's brother Simon to be "*strategos* from the Ladder of Tyre to the border of Egypt" (1 Macc 11:57–59). In their victorious struggle as functionaries of the young Antiochus VI against Demetrius II, the two Hasmoneans attempted to extend their own rule, which is probably what finally cost Jonathan his life.

After this, Simon (142–134 B.C.) gathered the reins of power in Judea to himself and returned under the banner of Demetrius II. Presumably in the beginning of 141 B.C., the Demetrius II granted not only him (as "high priest and friend of the kings") but also the "elders *(presbyteroi)* and the people *(ethnos)* of the Judeans" both amnesty and deliverance from taxation, allowing them to enter the royal service (1 Macc 13:36–40).

As yet, there is no indication that the Judean dynast tangibly supported the Seleucid king; instead, we discover that "the people" dated their own (i.e., presumably the non-Greek, viz. Aramean) documents according to the reign (!) of "Simon, the great high priest, the commander-in-chief and leader of the Jews" (1 Macc 13:42; Josephus, however, differs, referring to the high priest [*archiereus*] Simon, as "the benefactor [*euergetēs*] of the Judeans and the ethnarch" [*Ant* 13.213–14; varia lectio: "eparch"]). The first year of this alleged freedom of Israel from the "yoke of the nations" corresponds to Seleucid Era 170 by the Babylonian (and therefore Judean) reckoning, that is, the year 142/141 B.C. (from spring to spring) by the Julian reckoning (1 Macc 13:41–42; 14:27; *Ant* 13.213–14). Henceforth, as of the beginning of the year 141 B.C., the Judeans considered themselves to be completely free and independent. However, the Seleucid king had neither agreed to nor pronounced the formal decree of independence. Thus the "honorary record of the great assembly of the priests, the people, the community authorities, and the elders of the country for Simon, the high priest *en asaramel* and his brothers" (1 Macc 14:25–49), which was composed in the late summer of 140, served as an additional, proper and quasi-"Israelite" legitimation of Hasmonean sovereignty (cf. *Ant* 13.215–17, which reveals a similarly plebiscitarian-"democratic" tendency). In 141/40 B.C. (= year 172 by the Macedonian Seleucid reckoning, i.e., from autumn to autumn) the considerable privilege of *asylia* was accorded by the king to the city of Tyre with its important sea harbor. In 138 the new king Antiochus VII Euergetes (139–129 B.C.), who later managed to retard the struggle for the Seleucid succession, directed some demands to Simon, the "high priest and

people's leader of the Judeans." Simon only partially assented, and succeeded in repelling the retaliatory attack of the "high commander of the coastal district" (1 Macc 15:38), which was launched on Antiochus VII's personal order. However, in the beginning of 134 Simon fell prey to the plot of his son-in-law Ptolemy, the (royal?) chief, on the plain of Jericho. Once again (around 133 B.C.) Antiochus VII achieved the subjugation of Judea. In spite of several concessions, John Hyrcanus I (134–104 B.C.), the son of Simon, was confirmed as the legitimate dynast of the people and even received a limited right to issue his own coins. As vassal and military leader, he followed his lord Antiochus VII into the Parthian War of 131–129 B.C.

C. Remnants of Seleucid Sovereignty (129–63 B.C.)

Hyrcanus survived the death of Antiochus VII in the Parthian War. He was the first Hasmonean to hire foreign mercenaries (which apparently counted as a sign of royal power). According to Josephus (*Ant* 13.273), on his return he "fell away from the Macedonians (i.e., from the Seleucid kings) and did not concern himself with them as either subject or friend" (namely as functionary, vassal, or ally). Instead, he pursued his own successful policy of expansion everywhere in Palestine. Nevertheless, some vestige of Seleucid royal authority was officially retained, as evidenced by a document from 124/23 which reflects the usage of the Seleucid Era (2 Macc 1:9).

It was Alexander Jannaeus (104–78 B.C.), son and successor of Hyrcanus, who first assumed the most exalted title "king" (*melek* or *basileus*), who dated his documents (as the Ptolemies had already done) by the years of *his own* reign, and who formally declared himself free and independent. It is conceivable that the Seleucids never renounced their juridical claim to the possession of the Hasmonean territories.

In fact, it was the "Macedonian" kings who had exhausted themselves in passionate dynastic competitions in the years following the death of Antiochus VII in 129 B.C., while at the same time Ptolemaic (Egyptian) influence over Syria and Palestine had been steadily increasing. In 125, Tyre became completely free, and other coastal sites of the former province of Coele-Syria and Phoenicia followed suit shortly thereafter (Gaza between 112 and 103; Sidon in 111; Ascalon in 104/3; Acco probably in 103 or 102. In other places, particularly in the interior, local potentates (*tyrannoi, monarchoi*) established their own more or less independent governments—Zeno Cotylas had done so in Philadelphia already under Antiochus VII; somewhat later, his son Theodorus did so in Amathus on the Jordan; Zoilus would so do in Straton's Tower and Dora; Ptolemy, the son of Mennaeus, would do so in Chalcis in the Lebanon region, etc. Occasionally the fairly meager sources permit us to make out individual events clearly, as, for example, the controversy over Joppa and the territories which Antiochus VII had detached from Judea.

When Alexander Jannaeus laid siege to Acco at the beginning of his reign, neither of the two Seleucid pretenders—Gryphus (Antiochus VIII) or Cyzicenus (Antiochus IX)—was able to assist the town. By purest chance we happen to possess a dedicatory inscription from this city by a "first friend, minister for the land forces," who was also "local commander." The king honored in this document is possibly Antiochus IX (although this is debated). Actually, this Antiochus, who controlled S Syria and the coastal sites of Phoenicia and Palestine for a few years following 113/12, was able to assert himself in battle with his half-brother Antiochus VIII, who mainly ruled in the N Shortly before the turn of the century, the Ptolemies and Hasmoneans ruled the field in swift succession. With only a few exceptions, especially on the coast, Judeans and Nabatean Arabs, under their own increasingly Hellenizing and pro-Greek princes, determined the development of the former province of (Coele-)Syria, Judea (to which Samaria had in the meantime become subject), Idumaea, and Phoenicia (*Ant* 13.395; cf. Justinus, *Epit.* 39, 5–4–6; 40, 2:4). Thus, in the course of a single century the juridical, political, military, and economic pace of events had considerably intensified and fundamentally changed through the disintegration of the sole determining central authority (Rome had not yet seized control of the region).

D. Conclusion

In the course of one century, the Seleucid administration continuously proved itself to be, in both its regular and its transient functions, neither rigid nor formalistic. Instead, it was capable of adaptation and thoroughly suited to build upon its Ptolemaic predecessor, organically and by varying degrees. For the

moment it also proved to be able to compensate for the loss of its own Greco-Macedonian basis by the absorption of both new and domestic resources.

After the misconceived and unsuccessful policy of Antiochus IV in Judea, the Seleucid kings promulgated a policy which was at once indulgent yet determined; which ensured reciprocal advantages, took account of the actual situations, and allowed for contingencies. This was a policy of "good intention" of "faithfulness and obligation" in the form of "good deeds" with respect to the subject peoples. The Seleucids were thus able, with different intentions and in varying degrees of success, to attach the rebellious, aggressive, and ambitious clan of the Hasmoneans to their own "concerns." Moreover, they did so despite their losses of territory and power, despite the dynastic embroilments, despite Rome's continuously emergent influence, and above all despite the newly awakened senses of national and regional self-awareness which continually weakened their universal dominance, and which continually intensified the instability of the normally well-established power structures.

This process of gradual dissolution of central authority was accompanied by the continuous reevaluation and increased emancipation of the local and regional powers, that is, the dynasts, the *tyrannoi*, and the *monarchoi*, as well as of both the indigenous elite and the eminent individuals in the towns. These tendencies manifested themselves in an increase in privileges and in a refined and to some extent extremely complex "legal empowerment" of the ever more divergent and pluralistic instances.

With the death of Antiochus VII in 129 B.C. the final decline of Seleucid sovereignty began, at least in Palestine. Exalted titles replaced the *de facto* absent royal power and concealed the lack of real Seleucid authority. The political chaos was reflected by the dominance of the military, and by an unmistakable expansion in terms of industry, trade, and finance; in addition to this there was apparently a demographic increase. The dynasty of the Hasmoneans, with their success on the regional power level, did not end as Israelite "priests," genuine "judges," or true biblical "kings," as David and Solomon had done. Rather, they were very appropriate to their own time, "Hellenized," self-assertive, occasionally unscrupulous personalities who distinguished themselves as "leaders," "power holders," and finally as "kings" in the Greek sense, like the Seleucids and Ptolemies. This dynamic development of "decline and fall," like the once-great empire of Alexander, may have experienced a final, sometimes exaggerated and even exuberant flowering. However, unlike Poseidonius and the sectarians of Qumran, who deplored such a "denaturation" from very different points of view, the modern historian is in a considerably better position to study the transformation and the authentic achievements of the Seleucids as well as their fragmentation and "orientalization."

A. From Pompey's Conquest to the Parthian Invasion

The establishment of Roman control over W Asia after Pompey's decisive overthrow of Mithridates VI of Pontus in 64 B.C. was bound to affect the state of Judea, which for nearly 80 years had enjoyed independence under the Hasmonean dynasty of priest-kings. But division within the Hasmonean camp at that time positively invited Roman intervention in Judea.

When Salome Alexandra, Hasmonean queen regnant, died in 67 B.C., rivalry broke out between her two sons—Hyrcanus II, who had occupied the high priesthood during her reign, and Aristobulus II, who had been her military commander-in-chief. Hyrcanus, the older son, was heir to the throne, but Aristobulus rebelled against him and defeated his forces. Hyrcanus relinquished his royal and high-priestly titles in his brother's favor. Hyrcanus was totally devoid of personal initiative or ambition, but he was manipulated by the ambitious Idumean Antipater. Antipater persuaded Hyrcanus that Aristobulus had designs on his life and that he should seek sanctuary with the Nabatean king Aretas III. Aretas invaded Judea on Hyrcanus's behalf and defeated Aristobulus.

Aristobulus and Hyrcanus both sent legations to Damascus, where Aemilius Scaurus, Pompey's lieutenant, had arrived in 65 B.C. Scaurus favored Aristobulus, and ordered Aretas to leave Judea. But when Pompey himself came to Damascus in 63 B.C., legations from the two brothers appeared before him in turn, and Pompey eventually gave his support to Hyrcanus. Jerusalem was surrendered to Pompey, but the followers of Aristobulus barricaded themselves in the well-fortified temple area and held out against Pompey's forces for three months. The temple area was stormed in July or August, 63 B.C.

Pompey confirmed Hyrcanus in power, but withheld the title of king from him, and released from his control the Greek cities of the Mediterranean seaboard and Transjordan which his predecessors had conquered, placing them under the direct authority of the Roman governor of Syria (Scaurus), who at the same time exercised general supervision over Judea.

In 57 B.C. Alexander, son of Aristobulus II, escaping from his Roman captivity, raised an army and occupied three fortresses in Judea. Aulus Gabinius, newly appointed proconsul of Syria, put down the rebellion and reorganized the province of Judea. Hyrcanus was left with the high priesthood and the custody of the temple; Judaea was divided into five districts, each administered by an aristocratic council.

In 54 B.C. Gabinius was succeeded as proconsul of Syria by Licinius Crassus, a member of the first triumvirate at Rome along with Pompey and Julius Caesar. Crassus plundered the temple treasury in Jerusalem to raise funds for his campaign against Parthia. In that campaign he was defeated and killed (53 B.C.). His quaestor Cassius (later to be one of Caesar's assassins) exercised supreme authority in Syria and Judea from 53 to 51 B.C.

The civil war which broke out in 49 B.C. between Pompey and Caesar ended the following year with Pompey's defeat at Pharsalus in Thessaly and his murder when he fled for asylum to Egypt. Hyrcanus, at the prompting of Antipater (who for several years had been quietly consolidating his power base in Judea), declared his support for Caesar. A material proof of this support was given in the spring of 47 B.C. when Caesar found himself outnumbered in Egypt: Antipater sent troops and other supplies to his aid, and

Hyrcanus persuaded the large Jewish colony in Egypt to fight on his side. Caesar was grateful: when he came to Syria later that year he named Hyrcanus "ethnarch of the Jews" over and above his high priesthood, while he honored Antipater (the effective power behind Hyrcanus' throne) with Roman citizenship and freedom from taxation, and appointed him procurator of Judea. Gabinius' division of the province into five administrative districts was now canceled.

Antipater appointed his two sons, Phasael and Herod, military prefects in Judea and Galilee respectively. About the same time Herod, a young man of outstanding ability, was appointed military prefect of Coele-Syria by Sextus Caesar, governor of Syria.

Julius Caesar's assassination on March 15, 44 B.C., was a heavy blow to the Jews, both in Palestine and throughout the empire. Cassius, one of the leading assassins, came back to take control of Syria, and received from Hyrcanus and Antipater the support which they had given to Caesar. Antipater's policy, followed by his son Herod, was to support Rome, whoever might be the representative of Roman power in the east from time to time. Antipater was killed by a private enemy in 43 B.C.; his authority was taken over by his two sons. Next year they were nominated tetrarchs of Judea by Mark Antony, who became ruler of the Roman east when he and Octavian (Caesar's heir) defeated Cassius and Brutus at the battle of Philippi.

In 40 B.C. the whole of W Asia was overrun by the Parthians, from beyond the Euphrates. In Jerusalem they placed Antigonus, the last surviving son of Aristobulus II, on the throne as king and high priest. Phasael was captured and committed suicide; Herod escaped to Rome. There Antony and Octavian persuaded the Roman senate to recognize him as king of the Jews.

B. Herod, King of the Jews

It was now for Herod to give substance to his title by winning back his kingdom. The Romans lost no time in expelling the Parthians from the territories they had overrun, but left Antigonus on the throne in Jerusalem. Most of his subjects were well pleased to have an effective Hasmonean ruler again. It took long and hard fighting on Herod's part to reduce Judea. Jerusalem was taken in the summer of 37 B.C. after a siege of three months in which Herod's forces were augmented by Roman troops under the command of Sosius, governor of Syria.

For 33 years (37–4 B.C.) Herod reigned over Judea (including Samaria, Galilee and parts of Transjordan) as Rome's faithful ally. When civil war broke out between Antony and Octavian in 31 B.C. and Antony (with Cleopatra) was defeated at the battle of Actium (committing suicide at Alexandria the following year), Herod went to meet Octavian at Rhodes and undertook to be as loyal a friend to him as he had been to Antony. Octavian recognized Herod's worth to Rome and confirmed him in his status as king of the Jews.

Rome found it convenient to control several subject nations in the E part of the empire through client kings, who ranked officially as "friends and allies of the Roman people." These kings were completely dependent on Rome for their power, and were bound to retain the favor of Rome, but they enjoyed considerable freedom in the administration of their kingdoms. See CLIENT KINGS. If they kept the peace within their own boundaries and in adjoining territories, Rome was content: Rome reaped all the advantages from this arrangement, and the client kings incurred all the odium—and where Herod was concerned, there was no lack of odium. But when Herod subdued unruly tribes on his NE frontier, Augustus (the style which Octavian adopted from 27 B.C. on) knew that the best way to keep them pacified was to add them to Herod's kingdom. By the end of Herod's reign his dominions approached the dimensions of the empire of David and Solomon a thousand years before. But, whereas David and Solomon were overlords over weaker rulers, Herod could never forget that he was subject to the overlordship of Augustus, to whom indeed his subjects had to swear an oath of allegiance as well as to Herod himself (Joseph. *Ant.* 17.42).

C. Herod's Legacy

When Herod died in 4 B.C., his kingdom was at the disposal of Augustus. In his last will he had bequeathed his kingdom to three of his sons, but the will could not take effect until Augustus confirmed it. Judea and Samaria were bestowed on Herod's son Archelaus (cf. Matt 2:22), who received the title of

ethnarch; Galilee and Peraea (S Transjordan) went to Archelaus' full brother Antipas ("Herod the tetrarch" of the gospel records), while their half-brother Philip received as his tetrarchy the territories which Herod had acquired E and NE of the Sea of Galilee in 23 and 20 B.C.—"the region of Ituraea and Trachonitis" (Luke 3:1).

1. Sons of Herod. Archelaus, who inherited his father's ruthlessness but not his statesmanship, proved so intolerable to his subjects in Judea and Samaria that after 9 years they threatened revolt if he were not removed. Augustus accordingly removed him in A.D. 6 and banished him to Gaul. His principality was transformed into a Roman province.

Philip governed his mainly gentile tetrarchy justly and peaceably. He built himself a capital at Banyas, near one of the sources of the Jordan, and named it Caesarea in honor of the emperor; it was known as Caesarea Philippi ("Philip's Caesarea") to distinguish it from other foundations of the same name. When he died in A.D. 34 his tetrarchy was added to the province of Syria.

Antipas was politically the ablest of Herod's sons. He governed Galilee and Peraea in the interests of Rome for over forty years. He vigilantly checked any movement which he suspected might lead to insurrection. His capital was Sepphoris, until he built a new one on the W shore of the Sea of Galilee and called it Tiberias in honor of the Emperor Tiberius. He fell from power in A.D. 39, when his nephew Agrippa I satisfied a grudge by poisoning the mind of Tiberius' successor Gaius (Caligula) against him. Gaius deposed and banished him, and gave his tetrarchy to Agrippa.

2. Early Prefects of Judea. When Archelaus was deposed in A.D. 6 his territory was placed under the general supervision of the imperial legate of Syria, with its own governor of equestrian rank. The first event of the new order was the census held by Quirinius, legate of Syria, to determine the amount of tribute which the province of Judea would henceforth have to pay to Rome. The idea that the people of God, living in the holy land, should pay tribute to a pagan ruler was offensive to many Jews, chiefly to Judas of Galilee and his followers, who led a rising against the Romans; this was inevitably put down (Acts 5:37). It is plain from the gospels that the propriety of paying tribute to Caesar remained a burning question in Judea and Jerusalem (Mark 12: 13–17; Luke 23:2).

The first provincial governor of Judea was Coponius. Between A.D. 6 and 41 he and his successors appear to have been called prefects. This is Pontius Pilate's designation in the Caesarea inscription which bears his name; if Tacitus, writing ca. 115–17, calls him a procurator (*Ann.* 15.44.4), that may be because the later governors of Judea (44–66) were called procurators.

The prefects had some cohorts of auxiliary troops under their command: garrisons were maintained at Caesarea (the Mediterranean port founded by Herod ca. 13 B.C., where the prefects set up their official residence), at Jerusalem (in the Antonia fortress NW of the temple area) and elsewhere in the province. If more force was required, the legate of Syria could supply it from the legionary troops at his disposal.

The internal affairs of the Jewish nation were administered by the Sanhedrin, their senate and supreme court. The prefect reserved the right of capital punishment; only for offenses against the temple was this right left in the hands of the Sanhedrin, by a special concession from the Romans. Jerusalem had the status of a holy city; when its sanctity was disregarded by an insensitive prefect, he was apt to incur the emperor's disapproval. Images were not to be introduced within the city limits (for their presence would infringe the second commandment); when Pilate nevertheless brought into the city military standards bearing busts of the emperor, the Jewish authorities protested and Pilate had to remove the busts (*Ant* 18.35; *JW* 2.169).

From A.D. 6 to 41 the prefects of Judea, or occasionally the legates of Syria, appointed and deposed Jewish high priests. Annas, for example, was appointed in A.D. 6 by Quirinius; his son-in-law Caiaphas was appointed in A.D. 15 by the prefect Valerius Gratus, and retained the office until 37, when he was removed by Vitellius, legate of Syria. In addition to his sacral duties, the high priest was president of the Sanhedrin. The prefects maintained further control of the high priests until 37 by keeping their holy vestments under armed guard in the Antonia fortress.

3. Reign of Herod Agrippa I. When Gaius (Caligula) succeeded Tiberius as emperor in 37, he made Agrippa, grandson of Herod the Great, ruler of Philip's former tetrarchy, with the title king. When, two

years later, he deposed Antipas, he added Galilee and Peraea to Agrippa's kingdom. When Claudius became emperor in 41, he enlarged Agrippa's kingdom with the addition of Judea and Samaria, so that Agrippa ("Herod the king" of Acts 12:1) ruled a territory almost as extensive as his grandfather's.

Agrippa enjoyed considerable autonomy within his kingdom, but otherwise his authority was strictly limited. When, for example, he convened a conference of neighboring client kings at Tiberias, the legate of Syria ordered it to disband. His Jewish subjects were mostly pleased with his rule, but it lasted only three years: in 44 he died after a short and sudden illness (Acts 12:20–23; *Ant.* 19.343–50).

D. The Last Procurators of Judea

Agrippa's seventeen-year-old son, Agrippa the younger ("Agrippa the king" of Acts 25:13), was adjudged too immature to inherit his father's kingdom; Claudius gave him a tiny kingdom in South Lebanon. Judea (with Samaria, Galilee, and Perea) reverted to provincial status.

The governors of Judea from 44 to 66 were called procurators. Unlike the prefects from 6 to 41, they were not allowed to appoint high priests: this privilege was given to the late Agrippa's brother, Herod of Chalcis, and after him to the younger Agrippa.

Cuspius Fadus, first of the new procurators, tried to govern justly, but did not hold his office long. His successor, Tiberius Julius Alexander, an uncle of Philo, the Jewish philosopher of Alexandria, was unacceptable to most Jews because he was an apostate from his ancestral religion. He dealt sternly with insurgents, including two sons of Judas the Galilean, who were crucified by his orders. The next procurator, Ventidius Cumanus (48–52), experienced the difficulties inherent in governing both Jews and Samaritans. He intervened unsatisfactorily in a dispute between the two communities. Both sides appealed to the legate of Syria, who ordered their leaders, with Cumanus himself, to go to Rome and submit to Claudius' judgment. Claudius ruled in the Jews' favor, and Cumanus was deposed and exiled.

Cumanus' successor, Felix, was not a member of the equestrian order, like his predecessors, but a freedman who owed the appointment to the influence of his brother Pallas at the imperial court. Felix's procuratorship was disturbed by repeated outbreaks of insurgency, which his forces put down ruthlessly. A flattering description of his measures is given by Tertullus in his speech for the prosecution when Paul appeared on trial before Felix (Acts 24:2–3). His severity led to a stiffening of anti-Roman resistance in Judea. He was eventually recalled from office (A.D. 59) because of his inept handling of a feud between Jews and gentiles in Caesarea.

At his departure from Judea, Felix left Paul in custody for his successor, Porcius Festus (59–62) to deal with. It was at his appearance before Festus that Paul, exercising his right as a Roman citizen, appealed to have his case transferred from the subordinate provincial court to the supreme imperial tribunal in Rome (Acts 25:11–12).

Of Festus (exceptionally among the governors of Judaea), nothing discreditable is recorded, but he died suddenly after three years in office. Events in the three months' interregnum which followed his death showed how strictly Roman authority was maintained over a province even in the absence of a governor. The high priest Ananus took advantage of the interval which elapsed before the arrival of Festus' successor to assume the right of capital jurisdiction (one of his victims was James the brother of Jesus); this usurpation of an authority which was not his would have brought down Roman reprisals on the province if his action had not been disowned by his being deposed from the high priesthood.

Of the last two procurators of Judea, Albinus and Gessius Florus, nothing good is related. Their insensitivity and ineptitude were largely responsible for the Jewish revolt of 66, but Josephus depicts them as unworthy representatives of imperial Rome, which deserved better agents. Albinus accepted bribes impartially from the Jewish establishment and the insurgents, and on the eve of his departure, he released criminals from prison indiscriminately; Florus' misdeeds made Albinus appear a paragon of justice (*JW* 2.277; *Ant* 20.252). He flaunted his venality even more disgracefully than Albinus, and took savage reprisals when his vexatious treatment of the Jews became more than they could endure. Even Tacitus (*Hist.* 5.10) concedes that it was Florus' malevolence that made Jewish patience snap at last.

When the ensuing revolt quickly developed to a point where Florus could not cope with it, Cestius Gallus, legate of Syria, intervened with the twelfth legion and additional troops. On reaching Jerusalem,

Gallus realized that the reduction of the strongly defended Temple area would require a greater force than he had brought, so he withdrew northward, and his troops were severely mauled by the insurgents on their way through the Pass of Beth-horon.

E. The War with Rome

A state of war now existed throughout all Palestine, and supreme authority was vested in Vespasian, the commander-in-chief sent by Nero with adequate forces (three legions and auxiliary troops) to put down the revolt. When, in the strife that followed Nero's death, Vespasian was proclaimed emperor by the eastern legions in July 69, he left for Rome with Jerusalem still unreduced, entrusting the prosecution of the war to his son Titus. When Titus in turn left for Rome, after bringing the siege of Jerusalem to a successful conclusion in September 70, his place as commander-in-chief was taken by Vettenius Cerialis.

F. Judea under Imperial Legates

After the war, Judea's status as a Roman province was raised: it was now governed by a legate of senatorial rank, no longer under the general supervision of the governor of Syria, like the earlier prefects and procurators, but directly responsible to the emperor, with legionary troops under his command. These troops belonged at first to one legion only, the tenth *(Fretensis)*; later, between 120 and 130, the sixth legion *(Ferrata)* was also stationed in Judea. The seat of government continued to be Caesarea, now a Roman colony.

The first three legates appear to have been Cerialis, commander of the fifth legion at the siege of Jerusalem; Lucilius Bassus, who stormed the fortresses of Herodium and Machaerus; and Flavius Silva, who reduced Masada. The extant list of legates is incomplete: Lusius Quietus, appointed by Trajan, had put down a Jewish rebellion in Mesopotamia in 115; Tineius Rufus, appointed by Hadrian, was legate when the Bar-Kokhba revolt broke out in 132. The governor under whom this revolt was crushed (135) was Julius Severus, who had earlier been governor of Britain. Thereafter the name of the province was Palestine (Syria Palaestina); Jerusalem was refounded as a Roman colony and renamed Aelia Capitolina.

F. F. BRUCE

PALESTINE, ARCHAEOLOGY OF. This entry consists of four articles surveying, respectively, the prehistoric periods, the Bronze and Iron Ages, the Persian period, and the New Testament period.

PREHISTORIC PERIODS

The study of prehistoric Palestine began with surface collections made during the 19th century by travelers who came to look for the country's biblical past. The first excavation was carried out by F. Turville-Petre (1925–1926) in Zuttiyeh and Emireh caves in Wadi Amud near Tiberias. He was followed by D. Garrod, who is known mostly for her excavations in the Carmel caves (1928–1934) and by R. Neuville in rock shelters in the Judean desert (1928–1935). He also dug in Qafzeh cave (near Nazareth) with M. Stekelis, the first Israeli prehistorian, who excavated Jisr Banat Ya‹aqub, a Lower Paleolithic site in the Jordan Valley. From the 1950s through the 1980s, a series of excavations have been conducted in various parts of Israel, and these, with the results of surveys and excavations in Sinai and Jordan, have provided a continuous cultural sequence for the Middle and Upper Paleolithic, Epi-Paleolithic, and Neolithic periods. Our knowledge of the earlier period is still fragmentary—the number of sites is small and they are poorly dated.

C. Chalcolithic

———

A. Paleolithic

The earliest occurrences of artifacts testifying of the presence of early hominids in the Near East were found during the excavations at UBEIDIYA, in the central Jordan Valley. The archaeological horizons of this site are embedded in a sequence of lacustrine and fluviatile deposits which is defined at the Ubeidiya Formation. This formation overlies the Erq el-Ahmar Formation, which contained Late Pliocene mollusks and is the earliest limnic formation within the Jordan Rift, which was formed by a series of tectonic movements younger than 3.2 million years. The excavations at Ubeidiya demonstrated the presence of numerous implementiferous layers but only 14 were extensively excavated. The lithic industries are characterized by the high frequencies of core choppers from which flakes were removed and used. Polyhedrons, spheroids, and a few hand axes form the rest of the assemblages. It is worth noting that most core choppers and polyhedrons were made of flint pebbles; spheroids were shaped from limestone, and hand axes were dominantly made of basalt and the rest from flint and limestone. Only the earliest levels at Ubeidiya do not contain bifaces. The assemblages resemble the Oldowan of Africa. However, as the rest of the assemblages includes bifaces, trihedral, or picks even in small numbers, the entire lithic sequence is cautiously attributed to the Early Acheulian.

Over 120 species of mammals, birds, and reptiles were identified. Among the most common mammals are the horse, deer, hippopotamus, elephant, several carnivores, and various rodents (which essentially characterize a forest-steppic environment). The paleoecological reconstruction of the immediate environment of the site encompasses a variety of habitats including an open fresh-water lake, pebbly beaches, thickets with reeds and tamarisk along laguna areas, open grassy meadows, partly forested western slopes of the Jordan Rift with some rocky exposures, a plateau covered with oak forest above the valley, and some dry wadis descending into the lake much as they do today.

The site of Ubeidiya is dated on the basis of faunal correlations. The presence of certain species including an elephant (*Mammuthus meridionalis tamanensis*), rhinocerus (*Dicerorhinus etruscus*), horses (*Equus tabeti*, *Equus caballus*), deer (*Praemegaceros verticornis*), warthog, and wild boar (*Kolpochoerus oldowayensis*) led to a long-distance correlation between the faunal biozones of W and E Europe and E Africa, and indicates the Ubeidiya should be dated to 1.4–1.0 million years ago. This is the best-dated Lower Paleolithic site in the entire Near East and represents one of the stations of *Homo erectus* as members of this genus moved from Africa into Asia and Europe.

Other Lower Paleolithic sites, all of which are classified as Middle or Upper Acheulian, are found in the Jordan Valley or the coastal plain, where considerable amounts of deposits are exposed. The hilly areas are often stripped of any Lower or Middle Pleistocene accumulations.

Evron-Quary is a small site including the remains of some Middle Pleistocene mammals. Its lithic assemblage contains a few large flint bifaces and a small flake industry indicating that part of the assemblages was transported into the site. See EVRON.

JISR BANAT YA‘AQUB, on the banks of the Jordan River and currently under excavation, is known for its assemblages of lava flake cleavers which were made in the same technique so common in Africa. With the cleavers are lava bifaces and a collection of large mammalian fauna, which are best correlated with the European Cromerian fauna. They include elephants, rhinoceroses, hippopotamuses, wild boar, and deer. This site overlies a lava flow dated by Potassium/Argon (K/Ar) to 0.68 million years with a normal magnetic polarity. The age of the site is estimated to be around 0.5 million years old. According to the observations made by M. Stekelis in the 1930s, the upper layers of the site contained Acheulian industry in which the bifaces were mainly made of flint. Two fragments of human femora, without exact provenience, were collected from the dumps created by the deepening of the Jordan River channel, which considerably damaged the site.

Upper Acheulian materials, most of them collected from surface scatters, were located in the various regions of Palestine including the oases such as AZRAQ and Nahal Zin. However, it seems that hominids

during the Lower and Middle Pleistocene were not able to cope with arid or semiarid conditions. Sites located in the deserts, therefore, signify pluvial times. Upper Acheulian assemblages were also excavated in cave sites such as Tabun cave and Umm Qatafa cave. See CARMEL CAVES. The animal bones are often those of large to medium mammals, probably indicating the scavenging activities of humans.

In several sites, the Upper Acheulian is overlain by a lithic industry which has several names. The current term "Mugharan Tradition" was suggested by A. Jelinek, on the basis of his excavations in Tabun cave. Others still use the term "Acheulo-Yabrudian." Both terms mean that this entity contains several facies of the same lithic industry. One "facies" contains thick scrapers of various shapes including canted and transverse forms, often demonstrating considerable resharpening ("Yabrudian"); the second together with the scrapers has varying frequencies of often small, oval or pointed bifaces; and the third "facies" is dominated by blades with a few bifaces and burins ("Amudian"). The first two facies are the most common.

The Acheulo-Yabrudian demonstrates a particular geographic distribution. This entity occupied the N Levant, and its S manifestations are just S of Mt. Carmel and into the Transjordanian plateau. U-series datings suggest that this entity lasted from about 180/150–120 thousand years ago.

Human relics in Acheulo-Yabrudian contexts include the fragmentary skull recovered in Zuttiyeh cave and a broken femur in Tabun cave. The Zuttiyeh skull is morphologically attributed to the late *Homo erectus* or the archaic *Homo sapiens.*

In stratified cave sites such as Yabrud (Anti-Lebanon mountains) or Tabun cave, the Acheulo-Yabrudian is overlain by the Mousterian complex. The long sequence of Tabun cave enabled the general description of three types of lithic industries, mostly made through the use of various methods of the Levallois technique. Each of these is named after the main layer in Tabun as identified by D. Garrod, although A. Jelinek was able to refine the subdivision and accurately relate the industries to their geological deposit.

In "Tabun B"–type industry, the blanks were removed by the unidirectional and convergent methods of Levallois. Short and broad points are common as well as side scrapers. A more "facies" with more blades and elongated points occurs at the lower levels of this entity in Tabun and Kebara caves. See KEBARA CAVE.

The "Tabun C"–type industry is often dominated by radial and bidirectional core reduction methods which were responsible for the production of large oval flakes. However, convergent flaking is present and resulted in the presence of a "facies" with Levallois points (such as in Tabun and Qafzeh caves).

The earliest industry is the "Tabun D" type, which contains numerous elongated points and blades, however, with side scrapers. Among the best examples are Tabun and Abu Sif caves. This type of industry seems to be more common in the Negeb and the S Transjordanian plateau than in the N part of Palestine. The lack of a sufficient number of well-founded dates precludes the establishment of the Mousterian sequence. Thermoluminescence (TL) and Electron Spin Resonance (ESR) dates from Qafzeh cave (averaging 90–100 thousand years for the hominid bearing layers) and Kebara cave (averaging 48–64 thousand years for the entire sequence in the site) support earlier contentions based on rodents' biozones. An estimated age for Tabun D–type industry will be in the order of 130/115–100/95 thousand years. However, the current use of these dating techniques and cross-checking by other radiometric methods makes any suggested conclusions premature.

The current surge of dates was motivated by the renewed discussion on the origins of anatomically modern humans. The number of Mousterian human remains discovered in Palestine is large when compared to other regions of the Old World. Several relics were uncovered by intentional burials such as in Tabun, Skhul, Kebara, Qafzeh, and Amud caves. The entire sample is considered to represent the West Asian Neanderthal (Tabun, Kebara, and Amud) or the archaic *Homo sapiens* (also referred to as "Proto-Cro-Magnon" at Qafzeh, Skhul). While one school views the entire collection as representing the same population, others see the Neanderthals as either emerging from local ancestors or as Europeans migrating into the Levant with the onset of glacial conditions (110 or 75 thousand years ago).

There is ample evidence to indicate that the Mousterian people gathered plant foods and hunted gazelles and fallow deer, although they did not refrain from opportunistic scavenging. The signs of utilization on their tools reflect hide and woodworking, and butchery. Levallois points bear impact marks as they have been employed as spear points. The use of red ocher is rare as is the collection of marine shells. Imported elements in sites include raw material for the production of artifacts and curated tools. Hearths were often rounded or oval, and amorphous ashy deposits are common in well-preserved situations in caves (e.g., Kebara).

The transition from the Middle Paleolithic to the Upper Paleolithic is reflected in the local evolution within the lithic industries. The best example is in Boker Tachtit, a site in Nahal Zin in the Negeb, excavated by A. Marks. The lithic sequence of this site demonstrates a transition in core reduction methods from a mixture of bidirectional Levallois cores and prismatic Upper Paleolithic cores for blade production to simple unidirectional Upper Paleolithic blade cores. The Transitional Industry includes Levallois points removed from blade cores with a bidirectional scar pattern. In Ksar Akil (Lebanon), the Transitional Industry represents an idea similar to that of the Upper Paleolithic. Tool types such as end scrapers are made on Levallois blanks. The specific tool type common in Lebanon, the chamferred blades and flakes, were not found in Palestine except for rare surface occurrences. The Early Upper Paleolithic sequence is therefore characterized by the dominance of tool types such as end scrapers and a few burins. The blanks are either mainly flakes (Emireh cave) or blades (Boker Tachtit).

It is the following industry which signifies the subsequent phases with the dominance of blades/bladelets (often removed from unipolar prismatic cores). This industry was called the Ahmarian Tradition and most of its sites are known from the Negeb and Sinai, but also include the early layers in some caves (e.g., Kebara). The dominant point forms are either the Ksar Akil type or the El-Wad type and retouched bladelets are often a steady component of these assemblages. The entire Ahmarian sequence is radio-carbon dated to 38,000–20/18,000 B.C. when it develops into the Kebaran Complex. Most of the sites indicate a greater mobility than in the Middle Paleolithic, accompanied by the hunting of gazelle, fallow deer, roe deer, and more ibex in the semiarid areas. Intensive use of red ocher is recorded and several grinding tools were also employed in the preparation of the color. Bone tools are quite rare and the manipulation of marine shells began around 20,000 B.C.

The Ahmarian sequence in the cave sites is interrupted by the distinct appearance of the first Aurignacian elements, such as carinated and nosed scrapers and later by the dominance of an industry essentially produced on flakes. It is this industry which is currently named Levantine Aurignacian.

With carinated and nosed scrapers, the Levantine Aurignacian assemblages contain El-Wad points which are also present in Ahmarian assemblages. However, rich bone and antler objects add to the distinction of this entity. Most of these objects were made by cutting and shaving with flint knives. Two split base points, a typical object in the European Aurignacian, were found in Kebara and El-Quseir caves. Two incised slabs, found in Hayonim cave, may represent artistic expressions.

The Levantine Aurignacian is only known from the N and central Levant and is not present in the Negeb or S Jordan. It is therefore considered as the archaeological expression of a social unit foreign to the Near East, which arrived in the region and lasted for some time between 32,000–28,000 B.C.

The following phase of the Upper Paleolithic is signified by an abundance of scrapers and burins (in several sites the latter is the dominant tool type) and it seems that in most assemblages, these tool types are made on flakes. In some sites the burins, especially those on truncation, dominate the assemblage. It is in this type of site (Nahal Ein Gev I, Jordan Valley) that a flexed burial of a woman, 30–35 years old, was uncovered.

The subsequent industries (ca. 25/24,000–20/18,000 B.C.) are characterized by the proliferation of blade/bladelet production, and microlithic tools become the dominant forms. This phase, which can be referred to as the Late Ahmarian, heralds the onset of what is known as the Kebaran cultural complex (ca. 18,000–12,500 B.C.), which encompasses a variety of assemblage types. The changes in the form of the microliths leads from nongeometric forms such as the obliquely truncated bladelets (Kebara points) to the

elongated trapeze-rectangles, which characterize the ensuing cultural complex known as the Geometric Kebaran (ca. 12,500–10,800/10,500 B.C.).

The Kebaran sites are generally small and located in lower altitudes. Most are known from surface collections and limited excavations. The largest excavation is in Ein Gev I (on the E shores of Lake Tiberias), where a shallow basin dug into the sandy deposits which formed the foundations of a small hut (5–7 m in diameter) was exposed. Repeated occupations resulted in considerable accumulation of flints and animal bones (mainly deer and gazelle). A burial of a 30–35-year-old woman was found under one of the levels in the center of the hut. A mortar and several pestles were among the domestic utensils. Recent excavations in Urkan er-Rubb II, a site in the lower Jordan Valley, retrieved the only art object from this period—a flat pebble which bears several incised series of the "ladder" pattern.

The climatic conditions during the Kebaran Complex were cold and dry (the Late Glacial Maximum) and human occupations were limited to the belt of Mediterranean vegetation and margins of the steppic Irano-Turanian belt including some of the desert oases. The subsequent climatic amelioration which brought the increase in temperatures and precipitation enabled the Geometric Kebaran groups to inhabit many of the formerly arid areas. Moreover, the spatial expansion of vegetal and animal resources tempted groups from neighboring regions to move in. Such is the archaeological complex of the Mushabian, mainly known from Sinai; which is considered to be a penetration from NE Africa. Other groups moved into the inland basins on the Transjordanian plateau such as the Azraq.

The general increase in population within the entire region and the different lithic knapping traditions imported into Palestine left a variety of assemblages which cannot easily be clustered under one or two taxons. However, the common denominators are the microliths, mostly the trapeze-rectangles, the triangles, and the lunates. In terms of lifeways, these were basically small groups of hunter-gatherers who left behind ample evidence for reconstructing small campsites with a hearth and a particular distribution of the dumps. The larger sites are either palimpsests of reoccupations where deflation and erosion obliterated many features or sites where rapid accumulation of sand and loam today enables the identification of discrete features such as hearths and activity areas. The consumption of seeds, grain, acorns, and nuts is best recorded in the use of pounding and some grinding tools such as mortars, pestles, and mullers. Marine shells were brought mainly from the closest shoreline—either the Mediterranean or the Red Sea. From the large Geometric Kebaran site of Neveh David (Mt. Carmel), two burials with fragmentary skeletons are known.

The settlement pattern reconstructed for the Epi-Paleolithic groups depends on the available resources and their seasonal distribution. On the whole, lowlands were better suited for winter exploitation while highlands were better suited for summer occupations. Water sources are abundant in the hills of Palestine (including the Transjordanian plateau) and the dry summer had no effects on the availability of this resource. Over one hundred species of plants can be exploited during the year and the stress period is often from November through late February. The common medium- to small-size mammal is the gazelle (mainly *Gazella gazella*), which is a stationary mammal with a very small home range territory (1–5 km^2). Such an availability, reliability, and accessibility of resources would encourage a semisedentary settlement pattern with some storage facilities.

A short and abrupt climatic crisis, probably around 10,000/10,500 B.C. was responsible for the disruption of the socioeconomic situation and caused some groups to resolve the seasonal shortages by settling down on the ecotone of the Mediterranean open forest and the steppic belt or on the boundary between the coastal plain and the hilly areas. This archaeological entity known as the Natufian culture has a distribution of sites which avoids the arid belt.

The Natufian large sites (or base camps) are up to 5,000 m^2 and contain rounded and oval houses (e.g., Ain Mallaha, Hayonim Cave and Terrace, Wadi Hammeh 26), burials, and rich lithic and bone industries. The houses are often dug into the ground and the walls of undressed stone are slanting inside. In one large house in Ain Mallaha a series of postholes were uncovered. There is no evidence for the use of mudbricks by the Natufian and it seems that the superstructures of the houses were built of organic substances.

Natufian burials display various styles in disposition of the dead. Collective burials are more common in the Early Natufian and positions are supine, semiflexed, and flexed. In rare cases, skulls of adults were intentionally removed. The late Natufian sites contain more single burials in flexed position. Grave goods possibly indicate social differentiation. They include body decorations made of bone and stone pendants, shell beads, often using the various species of *Dentalium* and rarely some mundane tools. The original places of the decorations were probably as head-gear, garments, and belts. Of special importance is the burial of a woman with a young dog exposed in Ain Mallaha, indicating the domestication of this mammal.

The lithic industry of the Natufian culture often demonstrates a proliferation of geometric microliths, especially of lunates shaped by either Helwan or abrupt retouch. Sickle blades, burins, perforators, and a few delicate, elongated picks make for the rest of the assemblages. The production of small flakes and short bladelets as blanks for tools differentiate the Natufian from the former cultural complexes. The use of microburin technique to obtain oblique snaps possibly indicates the local tradition of certain groups which lasted through the two phases of the Natufian. However, Helwan retouch (a bifacial retouch on lunates) is more common in the Early Natufian. On the whole, the Early Natufian is better known from some large sites and small ephemeral occupations in the semiarid zone while the Late Natufian is poorly known from a few sites such as NAHAL OREN Terrace (Mt. Carmel), Salibiya I (Jordan Valley), Rosh Zin, and Rosh Horesha (Negeb).

Natufian art expressions are more numerous than in any of the preceding periods. They include the carving of heads of ungulates on sickle hafts, limestone figurines schematically representing humans and animals, zigzag and meander decorations incised or carved on domestic objects, and some incised slabs where the ladder pattern is dominant. The sudden increase in artistic activity in the Natufian is explained by the need to increase symbolic behavior to maintain social cohesion. Natufian sites also differ from each other by types of ornaments, especially the arrangements of *Dentalium* shells or common bone beads. It seems that body decorations were the salient means of group identification.

The Natufian economy was based on intensive collection of cereals (which left its marks as a special luster on the sickle blades) although some scholars have suggested that during this period emerged the earliest farmers. Unfortunately, plant remains in Natufian sites are scarce, mainly owing to bad preservation in Mediterranean soils. For pounding and grinding, they employed mortars and pestles which were made either of limestone or basalt. Hunting continued, and at some sites, the decrease in gazelle size is interpreted as overexploitation. Otherwise, the range of hunted game and collected reptiles or trapped water fowl is wider than in any previous Epi-Paleolithic entity. It seems that the Natufian subsistence strategy had responded to the increase of basic group size and sedentarism (which leads to increase of population). Even if Natufian groups were not permanently annually sedentary, the investments in building structures in the sites reflects a tight pattern of anticipated mobility.

The evidence for sedentarism is derived from the proliferation of commensals, such as house mice and house sparrows, in some Natufian sites. Recent chromosomal studies, as well as metrical analysis of living wild and domestic forms of house mice, confirm the identification of the Natufian mice populations as including both forms of this self-domesticated rodent.

The study of Natufian skeletal remains indicates that they were generally healthy, with a stature of 153–160 cm (i.e., ca. 60–62.5 inches), a life expectancy of 32–35, and about 20–30 percent mortality of children 0–12 years old. Teeth attrition demonstrates (except for the Kebara sample) the eating of ground and pounded substances. Thus Natufian economy seems to have been a mixture of hunting and gathering of a large variety of foodstuffs which enabled the survival of larger groups. During the 11th millennium B.C. (based on uncalibrated C14 dates), the Near Eastern climate returned to cold and dry conditions. Natufian adaptations were slightly changed, but the most prominent example of efforts to retain the traditional lifeways are the archaeological remains of Late Natufian groups in the Negeb and N Sinai, who developed some special regional attributes and are therefore known as the Harifian culture.

The Harifian sites demonstrate a well-defined distribution. The small sites (sometimes less than 100 m^2) are dispersed in the lowlands (which in N Sinai and the W Negeb are covered with sand dunes). The

larger sites were uncovered in the highlands of the Negeb, on the plateau of Har Harif and its vicinity which lies 1000 m above sea level. The sites contain semisubterranean buildings, often lined with stones. Mortars, pestles, grinding stones, and slabs with numerous cupholes are found either inside the huts or around them. The lithic industry is Natufian-like with numerous microliths dominated by lunates but with the inclusion of what seems to be a desertic projectile point—the Harif point. This is a microlithic point, with a rhomboid form, modified by abrupt retouch and microburin technique. Animal bones include mainly gazelle, ibex, and hare. No plant remains were recovered and charcoal samples indicate a similar vegetation, probably with a better cover of *Pistacia atlantica.* Radiocarbon dates indicate a distribution between 8700 and 8000 B.C. (uncalibrated). Taking into account the problems of "dead wood," typical to desertic sites, these dates could be interpreted as indicating the presence of humans during only one or two centuries.

B. Neolithic

The Natufian culture marks an important threshold in the cultural and social evolution in the Levant. The emergence of sedentary and semisedentary communities in which the social unit was larger than the smaller Paleolithic band demonstrates a change in human organization. Under the climatic circumstances prevailing in the Levant around 8000 B.C., with the increase of annual precipitation and an additional rise of temperatures, the adoption of systematic harvesting of natural stands of cereals led to the establishment of permanent farming communities. In these new and large villages, such as Jericho, Netiv Hagdud, and Gilgal (in the Jordan Valley), cultivation of barley was practiced. See GILGAL (PREHISTORIC SITES).

Archaeological observations dated to the Early Neolithic period (8300/8000–6000/5800 B.C.) provide ample evidence for the contemporary presence of farmer-hunters and hunter-gatherers in the S Levant. The sown land, which is a narrow "corridor" stretching from the Damascus basin through the W edges of the Transjordanian plateau into the Jordan Valley and the Edom Mountains (S Transjordan), was inhabited by the earliest cultivators. The coastal belt and the deserts were occupied by hunter-gatherers, who continued to survive while interacting with the villagers. While agriculture as a subsistence strategy expanded, the Lebanese mountains and the arid region remained the primary territories of hunter-gatherers, who continued their mutual exchange (food and commodities) with the farming communities.

Current researchers use a variety of archaeological terms to describe the material culture of the Neolithic period. Terms such as "Pre-Pottery Neolithic" or "Aceramic Neolithic" interchange with Archaic or Early Neolithic. The use of chronological terms such as Period 1, 2, 3, … etc., is based on C14 dates which are currently subject to calibration. In order to keep the basic terminology in line with those used in Palestinian archaeology, the terminology proposed by K. Kenyon during her excavations in Jericho will be used.

1. Pre-Pottery Neolithic (PPN). The number of sites excavated and studied from the Pre-Pottery Neolithic A (PPNA) (8300–7300/7200 B.C.) is small. Most of them were found in the Jordan Valley or the adjacent slopes of the Jordan Rift. On the basis of lithic studies, this period was subdivided into two phases—the Khiamian and the Sultanian. The Khiamian lithic assemblages contain moderate frequencies of microliths (mainly lunates and retouched bladelets), perforators, burins, some sickle blades, and arrowheads mostly of the El-Khiam type (a small projectile with bilateral notches near the often retouched base). The Sultanian contains the same components with the addition of axes-adzes and polished celts. Unfortunately the Khiamian is known from only one unicultural site (Salibiya IX) and from two sites where the Khiamian assemblages are partially mixed with the underlying Late Natufian industry (HATULA, El-Khiam Terrace). The Sultanian is well represented in Jericho, Netiv Hagdud, Gilgal, Gesher, and Hatula. It is possible that the Khiamian, as an archaeological phenomenon, represents the actual transition from the Natufian to the Early Neolithic, and the overlapping radiocarbon dates only indicate that this transition was a rather rapid change, which deserves the definition of the "Neolithic Revolution."

An additional aspect of this major cultural change is site size. PPNA sites vary in size from 2.5 hectares (Jericho), through 1.5–1.0 (Netiv Hagdud and Gilgal), to the smallest occupations of this period in the desert, which hardly cover 100 m^2. Minimal demographic estimates would suggest a population of 150

persons per hectare and thus a large village like Jericho probably had a population of about 450 people. If such minimal estimates are correct, then the largest villages held a sufficiently large social unit to maintain their biological vitality. Such a group size is a significant departure from the previous Paleolithic period.

The Sultanian architectural remains are best known from the excavations of JERICHO. The so-called "town wall," built of undressed stones 1.8 m thick and 3.5 m high, was exposed in the W trench. In front of the wall was a 3.5 m wide shallow ditch dug into the chalky bedrock. Behind the wall, inside the settlement, is the rounded tower, 8.5 m high, built of stone and covered with a thin layer of mud, with a small door and interior staircase with 22 steps. On the N side of the tower, a few large and deep rounded structures built of mudbricks were exposed. The "town wall" according to Kenyon's observations, was removed by erosion on the N end of the village and is only 1.6 m thick on the S end. The conventional interpretation is that the wall and the tower were part of a fortification system against human aggression. The ample evidence for the role of erosion evidenced in Jericho and neighboring sites in the lower Jordan Valley led to the alternative interpretation that the defense system was built in order to protect the settlement from flooding. Apparently, the PPNA period was wetter and slightly warmer than the preceding millennium. These conditions secured the success of the early farming communities, which otherwise under climatic conditions similar to today's, with frequent droughts, would have retreated to better-watered areas.

Domestic architecture is represented in Jericho, Netiv Hagdud, Gilgal, and Hatula in oval houses, the foundations of which were dug into earlier levels, which were lined with stones and a superstructure built of mudbricks. The shape of the roof is somewhat unclear, but some collapsed examples indicate that they had a flat roof with wooden beams and mats covered with mud. On the floors there is evidence for the use of mud and plaster. Mats covered the floors. Hearths were embedded into the floors, generally forming a sort of a shallow, well-paved basin. Some of the houses or structures were rounded with a smaller diameter of about 3 m. The walls were built of mudbricks which often have a planoconvex cross-section. Mud as a building material was brought from the vicinity of the site and thus "foreign elements" such as flints from earlier sites were incorporated in the site's deposits.

While burials are absent from some sites (such as Gilgal), they are otherwise found in various places, including situations which are often interpreted as under the floors. It is conceivable that some burials took place in open spaces which were later built up. Building required leveling and thus some burials, or storage installations, stratigraphically occur under the floors. Burials are generally single and only from adults were skulls removed while leaving the jaw in place. No grave goods were encountered in any of the sites.

The lithic industry of the PPNA is generally characterized by the production of blades, bladelets, and flakes. It differs from the Natufian by having much lower frequencies of microliths even in the desertic sites such as Abu Madi I in S Sinai. Among the retouched pieces, there are small projectiles such as El-Khiam point and a few others with a small tang or with a triangular shape. Perforators are common as are burins. Sickle blades are often plain and a few bear bifacial retouch and are known as Beit Ta'amir knives. The group of bifacial tools include axes-adzes (in which the transverse removal shaped the working edge; i.e., Tahunian axes), chisels (with narrow working edges), and picks. Polished celts made of basalt and limestone occur as well. In the desert sites, sickle blades and bifacial tools are missing. Instead higher frequencies of scrapers were noted. Retouched or used blades are common in most of PPNA assemblages.

Art objects are quite rare, but small figurines exist, which are made either of limestone or clay. A common type is the sitting female (most notably known from Netiv Hagdud), a female with a string skirt and birds (Gilgal), and schematic figurines of kneeling females (?) from Salibiya IX and Nahal Oren. It seems that the small number of excavations and the small areas dug in the sites are responsible for the poor sample of artistic representations.

The economic basis of the Sultanian villages was a mixture of cultivation of emmer (in the Damascus plain), barley, and legumes. Fruits and wild seeds, including nuts and acorns, were collected. Gazelle and

foxes were the main game animals in the Jordan Valley with some fallow deer, bovids, and hare. Water fowl trapping was a major seasonal activity for the collectors in the village, and several species of ducks are evident. The health of the population (as inferred from the skeletal remains) was comparable to that of the earlier Natufian period. Similar frequencies of child burials are recorded. In some cases in Jericho skull deformation was practiced *in vivo.*

It is impossible to separate the cultural changes that took place in Palestine from those of the entire Levant. Although agriculture as a subsistence strategy was first established in the central and S Levant, it rapidly diffused northward and the ensuing technological changes in the N Levant began by the mid-8th millennium B.C. (uncalibrated).

The following period, the Pre-Pottery Neolithic B (PPNB; ca. 7300/7200–6000/5800 B.C. uncalibrated), is better known from Palestine and other parts of the Near East. It was recently suggested, on the basis of stratigraphic evidence from AIN GHAZAL (near Amman) to name the latest portion of this period as PPNC.

Climatic conditions during the PPNB were wetter than in the PPNA, at least until the second half of the 7th millennium B.C. (uncalibrated). Site size increased considerably, especially when the sizes of the largest sites of each period are compared. The surface size of Ain Ghazal is 12 hectares, Basta is 12 hectares, Beisamoun is 12, Yiftahel is 4, and Jericho is 2.5 hectares. The largest sites are about five times larger than the largest known PPNA sites. Even if the increase in size took only 500 years, it still reflects a population increase which is evident not only in the lusher areas of Palestine, but also in the desert region in the Negeb and Edom, where relatively large PPNB sites were discovered and several were excavated.

The change in domestic architecture, which among other archaeological criteria led K. Kenyon to propose her subdivision, is neatly expressed in the houses with a rectangular plan exposed in Jericho, Ain Ghazal, YIFTAHEL, Munhatta, Beisamoun, and Nahal Oren. The excavations in Beidha demonstrate that the appearance of rectangular houses was preceded, at least at this site, by polygonal buildings, where the roof was supported with wooden posts. The use of lime plaster for building floors and coating lower portions of the walls, as well as storage facilities, is recorded from various sites. This practice is not evenly distributed within the sites, and is therefore understood to indicate socioeconomic hierarchies. In Ain Ghazal, the preservation of postholes implies the use of timber, and in the later phases of the site's history, the diminishing of this resource is reflected in smaller spaces and fewer posts.

PPNB burials are found under floors and in open spaces. Skulls of adults were removed and in a few sites nests of skulls were found. Better known are the plastered skulls uncovered in Jericho, Beisamoun, and Ain Ghazal (as well as Tel Ramad in S Syria). An additional method of treating skulls was discovered in Nahal Hemar cave (Judean Desert), where the skulls were modeled in asphalt. There is a consensus that the special treatment of the skulls is a direct evidence for the "ancestors' cult." This is possibly supported by the important discovery of a cache of plaster statues of humans in Ain Ghazal. Similar, but fragmentary, remains were also found in Jericho and Nahal Hemar cave. The human statues, made of lime plaster and modeled on reed skeletons, represent males and females. The fashion in which they were constructed recalls the Mesopotamian legend of the creation of man, perhaps indicating the antiquity of this myth.

Additional insights on either domestic or cultic activities are gained from the numerous clay figurines which represent pregnant females, males, and animals, including oxen, sheep, goat, as well as some wild species. A cache of human figurines, stone masks, modeled skulls, and numerous domestic objects in a small, dark cave in Nahal Hemar in the S end of the Judean Desert indicates that ritual activities also encompassed special sites which perhaps marked territorial ownership.

The PPNB lithic industry differs from its predecessor by the heavy reliance on blade removal from bipolar cores, which in their more elaborate, elongated form, are known as "naviform" cores. The punched blades were shaped into arrowheads, perforators, burins, sickle blades, or simply used in their original shape. The typological changes in arrowhead types proved to be chronological indicators for the subdivision of the PPNB and for marking prehistoric provinces within the Levant. The earliest types are

the Helwan point (with bilateral notches and a tang) and the Jericho point (with wings or clear-cut shoulders and a tang) and the later types are the Byblos point (leaf-shaped with a tang) and the Amuq point (leaf-shaped). The two latter types are often shaped by flat pressure flaking.

Sickle blades are either plain blades (which bear the luster resulting from the harvesting of cereals) or elongated, tanged blades, often finely serrated. A complete curved sickle made from a bent ibex horn, in which were three blades which had been attached with resin, was found in Nahal Hemar cave. Sickle blades are generally found only in sites within the sown land.

Burins are common in many, but not all, sites. In Transjordan there is a geographic province which stretches into the Syro-Arabian desert where burins are the most common tool type.

The group of bifacial tools including axe-adzes and celts see some changes through time. While in most early and middle PPNB sites, the Tahunian (tranchet) types dominate, there is a shift in the later PPNB to objects with rounded retouched or polished working edges. Triangular shapes increase in frequency. Desert sites contain none of these types, which seem to have been used in cutting and working wood and sometimes served as hoes.

Imported raw materials such as obsidian, which had first appeared in the Late Natufian, are more frequent in some PPNB sites although not necessarily at the large ones. The mechanism responsible for the distribution of this commodity is still poorly understood. Other exotic raw materials include greenstone (serpentine, malachite, rosasite), from which beads and pendants were made. Marine shells were collected on the shores of the Mediterranean and the Red Sea and distributed through the Levant. It seems that cowries *(Cyprea sp.)* and *Glycimerys sp.* are among the commonly used species. The preference for these forms marks a departure from the more *Dentalium*-shell-dominated assemblages of the Natufian and the PPNA.

The PPNB village economy was based on cultivation of domesticated species of cereals and legumes with the continuous collection of wild fruits and seeds. Hunting gazelles, along with a few roe deer, fallow deer, wild boar, and hare was supplemented in the villages (which were located within the core area of farming communities) by raising goats and sheep.

The domestication of goats and sheep is a controversial issue. While wild goats occur in the faunal collections of Epi-Paleolithic and PPNA sites (although in very small percentages), wild sheep were apparently absent from the original wild fauna of the Levant. Goats and sheep were most of the hunted game in the Zagros Mountains since Mousterian times. There is ample evidence to indicate that the domestication of these herd mammals took place during the Early Neolithic period in the Zagros region and perhaps in the E Taurus. The exchange networks which enabled the incorporation of domesticated cereals into the Zagros economy were probably responsible for the introduction of goats and sheep into the Levant. Thus, the shift in the faunal spectra is reflected in the PPNB sites, which in Palestine are located within the "corridor" which runs from the Damascus basin through the Jordan Valley. It is only in later times that both the W hilly slopes of Palestine and the desert fringes in Transjordan acquired the domesticated species.

In the late stages of the PPNB, new domestic objects were introduced. These products are known as the "White Ware," which is made of a mixture of ashes and plaster. The forms include bowls, open jars, and bowls on pedestals. Most of those are known from N Syria, and they rarely occur in Palestinian contexts.

The end of the PPNB period is not as clear as its beginning. Many sites were abandoned. The abandonment of villages either during the PPNA or the PPNB is an issue which has never received an adequate treatment. Suggested reasons which might cause a population to move out or not to return to their home base may include group aggression, salinization of fields, mortal epidemic, and temptation to move to an empty and a better environment. The "collapse" of the PPNB in the S Levant is known to have been a major break or an abrupt change of settlement pattern. In the site of Ain Ghazal, where this phase is named "PPNC," there is sufficient evidence to demonstrate the presence of two cultural changes. The first is signified by a change in the lithic industry and mortuary practices. The main core reduction strategy was based on the production of flakes and to a lesser extent of blades. The dominant tool types

are burins, with low frequencies of other formal tool types including arrowheads. Burials were less organized and with no evidence for skull removal.

The second cultural change brought about the establishment of what is known as the Yarmukian culture, the assemblages of which contain ceremics. This introduction is part of the definition of the following period.

2. Pottery Neolithic (PN). The Pottery Neolithic is a poorly known period, mainly because of a major change in settlement pattern. This change is archaeologically expressed in two ways: (1) in stratified sites the PN remains are found in numerous pits of various sizes which often penetrated and disturbed the wealth of PPNB rectangular buildings (Jericho, Munhatta, Beisamoun, etc.), and (2) many new settlements were established either in the Jordan Valley (Sha'ar Hagolan) or along the coastal plain. Most of these were abandoned after some time and their remains provide excellent examples of unicultural assemblages.

The invention of pottery and its introduction to domestic use took place first in the N Levant and later in Palestine. As mentioned above, the "White Ware" is made of lime plaster mixed with ashes. Clay pots outnumber in Palestine the White Ware products and the common forms are simple, including jars, cooking pots, and bowls. These were decorated first with chevron pattern and red paint and later by painting alone.

The economy of this period is based on the cultivation of cereals and legumes, herding goats and sheep, raising pigs in the more humid parts of the country, and some cattle. The activities of pastoral nomads, who partially subsisted on herding goats, are reflected in numerous desert sites. These groups continued to hunt and were possibly exchanging meat and other products for carbohydrates with the farming communities.

Evidence for burials is still rare, but indicates a shift from the earlier pattern. One burial under a small built-up cairn of rocks was exposed in Sha'ar Hagolan. Single flexed and semiflexed burials were found in other sites. Further indications concerning belief systems are reflected in clay and stone figurines. The Yarmukian culture, represented to date in Sha'ar Hagolan, Munhatta, Ain Ghazal, and Jericho, is famous for the female clay figurines which depict seated women, with tall headgear and a mask on the face, but exposed breasts. Schematic images of the same female were incised on river pebbles. The minimal representations kept the slanted eyes or the female organ. Additional patterns on the pebbles are the network and series of parallel lines.

Temples or shrines are as yet unknown from the more sedentary sites, but occur mainly in the desert sites. An open temple found in Biqat Uvda has an open courtyard and a small enclosure in one corner with miniature steles of undressed stones. Two small pebble-coated pits, which contained charcoal, were uncovered in the courtyard. Rock figures were found on the surface just outside the shrine. These were made by planting small stones which depict a series of panthers and one antelope. Panthers, more than lions, seem to have been part of the animal imagery of the Neolithic religious world.

The distribution of the PN sites in Palestine reflects a settlement pattern which was based on cultivation and herding with seasonal mobility. The investment in the more permanent sites seems to have been less than in the PPNB period and probably points toward a less anticipated pattern of mobility. It might reflect the unstable climatic conditions which by the mid-Holocene were changing from a stable pattern of precipitation to one which resembles much more today's unpredictable pattern.

C. Chalcolithic

The Chalcolithic period (5000–3500 B.C. calibrated) marks the establishment of a typical Mediterranean socioeconomic structure based on large and small communities, which practiced cultivation of cereals and legumes, herding goats and sheep, some cattle, raising pigs in suitable areas, and tending a variety of fruit trees. There are some regional subcultures, and in a few cases several scholars view them as chiefdoms. In the arid region, both pastoral nomads and seasonal herders from villages exploited the natural pastures maintaining constant interaction.

Several cultural attributes characterize the subregions and are archaeologically expressed in particular architectural remains and pottery types. It should be stressed that, contemporaneously, major urban

centers were already established in Mesopotamia and the emergence of large human organizations—chiefdoms and states—was underway. By the end of the Chalcolithic period in Palestine, writing systems were employed in Mesopotamia and Egypt, and there is ample evidence of connections between the Sumerians and the Egyptians.

The Chalcolithic period suffers from the same taxonomical problems as almost every other archaeological period. Its earliest phase, which certain scholars still call "Late Pottery Neolithic" (spanning the last third of the 6th and first half of the 5th millennia B.C.) is sometimes known as the "Wadi Rabah culture," the sites of which were found only in N and central Palestine. Most of the sites of the second half of the 5th and first half of the 4th millennia contain the remains of the Ghassulian culture (named after Tuleilat el-Ghassul, a site in the lower Jordan Valley, across the river, and E of Jericho). However, in the Negeb, which is one of the most studied subregions, a sequence of local entities, beginning with the Qatifian (ca. 4500–4000 B.C.), followed by the Besor phase and then the Beer-sheba-Ghassulian culture (ca. 4000–3500/3300 B.C.) was suggested. See RABAH, WADI; GHASSUL, TULEILAT EL-; and BEER-SHEBA.

The climate of the Chalcolithic period was and is a subject for debate. The palynological evidence and the deposition of the loess in the N Negeb suggest a humid period with considerable precipitation in the S. The plant remains from the site of Shiqmim were interpreted as indicating a climate similar to today's. However, it is difficult to understand how the Negeb sites had flourished, while subsisting on farming and herding in an area with repeated droughts without economic support from a central political power. A low-level regional social organization (i.e., chiefdom) is inferred from the archaeological remains. Hence, favorable environmental conditions seem essential for the survival of semidesert Chalcolithic communities during the 4th millennium B.C.

The Wadi Rabah culture, considered here as Early Chalcolithic, is known from sites in the Upper Jordan Valley, the coastal plain, Mt. Carmel area, and the lower Galilee. It is characterized by the pottery known as Dark Face Burnished Ware. Some of the pots are angular, with red, brown, and black color and decorated with incisions, fingerprints, shell prints, and clay relief. Other types include the bow-rim jars. In some sites evidence for the influence of the Halafian culture (known from N Syria and S Turkey) is inferred from the ornamentation of the pots with geometric bicolor designs. The lithic artifacts are shaped in the forms which were common during the Chalcolithic period such as backed sickle blades, adzes with planoconvex longitudinal cross-section, robust perforators, cortical scrapers, and the lack of arrowheads.

The houses exposed in small excavations are either square or rectangular, built on stone foundations. Similar structures were uncovered in other sites which are not included in the Wadi Rabah entity, in other parts of the country. Additional common attributes are within the economic realm. All sites were those of farmers and herders. Because of the similarity of the material remains with the following millennium, the only reliable way to differentiate them is with C14 dates. It seems that communities of pastoral nomads continued to evolve in the Near Eastern desert, and still relied on herding goats and sheep. Most scholars view as autochtonic the development of Palestinian society from this phase into the Late Chalcolithic.

The Ghassulian culture is better known and is represented by a wide distribution of sites, mostly villages and hamlets of various sizes, often located on alluvial terraces. The basic house plan was the broad room type, with the entrance in one of the long walls of the house. Sometimes it is subdivided with one or two small rooms at the ends. Storage installations were built inside the houses or in the courtyards (which in Tuleilat el-Ghassul were encircled). In the Beer-sheba region subterranean rooms and tunnels, carved into the loess, were exposed by J. Perrot and other archaeologists. These unusual features ignited debate regarding their function. However, the objects found inside the underground rooms and tunnels indicate that they were intentionally closed, but the inhabitants never returned to retrieve their belongings.

Special buildings or compounds either (1) occupied a special topographic location, such as the temple of En Gedi, (2) were specifically decorated, such as the house with the frescos in Ghassul, or (3) contained special vessels and artifacts like the one in Gilat. The presence of temples or shrines is not a major change, as already noted above. This phenomenon began at least during the Neolithic when social cohesion among farming communities required a more permanent establishment. In this context the hoard

found in a cave in Nahal Mishmar should be mentioned. The large collection of cult objects which include standards decorated with maceheads, animal figures, scepters, "crowns," decorated animal figures, doors (which resemble the ossuaries), standards, carved hippo tusks with numerous well-oriented holes, and numerous maceheads was related to the En Gedi temple. However, petrographic analysis of pottery derived from the two sites did not confirm this hypothesis. A similar analysis illuminated the important place of the temple exposed in Gilat, one of the Negeb village sites where two ceramic figurines were uncovered. One of these depicts a seated woman carrying a churn on her head while the other one is a ram with three cornets on its back. To the general description of cultic objects one should add the ivory male and female human figurines from Bir es-Safadi, near Beer-sheba, the schematic basalt face carvings known as the pillar statues from the Golan, and the numerous "fiddle" figurines, found in various sites, which sometimes were made of foreign metamorphic rocks and were brought into Palestine.

Mortuary practices are signified by the establishment of cemeteries which lie outside the habitation area. Such cemeteries with circular graves or tumuli were exposed in Adeimeh and near Shiqmim. Others were found in dug-out caves in the kurkar (sandstone) ridges in the coastal plain. Clay ossuaries are an additional attribute of this culture. They have two basic forms, either circular like a jar with an opening at the top, or rectangular like a "house" with an opening in the narrow side. Both types were interpreted by M. Dunan as representing silos. The "house"-type ossuaries often have legs and a door in the upper part of the narrow side, a trait which resembles silos much more than the typical broad-room Chalcolithic house. Some of the ossuaries were decorated on the front pediment with attributes (e.g., horns) similar to those common on the Golan pillar statues or in the hoard of Nahal Mishmar, thus indicating a common belief system.

Craft specialization in the Chalcolithic is reflected in the lithic, pottery, and especially the metal assemblages. Among the lithics, the frequent tool types are adzes with the planoconvex cross sections, the scrapers on tabular flint (which seem to have been a trade item), backed sickle blades, some microlithic tools, and hammer stones. A special tool type is the starlike, perforated, bifacially retouched disk.

Ceramic technology was marked by the introduction of the slow wheel (tournette), the production of V-shaped bowls, the cornets (which are the hallmark of the Ghassulian), the churns (used for butter production), and a variety of pots including large pithoi, holemouth vessels, globular jars, basins, footed vessels, and vessels with multiple handles. Clay was used to construct large storage jars (i.e., pithoi) as tall as 2 m; these were decorated with rope designs. Pottery decorations, however, were minimal and the "hanging triangle," red painted stripes, and rope motifs in relief seem to have been the common ones.

Two other raw materials received careful attention by the artisans of this period—basalt and ivory. Basalt objects included, besides the traditional mortars, grinding bowls, pestles, handstones, fenestrated bowl stands, delicately shaped V-shaped bowls, and pillar statues. Ivory craftsmanship was well done and a workshop was discovered in Bir es-Safadi (Beer-sheba). Both elephant and hippopotamus tusks were exploited. Additional raw materials, which have been used, include mined malachite and turquoise which were quarried in Feinan, TIMNA (PLACE), and S Sinai. In addition to making beads and pendants, the Chalcolithic period is marked by the development of metallurgy.

The main evidence concerning the metallurgical achievements of this period come from the hoard of Nahal Mishmar cave (Judean Desert). The spectrographic analysis indicates that the mace heads and probably most of the elaborate forms were made by the lost wax-casting technique. Copper mines and smelting installations were uncovered in Timnaʿ, but the full picture of the entire exploitation system (including investment in labor, food supplies for workers, exact sourcing, etc.) is not well documented.

The transition from the Chalcolithic to the Early Bronze period is again not a simple subject for discussion. However, by the end of this social process, urban centers emerged in Palestine and thus marked another threshold in the history of the country.

OFER BAR-YOSEF

BRONZE AND IRON AGES

Ancient Palestine was geographically a small country, situated astride the narrow coastal "land bridge" between Egypt and Syro-Mesopotamia. Its vulnerable geopolitical position, in addition to its mountainous terrain and its semiarid agricultural conditions, made the country economically unstable, politically fragmented, and constantly subject to foreign domination. Palestine was thus a marginal area compared to its great neighboring empires; but its long history and contribution to universal culture were nevertheless uniquely important.

The archaeological history of Palestine has frequently been surveyed, and detailed data on individual sites and problems will be found in many publications (see also *EAEHL*; Aharoni 1979; Shanks and Mazar 1984; Mazar 1989; and, for Transjordan, especially Hadidi 1982–89). The present treatment, therefore, confines itself to an overview, concentrating on the Bronze and Iron Ages as is typical of the divisions usually made in Syro-Palestine archaeology. See also ARCHAEOLOGY. Major attention is given to discoveries and changed opinions since about 1970.

A. The Late Chalcolithic Age (ca. 3800–3400 B.C.)

The last "prehistoric" phase preceding the Bronze Age and its rapid urban development was the Chalcolithic (or "Copper-Stone" Age). Early Chalcolithic (sometimes called "Late Neolithic," ca. 4500–3800 B.C.) is not yet well defined, but it represents a transitional phase between the long Neolithic period (ca. 9th–6th millennium B.C.; see preceding article) and distinctive village cultures of "proto-urban" type. These later Chalcolithic sites (ca. 3800–3400 B.C.) consist mostly of small villages, grouped in several complexes and marked by strongly regional cultures. Some are in the N and inland, while others are along the coast and the river valleys, and especially in the lower Jordan Valley and the N Negeb. One of the first sites extensively investigated (in the 1920s), Tuleilat al-Ghassul, at the N end of the Dead Sea, produced a large, exceptionally well planned and laid out village. Grains and cereals were grown, possibly using primitive irrigation; olives and grapes were imported from the hill country; and copper was brought from mines farther S in the Jordan Valley. A sanctuary revealed frescoes with exotic cult scenes. The lithic and ceramic industries were technically and aesthetically very advanced, and both textiles and basketry were attested. More recent excavations at Nahal Ḥever along the W Dead Sea shore have yielded dozens of very elaborate arsenical copper implements, mostly cultic, produced by a lost-wax method of casting. Near Beer-sheba, a group of similar sites, most recently Shiqmim, has produced a series of ivory male and female figurines carved in the round, copper items, exotic painted pottery, rectangular houses, the first well-preserved tombs found (of *tholos*-type, at Shiqmim), and even some evidence for runoff irrigation agriculture (again at Shiqmim). The coastal sites near Tel Aviv are characterized by secondary burials in terra-cotta painted ossuaries, some in zoomorphic form, others representing domestic houses. The latest regional Late Chalcolithic family is in the far N, as exhibited for instance at Tel Teo near Shiqmonah, a well-planned village with exceptional stone-built rectilinear houses. On the Golan heights, Claire Epstein has investigated many pastoral nomadic camps and agricultural villages, the latter characterized by broadroom dwellings, rope-molded pottery, and curious basalt anthropomorphic and zoomorphic figurines.

The general picture of the Chalcolithic is that of a highly sophisticated society, based on intensive farming, and particularly concerned with religious expression. Although still regional, it represents a further development from "tribal" to a "chiefdom" level of social organization. Indeed, the last century or two is classed by some authorities (together with the early part of the following phase) as the "Proto-Urban" horizon. In Egypt and Mesopotamia, this is the Late Predynastic and Proto-Historic period, with monumental art and architecture, and even the beginnings of writing, already in evidence (see further Levy 1986).

B. The Early Bronze I–IV Age (ca. 3400–2000 B.C.)

Early Bronze Age studies have flourished since 1970, changing our views of every phase (see further Broshi and Gophna 1984; Richard 1987). Early Bronze I, ca. 3400–3100 B.C., appears more and more as a "Proto-Urban" (Kenyon's term), transitional phase between Late Chalcolithic and the true urban Early Bronze period. Among the key sites is ʻEn-Shadud in the Jezreel Valley, a well-developed agricultural village founded *de novo,* with typical broadroom dwellings. In the N Shephelah, Gezer continues the Chalcolithic occupation but remains, as most sites, an unwalled village. J. A. Callaway's reexcavation of ʿAi, N of Jerusalem, greatly clarifies older work, revealing several well-defined "pre-urban" phases. The final publication of the Jericho volumes clarifies the occupational deposits that complement Kenyon's red-painted and red-burnished ceramic groups from tombs, upon the basis of which she (like Wright) had characterized this period. Kenyon's notion of three intrusive *ethnic* groups, however, finds little favor today. Bâb edh-Dhrâʿ in S Transjordan exhibits a pre-town phase of occupation, with early disarticulated, secondary shaft-tomb burials supplanted by articulated primary burials toward the end of EB I (Wright's

"EB IB"). Renewed workup of the unpublished Tel Gath materials will almost certainly clarify the Palestinian EB I–Egyptian Late Predynastic connection already attested. At Yiftaḥel, in lower Galilee, several long oval houses clearly dated to Early Bronze I apparently lay to rest the older notion of "apsidal" dwellings as characteristic of this period. All sites thus far excavated show that city walls were first built only in the succeeding phase (the former "EB IC," or transitional phase, now generally being abandoned).

Early Bronze II, ca. 3100–2650 B.C., is now richly documented as Palestine's first, and very impressive, urban period. By "urban," we mean a "complex society" that exhibits such features as densely nucleated population, in a hierarchically tiered settlement pattern with a few large sites; a stable subsistence system, in this case based on intensified agriculture, industry, and trade; social stratification; centralized political administration (not state-level formation in Palestine, but the typical "city-state"); and monumental art and architecture. In Egypt and Mesopotamia, this first urban era comprises the Archaic/Proto-Dynastic and Early Dynastic I–II periods, with writing well in evidence, but Palestine lags somewhat behind these developments.
